The farmer is often criticized because he overlooks the little things that count for much more than the things that he at times lays stress on. An example of this is the price received for 100 pounds of milk, butter fat or cheese, when his larger problem is the cost of production. This is likewise true with some of the creamery men when they consider the questions that may seem large and are of national importance. These problems need not all be mentioned. They all bear a relation to efficiency in factory operation. The water limit in butter or any legal standard and its enforcement must be considered, but the problem of making the butter of such high quality and uniformity that the consumer will buy five pounds in place of four is of far greater importance in dealing with the successful maker. Again, a great deal of stress is put forth by a few men to see how close they may scale the legal standard for water in butter and not pay the penalty. The larger problem should be the putting into every pound of butter such workmanship that 100 pounds may be shipped across the continent and be returned and still weigh 100 pounds. A maker may talk overrun and the factors that influence it or he may discuss the fat standard in butter, because to him it may seem a ponderous question, but at the same time he will pack sixty-four pounds of butter in a tub and accept payment for sixty-two or sixty-three and not question whether or not the actual difference was shrinkage or inaccuracy in weighing the butter. This problem alone is a loss to Wisconsin of 1,000,000 pounds of butter per year.

This is one of the little leaks that can be stopped by the treatment of tubs and liners in boiling water for a period of fifteen minutes and then in cold water before being placed in contact with the butter. These matters are of interest to so many farmers who re interested in the hundreds of cooperative creameries as stockholders as well as patrons. It is essential that every farmer take an interest in his creamery aside from the amount he gets for his butter fat or his milk, for the better the creamery's products the better the price it will bring, and a creamery which falls below standard is not giving its farmer-patrons the justice they deserve.

WATERLOO DAIRY CONGRESS.

Cattle of High Quality Compete For Dairy Honors—New Records Are Made in Attendance and the Cattle Congress Is in Every Respect a Success.

THE sixth annual Waterloo Dairy Congress, held last week at Waterloo, Iowa, was by far the most successful in the history of this institution. This has been a year of great progress for fairs and live stock shows, and new records have been made all along the line. The Waterloo Dairy Cattle Congress not only made new records but in many instances doubled records. The show was put on a firm financial footing the past winter by subscriptions of $50,000 stock in the managing company, practically all the stock being subscribed by enterprising business men and progressive manufacturers of Waterloo. There has been a doubt in the minds of some dairymen as to whether Waterloo could successfully maintain a dairy show, but the performance this year would seem to dispel that doubt entirely. As the center of the dairy world moves westward, and as Iowa begins to take up dairying on a larger scale, the Waterloo Dairy Congress will undoubtedly grow and rival other dairy shows in the world for number and quality of cattle and for attendance upon the show.

FIRST-PRIZE WINNERS OF THE HOLSTEIN-FRIESIAN FEMALE CLASSES.

It is not possible to attend the Waterloo Dairy Congress and fail to catch some of the buoyancy which saturates the business atmosphere of the city of Waterloo. In no city this year where a great fair or exposition of live stock has been held has the progressive spirit of the citizens been so apparent as at Waterloo. If Waterloo will continue to stand by this cattle congress as it has done in the past, and as it did with very special emphasis this year, Waterloo may become the dairy center of this western country. Waterloo is near the center of that section of Iowa where dairying has reached its highest stage of development. It is close to Wisconsin and Minnesota. The cattle congress offers a great educational advantage to Iowa, where dairying has in the past few years reached some prominence. Waterloo is a good point from which to conduct and continue the dairy educational campaign. More dairying in Iowa, more pure-bred animals of the dairy class, greater interest in quality production, etc., will all help the Waterloo show. And the Waterloo dairy show will be a great factor in bringing these things about. Waterloo is a manufacturing city from which we get many articles of importance to the dairy farmer. Waterloo knows how to extend the glad hand to a crowd and she knows how to entertain. Waterloo is a beautiful city situated on both banks of the Cedar, Iowa's most beautiful stream. The cattle congress is housed in a fine place, the transportation facilities are good and a larger crowd could have been handled with ease. Six years ago the Dairy Cattle Congress held its first show in two small tents at the Chautauqua grounds. It was an insignificant beginning, but this year's result warrants the effort which has been made.

The Dairy Cattle Congress was a show of quality. Jerseys predominated, there having been a very special effort made by the Jersey breeders to make a big showing. There were 138 Jerseys in the show herd, representing some of the highest class herds of the country and competition which taxed the keen eyes and expert knowledge of the judge. There were 104 Holsteins shown in the ring, several of highest quality, and a splendid average showing. The eighty-eight Guernseys were a fine lot of cattle and the seventy-three Ayrshires and fifty-eight Brown Swiss showed admirably the good characteristics of these two dairy breeds. In addition to the show stuff there were many cattle on the grounds consigned to sales and a number for exhibition purposes not entered in the show ring. It was a much better show of dairy cattle than has been seen at many of the state fairs this year. As to quality, we need only say that a considerable number of the winners go direct to the National Dairy Show at Springfield, Mass., for competition with the top notchers of the dairy world.

The Dairy Cattle Congress afforded a great opportunity for representatives of the breed to get together. The Holstein breeders of Iowa had a meeting and banquet on Tuesday, at which the national president, D. D. Aitken, of Flint, Mich., was present. Col. George W. French, proprietor of Iowana Farms, an exhibitor at the show, was also present and spoke at the banquet. Colonel French is a vice president of the Holstein-Friesian Association of America. M. H. Gardner, of Delavan, Wisconsin, secretary of the Holstein Advanced Registry Association, was present and spoke and W. B. Barney, state dairy and food commissioner, and other Iowa breeders were on the program. Each of the breed associations had a booth at the show. The Ayrshire booth was in charge of J. G. Watson, of Brandon, Vermont, a personal representative of the Ayrshire Breeders' Association. The American Guernsey Cattle Club booth was in charge of C. H. Hurlburt, editor of the Guernsey Breeders' Journal, and J. E. Stallard, Jr., both of Peterboro, New Hampshire. Mr. Charles L. Hill, of Rosendale, Wisconsin, secretary of the Western Guernsey Breeders' Association, was present and acted as judge in the Guernsey classes. The Jersey breeders of the country were there in force, as before indicated. On Friday evening they were tendered a banquet by George T. Slade, of St. Paul, son-in-law of the late James J. Hill, of the Great Northern road. Mr. Ed C. Lasater, of Falfurrias, Texas, won the American Jersey Cattle Club cup, awarded to the winner of grand champion cow at the show. The Jersey breeders left Sunday evening by special train in style, their cattle accommodated in almost as inviting a manner as their owners, for Springfield, Mass., to attend the National Dairy Show.

GRAND CHAMPION JERSEY COW.

Aldam's Golden Fern, owned by Ed C. Lasater, of Farfurrias, Texas.

HOLSTEINS.

The black and white cattle made a magnificent showing at the Dairy Cattle Congress. Eight exhibitors, having a total of 104 head, came into strong competition with one another, and the wonderful lot of quality displayed in every class made it a difficult task to pick the winners. "It was the best showing ever made at Waterloo," declared U. S. Moscrip, of Lake Elmo, Minn., who was judge of Holsteins, and several prominent breeders claimed that it was the greatest Holstein show ever held west of the Mississippi River. The classes of cows and heifers were especially strong. The first three cows in the aged class showed a wonderful lot of quality and type. Minerva Beets, the aged cow of R. E. Haeger, Algonquin, Ill., finally carried away the blue ribbon. She is an excellent animal, showing splendid quality and type, strong in the middle and carrying a wonderfully developed udder and large milk veins. One of the best classes in the show was that of senior heifer calves. The sixteen calves brought into the ring showed a remarkable lot of quality, and the rank of the winners was very close. Lady Calamo Hengerveld, owned by Mr. Haeger, was awarded first place in this class. All the group classes were well filled and made a strong showing. The aged herd bull, Oak De Kol Ollie Homestead, of the Iowana Farms, Davenport, Iowa, was made senior and grand champion bull of the show. He is a big, sturdy animal, strong in the middle and possessing good Holstein type. The junior champion, Nockdair Segis Fobes Boy, owned by Baird Bros., Waukesha, Wis., is a good bull calf with fine quality, straight lines and lots of promise, but lacking somewhat in scale. In the female championship classes, Minerva Beets was made senior and grand champion and Nellie Segis Pontiac Combination, owned by the Galloway-Messer Farms Co., of Waterloo, Iowa, was made junior champion. The Galloway-Messer heifer is remarkable because of her excellent type and quality combined with plenty of scale. Immediately after the judging, the champions and first prize winners in all single classes were lined up and led around the show ring. This parade was a pleasing sight to all Holstein lovers at the ringside and gave the visitors a chance to study the type of animal that breeders of the black and whites are striving to produce.

Exhibitors: Baird Bros., Waukesha, Wis.; Galloway-Messer Farms Co., Waterloo, Iowa; Iowana Farms, Davenport, Iowa; Cass Farm Co., Sumner, Iowa; McKay Bros., Waterloo, Iowa; R. E. Haeger, Algonquin, Ill.; H. O. Larsen, Dike, Iowa; Iowa State College, Ames, Iowa.

Judge, W. S. Moscrip, Lake Elmo, Minn.

AMERICAN LIGHTING SYSTEM

Brighter than Electricity

Every prosperous farmer wants a lighting system for his home. Only a few care to invest $350 to $500 for an electric light system and then have to put in new $100 batteries after a few years' use.

The American Lighting System will give you a much brighter light than electricty at 1-10 the cost of an electric light plant.

IDEAL LIGHT FOR FARM HOMES

The American Lighting System solves the lighting problem for farm homes. Gives you the same convenience for lighting and cooking as gas. Does not require any expensive piping—no complicated machinery. It is simple, easy to operate, and absolutely safe. Lights with a match. Costs less to run than kerosene lamps. Does away with the drudgery of filling and cleaning kerosene lamps. Easily installed by your dealer in a few hours without tearing up floors, etc.

WRITE FOR INFORMATION

If you want more light—with less work—at less expense, write for circular today. Any live hardware dealer either has the Amercan Lighting System on hand or will get it for you.

American Gas Machine Co.

Albert Lea, Minn.

THE GOOD JUDGE SETTLES A MISUNDERSTANDING.

YOU want to remember that the same fine stock is used in both W-B CUT and Right-Cut. The difference is that one is long shred and the other is short shred, both seasoned with a bit of salt. You will know *real tobacco satisfaction* when you cut out the old kind and take up either one of the Real Tobacco Chew twins. A *little* chew *lasts* and *satisfies.*

Made by WEYMAN-BRUTON COMPANY, 50 Union Square, New York City

Gives You A Giant's Power

One-Man Easily Handles And Operates A Kirstin

When you see a KIRSTIN get a grip on a great big stump and bring it out, roots and all, at a rapid rate, you will realize how this little machine gives a man the power of a giant. The Kirstin's wonderful system of double leverage enables one man to do more work, quicker work, easier work, better work at stump pulling and at less cost. The powerful

Kirstin One-Man Stump Puller

will clear an acre from one anchor. The only stump puller that changes speed while in operation—the only puller that gives you *five* machines in one. We back the Kirstin with an iron-clad guarantee and invite full comparison with any other stump puller or land clearing method. Our Big Free catalog tells all about the easy, economical KIRSTIN way of clearing land. Write today for your copy.

Grand Champion Cow—Haeger on Minerva Beets.

Grand Champion Cow With Official Record—Cass Farm Co. on Jessie Fobes Bessie Homestead.

JERSEYS.

A keen interest was taken in the Jersey show at the Dairy Cattle Congress. Large crowds gathered at the ringside and watched the placing of the ribbons, while the exhibitors and breeders, who sat at the border of the ring, studied every movement of the judge in an effort to anticipate his decisions. Ten exhibitors with 138 head of cattle competed for the prizes, which were awarded in all classes except one by John Lee, of Shelbyville, Ky. The aged bull class was judged by C. H. Staples, of Baton Rouge, La. Not only in number was the showing strong, providing a full representation in every class, but a wonderful lot of quality and type was exhibited. The aged cow class in particular was remarkable in this respect. Seldom have such choice Jerseys been brought together at one time.

The group classes of this popular dairy breed presented a beautiful sight, which brought forth much favorable comment from the ringside. In the championship classes, Noble Sultan's Golden Fern, owned by Mrs. Harry C. Galbraith, Knoxville, Tenn., was made senior and grand champion bull. He is a handsome animal of golden fawn color with white markings, possesses plenty of quality and a beautiful head, which is his most distinguishing characteristic. The junior champion bull, Noble Prince Jolly, owned by Geo. T. Slade, White Bear Lake, Minn., also is a stylish fellow and ranks high in quality and type; he gave the senior bull a close race for the grand championship, but was not quite good enough to be placed over the aged animal.

In the female championship classes, Aldan's Golden Fern, owned by Ed C. Lasater, Falfurrias, Texas, won the senior and grand champion ribbons. She is a beautiful, outstanding cow of wonderful conformation and type, with an excellent udder and splendid veining. The junior champion, Fern's Oxford Ever, owned by F. J. Bannister, Kansas City, Mo., is a stylish yearling heifer showing much promise. While the champions were outstanding in their respective classes, they were supported by winners of lesser prizes which would have made a remarkable showing by themselves. Without fear of contradiction, we may say that the Jersey show at Waterloo was crowned with success.

Exhibitors: F. J. Bannister, Kansas City, Mo.; Ed C. Lasater, Falfurrias, Texas; M. D. Munn, St. Paul, Minn.; N 'le Fabyan, Geneva, Ill.; Mrs Harry H. Galbraith, Knoxville, Tenn.; Kingston Bros., Avon, Ill.; Geo. T. Slade, White Bear Lake, Minn.; R. Y. Gibson, Jacksonville, Ill.; I. Robert Blackburn, Dayton, Ohio; Willow Lawn Farm, Inc., Waverly, Iowa.

Judges, C. H. Staples, Baton Rouge, La., and John Lee, Shelbyville, Ky.

Bull 3 Years or Over (8 shown)—1st Galbraith on Noble Sultan's Golden Fern; 2d Bannister on Noble's Handsome Prince; 3d Lasater on Noble's Eminent Lad; 4th Munn on Gamboge's Vellum Majesty; 5th Kington Bros. on Noble Rozel.

Bull 2 Years and Under 3 (9 shown)—1st Lasater on Windsor's Nobleman of F.; 2d Bannister on Flora's Queen's Raleigh; 3d Fabyan on Fern's Noble of Riverbank; 4th Lasater on Eminent's Nobleman of F.; 5th Fabyan on Riverbank's Oxford Noble.

Bull 1 Year and Under 2 (12 shown)—1st Slade on Noble Prince Jolly; 2d Munn on Castor's Golden Jolly; 3d Lasater on Aldan's Noble of Texas; 4th Bannister on Golden Fern's Pathfinder; 5th Galbraith on Sam Loates Warrior.

Bull Calf 6 Months and Under 12 (9 shown)—1st Lasater on Sultana's Eminent Lad; 2d Bannister on Society Lad; 3d Galbraith on Golden Fern's Figgis Fox; 4th Fabyan on Ocean Blue's Chieftain; 5th Kington Bros. on Majesty's Cora's Noble.

Bull Calf Under 6 Months (7 shown)—1st Galbraith on Champion Goddington; 2d Lasater on Miss Nora's Village Knight; 3d Fabyan on Golden Fern of Riverbank 4th; 4th Blackburn on Mabel's Noble Raleigh; 5th Blackburn on Sophie's Gamobe Premier.

Cow 5 Years or Over (16 shown)—1st Lasater on Aldan's Golden Fern; 2d Fabyan on Manor's Blossom; 3d Kington Bros. on Matilda's Mabel; 4th and 5th Bannister on Beechland's Champion Lily and Noble's Fair Nerissa.

Cow 4 Years and Under 5 (6 shown)—1st, 2d and 4th Bannister on Agatha's Maiden Fern, Warder's Fern Blossom and Golden Fern's Shy Lady; 3d Willow Lawn Farm on Countess Topsy; 5th Kington Bros. on Reinbou's Leda Raleigh.

Cow 3 Years and Under 4 (4 shown)—1st Kington Bros. on Fern's Pine Daisy; 2d Bannister on Golden Fern's Silver Thread; 3d Lasater on Majesty's Madame of Falf; 4th Blackburn on New Wave.

Heifer 2 Years and Under 3 (8 shown)—1st Bannister on Undulata Nena; 2d Munn on Burweb's Harriet; 3d Lasater on Constance of Falfurrias; 4th Kingston Bros. on Noble Rosina; 5th Galbraith on Cowslip's Maid.

Heifer 18 Months and Under 24 (11 shown)—1st Bannister on Fern's Oxford Ever; 2d Kington Bros. on Noble's Proud Beauty; 3d Lasater on Aldan's Mary of La Mota; 4th Bannister on Golden Fern's Jolly Beauty; 5th Blackburn on Minette's Sultana.

Heifer 12 Months and Under 18 (10 shown)—1st Bannister on Houpla's Panola; 2d Galbraith on Juda's Lilac; 3d Lasater on Eminent Lad's Brightness; 4th Galbraith on Golden Fern's Saucy Maid; 5th Blackburn on Lady Raleigh Noble.

Heifer Calf 6 Months and Under 12 (11 shown)—1st Bannister on Noble's Champion Gauntlet; 2d Lasater on Aldan's Noble Jessica; 3d Munn on Golden Fern's Triumph; 4th Fabyan on Ocean Blue's Cowslip; 5th Blackburn on Prue's Milk Maid.

Heifer Calf Under 6 Months (10 shown)—1st Lasater on Cowslip's Noble Queen of Falf; 2d Bannister on La Cima's Louise; 3d Galbraith on Golden Fern's Bright Jewel; 4th Slade on Panola's Oxford Rosabelle; 5th Blackburn on Lady Noble Raleigh.

Cow Having Official Yearly Record Begun at 5 Years or Over (2 shown)—1st Lasater on Aldan's Golden Fern; 2d Bannister on Beechland's Champion.

Owners and Renters of Stove Heated Homes

LISTEN!

YOU CAN burn less fuel and have warmer homes—less muss and fuss—better health—by heating with the MUELLER ONE REGISTER PIPELESS FURNACE.

MUELLER PIPELESS FURNACE

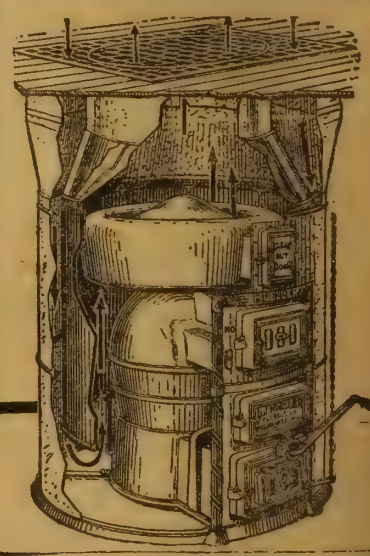
Heats every room in the house comfortably, cleanly, from one register. Keeps air moving, improves ventilation. Easily installed in old or new houses without tearing up walls or floors. Where no cellar, just dig a pit. Burns wood, coal or coke. Is made of solid cast iron and can be used a lifetime. Investigate NOW. Get the facts why the MUELLER PIPELESS is your best buy.

WRITE FOR FREE BOOKLET

Gives you all the facts about the Pipeless System of heating and the MUELLER PIPELESS FURNACE. Gives full details of construction and shows pictures of installation. Tells how to apply it to your own home, old or new; how to tell the difference between good and poor furnaces—the things to look out for and the things to avoid. This Booklet sent free on request.

L. J. MUELLER FURNACE CO.,
204 Reed Street Milwaukee, Wis.

As we are makers of heating systems of all kinds since 1857—regular hot air pipe furnaces, steam or hot water boilers and vapor heating systems—we are in a position to give you honest advice on your heating requirements.



GOOD MEN WANTED

To learn the Auto business.

Any capable, ambitious young man can make a success for himself, and if you will only prepare yourself YOU WILL GET WORK because POSITIONS ARE OPEN, WAITING for competent men to do Auto and Electric work.

Learn a GOOD BUSINESS. Are you dissatisfied with your present work? Thousands of new men will go into the Auto and Electric Starter business within the coming year. YOU CAN, TOO. Do you want to?

The Auto business offers opportunities and promotion to high pay.

Grand Champion Bull—Galbraith on Noble Sultan's Golden Fern.

Grand Champion Cow—Lasater on Aldan's Golden Fern.

Grand Champion Cow With Official Record—Lasater on Aldan's Golden Fern.

GUERNSEYS.

A splendid lot of Guernseys were exhibited at the Dairy Cattle Congress this year. Eighty-eight head of cattle from the herds of six exhibitors made up the showing, which was pronounced by leading Guernsey men who saw it to be first class in every respect. Many visitors gathered at the ringside and watched the tying of the ribbons, a task which fell to Charles L. Hill, of Rosendale, Wis. The judging was difficult because all the classes were well filled, and much uniformity was displayed in practically every class. W. W. Marsh, of Waterloo, Iowa, entered the largest number of animals and won the largest number of ribbons; his representation consisted of twenty-six excellent animals, including some of the finest Guernseys in the country.

The awards for senior and grand champion bull went to Mr. Marsh on Ladysmith's Cherub. He is a strong, handsome bull, with great finish, an excellent head and remarkable quality. The junior champion bull award also went to the Waterloo breeder on Flora's Memento, an excellent senior bull calf of great promise. In the female classes, Hayes Wena 4th was made senior and grand champion cow, and Figtree of the Prairie junior champion heifer; both animals were from the Marsh herd.

Exhibitors: Hans J. Schmidt, Cedar Falls, Iowa; Jean Duluth Farm, Inc., Duluth, Minn.; Wilcox & Stubbs, Des Moines, Iowa; Village Farms, Inc., Grass Lake, Mich.; Nelle Fabyan, Geneva, Ill.; W. W. Marsh, Waterloo, Iowa.

Judge, Charles L. Hill, Rosendale, Wis.

Bull 3 Years or Over (5 shown)—1st Village Farms on Walbridge's Glenwood Boy; 2d Wilcox & Stubbs on Penwyn of Rosendale; 3d Wilcox & Stubbs on Imp. Patricia's Son; 4th Schmidt on College Pride; 5th Marsh on Nancy Mac's Son of Iowa Dairy.

Grand Champion Bull—Marsh on Ladysmith's Cherub.

Senior Champion Cow—Marsh on Hayes Wena 4th.

Junior Champion Heifer—Marsh on Figtree of the Prairie.

Grand Champion Cow—Marsh on Hayes Wena 4th.

BROWN SWISS.

Although the Brown Swiss are not as prominent as many other breeds of dairy cattle, they made an excellent showing at the Dairy Cattle Congress this year. Fifty-eight head were exhibited from four complete herds; this number was sufficient to fill all classes and the quality of the animals made competition keen at all times. The heifer calf class was one of the largest and best shown. Jane C., owned by H. W. Ayers, won first in this class and later carried away the female junior champion honors. She was defeated in the grand champion class, however, by the senior champion cow, Swiss Valley Girl 7th, owned by Hull Brothers. The senior and grand champion bull was Merney's 2d Son, a big, rugged animal with good conformation, owned by H. W. Ayers. The junior champion bull ribbon also went to Mr. Ayers on Merney's Nephew. W. A. McKerrow, of Minneapolis, Minn., was judge, and his work met with complete approval.

Exhibitors: H. W. Ayers, Honey Creek, Wis.; Ira Inman, Beloit, Wis.; Hull Bros., Painesville, Ohio; Dahlem & Schmidt, Eldorado, Kan.

Judge, W. A. McKerrow, Minneapolis, Minn.

Bull 3 Years or Over (5 shown)—1st Ayers on Merney's 2d Son; 2d Hull Bros.

We Must Add *$175* to the HUDSON SUPER-SIX

Here is an issue which we can't evade. So we meet it fairly and frankly, but give you a full month's warning. Every Super-Six will be sold at present prices while they last. If you can get one, get it.

The Super-Six of the present series is built from materials contracted last year. There are only 3500 more to go out, including open cars and enclosed. And part of them are sold.

The next production—starting December 1—will be like the present models. The changes, if any, will be only minor refinements. But materials for that series were contracted this year, and at prices enormously advanced.

So the cars now in process are the only Super-Sixes we can deliver at the present Hudson prices. The advance will be *$175* per car.

No Way Out

Most people know that Hudson profits are amazingly low for our output. Here is the top-place car—the largest-selling fine car in the world with a price above $1100. Yet it sells way below some fine cars. Still our standards are so high that, despite our big output, profits are very small.

Now these high-grade materials, in one year, have enormously advanced. We must either adopt lower grades of materials, or add the advance to our price.

There is no other way out for fine-car makers whose profits have been fair. This enforced raise means no greater profit to us. So we frankly state the facts.

We shall continue the present-grade Hudson. Next year's models will be the same as this year's; save perhaps in some minor refinements. There will positively be no change in the Super-Six motor. So the added cost—and that alone—will be added to our price.

Good News for Owners

This will be good news for owners. About 25,000 have, or will get, Super-Sixes at present prices. With this patented motor, where wear and friction are almost eliminated, depreciation is a trifle. And like cars, of the next production, will cost a great deal more. *So a Super-Six can be bought now at a saving of $175.*

We have under way of the present production about 3500 cars. Part are open models, part enclosed. Many of them are sold.

But many Hudson dealers, suspecting the advance, have unsold Super-Sixes. If you get one now, you will save $175. For all Hudson dealers will advance the Super-Six when we start production of the next series.

If you can get one now, go get it.

Next Year's Ruling Car

Next year, as this year, the Hudson Super-Six is certain to hold its supremacy. The Super-Six is controlled by our patents—the motor which added 80 per cent to efficiency. So other cars can't use it.

The Super-Six now holds all the worthwhile records. All the world's stock car records up to 100 miles. It holds the 24-hour record of 1819 miles. It won the Pike's Peak hill-climb—the world's greatest event of its kind.

In September it won the ocean-to-ocean record. It went from San Francisco to New York in 14 hours 59 minutes less time than the next best record.

It won all these records because of endurance. Because this invention has so nearly eliminated all friction, vibration and wear.

So every man who knows the facts must concede the Super-Six supremacy. Every test has proved it. If you want such a car—even for next year—now is the time to get it, if you can.

Grand Champion Bull—Ayers on Merney's 2d Son.

Grand Champion Cow—Hull Bros. on Swiss Valley Girl 7th.

Grand Champion With Official Record—Hull Bros. on Swiss Valley Girl 7th.

AYRSHIRES.

The Ayrshires were especially well represented at the Dairy Cattle Congress this year. Six exhibitors showed seventy-three head, of which every animal was a credit to the breed. As may be expected, some of the animals were particularly outstanding, but those winning second and third places were good ones, also, and the judging required careful, painstaking work. Will Forbes, of Waterloo, Iowa, did this work in a manner satisfactory to all. The class of senior heifer calves deserves special mention because of the noticeable uniformity of this young stuff. They were a fine lot and the winners met some strong competition. The senior and grand champion bull was Bargenoch Rising Star, an outstanding dairy bull of good quality and type, owned by Adam Seitz, of Waukesha, Wis. The junior champion bull was Cavalier's Lord Roseburg, a big, sturdy yearling, also owned by Mr. Seitz. For female grand championship, the senior champion cow, Imp. Kilnford Bell, owned by Mr. Seitz, was defeated by the junior champion, Nona Spencer. This heifer, owned by William Galloway, of Waterloo, Iowa, is an outstanding animal of strong constitution and development, and gives promise of making an excellent cow. Ayrshire men were well pleased with the showing at Waterloo and received new enthusiasm over this breed which is making rapid progress in the dairy world.

Adam Seitz, Waukesha, Wis.; Ferndell Farms, Ladysmith, Wis.; William Galloway, Waterloo, Iowa; C. H. Peverill, Waterloo, Iowa; Dr. David Roberts, Waukesha, Wis.; Dairy Farm, Iowa State College, Ames, Iowa.

Judge, Will Forbes, Waterloo, Iowa.

Bull 3 Years or Over (5 shown)—1st Adam Seitz on Bargenock Rising Star; 2d Wm. Galloway on Auchenbrain Good Gift; 3d Dr. David Roberts on Roberts' Cavalier; 4th Peverill on Yankee Doodle; 5th Ferndell Farms on Victor of Ladysmith.

Ailing Animals.

Too Fat for Breeding.

Can ewes on grass become so fat as to hinder them from becoming pregnant?

It is possible for any animal to become too fat to breed well, but it is not very probable they would become so on grass feeding alone.

Ailing Sow.

I have a sow pig, three months old, that holds her head sideways. She is not doing as well as the rest of the bunch. Has been this way for a week. One of the same litter died of the same thing when two weeks old. It seemed to be in great pain and slobbered a great deal before it died. Can you tell me what to do?

It would be impossible without stronger description of symptoms and lesions to diagnose this trouble. However, it may be from poisoning of some nature.

Cough in Calves.

I have some spring calves which I would like to ask about. They look to be in good health only that they cough and I would like to know if there is any cure for that cough.

As there are so many causes for cough and it is usually one symptom of some disease it would be impossible for us to say what is causing it. You will have to find out what the cause of the cough is before one can prescribe intelligently for it. Among the different causes of cough may be mentioned tuberculosis, verminous bronchitis, indigestion, etc.

Lack of Oestrual Period.

I have a four-year-old black cow that was fresh last November and has not come around to the bull yet, and also two heifers that have never been in heat yet. What treatment is there for this, if any?

Whether anything can be done for this condition will depend entirely upon the cause. You should have these animals examined by a competent veterinarian so you may find out, if possible, what the underlying cause is. He may advise the use of some aphrodisiac and he may advise some change of feed, etc. This will depend upon what he finds.

Sand Crack.

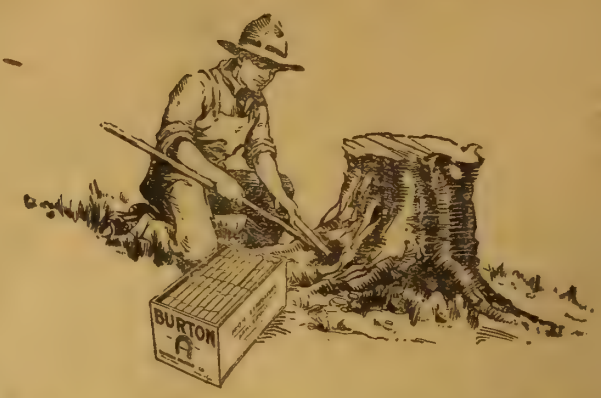
I have a three-year-old mare which has one front hoof cracked from the bottom and up about an inch and a half. It has been that way for some time. I keep her hoof quite well trimmed. I have not driven her very much. She sometimes limps a little. I have never had her shod. Her hoof is in medium shape.

In simple quarter crack recovery will often take place if the coronet is blistered, the foot shod with a "tip" and the patient turned to pasture. If the crack is bad it should be treated by the application of clasps which are applied after cleansing the crack thoroughly, and also a shoe put on. The coronet should also be blistered to hasten the growth of horn. The clasps should be put on under the direction of a veterinarian and farrier.

Fetlock Wound.

I have a two-year-old mule that got his foot cut on wire a week ago. The cut is between the hoof and the fetlock joint. It is about two inches long and an inch deep. I have used nothing except healing powder. Can it be cured without leaving a scar?

This wound should give you little cause for concern. Cleanse it thoroughly and apply tincture of iodine two or three times. Keep it clean after this and apply some good dressing powder and there should be very little, if any, scar left.



Easy to Remove—and Cheaper

Progressive farmers no longer use the antiquated, primitive methods formerly employed in removing farm obstructions. Instead they save time, labor and expense by using

BURTON

"Good Luck" Dynamite

Contrast this new money-saving way with the old-style procedure of chopping and pulling, hour after hour. Not only is Burton "Good Luck" Dynamite better than former methods, but it is infinitely better than most other grades of dynamite on the market. And it is *cheaper*, too, because a smaller amount is required for a charge.

Safer to use and uniform in quality, "Good Luck" Dynamite is equally successful for ditching, tree-planting or subsoiling.

Our distribution facilities enable us to guarantee prompt deliveries

Ask your dealer for Burton "Good Luck" Dynamite. If you can't locate a dealer in your community, write at once. If you have some difficult farm-clearing problems to solve, write us and we will help you.

Ask your neighbor to subscribe for The Wisconsin Farmer.

Two Dollar Milk Granted.

Following a strike and considerable excitement at Burlington, Racine county, Wisconsin, farmer-dairymen producing milk for the Wisconsin Condensed Milk Company, secured an advance in prices for their milk. The new price averages about $2.00 per hundredweight, and covers a six-months period. Milk testing 3.5 per cent is to be paid for at the following scale for fall and winter months: October, $1.90; November, $2.10; December, $2.10; January, $2.05; February, $2.00; March, $1.85. The prices agreed upon for February and March are subject to change, provided the market at the time does not warrant such prices. At a special meeting of the members of the local milk-producing associations, a demand was made of the manager of the condensery for a $2 average price for milk for the six months, beginning October 1st. The manager refused the demand and a strike was set for Sunday morning, October 1st. Pickets were stationed at all the chief roads leading to the city. Farmers were stopped and the situation explained to them in detail, and about 50,000 pounds of milk was carried back to the farm before the strike was finally settled. In some instances ropes are said to have been stretched across the roads so that the milk-wagon drivers had no alternative but to turn back. Only about 4,000 pounds of milk was received at the condensery the day the strike was ordered. On Monday morning the supply at the condensery decreased and farmers were riding all over the country explaining their position in the strike and enlisting the support of others. The fight was settled Monday afternoon. The Milk Producers' Association secured most of its demands and the members were apparently well pleased with the outcome of the strike. The Burlington local of the Milk Producers' Association is a member of the Chicago, Illinois, association. The manager of the condensery objected to the sale submitted to him, but was willing to pay the scale for 4 per cent milk. Thus the controversy revolved about both the price per hundredweight and the quality of the milk. The price of milk is a lively subject for discussion in a number of Wisconsin communities. There has been a scale of prices up for consideration in the Milwaukee district for some time, but no agreement as to an advance has been reached.

Rock County Contest Tour.

Two hundred farm boys interested in corn growing and road improvement in Rock county were the guests last Saturday on an automobile tour through southern Rock county and Winnebago county, Illinois. This was the second tour of its kind as a compliment to the boys engaged in this work, the trip last year including a visit to Madison.

The tour was sponsored by the Janesville Commercial Club, the Beloit Business Men's Association and Mr. T. H. Markham, superintendent of the county Y. M. C. A., who is also directing the agricultural contest work. The tour started at Janesville, continued through Beloit and south to Rockford, Illinois, where the party turned back after a picnic luncheon, an afternoon of amusement at Harlem Park and a tour of the city. About sixty machines were in the party, the use of which was donated by the business men interested, and more ideal weather conditions could not have prevailed.

The purpose of the trip was twofold; first, to give the boys entered in the contest work an outing, and, secondly, to foster the spirit of better roads and consolidated rural schools for Rock county. Quite a large number of farmers made the trip, affording a splendid opportunity for them to learn what Winnebago county, Illinois, is doing along these lines.

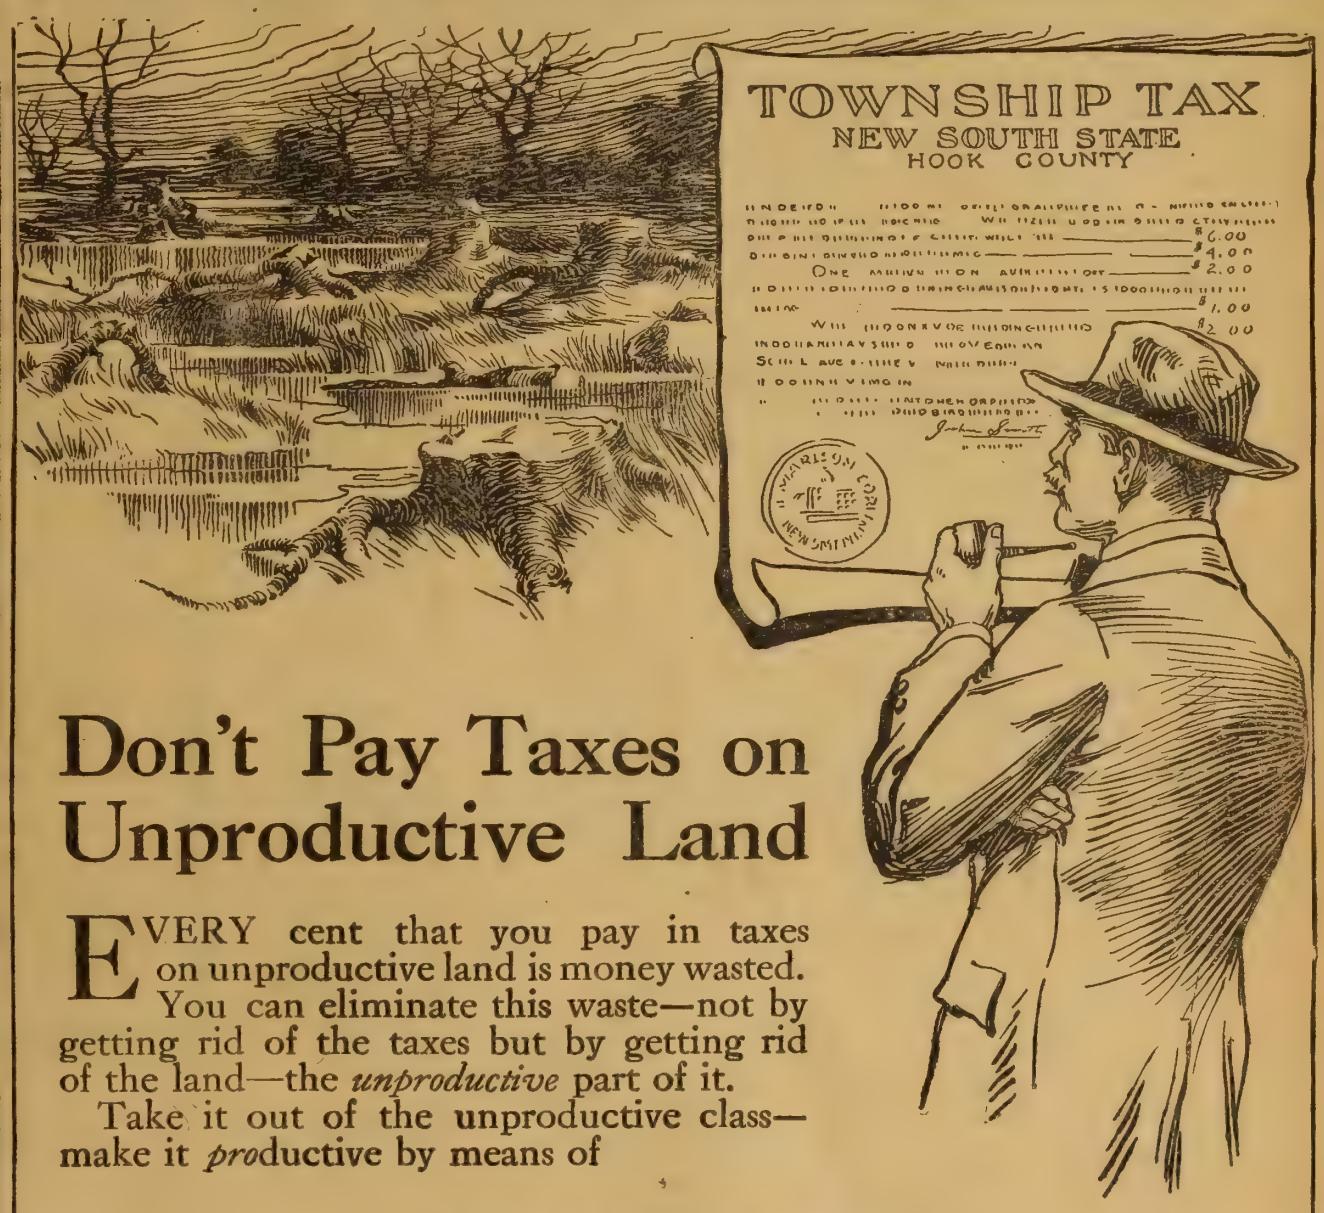
En route to Rockford an hour's stop was made at the Harlem consolidated school, which is one of the show places of the county. This school was built and opened six years ago, taking the place of four one-room country schools. The enrollment now is double the enrollment of the four schools it replaced and no visitor will doubt the value of the increased facilities. The school takes in a district comprising seventeen sections and all the 115 grade pupils either come in their own conveyances or on the interurban, which passes the door. Mr. E. M. Pallett, principal, and Mrs. A. J. Craig, county superintendent, spoke briefly of the work of this school and the three other consolidated schools in the county and in a future issue we will discuss it more fully than is possible at this time. Miss Catherine Magarr, of Madison, who has made an expert study of rural school work, spoke briefly of work being done along these lines in the East.

The road improvement has also kept pace with the school movement and past the Harlem school is now being built two miles of concrete roadway. As there is a proposal in Rock county to carry on some work of this nature, especially in building a twelve-mile connecting link between Beloit and Madison, attention was called to this improvement by Mr. G. S. Parker and Mr. C. E. Moore, of Janesville, who spoke of Rock county's aims and ambitions. The party then proceeded to Rockford for a picnic dinner, followed by an address on good roads by Mr. F. A. Cannon, of Madison, secretary of the Wisconsin Good Roads Association. Games were then enjoyed by the boys until time for starting home.

The outing was fully up to expectations and too much credit cannot be given Mr. Markham for his part, together with those who gave of their time and cars.

The final awards in the road contests will be awarded soon, but those in the corn-growing contests not until about December 1st.

Miss Mathild Krueger has been employed as county adviser under the auspices of Dunn County School of Agriculture. Her duties include health advice to the people of rural districts. She will visit the county schools and act as visiting nurse, and will advise regarding sanitary conditions, hygiene, and care of the sick. Miss Krueger is a graduate of the Illinois Training School for Nurses, of Chicago. She served six years as surgical nurse in Rush Medical College. She was for four years in charge of the Lutheran Hospital at La Crosse.



Don't Pay Taxes on Unproductive Land

EVERY cent that you pay in taxes on unproductive land is money wasted. You can eliminate this waste—not by getting rid of the taxes but by getting rid of the land—the *unproductive* part of it.

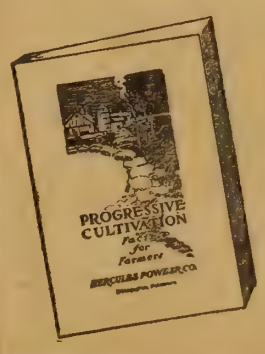
Take it out of the unproductive class—make it *pro*ductive by means of

HERCULES DYNAMITE

If you own land rendered useless by water, stumps, rocks, or by all three combined, Hercules Dynamite will clear it at the least possible expense.

If you have ever run a drainage ditch, pulled stumps, or removed rocks by hand power you know the amount of work involved. Hercules Dynamite will do the same job, and do it more thoroughly, at a small fraction of the cost in time, labor and money.

It will pay you to write us for an instructive and interesting book called "Progressive Cultivation". It is sent free on request. It treats fully not only the question of land clearing by means of dynamite but also subsoiling, tree planting, irrigation work, etc. Write for your copy today. Please use the coupon opposite.



HERCULES POWDER CO.

Summing Up Youths' Club Work.

Results of the Calf, Baby Beef and Pig Contests and Other Interests in Boys' and Girls' Club Work in State.

SOMETHING close to 25,000 boys and girls in Wisconsin are now engaged in the young people's contest and educational work carried on under the leadership of Mr. T. L. Bewick, of the Wisconsin College of Agriculture. Extension and development work is being directed in fifteen different projects, including stock-raising contests and canning clubs, and this department of the state fair, this year, proved to be one of the big features.

Owing to the large amount of clerical work involved in deciding the state championships announced as a part of the state fair program, some of the winners are just now being informed of their success. Championships were awarded on the basis of so many points for firsts, seconds, etc., in both the boys' and girls' divisions, and the splendid scores made by these winners indicate the success of this work. About 500 boys and girls exhibited at the fair, some of them in six or eight different divisions. In the work this year many prominent men of the state co-operated by offering prizes for the championships. Including state fair awards, the total premiums offered amounted to about $9,000.

Considerable interest centered in the calf, baby beef and pig-growing contests. These contests are of inestimable value to the live stock interests of the state. The plan is for a boy to take an animal at birth and raise it, the awards being made on the basis of gain, cost of production, care, etc. The grand championship of all breeds in the calf-feeding contest went to Carl Swensen, of Scandinavia, who showed a Holstein heifer, while the grand championship over all breeds in the pig-raising contest was awarded to a Chester White, shown by Frank Willwarth, of Sun Prairie. The baby beef-feeding contest was under the direction of the Wisconsin Live Stock Breeders' Association, although a part of the boys' and girls' department, and first prize was awarded to A. C. Callen, of Mineral Point, on his pure-bred Hereford. Some disappointment in this contest was expressed by the boys, as both breeding and butcher stock were permitted, the boys who were feeding steers and heifers intended for slaughter contending they should not have to compete with breeding animals. Next year breeding and feeding classes will probably be separated.

The special prize of a Holstein calf, offered by Mr. Fred Pabst, of Oconomowoc, went to the Sun Prairie High School as the best school exhibit, as previously announced, while the Linn Junior Farmers' Club, Walworth county, won the $100 special as the champion boys' and girls' club. This prize was offered by the Wisconsin Bankers' Association and the money is to be used for the purchase of pure-bred live stock or pure-bred grains. Frank Wilmarth, of the Sun Prairie school, was declared the champion boy, winning a total of $161.25 in cash, $100 of which was given by Mr. F. D. Underwood, of Wauwatosa, and the remaining $62.25 he won in individual classes. This lad won nine firsts, four seconds, three thirds, one fourth, four fifths and one sixth, giving him a total of 1,355 points.

The Sun Prairie club was declared the champion corn club, the Onalaska school the champion calf club, the Sun Prairie club the champion poultry club, the Jolly Dozen Club, of Elkhorn, the champion girls' sewing club, and the Bayfield school the champion garden and vegetable club. The three pure-bred Guernsey calves given by Mr. G. W. Browne to the stock-judging teams were awarded in this order to the winners: La Crosse County Agricultural School, Pewaukee High School and Mukwanago Boys' Club.

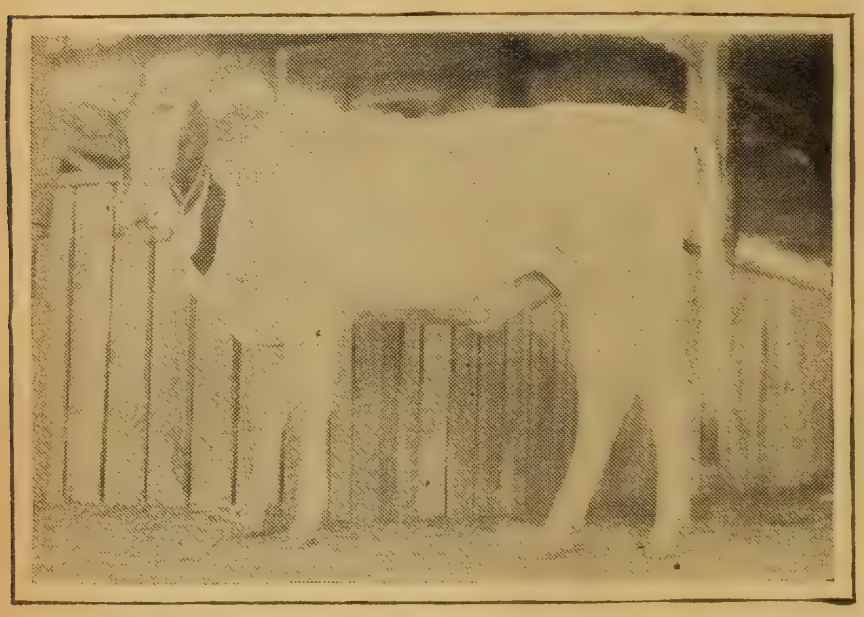
Miss Helen May Fatch, of Lake Geneva, a member of the Linn Junior Farmers' Club, was declared the champion girl, she winning one first, one second, one fourth, and one sixth, giving her a total of 195 points. Compared with the boys' scores, this sounds small, but it must be remembered the girls' work was confined to fewer activities. She was given $100 offered by Mr. Underwood for the girl securing the most points in the girls' divisions.

Bread making, sewing and canning made up the girls' work, very largely, and champions were declared in each division. Miss Wallarg Davidson, of West Allis, was found to be the champion girl breadmaker. Miss Elsie Miller, of Bayfield, won the sewing championship and Miss Fannie Stimson, of Sun Prairie, the canning championship.

In the horticultural work, Howard Haines, of Pewaukee, won first honors in the senior division in fruit judging and Spencer Ames, of Egg Harbor, the same honors in the junior division.

Scholarships in the young people's course at Madison were offered by the Merchants and Manufacturers' Association, of Milwaukee, to the county winners, those winning state championships being exempted. These awards were made in this order: First, Richard Ryan, of Sun Prairie, for Dane county; second, George E. Marvin, of West Allis, for Milwaukee county; third, Laurie Nourse, of Bayfield, for Bayfield county; fourth, Thomas Claridge, of Bayfield, for Bayfield county; fifth, Roger R. Taylor, of Pewaukee, for Waukesha county; and sixth, Christian Conrad, of Onalaska, for La Crosse county.

The Wisconsin State Fair cheese exhibit was purchased by A. Groosenbach. There were over 200 exhibits all told and the total weight of Swiss cheese alone was 3,000 pounds. There was about the same quantity of American cheese of various makes besides a splendid exhibit of brick, Limburger and other varieties.



CHAMPION CALF IN WISCONSIN BOYS' CALF CLUB CONTEST.

POULTRY AND PET STOCK.

S. C. R. I. REDS

FOR SALE—Hatching eggs from prize pens, half price for balance of season. Won 9 ribbons on 15 birds at Wisconsin State Fair, 1915; 4th pullet and 3d young pen at Chicago Coliseum, 1915. Winnebago Poultry Yards, R. 23, Omro, Wis.

HOUNDS: Coon, Fox, Wolf, Deer, and Rabbit Hounds; pedigreed and eligible to reg; Young and old stock for sale. Sent on ten days' trial. Money back guar. Otis Slater & Son, Oconee, Ill., Succes'rs to R.F.Johnson, Assumption, Ill.

HATCHING EGGS; prize-winning S.C. Reds, White Wyandottes, Buff Orpingtons, S. C. White and Brown Leghorns, $1.50 per 15. Ledge View Poultry Farms, Box W.F., Fond du Lac, Wis.

TURKEYS WE BUY 'EM. Write us what you have. THE R. E. COBB CO. 26 E. 3d St., St. Paul, Minn.

HATCHING EGGS; S. C. Reds, prize-winners all leading shows. Eggs $1.50, 15; $8, 100. Order from this ad. Address C. L. Pre-Fontaine, Box 600, Fond du Lac, Wisconsin.

EGGS for hatching from Barred Rocks, E. B. Thompson's Ringlets, $1.25 per 15, prepaid. D. S. Thorosen, Shell Lake, Wisconsin.

FULL BLOODED COLLIE PUPPIES FOR sale. Farmers' prices. J.V. Northrup, Waupun, Wis.

FOR SALE—Full blooded Scotch Collie pups, males, $5, females $4. H. R. Platt, Route 3, Box 35, Baraboo, Wisconsin.

POULTRY JOURNAL

BIG 4 Practical, Snappy, Instructive—YOUR PAPER. For the breeders of Mich., Ind., Ill., Wis., only. You should read it. 50c a year, 3 mo. 10c. Agents wanted. Big 4 Poultry Journal, Desk 29, Chicago, Illinois.

UPPER WISCONSIN

Good Year For Cucumbers.

This was a great year for cucumbers in Marinette county. It was a decidedly profitable season both to the growers and to the companies which operate the pickling vats at various locations in the county. The close of the season has brought forth some figures which show the extent of the business in a measure this season. To date 6,000 bushels of cucumbers have been received at the Crivitz pickling station and 2,600 at the Wausaukee station. Reports from other stations in the county have not been received. The delivery at the Peshtigo station was large and a new station with two pickling vats was erected at Porterfield during the summer to take care of the crop in that locality. Prices for pickles have been growing more remunerative each year, and, as the farmers grew to understand the handling of the crop better, the acreage was gradually increased until today it is one of the most important special crops in the county. Some idea of the returns made through this crop can be realized by the figures reported by some of the Marinette county growers: Delbert Fitch, one acre, $105; William Freele, one-half acre, $55; Edward Clark, two acres, $170; Earl Johnson, one acre, $70.

The big pickling companies recognize the fact that Upper Wisconsin is especially well adapted to this special crop. Libby, McNeill & Libby have for many years been encouraging the growth of cucumbers in this locality. Pickles grown in the upper part of the state are free of disease, they grow rapidly and are crisp and firm. Few crops give such big returns from a small outlay.

Howard I. Wood.

Barron County Fair.

At the annual meeting of the Barron County Agricultural Society the following officers were elected for the coming year:

President—H. W. Heintz, Rice Lake.
First Vice President—W. F. Colbert, Chetek.
Second Vice President—A. M. Crislaw, Brill.
Secretary—J. G. Rude, Rice Lake.
Treasurer—W. A. Demers, Rice Lake.
Directors—A. G. Strand, Rice Lake; James Hanson, Stanford; Wm. Bartlett, Barron; F. J. Krahenbuhl, Barron; F. H. Gardner and John Jacobson, Rice Lake.

The fair this year was a good one, but poor weather held down the attendance and it is doubtful whether the board can play even financially. Plans are being made, however, for a fair next year better than ever, and special emphasis will be laid on the dairy department. There is talk of a new building for dairy cattle.

Largest Yields Made by Pedigreed Rye.

W. W. Clark, secretary of the county order of Wood county, calls attention to the fact that the pedigreed rye is outyielding the common rye from two to fifteen bushels per acre. At the time Mr. Clark wrote his report, about the 10th of September, between 2,000 and 3,000 bushels had been threshed in the county and this is now ready for seed. There is a big demand for the pedigreed rye for seed and it will bring top prices, as it is a little more plump than common rye. Some fields in Wood county have yielded as high as forty-five bushels to the acre and Mr. Clark says one-half of this yield at present prices makes raising rye a profitable business.

Fine Creamery Record.

A splendid record was made in the fiscal year just ended by the Mellin creamery in Ashland county. In the year 1914 this creamery paid out $12,000 to farmers for butter fat. This was increased in 1915 to $37,000 and in the year just ended to $125,000. This means an increase of more than 1,000 per cent in three years. Three years ago this creamery was making fifty pounds of butter a week. Now they are making 200 pounds a day. Plans are being made for new buildings and equipment.

At Ladysmith Fair.

What is believed to be the first stump-puller demonstration ever conducted in connection with a county fair was put on recently at Ladysmith, Rusk county. Horse and hand-stump machines and dynamite did effective work on a large tract of virgin land adjoining the Rusk county fair grounds along the banks of the Flambau river. A stump piler, devised by a Rusk county settler, was used to pile up the refuse for burning. The land-clearing special had not been scheduled to stop at Ladysmith, but an extra date was found which happened to be convenient for the county fair. The demonstration was in charge of Carl D. Livingston, who has recently been chosen to head the new division of land clearing at the Wisconsin College of Agriculture.

NEW FARM HOME.
Property of A. J. Pinkerton, live stock farmer, Waupaca County, Wis.

Green County Fair.

Although rain interfered for two days, the attendance and receipts at the Green County Fair, held at Monroe, broke all records this year. The total attendance for the week was around 30,000 and the total receipts about $16,000. This is the sixty-second county fair held in Green county and the association will begin the new year with a comfortable balance in cash.

Barron Creamery Gains.

Notwithstanding the dry August in Barron county the Barron creamery received 454,894 pounds of cream, netting 129,931.7 pounds of butter fat. The business for the month showed about $45,000, which was an increase over the corresponding month of 1915. The price paid for butter fat was 34 cents net. The creamery patrons for the month numbered 863.

Increase in Land Values.

Mr. B. F. Williams, of Hillsdale, Barron county, recently sold his farm for $125 per acre. He bought the land in September, 1897, for $2.25 an acre. The farm is equipped with a fine set of buildings and the land is in a high state of cultivation. Mr. Williams moved to Barron county from Indiana.

Potatoes in Langlade.

In Langlade county potatoes are running 140 to 200 bushels to the acre, according to reports made at the Antigo warehouses. The crop in many places is not so discouraging as was at first feared.

A Fine New Dairy Building.

IT IS surprising what a commodious, practical and serviceable little dairy can be built for a very small cost. The Hemlock Manufacturers, 300 F. R. A. Bldg., Oshkosh, Wis., have prepared plans and specifications for dairy buildings of various sizes to suit the needs of the different farmers, and the plans are offered free to any farmer or dairyman who is thinking of building a dairy building. Send for a copy of the "Old Faithful" hemlock booklet. Mention The Wisconsin Farmer.—Adv.

FARMERS FLOCK TO EAGLE RIVER FOR VILAS COUNTY'S FIRST ANNUAL DAIRY SHOW.

When Nature Turns Outlaw

"Blow, winds, and crack your cheeks! rage! blow!—
You cataracts and hurricanoes, spout . . . . . "

Thus King Lear, in Shakespeare's tragedy, defies the elements. But man, even today, cannot challenge nature with impunity.

The unsinkable ship goes down like a rock from the impact of an iceberg. The fireproof building is burned. The monument, built for unborn generations, is riven by lightning or shaken down by an earthquake.

There are storms which make train service impossible, which delay the mails and which close the public highways to the usual traffic. Even in the cities there are times when the street cars do not run, and neither automobiles nor horse-drawn vehicles can be driven through floods or high-piled snowdrifts.

Such conditions increase the dependence on telephone wires, which themselves are not exempt from the same natural hazards. Fortunately, however, the Bell System has faced these dangers and well-nigh overcome them. Masses of wires are buried underground and lonely pole lines, even the most stoutly built, are practically paralleled by other lines to which their business can be transferred.

Each year the lines are stronger and the guardians of the wires are prepared to make repairs more quickly. So each year increasing millions of subscribers find their telephones more dependable and, within the limits of human power, they count upon their use in storm as well as in fair weather.

Do You Know What It Costs You for Horse Feed?

$750

U.S. Agricultural Department Bulletin No. 75 states that it costs $716.32 to feed eight horses one year — all you can raise on 40 acres — or five acres to each horse.

The Waterloo Boy One-Man Kerosene Tractor Does the Work of 8 Horses at Fuel Cost of Only $120 a Year.

It saves in fuel cost $175 a year, over a tractor of equal power, burning gasoline.

Geo. Wegener, Groton, S. D. writes: "We are pulling three 14-inch bottom plows with the Waterloo Boy Tractor—up hill and down hill through gumbo soil and everything."

Does all farm, field and road work—supplies belt power for every purpose.

We guarantee all Waterloo Boy machines.

Illustrated catalogs free. State in which machine you are interested.

Waterloo Gasoline Engine Co.
3803 W. 3rd Ave., Waterloo, Ia.

Waterloo Boy Cream Separator is in every respect a standard machine.

Waterloo Boy Milker satisfies the demand of the particular dairyman. In price and efficiency, it can't be beaten.

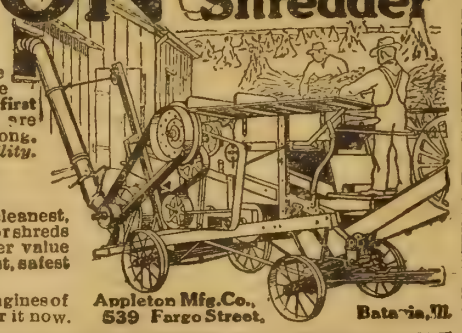
Waterloo Boy Kerosene Engine is a successful kerosene burner. Saves fuel cost.

APPLETON Husker and Shredder

Every year hundreds more farmers buy huskers, as they find the most economical, efficient way to save all the *value* of a corn crop is to husk the ears and make fodder of leaves and stalks. Appleton was the first successful husker. Appletons made years ago are giving good service today. Few parts, extra strong, mean long life, few repairs and sure *dependability*.

GUARANTEED TO DO MORE WORK WITH LESS POWER

than any husker of equal size. Appleton husks cleanest, shells least; has most efficient corn saver. Cuts or shreds leaves and stalks while husking ears. Fodder value saved from small acreage pays its cost. Easiest, safest to operate. Works in all conditions of corn.



Free Husker Book: describes 4 sizes for engines of 4 h.p. and up. Write for it now.

Appleton Mfg. Co., 539 Fargo Street, Batavia, Ill.

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. Place your name and address to it, then, to know its cost, count the number of words. The rate is six cents per word, each insertion. For instance, if your advertisement, including the address, has 15 words, one insertion would cost 90 cents, which is one cent for every thousand copies printed. Note the low cost, and read what small advertisements in The Wisconsin Farmer have done for others.

One **Wisconsin Farmer** seed corn advertiser says: "We are getting a nice response to our advertising. We will come back with a larger advertisement." Another says: **"The Wisconsin Farmer** has done good work helping me to sell lots of stock." And another writes: "Please discontinue my advertisement in **The Wisconsin Farmer.** I am getting pretty well sold out for the present."

These small advertisements did not have the advantage of the classified headings now available—under which your advertisement would appear. Any "Wanted," "For Sale," or "To Exchange" advertisement will receive prompt attention and insertion will be made in first issue possible.

THE WISCONSIN FARMER MADISON, WISCONSIN

FARM LANDS.

FOR SALE—A well improved 160 acre farm, good ten room house, two story, hip roof barn 28x44, lean 20x44. Other good outbuildings. Wind mill, good well, nice pine grove. Hundred acres under plow. Two miles from railroad. New town. $58 per acre if taken at once. Address Anton J. Roelike, Pierz, Minn.

324 ACRE Maple Grove stock farm now for sale, located 4 miles north of Lancaster, Mo., county seat of Schuyler county, 1 mile of Iowa line. Fine improved stock farm priced to sell to settle up partnership business. For particulars inquire and buy of owners, Sawyer & Sawyer, Lancaster, Missouri.

400 ACRE grain and stock farm in Clark county, S. Dak. Eight miles to town, thirteen miles to county seat. 140 acres cultivated, balance native grass. Spring water, good school, telephone and daily mail. $35 per acre. $7,650 cash, balance 6%. A bargain for some one. James E. Pickles, Elrod, S. Dak.

REAL BARGAINS in improved farms in Taylor, Marathon, Clark, Langlade counties in Wis. With and without stock and machinery. A natural dairy section. Very liberal terms. Lists & literature free. Loeb-Hammel Realty Co., (Inc.) Owners, Medford, Wis.

FARM LANDS.

960 ACRES—Florence county, choice cut over hardwood land; in solid body; 5 miles from county seat. Reasonable price and terms. Will divide. Write Peter McGovern Land Company, Florence, Wisconsin.

FORTY quarter sections east Missouri, 25 west Missouri river, South Dakota, farms, ranches best in state, for sale. If interested, write owner, C. E. Lennan, Mobridge, S. Dak.

SEEDS.

1916 GINSENG SEED for sale cheap. Guaranteed A No. 1 seeds. J. Treiber, 2310 Ohio Avenue, Madison, Wisconsin.

MAGAZINES.

CURRENT EVENTS, a quarterly magazine published by The Kansas City Southern Railway Co., contains reliable information concerning the cities and towns, lands, agricultural and mineral resources, opportunities for business in southern Missouri, western Arkansas, eastern Oklahoma, western Louisiana and southeast Texas. Sent free for one year to parties interested on request. Address Current Events, K. C. S. Bldg., Kansas City, Missouri.

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

River Falls and Roberts Association.

To the Editor:—The number of cows in the River Falls and Roberts Association which produced forty pounds of butter fat or over in September is not very high, owing to the dry weather and flies, and it would pay all of our dairymen to have some green crop to feed during dry weather, or at least silage could be fed. If this green crop could be fed with a little grain it would help keep the cows up to the normal flow of milk.

There were nine cows which produced forty pounds of butter fat or over for the month of September, as compared with seventeen for the month of August. The record for butter fat for September was made by a registered Jersey producing 52.6 pounds. This cow is owned by L. W. Ash. Mr. Ash's herd also had the best average of any in the association—the average being 31.76 pounds. I am hoping to find many more cows in the forty-pound class for October. Our cows will be better cared for as the rush season of farm work closes and silage can be fed in place of corn fodder. Most of our cows are due to freshen in the fall or winter months and we find the fall cow has the advantage of the spring or early summer cow. She will be producing a large amount of fat during the winter when the price of fat is high, whereas the summer cow produces heaviest when the price is the lowest. The fall calf gets a better start in growth, gets the advantage of the winter feeding and is in fine trim to turn out upon the pasture in the spring, although my experience with a calf is if fed well in the barn the first summer it gets to be a larger animal than if it is turned out when it misses its grain and milk.

The following is the number of cows which produced forty-five pounds of fat or over for the month of September:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
J. L. Chapman					
Clover, G. H...	4	9-3-16	1330	3.4	45.2
Nellie, G. H....	3	7-18-16	1265	3.7	46.8
L. W. Ash					
Polly, R. J.....7		3-15-16	809	6.5	52.6
Gem, R. J.....4		7-6-16	970	4.7	45.6

C. G. Carlson, Official Tester.
J. M. May, Secretary

Wood County Association.

To the Editor:—The following from the record of the Wood County, Wisconsin, Cow-Testing Association is a list of cows which produced forty-five pounds of butter fat or more for the month of September:

Owner, name and breed	Age	When fresh	Pounds Milk	Per cent of fat	Pounds B. fat
J. C. Kieffer					
No. 1, R. H.....6		3-12-16	1680	3.9	66.5
No. 14, R. H.....6		7-10-16	1475	3.6	55.1
Wm. Schultz					
Brindle, G. H....7		4-30-16	1448	3.9	56.5
Bleemie, G. H...4		3-14-16	1280	4.6	58.9

J. L. Williams, Official Tester.

Alban and New Hope Association.

To the Editor:—The following is some of the results obtained by the Alban and New Hope Cow-Testing Association during the month of August.

Mr. Alfred Brekke had the best herd average, his Holstein cows giving an average of 917 pounds of milk and 35.7 pounds of butter fat per cow.

C. E. Ericksen's grade Guernsey cow produced the most in pounds of butter fat. She gave 1,105 pounds of milk and 51.9 pounds of butter fat.

There were only twelve cows that produced more than forty pounds of butter fat during this period, the reason for this being shortage of pasture, and quite a number of cows are having their resting period preparing for early winter and late fall freshening. This is a very good idea, because the farmer has more time to properly tend to his stock during the winter. He also gets better returns for his products during the winter months and is enabled to raise better calves from fall fresh cows. The farmers that had silage during the summer months secured the best results, as their herds did not shrink so much in milk yield. Every farmer ought to raise an extra acre or two of corn every year to prepare for summer drouths, as silage fed during this time means dollars in the dairyman's pocket. "More corn, more silos and more and better live stock means bigger profits for the farmer and the nation."

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

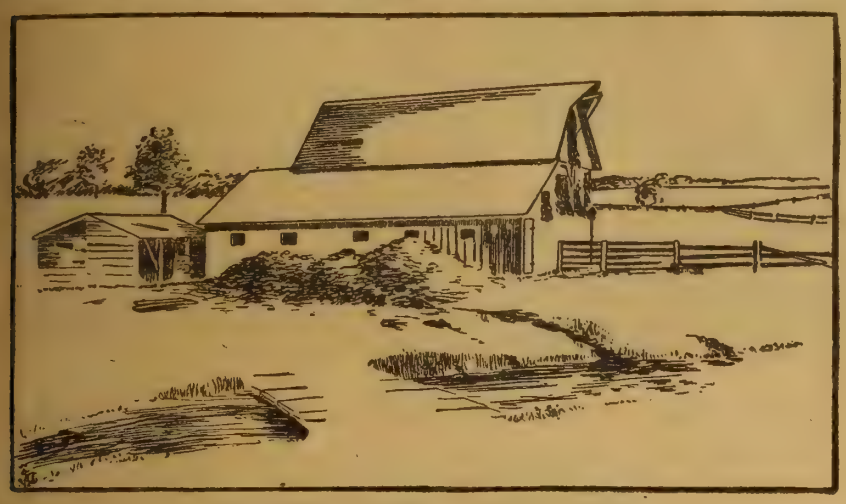
Getting Full Manure Values.

Unless the Wisconsin Farmer Takes Proper Care of Stable Manures and Distributes Properly He Is the Loser by Many Dollars.

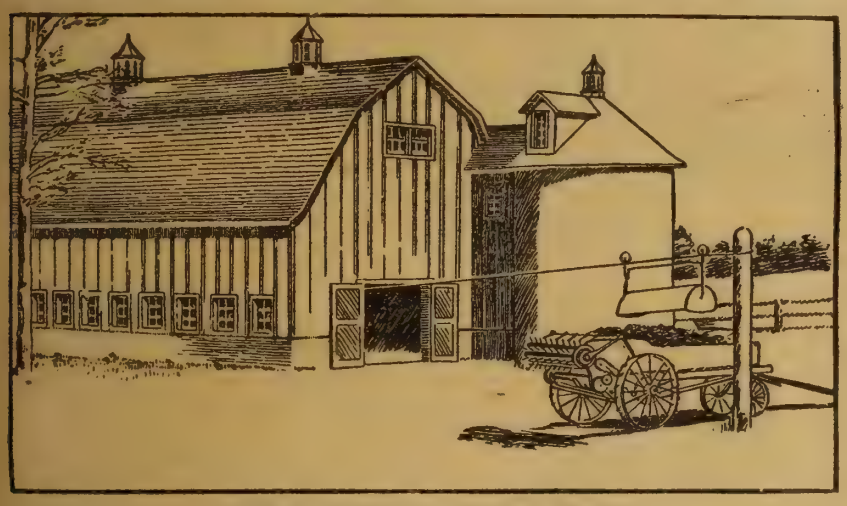
FARM fertility may be conserved by the proper distribution of farm manures. How often we have heard this, yet it must be rung in our ears more and more, for there is considerable waste as yet in this state of the farm manures. In some states, according to the Wisconsin Experiment Station, as high as 6 to 7 per cent of the total value of farm crops raised is spent in fertilizers. In Wisconsin some commercial fertilizer is used to good advantage, especially where tobacco or potatoes or other special crops are raised, but we ought to be able to get the most of our fertility from the farm without making purchases from the outside except in instances where some needed chemical quality of the soil is lacking. A well-fed horse produces about $25 worth of manure in a year; a dairy cow about $30 worth, a beef animal about $20 worth, a sheep about $3 worth and a hog about the same amount in value as the sheep. Why not sit down and figure out what the manure on your farm is worth and then figure also whether the full value is being gotten out of it. Live stock and legume crops are designated by the Wisconsin station workers as Wisconsin's two great fertilizer factories and they are working day and night. It only remains for those who manage the farm to get full value and avoid waste.

Fertility is lost by scanty bedding. Tight stable floors and liberal beddings save the liquid, the most valuable part of manures. If manure is left in open barnyards or under eaves much of the fertility runs off in drainage water. Loosely piled manures permits "fire-fanging." Manures should be packed closely and kept wet. Piling manures in the field instead of properly spreading them promotes an uneven growth of crops and causes waste.

The subject of fertility and the proper method of getting back to the land 80 per cent of the fertility which animals take out in feeds is an old one, but ever more important each year.



LEACHING TAKES A HEAVY TOLL.
Stable manure is worth too much to neglect. Proper care costs but little more.



SAVING FERTILITY MAKES MONEY.
Stable manure should be hauled direct to the fields, or stored in compact piles, or under a shed.

The Elkhorn Fair

A splendid exhibit of live stock and agricultural products crowded the buildings at the Walworth County Fair, held in Elkhorn. The fair suffered somewhat in attendance on Wednesday, which is usually an important day, owing to the fact that the report had been spread abroad that children under eighteen years of age would not be admitted. Thursday's crowd was a record breaker.

There were about 150 head of cattle on display, including some of the best herds in Walworth county, 100 sheep and 286 swine. In the horse division there were 166 head, and in the speed barn 100 race horses. The poultry show was exceptionally good, with 1,200 birds exhibited.

Among the exhibitors in the horse division were: Ceylon Court Farm, Lake Geneva, with thirteen head of Percherons, Belgians and Shires; Wm. Bellman, of Delavan, with Belgians and Percherons; D. K. Latta & Sons, of Clinton Junction, with Percherons; Cook Brothers, with a standard-bred stallion; Boynton Brothers, Janesville, with Hackneys and Arabians; Sam Wallace, of Beloit, standard-bred stallion, carriage horses, driving horses, grade roadsters, draft horses and four Arabians; Nathan Dickinson, of Lake Geneva, a Percheron stallion, Merlati; Fred Cobleman, Elkhorn; R. Whitte, Waukesha; Alfred Olsen, Elkhorn; Floyd Lean and Ed Hicks, Elkhorn; W. W. Briggs, Delavan, and Wm. Hurdis, of Elkhorn. Fred Coles, of Delavan, exhibited a string of Shetland ponies and George White, of Elkhorn, also showed two Shetland ponies.

There were thirty-one head of Jerseys in the dairy cattle division. Wm. Knight, of Eagle, Wisconsin, had the largest showing, with fifteen head. H. H. Loomer, of Delavan, showed ten head and Alfred Olsen, of Elkhorn, six head.

There were twenty-nine head of Ayrshires exhibited, of which seventeen were owned by Stephen Bull, Racine, and twelve by James Finn, of Whitewater. There were twenty-six head of Holsteins shown, fourteen being owned by Harry D. Dunbar, of Elkhorn; ten head by N. Dickinson, Lake Geneva, and two head by Moss Brothers, of Elkhorn. Birch & Thompson, of Lake Geneva, showed eighteen Herefords, and Boynton Brothers, of Janesville, eighteen Polled Durhams. Ira Inman, of Beloit, showed his fine herd of thirteen Brown Swiss. The Tilden Farms, of Delavan, showed eleven head of Guernseys. Altogether, the cattle show was very creditable, although the cold weather cut it down somewhat in numbers.

There were ninety-eight sheep shown, the exhibitors being as follows: M. F. Hogan, Wanakee, eleven Cotswold and two Oxfords; J. C. Ellis & Son, of Evansville, ten Rambouillets; W. G. Miles, of Evansville, eleven Hampshires, thirteen Shropshires and ten Southdowns; E. Crall & Son, of Evansville, thirteen Cheviots, seven Dorsets, nine Lincolns, one Cotswold, eight Merinos, three Oxfords and twelve Angora goats.

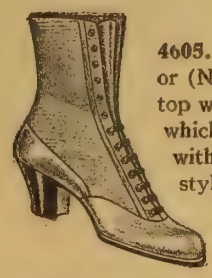
A new record from the standpoint of numbers was made in the swine division, where 286 head were shown. The largest previous number was 285, in 1914. An interesting exhibit was the Mule-Foot hog shown by Walter Knilans, of Richmond.

The largest exhibit by an individual breeder was that of W. W. Vaughn & Son, of Spring Prairie. These well-known breeders of "classy" porkers are showing fourteen head of Hampshires, twelve Duroc Jerseys and sixteen Chester Whites. W. G. Bartholf, of Spring Prairie, has twenty-three Durocs and seven Poland Chinas. Other exhibitors together with the number of entries in each class include: John D. Gant, Delavan, seventeen Durocs; H. J. Noblet, Elkhorn, four Chester Whites, six Durocs; Walter Beesecker, Delavan, seven Chester Whites; Rob Sturtevant, Delavan, eight Durocs; Roy C. Church, Elkhorn, ten Durocs; W. H. Esterly, Whitewater, six Poland Chinas; Theo. Bartleson, Springfield, seventeen Chester Whites; E. H. Parker & Son, Janesville, twenty-seven Durocs, two Hampshires; Heck Bros., Lyons, twenty Poland Chinas; George Lasch, Lyons, seven Poland Chinas; Moes Bros., Elkhorn, one Poland China; O. P. Coates, Elkhorn, ten Chester Whites; Cook Bros., Lyons, ten Chester Whites; C. H. Wiswell, Elkhorn, six Chester Whites; Whitmore Bros., Lyons, twenty-two Berkshires.

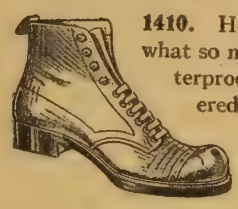
The success of the National Swine Show, which was held in South Omaha, Neb., last week means that the institution becomes a permanent one, with splendid future possibilities.

FOOT-Schulze Shoes are made *right*. But, more than this, they are ***sold*** right. They are distributed direct from manufacturer to the dealer and by him fitted to your feet. Never sold by mail. And not every dealer handling shoes can act as a distributor for Foot-Schulze Shoes. You'll generally find him the best merchant in the community. Put on a pair of Foot-Schulze Shoes—their comfort, durability and lasting good looks will prove they are better. Find the Foot-Schulze dealer—they're everywhere.

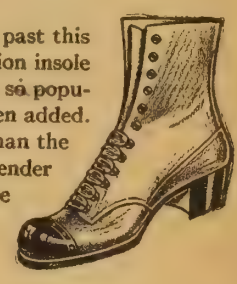
This Mark On the Sole Denotes Quality.



4605. Young woman's smart military lace boot in dull calf, or (No. 4213) patent leather. The combination of cloth top with the narrow strip at the eyelets lends that "touch" which takes it out of the class of the ordinary. Plain toe with medium narrow effect. Military heel. If you want style, (and wear, too) you'll make no mistake in selecting this shoe.



1410. Here's a ***waterproof*** shoe that's really dressy—just what so many business men want. The Web-Foot line, waterproofed by a thoroughly effective method. The covered piping just above the sole together with damp-proof interlinings furnishes a shoe that keeps water out remarkably well. A variety of lasts, medium or wider toes, to choose from, most any style you want. This is a real money's worth shoe.



4027. Because it has been the best seller in the past this Vici kid blucher must stand sponsor for the cushion insole line. But cushion insoles for women are becoming so popular that button and regular lace models have been added. Also lasts that are far neater and more graceful than the typical cushion insole pattern. If your feet are tender or give you trouble, you should try a pair of these Foot-Schulze cushion insole shoes. They're almost certain to relieve you.

National Swine Show Made Fine R

Members of the National Swine Growers' Association As

NEVER were ribbons coveted more devoutly by swine breeders than were those distributed at the National Swine Show held at South Omaha, Nebraska, last week. Conceived in the high purpose of benefiting the live stock industry of the United States and fostered by the National Swine Growers' Association, the success of this event was foreshadowed and foretold only in part. The state fair circuit had accomplished the important purpose of winnowing out the chaff so that the show last week was a round-up of the winners. They were there from nineteen states and fitted to a form never before excelled at any swine show. In all there were 1,409 swine in the pens and they were literally show hogs and not there for "sale purposes only." To be sure, there were a few dozen newly farrowed pigs, because laws of maternity will operate show or no show, but those who consider numbers only for purposes of comparison fail at a most important point. The record of getting together the best of all the breeds from all the swine states stands alone and unique in the history of all show-ring events.

With the holding of the first national show swine breeders enter upon a new epoch, because here is proof that men are willing to consider the great cause of swine improvement of first importance, giving to inter-breed rivalry a second rank. Surely an industry represented by $700,000,000 is deserving of an exposition of its very own and when 400 adherents of the principal breeds plight their troth at the same banquet board, as they did in Omaha last week, it may be accepted without mental reservation that what they purpose doing, that will they accomplish. It will doubtless be a still greater show in 1917, but the success of the first event insures it a permanent place among the list of purposeful institutions.

The location of the swine show placed a heavy responsibility upon the officers of the National Swine Growers' Association. There were strong claims put forward by cities more centrally located, but the inducement offered by Omaha proved to be most attractive, so that this hustling city landed the show. The location turned out to be an exceptionally advantageous one. The horse barns of the Union Stockyards proved to be ideal housing quarters, the individual stalls being easily converted into suitable pens. This building was well lighted, sanitary in every respect, and, with its broad aisles for visitors, it could scarcely be excelled in its adaptability to such a purpose. The attendance was all that could have been expected, certainly enough to tax the seating capacity of both ring sides. If fault could be found with any part of the show it would be that there was too much congestion in the judging quarters. For such an occasion there is needed ample room on both sides of the judging ring and visitors should be absolutely excluded from the ring itself. Wherever the 1917 show is located more ample provisions will have to be made in this regard because part of the educational value of the show is lost where there is too much congestion.

Visitors warmly welcomed the plan of issuing a complete catalog of all hogs entered for the show. Every entry was numbered and reference to the catalog enabled the visitor to quickly find the animal's name, together with the name and number of both sire and dam. The arrangements made by the committee in charge were, in this respect, far ahead of any of the swine departments of our state fairs. Every man at the ring side had a catalog in his hand and long before the ribbons were tied had mastered the breeding of the prospective winners. It is safe to say that thousands of swine breeders, coming from at least half the states in the Union, carried with them to their homes these show catalogs, marked by their own hands, showing the winners in all classes of the breed in which they were especially interested.

No special attempt had been made by the officers to feature educational exhibits, but the Nebraska Experiment Station had in-

stalled a miniature central hoghouse with skillfully arranged feed yards, pens and troughs. Among other things the self-feeder, which is coming into popular use, was located in these yards together with alfalfa racks, dipping tanks and other necessities and conveniences of a practical swine-breeding plant. The interest shown in this display would indicate that the National Swine Show has possibilities to develop in bringing to the show certain kinds of educational features. An eno by the experiment stations i breeding as well as for fatteni form and placed before the tribute materially to the inte were a number of commerci Many kinds of hog oilers we were shown in all sorts of v kinds received the special a there were sprayers, drinkin which are of interest to swine at a show of this character.

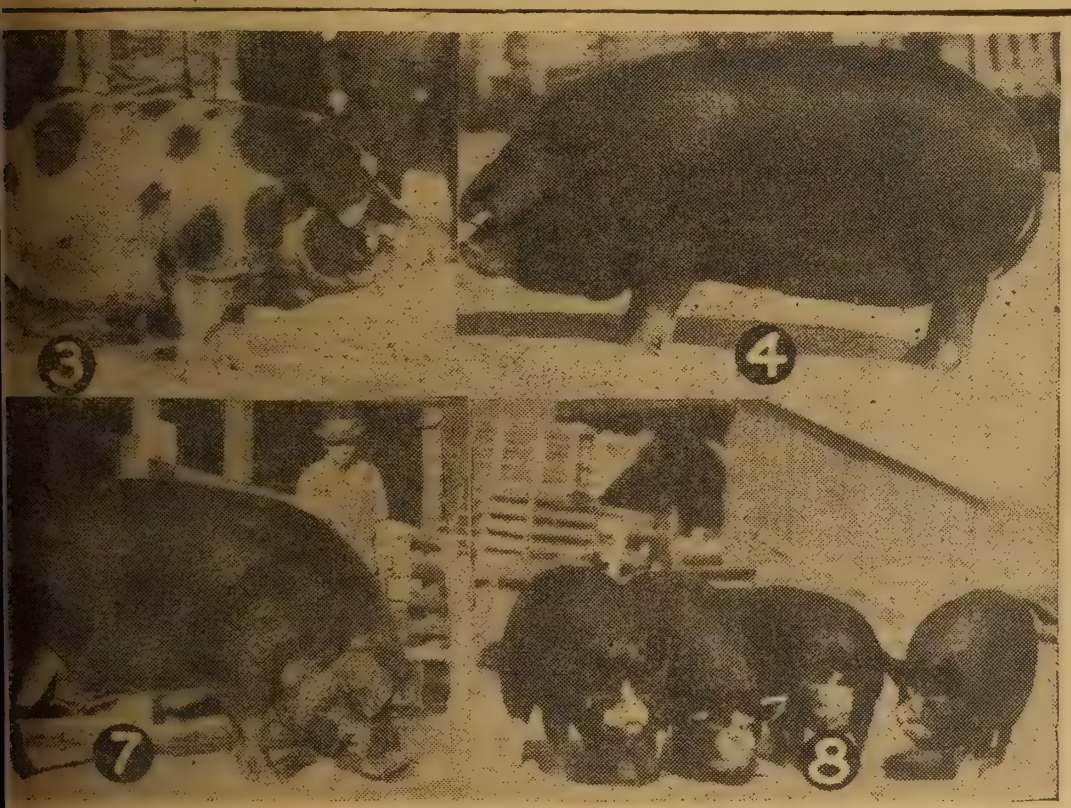
ast week would have been
nent of the science of im-
munization. A certificate of health accompanied every hog entered, so that when the various herds were returned to the shipping point from which they started there will be advanced assurances that hog cholera will not be disseminated. Those who have fought the use of serum must be forced to acknowledge that without the use of this product there could have been no such thing as a successful National Swine Show. Its continued use means more comprehensive plans can be made for the shows in the future and there can be full and earnest co-operation between breeders with complete assurances that valuable hogs will not be swept away by the worst of all contagious diseases, hog cholera.

The various breed associations assumed a large responsibility when they selected the judges for the National Swine Show. They chose men who have long since been recognized as expert judges, and the work outlined for these judges in the show ring called for fair play and a square deal. The task of judging any one of the breeds shown last week was an exceedingly difficult one, but the records made, when summed up at the close of the show, indicated that a most satisfactory distribution of the premiums had been made. No one breeder had the inside track and no clique was in control, as the difficult feat of sorting out the winners was patiently undertaken by the judges. Ringsiders with catalog in hand sat in many instances, breathless for the final decision and in most cases the judge's verdict harmonized with the majority of the onlookers. If the judges catered especially to the big type it can only be said that this is the type that is enjoying supreme popularity at the present time, and there was so much quality in the winners that no man could say that too much emphasis had been placed on the importance of size and scale. The judges at the National Swine Show performed an important task for the swine breeders of the United States last week and we believe that they made such a record as to entitle them to the good wishes and good will of our best breeders.



r Duroc Jersey sow pig, Orion's Willetta. 3—Bock & Shirk's grand champion Big Maid 1st. 5—Johnson's first-prize junior Duroc Jersey boar pig, National Colo-op. 7—Jackson's grand champion Duroc Jersey boar, Orion Cherry King Junior.

As said before, there were 1,409 swine in the pens at the national show and exhibitors were present from nineteen states of the Union. The Hampshires led in point of numbers with 355 animals in all; the Duroc Jerseys followed closely with 350 head; the Chester Whites were third in the list, with 244 to their credit. The Poland Chinas came next with 211 head, then followed the Berkshires, 162; Spotted Poland Chinas, 33; Tamworths, 20; Yorkshires, 17, and Mule-Foot hogs, 17.. Although there was no classification for Tamworth, Yorkshire and Mule-Foot hogs, yet good exhibits in these three breeds were made by B. F. Davidson, Menlo, Iowa (Yorkshire); J. B. McCoy, Farragut, Iowa (Tamworth); J. W. Cox & Sons, Arapahoe, Nebraska (Mule-Foot). The states represented by exhibitors at this show included Colorado, Indiana, Illinois, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, New Jersey, Ohio, Oklahoma, Pennsylvania, Rhode Island, South Dakota, Texas, Washington and Wisconsin.

As a detailed list of the prize winners is given in the following pages, it is scarcely necessary to make further comment on the work of the judges, although it is quite in order to say that more painstaking effort has never been made in an American show ring. The judges were selected by the various record associations and were considered by these associations to be men of the highest standing, each being an authority on the breed which he was called upon to judge. The work of placing the ribbons was much more difficult than is the same task at state fairs, because this was the show of prize winners. The East and the West met at Omaha and champions of the various circuits were brought together for the first time, thereby making the judging work exceedingly difficult. In spite of this, the results of the judging last week, taking them as a whole, proved to be exceedingly satisfactory. Ringsiders made no attempt to conceal their gratification when the ribbons were tied, while exhibitors graciously accepted the awards handed them, gratified in every case when a place was secured inside the monies.

Although the sum of $15,000 was paid out in premiums last week, it was apparent that this sum scarcely answered the needs of the association. Every breeder who entered at the National Swine Show involved himself in a heavy expense and, although eight premiums were given in each class, there were so many good entries in many of the classes that recognition should have been extended

or yearling Poland China sow, Orange Molly. 4—Patterson's aged Hampshire sow, Rose. 5—Swain & Sons' first-prize senior yearling Duroc nd champion Hampshire boar, Lookout Lad. 8—Rhode & Lewis' second-prize Hampshire sow, Keepsake Second.

further down the line. It would be encouraging to breeders if in the future an even dozen cash prizes could be given in each class and so much the better if an increase could be made in the amount of cash offered from the first to the last prize. The breeders' associations did their part and did it well and whether they can increase their premiums in the future remains to be seen, but in any event a permanently successful national show can only be maintained by giving to breeders who fit and show their hogs the most liberal kind of treatment. Even at that it is not expected that breeders will make a profit out of their winnings, and when it is suggested that the premiums be increased this is done mainly in order that those who show in the future will have their losses from showing cut down.

No report on the National Swine Show will be complete without the favorable commendation of those in charge. General Manager W. W. McFadden received the praise of all those who participated in the showing as exhibitors. He has taken an important part from the beginning in the inauguration of the National Swine Show, and, as president of the National Swine Growers' Association, he has in every instance used his influence in a non-partisan way to advance the cause of the pure-bred swine industry, with fairness to all breeds and partiality toward none. General Supt. E. Z. Russell carried through his part well in perfecting the details of the show and he deserves the highest commendation of the swine-breeding fraternity. As secretary of the National Swine Show, James J. Doty has worked incessantly to make the event a success and the enthusiasm shown by him has been an inspiration to his coworkers, thereby making it possible to bring together almost 1,500 of the best pure-bred hogs that have ever been placed under one roof at one time.

DUROC JERSEYS.

Prof. H. W. Mumford was called to judge an exceptionally strong show extending throughout all of the classes. He picked consistently the long, smooth, stretchy type with ability to move readily on their feet. There were many Durocs in the exhibit of the caliber that have been winning state fair championships. It was a blue-ribbon show all around. The aged boar class brought together the Ohio and Iowa purple winners. Orion Cherry King Jr. is not so wide nor thick as Great Wonder, but more inclined to the lengthy sort. Early maturity was most pronounced in the Waltemeyer boar. This was a ring of great Duroc sires. Swain won on Cherry King Orion in the senior yearlings. He is long, smooth and big, of the same type as the first-prize aged boar. Tommy Doyle, at the head of the junior yearlings, is a wonderful boar. He has width, smoothness and strong pasterns and all this combined with scale. The second junior yearling is long, stretchy and smooth, but not as thick as the Van Meter boar. Algo's Giant is a remarkable boar pig. Big, smooth and symmetrical, he stands on good pasterns. He was made junior champion here at Iowa. National Col. 1st was the first-prize junior pig at Ohio. He is a long, growthy type; hardly as near the ground as others below him in the prize list.

The aged sow class was the feature of the show. Twenty-one better sows have never been shown. Critic's Perfection harmonizes with her name. Her faults are few and hard to find; her virtues many. She is in the fittest shape and it may be long before as good a one is seen again. Her right to grand championship was little to be disputed. The senior yearling sow heading the class is big, deep and stretchy. She gave the aged sow a close rub when difference in age is computed. Johnson's junior yearling sow is a long, smooth one and has a chance to widen a little as she grows. This was one of the strongest classes of the show. There were many exceptional sows. Orion's Willetta 3d is a real Duroc type. She came into the junior purple. Her promise of size and growth is a strong feature. Orphan Belle headed the largest class of the show. She will be heard from in the future, if returned to the ring.

The round-up futurities for boar and sow pig brought together winners from the East and West. It was a convincing demonstration of what Duroc breeders are accomplishing. Classes were large and prizes liberal. The groups filled the ring so that there was little space left for them to be seen to advantage. Strength was prominent in all classes. It was a record Duroc Jersey show throughout.

Exhibitors: L. F. Atwater, Bangor, Wis.; C. F. Burke, Rocky Ford, Colo.; L. S. Berry, South Houston, Tex.; Geo. Briggs & Sons, Clay Center, Neb.; J. R. Breed, Hydro, Okla.; J. O. Young Herd—1st Jackson on herd headed by King Orion Cherry; 2d Waltemeyer on herd headed by Grand Model 44th; 3d Johnson on herd headed by National Col. 1st; 4th Widle & Sons; 5th Crow & Sons; 6th Johnson; 7th Swale; 8th Williams.

Herd Bred by Exhibitor—1st Johnson on herd headed by Oakland's Orion Cherry King; 2d Jackson on herd headed by Orion's Cherry King Jr.; 3d Jackson on herd headed by King Orion Cherry; 4th Waltemeyer; 5th Crow & Sons; 6th U. S. Indian School; 7th Widle & Sons; 8th Johnson.

Get of Sire—1st Jackson on herd sired by Orion Cherry King; 2d Jackson on herd sired by Orion Cherry King; 3d Waltemeyer on herd sired by Grand Model; 4th Waltemeyer; 5th Atwater; 6th U. S. Indian School; 7th Johnson; 8th Widle & Sons.

Produce of Dam—1st Jackson on produce out of Willetta I. J. 2d; 2d Johnson on produce out of Belle of Oakland; 3d Waltemeyer on produce out of Fancy May; 4th Johnson; 5th Widle & Sons; 6th U. S. Indian School; 7th Widle & Sons; 8th Crow & Sons.

Roundup Duroc Jersey Futurity for Sow Pig—1st Waltemeyer on Golden Lady 29th; 2d Widle & Sons on Critic's Beauty 1st 3d Crow on Futurity Lady 1st; 4th Van Meter on Zoalena 2d; 5th Barnes on Select Lady 1st; 6th Widle & Sons on Critic's Dream; 7th Crow on Crow's Futurity Lady 3d; 8th Van Meter on Theda Bara; 9th Widle on Critic's Beauty 2d; 10th Widle on Critic's Dream 2d.

Junior Champion Sow—Jackson on Orion's Willetta 3d.

Senior Champion Sow—U. S. Indian School on Critic's Perfection.

Grand Champion Sow—U. S. Indian School on Critic's Perfection.

Junior Champion Boar—Wellendorf on Algo's Giant.

Senior Champion Boar—Jackson on Orion Cherry King Jr.

Grand Champion Boar—Jackson on Orion Cherry King Jr.

THE POLAND CHINA SHOW.

If anyone still doubts the fact that Poland Chinas are both big and smooth, he should have seen the National Show. It was the greatest collection of big hogs with quality ever exhibited. The judges were never disappointed in finding this type to fill the moneys in each class. The aged boars each showed one thousand pounds or better of smooth, firm pork. Sievers' Long Big Bone is conceded to be a close approach to absolute perfection in his low-down type, smooth flesh and good balance. While it was a good fight, ringside favor for grand championship swung his way as soon as he headed the aged class. His closest contest was with Caldwell's senior yearling, a truly remarkable hog. But a few days too old for the junior yearling class, the Caldwell boar had remarkable size, being considerably over one thousand pounds in weight, and with it smoothness and uniform fleshing. He came to Omaha with the grand championship of Kansas in his possession. Smooth Big Bob won the blue among the junior yearlings for Jensen & Sons. A big, stretchy pig, he should make a good one to grow out. G. & A.'s King Joe acquired the junior purple in Iowa on his way here and won the junior championship in the warmer competition he met at Omaha. He is well fitted, has the bone, good feet and received popular favor as junior champion. The leading junior boar pig was again an Iowa winner. While in the ring before the ribbons were tied, Mr. Conrad sold him for $300. He is the long, smooth, stretchy kind that keeps growing.

The aged sows were one of the greatest classes of the show, averaging 800 pounds. It was a case here of all being good. Sievers' Big Maid 2d is nearly everything a Poland China sow should be; smooth, thin, but big and robust. She made a popular grand champion. Fair Queen, the senior yearling, is the same sort and made the competition for senior champion a warm one. Meharry had a big, smooth junior yearling at the top of the class. The junior champion at Des Moines came out to win the senior pig class. She had to give way to the junior pig, Pana Uhlan, when the championship was awarded on sows under one year.

Groups made a splendid showing. Sievers, with two grand champions, had a great aged herd; he also figured strongly in the other groups. Throughout the showing of herds, the ring was overflowing with big, smooth packers' type Polands.

The most favorable kind of commendation was accorded Chas. A. Marker, who judged the Poland classes. He performed a difficult task in a most creditable manner.

Exhibitors: John H. Andressen, Manilla, Iowa; Becker Bros., Richfield, Neb.; G. L. Burgess, Bement, Ill.; I. J. Conrad, Melbourne, Iowa; Fred B. Caldwell, Howard, Kan.; Fred Dralle, Mission Hill, S. D.; Phil Dawson, Endicott, Neb.; T. J. Dunbar, Coin, Iowa; Philip A. Frazier, Ft. Crook, Neb.; H. B. Francis, New Lenox, Ill.; W. J. Graham, Howard Lake, Minn.; H. Wade Gillis and Osbert Allender & Sons, Mt. Pleasant, Iowa; I. J. Gallagher, North Bend, Neb.; M. J. Hather, Ord, Neb.; Nels C. Fontanelle, Neb.; John Miller, Rock Valley, Iowa; D. H. Paul, Haverhill, Iowa; F. G. Paul, Marshalltown, Iowa; Fred Sievers, Audubon, Iowa; Mark I. Shaw, Monroe, Iowa; A. D. Severe, Dows, Iowa; Frank Stevens, Imogene, Iowa; W. E. Willey, Steele City, Neb.; Walter & Son, Effingham, Kan.; H. O. Williamson, Herman, Neb.; Alvin Windom, Nodaway, Iowa.

Judge, Chas. A. Marker, Auburn, Ill.

Consulting Judge, Thos. A. Shattuck, Hastings, Neb.

Aged Boar (10 shown)—1st Fred Sievers on Long Big Bone; 2d Meese on Meese's Rexall; 3d Graham on Big Price; 4th Windom on Expansion King Orphan; 5th Lagoni on Big Cloverdale 2d; 6th Gallagher on Long Hercules; 7th McDonald on McChief; 8th Andressen on Long Bob.

Senior Yearling Boar (6 shown)—1st Caldwell on Caldwell's Big Bob; 2d McKelvie on Mc's Sampson; 3d McNutt & Meese on Black Monarch; 4th Meharry on Double Wonder; 5th Dralle on Wonder Surprise; 6th McDonald on King James.

Junior Yearling Boar (11 shown)—1st Jensen & Sons on Smooth Big Bob; 2d Marlow & Son on Missouri Blue Valley; 3d Dawson on Robin Hood; 4th Sievers on Smooth Big Bone A.; 5th Andressen on Blue Valley King; 6th Hather on Orphan Wonder; 7th Meharry on Goldengate Wonder; 8th Hather on A Big Orphan.

Senior Boar Pig (19 shown)—1st Gillis & Allender on G. & A.'s King Joe; 2d Graham on Big Peter Jr.; 3d Kramer on K.'s New Banker; 4th Francis on Meritorious; 5th Dawson on Radio; 6th Meese on King Rexall; 7th McNutt on Illustrator; 8th Dawson on Radium.

Junior Boar Pig (17 shown)—1st Conrad on Long Orange; 2d Meese on Futurity A.; 3d Hather on Orphan Lad; 4th Graham on Big Peter 2d; 5th Lacy & Son on Giant Big Bone; 6th Graham on Big Peter 3d; 7th D. H. Paul on Futurity Wonder; 8th Williamson on Jumbo Chief.

Aged Sow (11 shown)—Sievers on Big Maid; 2d McDonald on Miss Big Knox; 3d Meharry on Orange Dolly; 4th Meharry on Illinois Patsy; 5th McDonald on Miss Price 4th; 6th Dawson on Belle Wonder; 7th Willey on Annie Price 36th; 8th Dunbar on Lillie Wonder.

Senior Yearling Sow (8 shown)—1st Miller on Fair Queen; 2d Walter & Son on Bob's Big Lady; 3d Graham on World Beater; 4th Meese on Miss Monarch Wonder; 5th Meyer & Sons on Bonnie Star; 6th Severe on Severe's Choice; 7th Graham on Record Breaker 2d; 8th McDonald on King's Lady 3d.

Junior Yearling Sow (14 shown)—1st Meharry on Orange Mollie; 2d Sievers on Smooth Maid 2d; 3d Walter & Son on U. S. Wonder; 4th Meese on Mastiff Queen 2d; 5th F. G. Paul on High Back Modesty; 6th Severe on Big Wonder Maid; 7th McDonald on Priceless Lady 2d; 8th Meese on Mastiff Queen 3d.

Senior Sow Pig (13 shown)—1st F. G. Paul on Big Black Modesty; 2d Walter & Son on U. S. Wonder 2d; 3d Meese on Monarch's Delight; 4th Graham on Big Peter's Best; 5th Dawson on Daisy Uhlan; 6th Walter & Son on U. S. Wonder 3d; 7th Meese on Monarch's Delight 2d; 8th Meharry on Miss Choice 2d.

Junior Sow Pig (22 shown)—1st Dawson on Pana Uhlan; 2d Hather on Orphan Lady 1st; 3d Graham on Winning Queen; 4th D. H. Paul on Sweet Look; 5th Willey on Omaha Girl; 6th McNutt on Miss Price; 7th Graham on Futurity Queen; 8th Meyer & Sons on Ak Sar Ben Queen.

Aged Herd—1st Sievers on herd headed by Long Big Bone; 2d Meharry on herd headed by Double Wonder; 3d McDonald on herd headed by Mc's Chief; 4th Meese; 5th Graham; 6th Dawson; 7th Willey.

Young Herd—1st Dawson on herd headed by Radio; 2d Graham on herd headed by Big Peter 2d; 3d Meese on herd headed by Futurity A.; 4th Hather; 5th Lacy; 6th McDonald; 7th Becker Bros.

Herd Bred by Exhibitor—1st Meese on herd headed by Meese's Rexall; 2d Sievers on herd headed by Smooth Big Bone A.; 3d Meese on herd headed by King Rexall; 4th McDonald; 5th Hather; 6th Graham; 7th Lacy; 8th Meyer & Sons.

Get of Sire—1st Walter & Son on herd sired by Big Bob Wonder; 2d Meese on herd sired by Big Monarch; 3d Sievers on herd sired by Smooth Big Bone; 4th Dawson; 5th Graham; 6th Hather; 7th Meyer & Sons; 8th Williamson.

Produce of Dam—1st Walter & Son on produce out of King's U. S.; 2d Sievers on produce out of Big Maid 1st; 3d Graham on produce out of Miller's Best; 4th Meese; 5th Hather; 6th Dawson; 7th McDonald; 8th Williamson.

Junior Champion Sow—Dawson on Pana Uhlan.

Senior Champion Sow—Sievers on Big Maid 1st.

Grand Champion Sow—Sievers on Big Maid 1st.

Junior Champion Boar—Gillis & Allender on G. & A.'s King Joe.

Senior Champion Boar—Sievers on Long Big Bone.

Grand Champion Boar—Sievers on Long Big Bone.

SPOTTED POLAND CHINA.

Exhibitors: A. S. Booco, Jeffersonville, Ohio; Bock & Shirk, Kempton, Ind.

Judge, Col. Thomas Vinnedge, Indianapolis, Ind.

Aged Boar—1st Bock & Shirk on O. and K.'s Pride; 2d Booco on Spotted Ohio Boy.

Senior Yearling Boar—1st Booco on Choice.

Junior Yearling Boar—1st Booco on Enormous 6th.

Senior Boar Pig—1st Booco on Michigan Boy 14th; 2d Booco on Michigan Boy 15th.

Junior Boar Pig—1st Bock & Shirk on Jeff; 2d Bock & Shirk on Tom Boy; 3d Booco on Michigan Boy 16th; 4th Booco on Michigan Boy 17th; 5th Bock & Shirk on Searchlight.

Aged Sow—1st Bock & Shirk on Queen Bess; 2d Booco on La Vern B. 4th; 3d Booco on Wonder Girl.

Senior Yearling Sow—1st Bock & Shirk on Packer's Model; 2d Bock & Shirk on Queen Bess 2d; 3d Booco on Nan Spot; 4th Booco on Indian Princess.

Junior Yearling Sow—1st Bock & Shirk on Stockholm Margaret; 2d Booco on Highland Queen; 3d Booco on Silver Maid III.

Senior Sow Pig—1st Booco on Riverside Model XI; 2d Bock & Shirk on Queen Alice O.; 3d Booco on Indian Velvet VII; 4th Bock & Shirk on Underwood's Daisy.

Junior Sow Pig—1st Booco on Perfect Lass 8th; 2d Bock & Shirk on Orphan Girl.

Aged Herd—1st Bock & Shirk; 2d Booco.

Young Herd—1st Booco; 2d Bock & Shirk; 3d Booco.

Herd Bred by Exhibitor—1st Bock & Shirk; 2d Booco.

Get of Sire—1st Booco; 2d Bock & Shirk; 3d Booco.

Produce of Dam—1st and 3d Bock & Shirk; 2d and 4th Booco.

Junior Champion Sow—Booco on Perfect Lass 8th.

Senior Champion Sow—Bock & Shirk on Queen Bess.

Grand Champion Sow—Bock & Shirk on Queen Bess.

Junior Champion Boar—Booco on Michigan Boy.

Senior Champion Boar—Bock & Shirk on O. K.'s Pride.

Grand Champion Boar—Bock & Shirk on O. K.'s Pride.

Special—$50.00 Silver Cup offered by the Nebraska State Board of Agriculture for the best boar and three gilts farrowed since February 1, 1916, won by Bock & Shirk.

BERKSHIRES.

The territory represented in the Berkshire ring was of wider scope than in any other breed. The west came halfway to meet the east in a record show. Silver Birch Farm, D. C. Bunn and Clark Bros. came from the state of Washington; Hamilton Farm, Colt Farm and C. H. Carter from New Jersey, Rhode Island and Pennsylvania. The exhibit was strong in all classes, contributing its share to make the First National Swine Show a pronounced success. Quality was found in all the entries, bearing out the claims of breeders for high dressing swine and firm pork.

The aged boars were headed by Longfellow's Double Rival, a boar of exceptional type in head and general make-up. He is long and stretchy, smooth throughout. Rival's Iowana Baron, having been off his feed, was down to third. Chas. Sutton's Silver Tip's Duke 7th is a strong Berkshire type. This is a son of Duke's Bacon 8th and proves a good argument for his sire. Mr. Lovejoy reversed the first and second junior yearlings just before tying the ribbons. Superbus Royal Master is smoother, has a finer ear and coat, but not the weight for age, stretch and promise of size of his litter brother placed second. Both are boars of splendid type. The senior boar pig, Imperial Rival, came out the junior champion of the show. He is a big, wide, early-maturing pig, with a good Berkshire head. He has not yet failed to take the blue wherever shown. Jenkins' junior boar pig is a big, wide, growthy kind. His size is one of his strong points. Rogers Bros.' second was a smooth, typey, right kind.

The aged sow class was one of the strongest of all the Berkshire competitions. Duke's Champion Lady 4th has great length, is a big, breedy sow, but might fill in stronger in the ribs. Iowana Peaceful 2d is a real Berkshire matron. She made a good run for the blue ribbon and had favor among many at the ringside. Iowana Farms pulled the blue in senior yearling sows with Iowana Lady 16th by Rival's Iowana Baron 2d. She has been beaten in previous shows by another entry of the same farm, but seems to thrive on the circuit and is growing better each week. With a strong back and loin she makes a thick, meaty sow. Symboleer's Ideal Lady has all the quality a Berkshire needs. She made a good top for the junior yearling class. Some of the other entries were more growthy, but none were as tidy and smoothly made. Hamilton Farm's senior sow pig is big, smooth and typey, with a good head. She lost when the junior purple was awarded to Jenkins' Superior Duchess 11th. The last has size and quality splendidly combined. Her weight for age, smoothness and type of head won her the junior championship.

Groups were strong. The herds were uniform in type throughout, showing the constructive efforts of years of breeding. Competition was keen and differences in placing awards close. Iowana Farms won the get of sire on herd sired by Rival's Iowana Baron 2d and the produce of sow on the produce of Rookwood Lady 52d. Iowana Farms have not been defeated in either get or produce this season.

The grand championships of both sexes were won by aged entries. Both the boar and sow were typical specimens of the breed. The junior champions were not far behind in merit to the older animals.

Exhibitors: Chas. E. Sutton, Lawrence, Kan.; Iowana Farms, Davenport, Iowa; Silver Birch Farm, Newport, Wash.; W. S. Corsa, Whitehall, Ill.; Hamilton Farm, Gladstone, N. J.; Colt Farm, Bristol, R. I.; C. H. Carter, West Chester, Pa.; Townsend Farms, New London, Ohio; Rogers Bros., Harrodsburg, Ky.; D. C. Bunn, Prosser, Wash.; Jenkins Bros., Orleans, Ind.; C. D. Nichols Live Stock Co., Cresco, Iowa; C. F. Curtiss, Ames, Iowa; Clark Bros., Prosser, Wash.; F. C. Mitchell, Sta. B., Omaha, Neb.

Judge, Wyman N. Lovejoy, Roscoe, Ill.

Aged Boar (7 shown)—1st Colt Farm on Longfellow's Double Rival; 2d Corsa on Duke's Fearnaught; 3d Iowana Farms on Rival's Iowana Baron; 4th Hamilton Farm on Rival's Baron Duke 2d; 5th Silver Birch Farm on Laurel's Duke 9th; 6th Hamilton Farm on Rookwood Champion 2d; 7th Iowana Farms on Iowana Rival Champion.

Senior Yearling Boar (4 shown)—1st Sutton on Silver Tip's Duke 7th; 2d Iowana Farms on Artful King 11th; 3d Iowana Farms on Iowana Rival 2d; 4th Hamilton Farm on Charmer's Duke 98th.

Junior Yearling Boar (7 shown)—1st Corsa on Superbus Royal Master and 2d on Superbus Royal Master 2d; 3d Townsend Farms on Pride of Townsend; 4th Colt Farm on Ames Rival 125th; 5th Carter on Lord Premier's Double; 6th Silver Birch Farms on Dominator.

Senior Boar Pig (13 shown)—1st Carter on Imperial Rival; 2d Rogers Bros. on Handsome Matchless; 3d Colt Farm on Successor's Creation; 4th Hamilton Farm on King Louis 49th; 5th Colt Farm on Rock River Lord Lee 16th; 6th Rogers Bros. on Majestic Rival 6th; 7th Bunn on Riverby Prince; 8th Hamilton Farm on Baron Duke 208th.

Junior Boar Pig (12 shown)—1st Jenkins Bros. on Baron's Superb 2d; 2d Rogers Bros. on Majestic Matchless 3d; 3d Townsend Farms on Duke's Bacon Jr.; 4th Jenkins Bros. on Superior's Baron Duke; 5th Rogers Bros. on Matchless Rival 10th; 6th Iowana Farms on Iowana Masterpiece 14th; 7th Corsa on Symboleer's Ideal Son; 8th Townsend Farms on Duke's Combination 18th.

Aged Sow (13 shown)—1st Hamilton Farm on Duke's Champion Lady 4th; 2d Iowana Farms on Iowana Peaceful 2d; 3d Hamilton Farm on Starlight Premier Duchess 2d; 4th Carter on Sterling Ruberta; 5th Silver Birch Farm on Silbirfa Julia; 6th Corsa on Fearnaught's Belle; 7th Iowana Farms on Iowana Peaceful 8th; 8th Corsa on Rival's Duchess 23d.

Senior Yearling Sow (9 shown)—1st Iowana Farms on Iowana Lady 16th; 2d Colt Farm on Successor's Duchess 19th; 3d Iowana Farms on Iowana Lady 32d; 4th Colt Farm on Successor's Duchess 20th; 5th Hamilton Farm on Master's Lady Value 3d; 6th Corsa on Fannie 17th; 7th Corsa on Fannie 18th; 8th Townsend Farms on Rosalie 15th.

Junior Yearling Sow (14 shown)—1st Corsa on Symboleer's Ideal Lady; 2d Corsa on Ideal Fannie's Princess; 3d Rogers Bros. on Matchless Belle 20th; 4th Hamilton Farm on Symboleer's Star Lady; 5th Colt Farm on Lorna Doone 9th; 6th Hamilton Farm on Symboleer's Lucindy 4th; 7th Townsend Farms on Townsend's Betty 2d; 8th Colt Farm on Lorna Doone 10th.

Senior Sow Pig (13 shown)—1st Hamilton Farm on Duchess 481st; 2d Rogers Bros. on Maximus Girl; 3d Rogers Bros. on Maximus Girl 2d; 4th Hamilton Farm on Louisiana 69th; 5th Silver Birch Farm on Silbirfa Royal 34th; 6th Silver Birch Farm on Silbirfa Bessie 28th; 7th Iowana Farms on Iowana Queen 29th; 8th Iowana Farms on Iowana Queen 31st.

Junior Sow Pig (16 shown)—1st and 2d Jenkins Bros. on Superior's Duchess 11th and Superior's Duchess 10th; 3d Rogers Bros. on Lady Maximus 9th; 4th Corsa on Symboleer's Ideal Girl; 5th Rogers Bros. on Majestic Beauty 14th; 6th Townsend Farms on Peerless Lady 14th; 7th Hamilton Farm on Matchless May 3d; 8th Silver Birch Farm on Silbirfa Bessie 25th.

Aged Herd—1st Corsa; 2d Colt Farm; 3d Hamilton Farm; 4th and 5th Iowana Farms; 6th Corsa; 7th Silver Birch Farm; 8th Townsend Farms.

Young Herd—1st Jenkins Bros.; 2d and 3d Rogers Bros.; 4th Hamilton Farm; 5th Townsend Farms; 6th Silver Birch Farm; 7th Colt Farm; 8th Iowana Farms.

Herd Bred by Exhibitor—1st Corsa; 2d Iowana Farms; 3d Iowana Farms; 4th Jenkins Bros.; 5th and 6th Rogers Bros.; 7th Silver Birch Farm; 8th Townsend Farm.

Get of Sire—1st Iowana Farms; 2d Corsa; 3d Colt Farm; 4th Jenkins Bros.; 5th and 6th Rogers Bros.; 7th Corsa; 8th Townsend Farms.

Produce of Dam—1st Iowana Farms; 2d Corsa; 3d Jenkins Bros.; 4th and 5th Rogers Bros.; 6th Iowana Farms; 7th Silver Birch Farms; 8th Colt Farm.

Senior and Grand Champion Boar—Colt Farm on Longfellow's Double Rival.

Junior Champion Boar—Carter on Imperial Rival.

Senior and Grand Champion Sow—Hamilton Farm on Duke's Champion Lady 4th.

Junior Champion Sow—Jenkins Bros. on Superior's Duchess 11th.

Silver Cup Special (Board of Agriculture)—Jenkins Bros.

Silver Cup Special (Hotel and Farm Paper)—Corsa.

CHESTER WHITES.

In commenting upon the excellence of the Chester White exhibit, Judge Wm. A. Hoover said: "This is the greatest hog show ever held anywhere." A more enthusiastic group of exhibitors would be hard to find. Preceding the showing Thursday the Chester White men started a parade with a band at the head. All appeared in the ring in white suits. It was a fine showing when the aged herds were in the ring and President and Mrs. Wilson appeared. This was the final comparison of aged boars for the year 1916 Barr won on Wm. A., and a fine type of sire he is. Barber's Long Wonder is a good quality boar, but hardly as big as the first. It makes an unbroken list of top places for Wm. A. this season. Barber's C. W. Wonder is a big, smooth and lengthy senior yearling hardly as neat about the shoulders as the second-prize boar. Tony Evans headed the junior yearling boars for Barber. He is long, smooth and growthy. Barr's Wm. Goods came second. He is wider, thicker and lower set than the first boar, but you might fault him a trifle in the back. Barr took the lead in senior boar pigs with Hiland Improver, a wide, thick, typey kind. Villa won the battle among the junior pigs

Get Stumps Out With Less Work

Pulling stumps is slow and costly. "An explosive reduces the labor of clearing land to the minimum. It may be used by any intelligent man," says Minnesota Farmers' Bulletin 134. Get any stump out quickly, and at the same time split it into pieces easily handled, by using

Atlas Farm Powder
THE SAFEST EXPLOSIVE
The Original Farm Powder

Atlas Farm Powder is made especially for farm use. It is easy to use—no experience needed. Just bore a hole, load, fire, and work that otherwise would take hours or days is done instantly! Ask your dealer about Atlas Powder today.

You can save money and make money by using Atlas Farm Powder to blast out stumps and shatter boulders, break up hard-pan, do ditching and dig holes for trees or posts. It is the cheapest farm hand you can possibly find.

Send for "Better Farming" Book—FREE
Our illustrated book, "Better Farming," tells how to improve the fertility of the soil, how to grow bigger crops, redeem waste land, improve orchards, etc., with Atlas Farm Powder. Valuable to every land owner. Mail the coupon.

for Barber. He is a smooth, firm-fleshed, good-headed boar. Queen Viola lead the aged sows. This was a great show of twelve smooth sows. Size was pronounced, but was not accompanied by coarseness. It was a ring of close competitions and took the judges the longest to place of any class out. Hiland Bell drew the blue in the senior yearling class. She is a splendid type, low set, thick, smooth and well fitted. Barr won again on the next class with Better Goods 2d. She is an early maturing kind, being thick, deep, wide and meaty. The second-prize sow had a little more stretch, but not the lardy type of the blue ribbon winner. Senior sow pig was also Barr's on Lenora Queen 2d, a pig of much the same type as Better Goods 2d. The second pig in this class was a good, smooth one. Armentrout's Kind took the junior class.

The groups were all won by W. T. Barr. Uniformity was their great advantage over the other herds exhibited. In this show herd nineteen of the twenty-one head were sired by Wm. A. Barber won most of the seconds. Barr won three championships and one grand championship on Wm. A. and two of his get. Barber's grand champion is a long, smooth, breedy sow with good pasterns. The Chester White show will be remembered by everyone who saw it as the strongest exhibit of this breed in the history of the white hog in America.

Exhibitors: W. E. Gaffey, Storm Lake, Iowa; Edw. Ross & Son, White Hall, Ill.; J. L. Barber, Harlan, Iowa; H. O. Bode, Friend, Neb.; W. T. Barr, Ames, Iowa; Thos. F. Kent, Walnut, Iowa; John C. Weddle & Son, Franklin, Ind.; C. A. Andrews & Son, Sheffield, Ill.; P. H. Sheridan, Vail, Iowa; W. P. Doolittle, Woodland, Mo.; Harry C. Crandall, Cass City, Mich.; M. Armentrout, Botna, Iowa; Chas. H. Murray, Friend, Neb.; Raymond E. Brown, Dunlap, Iowa; H. A. Derenthal, Wykoff, Minn.; John P. Coulson, Storm Lake, Iowa; Arthur Tomsen, Wabash, Ind.; Margaret F. Haverfield, Joy, Ill.; C. C. Paul, Laurel, Iowa; Bode & Murray, Friend, Neb.; L. M. Feland, Tipton, Ind.; R. H. Scott, Nelson, Mo.

Judge, Wm. A. Hoover.

Aged Boar (6 shown)—1st Barr on Wm. A.; 2d Barber on Long Wonder; 3d Gaffey on Joy Boy; 4th Bode on Bode's Combination; 5th Kent on Plain View Boy; 6th Ross & Son on Illinois Protection.

Senior Yearling Boar (8 shown)—1st Barber on C. W. Wonder; 2d Armentrout on Izzy O. K. Wonder; 3d Feland on Gallaway Ed; 4th Doolittle on Hercules; 5th Doolittle on White Eagle Boy; 6th Sheridan on Iowa Wonder; 7th Andrews & Son on Onward Lad; 8th Barr on Wm. King.

Junior Yearling Boar (10 shown)—1st Barber on Tony Evans; 2d Barr on Wm.'s Goods; 3d Barber on Supreme; 4th Gaffey on Proud Chief 2d; 5th Crandall on Good Enough; 6th Bode and Murray on Bode and Murray's Choice; 7th Barr on Prince Wm.; 8th Sheridan on White Wonder.

Senior Boar Pig (15 shown)—1st Barr on Hiland Improver; 2d Barber on Eden Valley Chief; 3d Gaffey on Chieftain Boy; 4th Tomsen on Schoolmaster Again; 5th Gaffey on Wm. A.'s Kind; 6th Barber on William Penn; 7th Sheridan on Iowa King; 8th Barr on Royal Chief.

Junior Boar Pig (16 shown)—1st Barber on Villa; 2d Brown on Brown's Kind; 3d Crandall on Postie; 4th Gaffey on J. B. Chief; 5th Crandall on School Boy; 6th Gaffey on Joy Boy 2d; 7th Barber on Single File; 8th Coulson on White Hall Hype.

Aged Sow (12 shown)—1st Barber on Queen Viola; 2d Barber on Grace A.; 3d Gaffey on Claire Babe 1st; 4th Armentrout on Queen; 5th Kent on Walnut Beauty; 6th Barr on Elmo's Princess; 7th Doolittle on Lola; 8th Armentrout on Best of All.

Senior Yearling Sow (10 shown)—1st Barr on Hiland Bell; 2d Crandall on Perfection Equal; 3d Barber on Wedding Belle; 4th Crandall on Cass City Belle; 5th Barber on Isabelle May; 6th Andrews & Son on Beauty A.; 7th Sheridan on Beauty; 8th Kent on Iowa Production 4th.

Junior Yearling Sow (16 shown)—1st Barr on Better Goods 2d; 2d Brown on Silver Cup 2d; 3d Crandall on Modern Tena; 4th Scott on Scotlea Heart's Delight; 5th Barr on Lenora 21st; 6th Barber on May Flower; 7th Sheridan on Western Girl; 8th Gaffey on Our Maid 3d.

Senior Sow Pig (20 shown)—1st Barr on Lenora Queen 2d; 2d Tomsen on Clover Blossom; 3d Barr on Lenora Queen 3d; 4th Crandall on Orange Bud Again; 5th Barber on Security; 6th Tomsen on Audra; 7th Barber on Security 2d; 8th Andrews & Son on Medoc Maid 3d.

Junior Sow Pig (11 shown)—1st Armentrout on Armentrout's Kind; 2d Barr on Princess; 3d Coulson on Queen Molly; 4th Coulson on Molly White; 5th Doolittle on Louise 2d; 7th Murray on White Lily; 8th Paul on Wonder Girl 1st.

Old Herd—1st Barr; 2d Barber; 3d Armentrout; 4th Kent; 5th Crandall; 6th Barber; 7th Doolittle; 8th Barr.

Young Herd—1st Barr; 2d Barber; 3d Tomsen; 4th Gaffey; 5th Crandall; 6th Andrews & Son; 7th Coulson; 8th Doolittle.

Herd Bred by Exhibitor—1st and 2d Barr; 3d Gaffey; 4th Kent; 5th and 8th Doolittle; 6th Barber; 7th Coulson.

Get of Sire—1st and 3d Barr; 2d and 5th Barber; 4th Crandall; 6th Kent; 7th Gaffey; 8th Andrews & Son.

Produce of Dam—1st Barr; 2d and 7th Gaffey; 3d Barber; 4th Crandall; 5th Kent; 6th Doolittle; 8th Andrews & Son.

Senior and Grand Champion Boar—Barr on William A.

Junior Champion Boar—Barr on Highland Improver.

Senior and Grand Champion Sow—Barber on Queen Viola.

Junior Champion Sow—Barr on Better Goods 2d.

HAMPSHIRES.

Pronounced by all breeders as the greatest exhibit of Hampshires ever seen, the National Show reached a climax in the aspirations of the belted swine men. It was a great show from start to finish. Wickfield Farm figured prominently, especially in the group classes, with a grand collection of show hogs. Iowa and Nebraska sent the largest number of exhibitors, while Indiana furnished a good herd as their representation. Mr. Goodenough had a difficult task and accomplished it with promptness and satisfaction to the exhibitors. All classes were filled and many exceptional Hampshires brought forward.

Aged boars were a magnificent class. Lookout Lad is a show boar if ever there was one. He is big, smooth, firm, without wrinkles and well belted. He rightly earned senior and grand championship. Paulsen's Cherokee Pattern is another great boar and loses no credit in being beaten by so good a type as Lookout Lad. Champ You'll Do is a grand pattern and well headed the senior yearlings. He is a very well marked boar and gave the aged winner a run for senior champion. Wickfield Farm's Chin Chin is a splendid kind, well meated and low set. The Senator won for E. N. Manley in the junior yearling class. He is a good type. Paulsen's Star 99th was reserve junior champion, losing the purple for underyear boars to Cahill & Sullivan's Sticker. The last is a grand Hampshire type.

The sow classes made a mark for future exhibits that will be hard to eclipse. Never before has there been so many high-class Hampshires in one show ring. Champions at earlier shows had to take less than the blue in their individual classes. The aged sows were seventeen grand females. Pollard's Maude's Best 3d is a wonderful show sow and also a producer, as she has raised three litters of pigs. She beat a splendid sow in Keepsake 2d, which took the red. Such a ring of aged sows is worth going far to see. Wickfield Farm won the senior yearling class on Hawkeye Sunbeam, a strong competitor when the purples were tied. She has high quality, is thick, wide, smooth and deeply fleshed. The junior yearling class was headed by Boulder's Beauty, a big, smooth sow with good pasterns. Wickfield Beauty had to claim second. Show Girl has been undefeated this year in the senior pig class. She is sired by Gen. Wickware, also the sire of Dream Girl, the red ribbon winner in this ring. Show Girl has quality, smoothness and a little the edge on type over her half-sister. Moore & Son's junior sow pig was the peach of the show. She was pronounced by Mr. Goodenough and Secretary Stone as the best Hampshire pig they had ever seen. She became junior champion, while Maude's Best 3d won from her the grand championship because of her matured smoothness and symmetry.

Herds went largely to Wickfield Farm, showing uniform, symmetrical animals in each group. Their aged herd was headed by Lookout Lad. Each blue ribbon for the five groups was won by Wickfield Farm entries. The get of General Wickware has won twenty-seven out of a possible twenty-nine firsts, repeating at this strongest of all shows. Reserve championships were awarded at the request of exhibitors who purchase their own ribbons, as was done at San Francisco.

It was a great Hampshire show made by typical Hampshire boosters. They except to carry on the good work by putting out a strong field in the next swine show.

Exhibitors: Simon Albrecht, Tiskilwa, Ill., V. K. Bartak, Ewing, Neb.; R. J. Boles, Ocheyedan, Iowa; C. S. Bratt, Arapahoe, Neb.; Cahill & Sullivan, Newboro, Neb.; T. C. Cole, Thurman, Iowa; J. S. Curren, Silver Creek, Neb.; C. S. Erb, Pleasantville, Iowa; Cary Feagins, Bussy, Iowa; Fisher-Parmer Co., Omaha, Neb.; Peter Hopley & Son, Atlantic, Iowa; E. N. Manley, Lyons, Neb.; E. L. McCoy, Rock Port, Mo.; C. L. Moore & Sons, Tremont, Ill.; Billie McFarland, Syracuse, Neb.; Vern Patterson, Fairmount, Neb.; R. C. Pollard, Nehawka, Neb.; C. P. Paulsen, Nora, Neb.; R. L. Pemberton, Le Grand, Iowa; Rhode & Lewis, Pine Village, Ind.; J. C. Root, Sta. B., Omaha, Neb.; C. O. Robertson, Atchinson, Mo.; Art Shaw, Oskaloosa, Iowa; Carl Schroeder, Avoca, Neb.; J. N. Summers, Malvern, Iowa; Donald Tracy, Benson, Neb.; C. J. Ward, Cameron, Mo.; Wickfield Farm, Cantril, Iowa; Mark Whitaker, Miami, Mo.; Ezra Williams, Oak Grove, Mo.; J. M. Womeldorf, Dallas, S. D.

Awards:

Judge, A. L. Goodenough, Morrison, Ill.

Aged Boar (8 shown)—1st Wickfield Farm on Lookout Lad; 2d C. P. Paulsen on Cherokee Pattern; 3d Rhode & Lewis on The Harvester; 4th Vern Patterson on Tatro's Model Jr.; 5th Bartak on Election; 6th Wickfield on General Wickware; 7th Hopley & Son on Guy; 8th Rhode & Lewis on Col. Hope.

Senior Yearling Boar (7 shown)—1st Rhode & Lewis on Champ You'll Do; 2d Wickfield on Chin Chin; 3d Tracy on Tracy's Model; 4th Boles on Col. George; 5th Womeldorf on King Piu; 6th Feagins on High Water; 7th Boles on Compeer's Col.; 8th Pemberton on Major Boy.

Junior Yearling Boar (13 shown)—1st Manley on The Senator; 2d Patterson on Manley's Duke; 3d Wickfield on Wickfield Lad; 4th Rhode & Lewis on Cambridge Boy; 5th Pemberton on Big Boy; 6th Cole on King of Meadowbrook; 7th Pollard on Corn Husker Boy; 8th Paulsen on Paulsen's Star 85th.

Senior Boar Pig (19 shown)—1st Paulsen on Paulsen's Star 99th; 2d Fisher-Parmer on Parmer's King 10th; 3d Curren on Neb. Boy; 4th McCoy on Concillio; 5th Wickfield on Silverheel; 6th Boles on Colonel's Best; 7th Boles on Col. A.; 8th Wickfield on Cornhusker.

Junior Boar Pig (42 shown)—1st Cahill & Sullivan on Sticker; 2d Wickfield on Spellbinder; 3d Rhode & Lewis on Renssaler Dudie; 4th Wickfield on Silver King; 5th Whitaker on Whitaker's Model; 6th Pollard on Blue Bird; 7th Whitaker on Gov. Major; 8th Cole on Everett True.

Aged Sow (17 shown)—1st Pollard on Maude's Best 3d; 2d Rhode & Lewis on Keepsake 2d; 3d Wickfield on Missouri Best 4th; 4th Wickfield on Lady Tone; 5th Patterson on Hulda 4th; 6th Rhode & Lewis on Hampshire Lady; 7th Fisher-Parmer Co. on Blackfoot Lady; 8th Pemberton on Susan.

Senior Yearling Sow (7 shown)—1st Wickfield on Hawkeye Sunbeam; 2d Rhode & Lewis on Dolly Messenger; 3d Patterson on Bessie Tipton; 4th Boles on R. J.'s Queen; 5th Paulsen on Silver Queen 178th; 6th Paulsen on Gene 1st; 7th Fisher-Parmer Co. on Fisher's Fancy.

Junior Yearling Sow (13 shown)—1st Rhode & Lewis on Boulder Beauty; 2d Wickfield on Wickfield Beauty; 3d Rhode & Lewis on Blanche L.; 4th Paulsen on Silver Queen 170th; 5th Wickfield on Wickfield Queen; 6th Pemberton on Pride's Pet; 7th Fisher-Parmer Co. on Fancy; 8th Bratt on Ruth.

Senior Sow Pig (15 shown)—1st Wickfield on Show Girl; 2d Wickfield on Dream Girl; 3d Roberson on Sunny Brook Queen; 4th Whitaker on Hazel Dell; 5th Pemberton on Scottish Lass 6th; 6th Paulsen on Silver Queen 179th; 7th Rhode & Lewis on Lucile Maid; 8th Rhode & Lewis on Lady Harris.

Junior Sow Pig (27 shown)—1st Moore & Sons on Moore's Queen; 2d Rhode & Lewis on Miss Dudie; 3d Wickfield on Fairy; 4th Boles on Mabel; 5th Whitaker on Teresa; 6th Wickfield on Farmon Miss Fairy; 7th Rhode & Lewis on Belvia D.; 8th Root on Kate A.

Aged Herd—1st Wickfield; 2d Rhode & Lewis; 3d Paulsen; 4th Rhode & Lewis; 5th Wickfield; 6th Patterson; 7th Boles; 8th Pemberton.

Young Herd—1st Wickfield; 2d Rhode & Lewis; 3d Cahill & Sullivan; 4th Whitaker; 5th Wickfield; 6th Cole; 7th Boles; 8th Boles.

Herd Bred by Exhibitor—1st Wickfield; 2d Wickfield; 3d Rhode & Lewis; 4th Cahill & Sullivan; 5th Whitaker; 6th Fisher-Parmer Co.; 7th Pemberton; 8th Boles.

Get of Sire—1st Wickfield; 2d Wickfield; 3d Rhode & Lewis; 4th Paulsen; 5th Cahill & Sullivan; 6th Whitaker; 7th Boles; 8th Pemberton.

Produce of Dam—1st Wickfield; 2d Rhode & Lewis; 3d Paulsen; 4th Wickfield; 5th Cahill & Sullivan; 6th Whitaker; 7th Pemberton; 8th Fisher-Parmer Co.

Junior Champion Sow—Moore & Sons on Moore's Queen.

Senior Champion Sow—Pollard on Maude's Best 3d.

Grand Champion Sow—Pollard on Maude's Best 3d.

Junior Champion Boar—Cahill & Sullivan on Sticker.

Senior Champion Boar—Wickfield on Lookout Lad.

Grand Champion Boar—Wickfield on Lookout Lad.

Reserve Junior Champion Sow—Wickfield on Show Girl.

Reserve Senior Champion Sow—Rhode & Lewis on Keepsake 2d.

Reserve Grand Champion Sow—Rhode & Lewis on Keepsake 2d.

Reserve Junior Champion Boar—Paulsen on Paulsen's Star 99th.

Reserve Senior Champion Boar—Paulsen on Cherokee Pattern.

Reserve Grand Champion Boar—Paulsen on Cherokee Pattern.

Drinking Water With Meals.

Occasionally one hears conflicting assertions in regard to the wholesomeness of the practice of drinking water at meal time; these assertions being often based upon hearsay or unfounded impressions. Somewhat recent physiological studies indicate that while the drinking of water with meals has no apparent effect upon the utilization of the fats, sugars and starches, its copious use does result in the better digestion and absorption of the ingested protein—that tissue-building constituent which is the most abundant of the solids in lean meat, eggs and cheese, and that constituent which also characterizes certain other foods.

The conclusion to be arrived at, then, is that the use of water as a beverage, with meals, is a desirable practice. It may be added that drinking generous quantities of water during the course of the day is an important health measure in the upkeep of the general health of the body.

An unfortunate eating habit is that of depending upon water as an aid to swallowing food. If one has not learned to thoroughly masticate food—swallowing it without the aid of a beverage—then it would seem wise to subscribe to the creed of the "dry eaters."—[Inga M. K. Allison, Colorado Agricultural College.

To Clean White Felt Hats.

White felt hats may be cleaned quite satisfactorily by the following method.

Place the hat on a flat surface at all points.

Sprinkle crown and brim with coarse yellow corn meal and rub into the felt with a stiff bristle brush or a pad made of white crinoline.

It is betfer to begin at the center of the crown and work outward with a circular movement.

After the upper surface has been cleaned slip the crown of the hat through an opening cut in the lid of a box, which is a little larger than the hat.

This brings the under surface of the hat up and gives support for the brim.

Make the Lunch Hour Enjoyable

It should be borne in mind that very few schools are provided with a comfortable, attractive and sanitary place in which the lunch may be eaten. However, the following points should be observed during the lunch hour: (1) Room thoroughly aired before lunch hour. (2) Hands washed before eating lunch. (3) Desk clean—paper napkin used for tablecloth. (4) Upright position at desk. (5) Paper napkin in lap. (6) Elbows at side; never on desk. (7) Lunch eaten slowly and quietly. (8) No talking when mouth is full of food. (9) Knife is used only for cutting food. (10) Lunch eaten in order—dessert last. (11) Drinking of water when desired, but food must not be swallowed hurriedly by being washed down. (12) Pleasant conversation.

The Gift Box.

Have you ever been brought face to face with a birthday that you had entirely forgotten, or a new baby for whom you would like to make something dainty, but haven't the time?

Then you will appreciate the gift box idea. It is a pretty idea, too, because it shows one's interest and love for one's friends, and then it is a help to the giver, for always there is something for the birthday, the departing guest, the baby, for any occasion or any individual. Moreover, a gift box is economical even though it holds articles that may not be used for many months, for you may pick up many a dainty gift at bargain prices, put it away in the box and there it will be all ready at a time when perhaps you would have to pay much more for the same article.

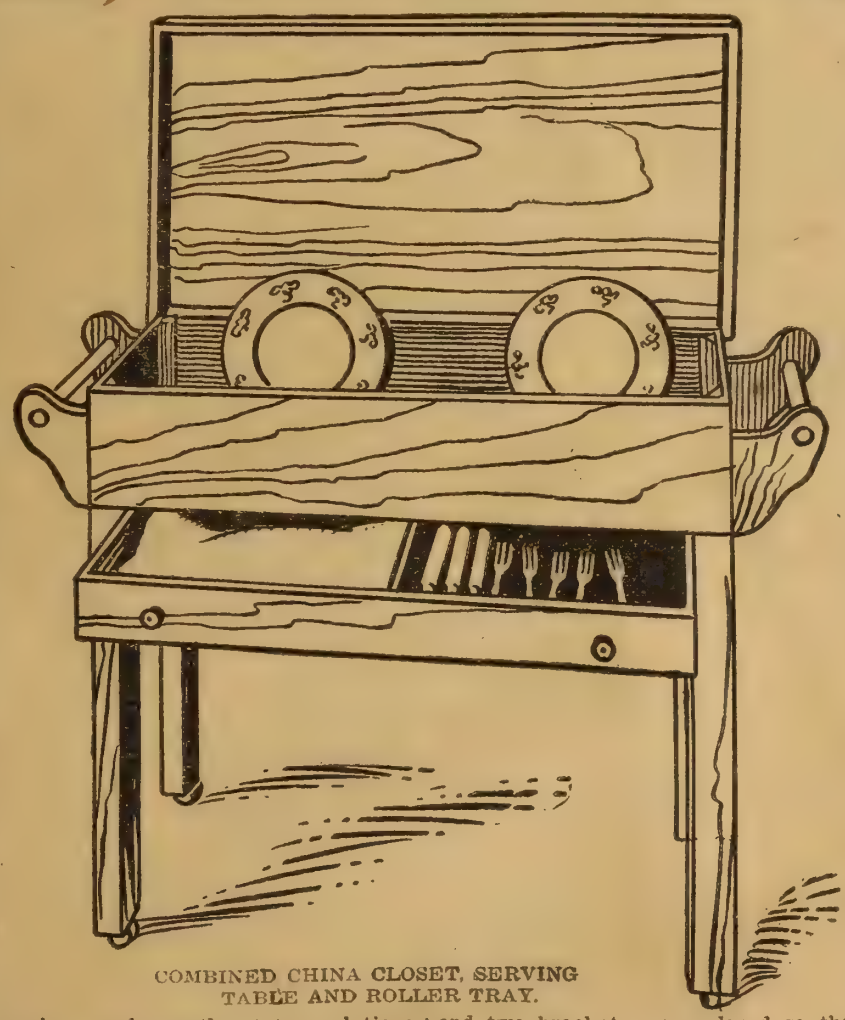
Start your box with a supply of tissue paper and dainty baby ribbon for tying packages. Pretty bits of china, handkerchiefs, daintily bound books, stationery, perfume, tiny note paper or games for the little folks, and pieces of your own needlework—towels, doilies, lingerie and baby apparel—may be added piece by piece and you will soon find yourself prepared for any unexpected demand.

It is a good idea to provide a nice assortment for your gift box and there add to it as opportunity presents itself so that it will never be empty; but never let it contain useless or unsuitable articles.

Once you have established a gift box you will never be without it.

Household Devices.

A number of labor-saving devices which will lessen the housewife's work may be constructed quickly and easily. The following contrivances actually being made and used by women county agents in the field and by the women who are working as their demonstrators in connection with the extension work, south, states relations service, can be made on the farm during spare time:



COMBINED CHINA CLOSET, SERVING TABLE AND ROLLER TRAY.

The "scrubbing chariot" consists of a comfortable padded frame on rollers which enables the housewives, in wiping the floors, to do the scrubbing with more ease and comfort and save a great many steps. This may be built at a very small cost, the material needed consisting of a three-fourths inch plank, twenty by ten inches, two-inch strips for the sides, which should be eight and one-half inches long by four inches wide, and a front piece of the same material twenty inches long and four inches wide. An ordinary soap box can be used for this by cutting down the size to about five inches high and knocking out one side. The padding for the bottom of the chariot may be made of burlap. Tack this around the inside of the chariot and place the whole thing on four rollers. Place a soap dish on one side and a little rack for the scrubbing brush on the opposite side. This contrivante, it is estimated, costs about 47 cents.

Another step-saving device made by the members of the demonstration club mentioned is a roller tray wagon. This convenience comprises a china closet, serving table, and roller tray all in one. This device was built by using a box five inches deep for the top and placing it on four wooden posts for legs. Dimensions: Top of table thirty-one and one-half inches long by sixteen and one-half inches wide and twenty-nine inches high, and a serving compartment five inches deep. The top of the table is put on hinges and straps or small chains fastened to it to keep the top from falling back too far when opened. The bottom of the serving compartment is five inches below this top. Around the sides of this compartment are little screw hooks on which the cups may be hung. In the compartment, which may be lined with white oilcloth, is space for serving dishes for six. Below the serving compartment is a drawer which is divided in the center by a one-half inch strip. One side is used for the linen and one side for the silver. The side used for the silver is lined with blue outing flannel because this serves the same purpose and is cheaper than felt. A spool was cut into halves to make the knobs for the drawer and a pair of these knobs was placed on each side so that the drawer could be used from either side. The legs were square pieces of wood one and one-half inches with rollers. Old rubber-tired wheels from toy wagons or discarded baby coaches may be used. This is an improvement because the tray rolls noiselessly. In some cases the legs from old tables can be used in place of having these made. At each end two brackets were placed so that the table could be pushed or pulled. When the soiled dishes were taken to the kitchen and washed, they were placed in this serving compartment with one handling only, the lid placed down and the roller tray rolled into the dining room, with the dishes and silver ready for setting the table at the next meal. It is not necessary to put them away because they are out of the dust when the top is down. The estimated cost of this convnience is:

Dry goods box	$0.25
1 yard blue outing flannel	.10
1 remnant white oilcloth	.15
2 hinges	.10
4 rollers	.15
1 can of mahogany stain	.30
Total	$1.05

With a small doily and a vase of flowers this roller tray answers the purpose of a serving table and makes a very attractive piece of furniture.

Another step saver that may be added to the list is the folding ironing board and cover. This device, which is hinged to the wall, is always ready and in place. It may be hooked up against the wall out of the way when not in use. The leg is hinged to the board and falls flat when the board is lifted. With it down and in use, the leg is not in the way, and skirts may be ironed without any lifting or changing. The directions for making follow:

Length, fifty-seven inches; rounded at free end. Width, attached end, fifteen inches; free end, ten and one-half inches. Leg, fifty-eight and one-half inches, to be changed to suit height of board; attached to board eleven inches from free end.

Board to be attached by hinges to the wall thirty-three inches from the floor. For use by a person above average height, the board should be higher, which will necessitate a longer leg. Board to be made of thoroughly seasoned wood one and one-half inches in thickness.

The pad may be made of any heavy material such as canton flannel or a partially worn-out blanket. Cut shape of board, allowing two inches on each side and end. Bring extra two inches to underside of board and tack firmly and smoothly in place.

The ironing sheet is made of unbleached muslin (homespun). Cut shape of board, allowing four inches on sides and end and hem all around. Attach tapes to opposite sides about ten inches apart. Tie the sheet on with these tapes. Make two sheets.

The cover and sheet may be left on when putting the board up by allowing sufficient space when adjusting the button or screw hook and eye which holds the board in place.

Recipes.

Watermelon Pickles.—Ten pounds watermelon rind, one quart vinegar, two pounds sugar, one-half ounce whole cloves, one-half ounce cinnamon stick. Cube the rind, peel and remove all red part and let stand in cold water several hours. Boil in water till clear. Remove from liquid, drain and place in large porcelain vessel. Boil vinegar, sugar and spices ten minutes and pour over the rind. For three days drain off this liquid, heat and pour over the rind. Seal in sterilized jars.

Cream of Pea Soup.—One can peas, one quart milk, three tablespoonfuls butter, two tablespoonfuls flour, one tablespoonful parsley, one-half teaspoonful celery salt, salt and pepper. Set aside one cup of peas. Mash the remainder through a sieve and put into a kettle with the milk. When this boils add flour and butter rubbed to a smooth paste, stirring continually. Add parsley and seasoning and just before serving one cracker rolled fine.

Stewed Stuffed Eggplant.—Three medium sized eggplants, three-fourths pound chopped raw beef or veal, three-fourths cupful raw rice, one pint can tomatoes, one-fourth cupful butter, one medium sized onion, chopped, one teaspoonful salt, one-eighth teaspoonful pepper, one-eighth teaspoonful cinnamon, one-eighth teaspoonful allspice. Halve the eggplants lengthwise and scoop out the centers. This can be done with a tablespoon, the large pieces being salted and peppered, dipped in batter and fried as fritters. Leave the shells with walls a half-inch thick. Mix together the seasonings, rice and meat and half fill each shell with the mixture to allow for the swelling of the rice. Fasten the halves together with skewers, and pack the eggplants in a deep stew pan. Fry the onion in the butter till light brown, add the tomato together with a little salt and pepper, and when boiling pour it over the eggplants with enough water to cover well. Stew gently, covered, until the eggplants are tender, but not broken—about an hour.

Sausage and Spaghetti in Tomato Sauce.—One pound sausages, one-half pound spaghetti, one pint can tomato soup, one-half cupful hot water. Prick the sausages thoroughly, place in a frying pan, cover with boiling water, and simmer until they are thoroughly done and well browned, about an hour. Break the spaghetti in small pieces, and cook in boiling salted water till tender. Drain, rinse with cold water, and drain again. Combine the sausages and spaghetti in the frying pan, add the soup diluted with the hot water, and let it stand till very hot.

Veal Loaf.—Three pounds ground veal, three-fourths-pound ground fat pork, one onion, two cupfuls fine soft breadcrumbs, two and one-half teaspoonfuls salt, one-fourth teaspoonful

SOMETHING FOR NOTHING

BUT YOU MUST BE PROMPT

A COMPLETE MANUAL OF CROCHET AND TATTING

By Anna Valeire

This book on crochet and tatting craft is most timely, as these arts in all their forms are very popular at the present time. It contains over sixty designs and combines new and original patterns of rare beauty combined with dainty simplicity and elegant taste. The abbreviations used to designate the different stitches in tatting and crocheting are given and their meaning explained in full. Instructions are given in detail for every design displayed in the book. Therefore, the novice in this art will have no trouble whatever in working the simple, though seemingly complicated, designs which have been compiled for her special benefit and in very little time will find that she may easily attempt the more complicated patterns intended for more advanced and experienced needleworkers. The lovely array of insertions, edgings and medallions suggest numerous ways in which they may be used to beautify both personal and household articles. The dainty tattings immediately bring to mind handkerchiefs of cob-web fineness. The simpler crochet insertions and edges suggest pretty bath-room sets and bed linen. There are no end of designs which may be used on dresses and lingerie; two yoke patterns which appear in the book make it particularly desirable. Designs for luncheon sets, scarfs, curtain edges and panels, and the new round pillow tops, and many more things which will suggest themselves to the worker are all contained in the wonderfully complete book on this fascinating art needlework.

This wonderful book of working size designs and explicit instructions will be sent Free and postpaid if you will send your order for any of the following combinations of magazines before November 10, 1916.

THE REASON FOR THE INCREASED COST OF MAGAZINES

The price of paper has increased over 100 per cent and the cost of inks and other materials entering into the manufacture of magazines has caused some publishers to increase their subscription price. The magazines offered below will accept orders from The Library Reading Club until November 10th at the prices which have prevailed for the past year. As an extra inducement for promptness, we will give a copy of Crochet and Tatting by Anna Valeire, to all who send us orders before November 10, 1916.

Last Chance Prices!

pepper, two eggs, juice of one lemon. Work the ingredients together thoroughly; shape into a long, narrow loaf, sprinkle with lemon-juice and place in a baking pan; roast for an hour and a quarter, basting with a little hot water to which has been added a tablespoonful of butter or drippings. Serve with creole sauce.

Creole Sauce.—One-half cupful white sauce, two tablespoonfuls minced onion, four tablespoonfuls minced green peppers, one half-pint can tomato soup. In making the white sauce, melt a tablespoonful of butter, add the onion and peppers, and cook very gently for ten minutes; then blend in a half tablespoonful of flour, stir in slowly a half cupful of milk, and let boil up as usual. Season to taste. Gradually beat in the tomato soup, stirring constantly to prevent curdling.

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Lives on Farm Bought in 1845.

Dear Young Folks:—I always enjoy reading the Young Folks' letters. I have been reading them for some time, but have never written before. I am twelve years old and am in the seventh grade. I walk one mile to school, but we have gravel road all the way. I have two brothers and one sister. My brothers are both married and my sister is in high school.

The farm of 120 acres on which we live was bought by my grandfather about 1845. The certificate, No. 5583, was signed by President James K. Polk. My papa is forty-four years old and has lived on this farm all his life.

We milk several cows and have a cream separator. Mamma sells the cream and gives the warm skimmed milk to the pigs. We have twenty-seven head of hogs, twenty head of cattle and seven head of horses and mules. We raise a good many chickens and a nice garden every year.

My sister and I have a piano and take music lessons through the summer. We both crochet, make tatting and embroidery. —Maude.

Mother's Helper.

Dear Young Folks:—My father takes this paper and I read the letters and riddles and enjoy them very much. We live on a large farm. We have fifteen cows to milk.

I have to get up early in the morning, because before I go to school I have to help mamma with such things as making the beds, sweeping the floors, washing the dishes and other little things. I have to take care of three geese, five ducks and a great many chickens.

We have a very tame colt named Duane. Its mother died when it was ten days old. My brother takes care of it.

I go to school every day. We have two miles to go to school, but we have a car and we children drive it, so it does not take us long.

I have a riddle for the young folks. What is a put up job?

My brother wants to answer Bernice's riddle: What does the buffalo on the new nickels stand for? He thinks the answer is because it can't lie down. —Leolinda.

Here Is Problem For the Boys.

Dear Young Folks:—I have been reading your letters for more than a year and I am very much interested in them. I hope you will be interested in mine, too.

I want to ask you something and I hope someone will answer it soon. I am going to make a bobsled and I want to make it as near like an automobile as possible. I can make it all but the steering part. I do not know how to make a device that would guide it. I would like if one of you boys who read these letters would tell me how I could make this part.

—William.

[Editor's Note.—If any of the boys can help William out and will send us a drawing and explanation we will see that it is published for the benefit of all the boys who read our paper.]

Answer to Jerusha's Riddle.

Dear Young Folks:—I am ten years old and in the fifth grade at school. I like to go to school very much. We live two miles from the schoolhouse and seven and a half miles from town. We have a pony that we ride to school. I have two brothers and one sister. I can tat, crochet, play the piano, bake cakes and make candy.

Jerusha asked the riddle: Down in the cellar there is a bright light, all saddled, all bridled, all ready for flight; silk was the saddle and brass was the bow; I've told you three times and yet you don't know. The answer to it is an awl. This is my riddle: Here sits an Indian on a stump; he is my son, but I am not his father.

—Melva.

Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

Catalog of Fall and Winter Fashions

Send 10c in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses', and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wis.

1615—Ladies' camisole in kimono style. The pattern is cut in 3 sizes: Small, medium and large. It requires 1¼ yards of 36-inch material for a medium size.

1674—A dainty negligee. Ladies'house gown or negligee, with sleeve in either of two lengths and with or without yoke facings. The pattern is cut in three sizes: Small, medium and large. It requires 5¾ yards of 44-inch material for a medium size.

1833—Ladies' dress. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6⅞ yards of 44-inch material for a 36-inch size.

1614—Children's set, comprising a yoke dress with sleeve in wrist or elbow length, a slip and one-piece drawers. The pattern, comprising all styles illustrated is cut in 4 sizes: 1, 2, 4 and 5 years. The dress requires 2½ yards, the slip 2 yards and the drawers ¾ yard of 36-inch material, for a 2-year size.

1624 Coat-1558 Skirt—A jaunty suit for sport, outing and general wear.

The patterns are both cut in 4 sizes: 14, 16, 18 and 20 years. It requires 9 yards of 36-inch material to make this suit for a 16-year size. Two separate patterns, 10 cents for each pattern.

1839—A popular apron model. Cut in 3 sizes: Small, medium and large. It requires 2½ yards of 36-inch material for a medium size.

1475—Ladies' house or home dress, with sleeve in either of two lengths. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 8 yards of 36-inch material for a 36-inch size.

1829—A smart frock for mother's girl. The pattern is cut in 4 sizes: 6, 8, 10 and 21 years. It requires 3¾ yards of 36-inch material for an 8-year size.

1617—A smart junior dress in high or low neck, Empire style, with or without bolero, and with two styles of sleeve. The pattern is cut in 3 sizes: 12, 14 and 16 years. It requires 5½ yards of 30-inch material for the dress, and two yards for the bolero, for a 14-year size.

1842—Girls' dress. A new design both practical and stylish. Cut in 4 sizes: 6, 8, 19 and 12 years. It requires 3⅝ yards of 44-inch material for an 8-year size.

1817 Waist-1818 Skirt—Ladies' costume. Waist 1817 cut in 8 sizes: 34, 36, 38, 40, 42, 44, 46 and 48 inches bust measure. Skirt 1818 cut in 8 sizes: 22, 24, 26, 28, 30, 32, 34 and 36 inches waist measure. To make the costume of one material will require 5⅝ yards of 44-inch material for a medium size. The skirt measures 3 1-3 yards at the foot. Two separate patterns, 10 cents for each pattern.

PART III. "Prince Charlie"

CHAPTER III—Continued.

Twenty minutes after her offer they were mounted and clattering away over the crisp bronze turf. To Stuart the task of entertaining a lady was anything but a sinecure—more, it was easy to see that he was unused to it; and an ungallant query to himself was: "Why did she come, anyway?" He had not heard her reply to Tillie.

The air was crisp and cold enough to make their heavy wraps a comfort, especially when they reached the higher land; the sun was showing fitfully, low-flying, skurrying clouds often throwing it in eclipse.

"Snow is coming," prophesied the girl, with a weather eye to the north, where the sky was banking up in pale-gray masses; "perhaps not heavy enough to impede your trip south, to Owens, but that bit over there looks like a visiting card of winter."

"How weather wise you are!" he observed. "Now, I had noticed not the slightest significance in all that; in fact, you seem possessed of several Indian accomplishments—their woodlore, their language, their habit of going to nature instead of an almanac; and did not Mrs. Hardy say you knew some Indian songs? Who taught you them?"

"Songs came near getting us into a civil war at breakfast," she observed, "and I am not sure that the ground is any more safe around Indian than Scotch ones."

"There is something more substantial of the former race," he said, pointing ahead.

It was the hulking figure of a Siwash, who had seen them first and tried to dodge out of sight, and failing, halted at the edge of a little stream.

"Hostile?" queried Stuart, relying more on his companion's knowledge than his own; but she shook her head.

"No; from the reservation, I suppose. He doesn't look like a blanket brave. We will see."

Coming within speaking distance, she hailed him across the divide of the little stream, and got in reply what seemed to Stuart an inextricable mass of staccatos and gutturals.

"He is a Kootenai," she explained, "and wants to impress on our minds that he is a good Indian."

"He does not look good for much," was the natural remark of the white man, eyeing Mr. Kootenai critically; "even on his native heath he is not picturesque."

"No—poor imp!" agreed the girl; "with winter so close, their concern is more how they are to live than how they appear to people who have no care for them."

She learned he was on his way south to the Flathead Reservation; so he had evidently solved the question of how he intended living for the winter, at all events. He was, however, short of ammunition. When Rachel explained his want, Stuart at once agreed to give him some.

"Don't be in a hurry!" advised his commander-in-chief; "wait until we know how it is that he has no ammunition, and so short a distance from his tribe. An Indian can always get that much if he is not too lazy to hunt or trap, or is not too much of a thief."

But she found the noble red man too proud to answer many questions of a squaw. The fear, however, of hostilities from the ever-combative Blackfeet seemed to be the chief moving cause.

"Rather a weak-backed reason," commented Rachel; "and I guess you can dig roots from here to the reservation. No powder, no shot."

"Squaw—papoose—sick," he added, as a last appeal to sympathy.

"Where?"

He waved a dirty hand up the creek.

"Go on ahead; show us where they are."

His hesitation was too slight to be a protest, but still there was a hesitation, and the two glanced at each other as they noticed it.

"I don't believe there is either squaw or papoose," decided Stuart. "Lo is a romancer."

But there was, huddled over a bit of fire, and holding in her arms a little bundle of bronze flesh and blood. It was, as the Indian had said, sick—paroxysms of shivers assailing it from time to time.

"Give me your whisky flask!" Rachel said promptly; and dismounting, she poured some in the tin cup at her saddle and set it on the fire—the blue, sputtering flame sending the odor of civilization into the crisp air. Cooling it to suit baby's lips, she knelt beside the squaw, who had sat stolidly, taking no notice of the newcomers; but as the girl's hand was reached to help the child she raised her head, and then Rachel knew who she was.

(To be continued.)

International Sunday School Lesson.

Lesson for October 15, 1916.
(By E. O. SELLERS, Acting Director of Sunday School Course.)

Appeal to Caesar.

LESSON TEXT—Acts 25 (vv. 1-12).

GOLDEN TEXT—It is enough for the disciple that he be as his teacher, and the servant as his Lord.—Math. 10:25.

Teachers ought to urge their scholars to read Chapters 24, 25 and 26 thoroughly, and with the use of a map locate the places mentioned. The date of this lesson is A. D. 59, and it occurred at the crisis of the events which determined the way Paul should go to Rome, Nero being the emperor at that time.

I. Paul in the Prison at Caesarea (vv. 1-6). Paul was worn out, badly in need of rest, and is given during this imprisonment much freedom. He was accompanied by Luke, his physician, and probably some of his other friends. For almost twenty years Paul had been living a strenuous life, crowded full of labors that would have crushed an ordinary man. Now for some considerable time he had time to thoroughly master and assimilate the truth which he had been preaching, the results of which have come down to us in the form of letters, seven of which at least were written during and after the events of this lesson. His imprisonment also gave many of his friends opportunity to secure his counsel and guidance. The vindictiveness and hatred of the Jews is evident by this new plot whereby they sought the help of Festus against Paul. The corrupt Felix had been succeeded by a more upright man, Festus. The scheme of these enemies of Paul and of Jesus had already resulted in giving Paul an opportunity to preach Jesus as the Christ and the judge of men to persons who otherwise would not have been within the scope of his influence. Through his persecution he had reached leading officials and educated men of the Romans and of the Jews. Bunyan, in Bedford jail, and Luther in Wittenberg Castle, are illustrations of the principle that, "difficulties are the stones out of which all God's houses are built."

Felix, on giving up his office to his successor, left Paul bound (Ch. 24:27) though he knew he ought to be released, but by this vile, iniquitous act, he gave Paul another one of his desired opportunities to witness for Christ in high places. The shrewdness of Festus saved Paul from falling into the trap of the Jews, for God was guiding Festus, and at the same time guarding Paul.

II. Paul's Appeal to Caesar (vv. 7-12). The Jews made many and grievous complaints, but without bringing a single witness to prove their assertions. Doubtless these were the same old charges that had been brought before Felix through Tertullus two years before, and which now, as then, could not be proved. Paul was permitted to answer for himself, and he declared that he had broken neither the Jewish nor the Roman law. Most of the enemies of Christianity and of the Bible "lay many and grievous charges against it which they cannot prove." In all ages the enemies of God and his word mistake strong and confident charges and vilifications as proofs. Paul's life was absolutely clean, and he could say, "I have not sinned at all" (v. 8 R. V.) in any of the directions in which he was charged. Festus, as the newly appointed governor, desired to do the Jews a favor; literally, desired to gain their favor. Therefore, he said to Paul, "Wilt thou go up to Jerusalem, and there be judged of these things before me?" This amounted to an acquittal of Paul on the charges that would come under the Roman law.

There remained only such charges as would naturally come before the Sanhedrin, and the question was whether Paul would accept an informal acquittal from the Roman court on condition that he submit to a trial before his own people on the other count. Festus wished to throw upon Paul the responsibility of refusing to go to Jerusalem, and to avoid displeasing the Jews.

Festus got a courteous but a stinging and well deserved rebuke from his prisoner. Paul was perfectly willing to take any punishment he deserved, even unto death, but, having a clear conscience, he had no fear of Festus or any man. His appeal to Caesar was most unexpected. It confused Festus and baffled the Jews. The Lord's own words on his midnight visit to Paul in prison are here suggested (23:11.)

Festus could make but one decision, "Unto Caesar thou shalt go." Paul's sincere and open character was the means of his safety and power.

III. Paul and Agrippa (vv. 13-22). Agrippa was the king of the northern part of Palestine, a Jew and trained in religious ceremonies, but one who never mixed politics with religion, wearing his Judaism as a garment.

His father, Agrippa I, slew James the elder, the apostle.

The great grandfather, "The Great," caused the massacre of the infant innocents (Math. 2).

He married his own sister, Bernice, who came with him on this visit to Festus.

Festus declared Paul's cause unto the king.

Below Is Copy of Signed Statement of a Representative Golden Prairie Farmer

"Hillsdale, Wyoming, Sept. 18, 1916.

"Federal Land Company,
Burns, Wyo.
Dear Sirs:

"I have lived in Wyoming 6 years on E½ Sec. 30-16-64 and have raised good crops each year. This year I had 22 acres of winter wheat that made 19 bushels per acre. I have raised oats that yielded 60 bushels per acre and potatoes have made specially good crops each year. Our garden has always been good.

"I had two cows when I came here and now have 40 head of cattle and have sold 2 head, and have bought only 1, but have traded some steers for heifers. I milked this season 12 cows and my cream check for month of June was $96.00 even."

(Signed) FRANK KESLAR.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Weiskopf's Holsteins.

THE Holstein herd of H. R. Weiskopf, Cleveland, Wis., combines rich breeding with high production ability. The junior herd sire is King Veeman Pontiac Alcartra, whose dam, Tobe De Kol Pet 2d Dorothy, 30.15 pounds butter from 656.8 pounds milk is a 75 per cent sister to the former world's champion senior three year old, Lady Tobe De Kol, 36.59 pounds, thirty days 141.24 pounds. His eight nearest dams average 30.51 pounds butter from almost 600 pounds milk. His sire is a son of King Segis Pontiac Alcartra, out of a twenty-nine-pound daughter of Sir Veeman Hengerveld. Below is a list of the cows with records above twenty-five pounds butter in seven days: No. 1. Molly Johanna Korndyke, as a senior two year old gave 30.62 pounds butter from 484.1 pounds milk, world's record when made. No. 2. Johanna Maud Hengerveld, 29.50 pounds butter from 586.7 pounds milk. No. 3. Lena Johanna Korndyke Segis, as a senior three year old 29.03 pounds butter from 674.2 pounds milk in seven days and 120.85 pounds butter from 2,819 pounds milk in thirty days. This heifer won $109 prize money last year, winning first on milk for thirty days. No. 4. Lilly Johanna Belle, 27.78 pounds butter from 511.9 pounds milk in seven days and 112.85 pounds butter from 2,298.6 pounds milk in thirty days. No. 5. Flora Johanna Korndyke Segis, 27.72 pounds butter from 540.2 pounds milk as a junior four year old. No. 6. Juliana Johanna Korndyke 26.18 pounds butter from 498.7 pounds milk as a junior three year old. No. 7. Alta Belle Johanna Rose 26.10 pounds butter from 533.1 pounds milk. This cow is the dam of Nos. 3 and 4 in this list and the best daughter of our old foundation cow, Vickery Johanna 23.10 pounds butter at twelve years. In their herd at present are nine daughters of Wase Korndyke Segis, the best son of the

IMP. DAIRY MAID OF THE GREE 31682, the A. R. cow advertised for sale on page 29 by W. G. Jamison & Son, Appleton, Wis.

first thirty-pound two year old. Also sixteen daughters of King Segis Pontiac Veeman, a son of the $50,000 bull out of a twenty-seven-pound daughter of a twenty-nine pound cow and she a daughter of Sir Veeman Hengerveld. The average records of the dams of these heifers average 26.28 pounds butter from over 500 pounds milk, most of them being tested as two and three year olds. See page 31.—Adv.

The Waukesha County Holstein Breeders' Sale.

THE breeding of pure-bred cattle has gotten past the stage of an experiment and a gamble, and is now on a business basis, and the buying of cattle in public sales must be put on the same basis. There are a great many ways in which a buyer may be deceived as to the soundness and breeding ability of an animal and cannot prove that the seller was knowingly cheating him. As the late Dr. H. B. Faville so aptly stated, "The reputation and integrity of the seller is fully as important to the buyer as the cattle," for the best looking cow on earth is worth but little if she is tubercular, a non-breeder or has abortion. The Waukesha Holstein Breeders' Association are holding sales that are absolutely on the square. The word of the manager is as good as a bond. Every buyer is considered a future customer, not a dummy to be bled. Every animal is examined before it enters the sale ring by a committee of the association, one of which is a veterinarian to insure the buyers only sound animals. No side bidding is permitted in order to bleed the buyer or raise the average of the sale. Every promise of the manager is kept to the letter and in event of any animal developing any unsoundness for which the seller is at fault the association stands ready to make an adjustment. The cattle to be sold in their sale October 23d are a high-class offering and we unhesitatingly recommend this sale to our readers. Catalogs may be obtained by writing to Wm. Baird, Waukesha, Wis See page 26.—Adv.

Durocs Shipped on Approval.

RILEY MARTINY & SON, Baraboo, Wis., breed Duroc Jersey swine and Guernsey cattle. They want to satisfy the public and if you order a boar or gilt of them they will ship same on approval and if you are not satisfied with the individual when you get him there is no sale. If you are going to need Guernseys keep this firm in mind, they can supply your wants. When writing please say you saw the advertisement in this journal. See page 28.—Adv.

Last Call for the Atwater Boar Sale.

NEXT Wednesday, October 18th, will be bargain day at the "Home of Big Durocs," the day L. F. Atwater sells those thirty-five big, stretchy March Duroc Jersey boars at Bangor, Wis. All those that attended the Minnesota and Wisconsin State Fairs and were interested in Durocs saw the Atwater show herd, the boars that were shown sell in this sale. Those that didn't attend the fairs no doubt read the report of the show and saw that Atwater was the heavy winner so it is useless to say that he is going to sell a grand lot of boars on the above date. You should have received your catalog by this time, if you haven't write at once. We were going to call attention to the best boars, in this write-up, but we have read the foot notes and they describe the boars better than we could

ANOTHER HOLSTEIN BREEDER PLEASED.

A. M. ANDERSON, a breeder of Holstein-Friesian cattle, who lives near Whitewater, Wisconsin, recently advertised some fine young bulls in The Wisconsin Farmer and sold them so quickly he was amazed. Read what he says:

I wish you would discontinue my advertisement for a short time, as I am entirely sold out of bulls anywhere near ready for service. The Wisconsin Farmer is certainly a good paper to advertise in, as I have found by experience. I sold a great many bulls, heifers and cows at satisfactory prices.

You may do as well with your stock if you let The Wisconsin Farmer carry your message to the farmers and breeders. They are watching The Wisconsin Farmer's live stock columns for announcements of pure-bred stock for sale. Send your advertisement today.

THE WISCONSIN FARMER Madison, Wis.

Guaranteed Circulation, 90,000.

in this limited space. W. C. Jenkins sells the day before and Geo. Willsie the day following, arrange to attend all three sales. Send your buying instructions to T. P. Shreve if you can't attend in person. No matter whether you have Atwater breeding in your herd or not, there will be good boars sold that will not conflict with the breeding you have in your herd. Don't forget the date and place. See page 27.—Adv.

Some Short-horn Bargains.

WE RECENTLY looked over the Short-horn herd owned by W. F. Wilcox, Milton, Wis., and were very much impressed with the class of cattle this breeder is raising. Mr. Wilcox is a breeder in the true sense of the word, having purchased two cows ten years ago, and the breeding herd that he now has are descendants of those two cows. At the present time several young bulls of serviceable age are being offered for sale. They are well-grown, nice-lined bulls and the price is very reasonable if taken at once. They are sired by a ton bull that was first-prize winner at Janesville as a yearling, and was second-prize bull at the same fair this year. His name is Rover's Last 408744, and he traces to the noted Choice Goods on his sire's side. His dam comes from the Duchess family, consequently you have a desirable cross of Scotch and milking Short-horn blood in his pedigree. Investigate this herd, write Mr. Wilcox for any information you wish and you can depend on what he tells you. His advertisement appears in this issue, and when writing, please say you saw the advertisement in The Wisconsin Farmer. See page 30.—Adv.

The Martin Brown Swiss Herd.

ANDREW MARTIN has an old established herd of Brown Swiss cattle—females in the herd with excellent milk and butter records. He has around sixty head in the herd and has something for sale at all times. Just at this time he has some outstanding bulls of serviceable age for sale. They come from high producing ancestors and are being priced reasonable. His address is West Salem, Wis., and if you will write him for description and prices you will get a prompt reply telling you exactly what he has that might suit you. Don't forget to mention The Wisconsin Farmer. See page 29.—Adv.

W. C. Jenkins Starts the Circuit.

NEVER before have the farmers and breeders of Wisconsin had such an opportunity to buy Duroc Jersey boars as they will have next week. W. C. Jenkins starts the circuit of sales at his farm near Bangor, Wis., Tuesday, October 17th. He will sell forty-five head—twenty of the best fall and spring boars he raised and with this small number you may know that they are good ones, and twenty-five gilts and sows. There is a scarcity of good brood sows in the state and here is an opportunity to buy some good sows. You can take them home and breed them, or if you wish you can leave them and Mr. Jenkins will breed them to his first-prize and senior boar at La Crosse, Orion Col. S. The boars are sired by sons of Disturber and High Model, the sows are of the most popular line of breeding. We have recently seen this offering and we believe they will appeal to all lovers of the Duroc, sale day. Make arrangements now to attend this sale, your time will be well spent. If it is impossible to attend be represented with a bid, same should be sent to T. P. Shreve in care of Mr. Jenkins. Remember the date and place—Bangor, Wis., October 17. See page 27.—Adv.

The Waukesha County Guernsey Breeders' Sale.

THE Waukesha Guernsey Breeders' Association will hold a two days' sale November 1st and 2d. The first day's offering will consist of some sixty head of richly bred registered animals, most of which will be females. The second day's offering consists of high-grade females and a number of richly-bred bulls of serviceable age and younger. The reputation of the Waukesha Guernsey breeders for good cattle and honorable selling methods is too well known to need further comment. The integrity of the sales organization is of as much importance to the buyer as the cattle to be sold. This year's offering of cattle is very high class and our readers do not want to miss the sale. Catalogs giving breeding and description may be obtained by writing F. E. Fox, Waukesha, Wis. When writing kindly mention The Wisconsin Farmer. See page 25.—Adv.

Booklet on Upper Wisconsin.

THE Chicago, St. Paul, Minneapolis & Omaha railway has issued a thirty-two page booklet describing fertile lands in Upper Wisconsin. This booklet is illustrated by recent pictures, including many beautiful farm scenes. The purpose of the booklet is to show how homes may be established on the cut-over lands in Upper Wisconsin. A good many of these homes have already been established along the Omaha railroad. Any person who has in mind getting land for investment or settlement will be interested in this booklet. Copies will be sent postpaid to anyone who will address G. H. MacRae, General Passenger Agent, C., St. Paul & O Railroad, St. Paul, Minn. Please ask for booklet 32-I. Please be kind enough to mention The Wisconsin Farmer when you write. See page 23.—Adv.

Remember That Big Col.-Chief Defender Sale.

THIS is the last opportunity we will have to call the attention of our readers to that good Duroc Jersey offering that Geo. Willsie will sell at Prosper, Minn., October 19th. This sale should be of special interest to Wisconsin Duroc breeders. Big Col. (now dead) was without a doubt one of the two best King the Col. boars the writer has ever seen and Wisconsin breeders can use some Col. breeding in their herds to good advantage. Many of the choice boars to be sold are out of daughters of Chief Defender which makes a cross that is very acceptable. There will also be boars sired by Chief Defender and these will add prestige to nearly any herd in the Northwest. We are very much interested in the outcome of this sale and if breeders and farmers appreciate good individuals backed up with good pedigrees, they'll attend this sale. As a special attraction Mr. Willsie will sell a senior yearling boar that is a real herd boar. He is sired by King the Col. 1st and his dam is by Fain's Select the boar that H. S. Fain sold to O. S. Larson. Here's a herd boar for someone. If you haven't received your catalog write for one at once. L. F. Atwater sells the day before—arrange to attend both sales. If you can't spare the time send your instructions to T. P. Shreve, Wisconsin Farmer representative, in care of Geo. Willsie. Get the catalog and when writing for same mention this publication. See page 28.—Adv.

KING VEEMAN PONTIAC ALCARTRA, the thirty-pound bull at the head of the herd of H. R. Weiskopf, Cleveland, Wis. See page 31.

Brunker to Sell Short-horns and Poland Chinas.

THURSDAY, October 26th, R. F. Brunker & Son, will sell fifteen Short-horn cows, heifers and bulls and fifty-five head of Poland Chinas at their farm, five miles south of Ridgeway, Wis. Of the bulls three are very choice roans that are good herd bull prospects. The balance are good reds of serviceable age. The females are in nice breeding condition. The young stuff is by Proud Baron, a grandson of the noted Arondale. Of the Poland Chinas eighteen are fall yearlings by Big Hidestretcher, eight March boars and gilts by Repeater, twenty good spring boars by Tom Mc. Here is a very good, smooth yearling boar. Also nine spring gilts by this boar. There will be some bargains in this sale. Get a catalog and attend. Kindly mention The Wisconsin Farmer when writing.—Adv.

Durocs From Manitowish.

WITH this issue of The Wisconsin Farmer, E. R. Perkins, Manitowish, Wis., started his card offering September pigs for sale. He has eleven sows that farrowed in September, and, as his facilities for handling Durocs is limited he does not care to winter so many consequently these fall pigs are for sale, to be shipped at weaning time. Mr. Perkins has a well-bred herd of Durocs, headed by two good boars, one of them a son of the noted Cherry Chief. He also has a few choice spring boars for sale, one litter sired out of a daughter of King the Col. Here's your chance, write Mr. Perkins and mention The Wisconsin Farmer. See page 28.—Adv.

The Hoskins' Chester Whites.

DON'T overlook the Chester Whites being offered by Art G. Hoskins, Dodgeville, Wis., for he has the goods. He has some of the best pigs of this breed that we have seen and they would look good in nearly any herd. As for breeding, they come from a line of ancestry that has made good. St. Elmo the champion of Illinois for several years, Hinshaw, grand champion of Wisconsin and Illinois in 1914, Col. Kent a boar that is well known in Iowa, and

NEXT WEEK'S SALE PROGRAM

Tuesday, October 17	Duroc Jerseys, W. C. Jenkins, Bangor, Wis. Holsteins and Guernseys, W. W. Clark, Grand Rapids, Wis.
Wednesday, October 18	Duroc Jerseys, L. F. Atwater, Bangor, Wis.
Thursday, October 19	Duroc Jerseys, Geo. H. Willsie, Prosper, Minn.

Last Chance Prices

THE cost of production of all magazines has been very seriously affected by the increase in cost of all materials, such as paper, ink, etc., and because of this many magazines are forced to increase their prices.

Owing to the fact that we have special arrangements with all magazines, we are in a position to make some special Last Chance, money-saving offers.

PICTORIAL REVIEW. After November 25, 1916, Pictorial Review will be included in all clubs at $1.50. Until that date we are able to offer the following clubs at prices which will never again exist.

THE HOUSEWIFE 30 IRVING PLACE NEW YORK

others of note. Write Mr. Hoskins for his prices on boars and gilts. Mention this paper, please.—Adv.

The Marshfield Sale.

AT Marshfield, Wis., October 17th, there will be held the usual fall sale of Holsteins and Guernseys. We have been advised by Mr. W. W. Clark, the manager, that this will be the best consignment of dairy cattle ever sold at the above place. There will be about fifty registered Holsteins, the consignors' names appear in the advertisement. The feature of the Holstein offering will be the herd of E. E. Butters. Mr. Butters has one of the best herds in central Wisconsin and some excellent animals will be sold from his herd. Several young cows will be sold that have good A. R. O. records. If you are interested in Guernseys you will be pleased with those that go in this sale. No matter what you want they will have it for you in the Marshfield sale. Grades and pure-breds of the above breeds. The catalog is descriptive and you should have one. Send your name and address to W. W. Clark, Grand Rapids, Wis., and he will be glad to mail you one of the catalogs. Be sure and mention this publication. See page 26.—Adv.

An Opportunity.

THE McCLURG BROS., Viroqua, Wis., are offering some real bargains in Durocs. They have an excellent litter by the champion, Lee's Defender, and they are offering the boars and gilts from this litter for sale. Two of the boars are outstanding. They also have others by that good two-year-old boar, Prince Defender that will please you. Royal King 4th is a son of the $2,650 Royal King and the pigs by him are showing up well. Don't overlook this herd, the boys have some good stuff and their prices range from $25 to $35. Crates and pedigrees furnished with every pig sold. They will also give you a year's subscription to the breed paper, the Duroc Bulletin with every order. Notice their advertisement in this issue. When writing, please say you saw the advertisement in The Wisconsin Farmer. See page 28.—Adv.

Desirable Holsteins For Sale.

WITH this issue of The Wisconsin Farmer, Kirkpatrick Bros., Reedsburg, Wis., change their advertisement, offering Holstein cows, heifers and bulls for sale. These gentlemen have a good herd of cattle and are progressive farmers and if you buy from them you will get cattle that are right in every way. They have an excellent breeding bull in King Pontiac Korndyke, a King of the Pontiac bred bull and a wonderful individual. They are offering a few cows that are bred to this bull and a number of them will freshen in the near future. Bulls and heifers by the above sire are being offered at reasonable prices. Investigate this good herd. Their farm is near town and you will be pleased with the Holsteins they breed. Mention The Wisconsin Farmer when writing. See page 26.—Adv.

The Broughton Shropshires.

IT'S time to think about buying that ram and if you are going to need a Shropshire why not buy where they breed the best. Arthur Broughton & Sons, Albany, Wis., have one of the best flocks of this breed to be found anywhere, this fact was demonstrated at the recent Wisconsin State Fair. Just at this time twenty-five yearling rams are being offered, every one suitable to head a flock of registered Shropshires. Write the above firm your wants and mention this publication. See page 29.—Adv.

Carey & Son Sell October 25th.

WEDNESDAY, October 25th, W. H. Carey & Son will sell sixty-five head of Poland Chinas at Argyle, Wis. This offering will consist of forty head of spring and fall boars and twenty-five gilts. The offering will be presented in nice condition and you will be able to buy worth the money in this sale. The catalog of the offering is ready and can be had for the asking. Write W. H. Carey & Son, Argyle, Wis., and mention The Wisconsin Farmer.—Adv.

Consigning to the Watertown Sale.

EDW. KARLEN, who has one of the good herds of Holsteins in western Wisconsin, located at Thorp, is selling one son of the great bull, Johanna McKinley Segis, in the Watertown sale, October 24-25th. He will also consign three high-class sons from some of his high-producing dams. These will be attractions in the above sale and it will pay you to look for them on the above date at Watertown.—Adv.

Marquardt Bros.' Milking Short-horns.

IF you are in the market for a bull that comes from Short-horns bred for milk you should investigate those being offered by Marquardt Bros., Milton Junction, Wis. They do things on their farms and they produce the kind that make good. It is a pleasure to recommend this herd of cattle.—Adv.

Short-horns for Sale.

WE have just been advised by E. E. Jones, Rockland, Wis., that he has for sale a number of heifers and young cows. Mr. Jones has one of the good herds in the state and if you want good Short-horns it will pay you to write him. Mention this paper. See page 30.—Adv.

Schoenfeld's Poland Chinas.

SOME fall yearling Poland China boars of great bone and length are offered for sale by C. J. Schoenfeld & Son, Fox Lake, Wis. The boars will weigh from 300 to 400 pounds. They are sired by Big Bone and Long Wonder, and Mr. Schoenfeld guarantees them to be the most promising lot of boars he has ever offered for sale. See his advertisement on page 26 and write him for further information.—Adv.

Karlen's Holstein Dispersion.

With the dispersion of the herd of F. J. Karlen, Winslow, Illinois, on October 4th and 5th one of the finest Holstein herds in the middle West was disbanded. As evidence of the high esteem in which this herd was held by breeders all over the United States, is the fact that many of the best breeders from New York to Texas were at the ring side and were heavy buyers. It is commendable, however, that the breeders in the vicinity both in northern Illinois and southern Wisconsin were awake to the value of the great herd, and did not let out-of-the-state breeders take all the good ones. Several of the eastern breeders told the buyers present what they considered such breeding worth in the East. The top price bull was $4,250 and was the cheapest animal sold in the sale considering his breeding, individual merit and ability as a breeder. The top price female was $3,550. This cow, Palmar Veritas De Kol Ormsby, is a wonderfully fine individual, and, although dry at the present time, shows every evidence of being a heavy producer.

O. Money Order or Registered Letter.

The Reading Club, 30 Irving Place, New York.

Rural Clubs For Pleasure and Profit.

To the Editor:—There are about 25,000 farmers in Wisconsin who are members of the various community and neighborhood clubs. In addition there were held last year 21,159 meetings in the rural schoolhouse at which about 150,000 people were present. The rural club movement is an important one in Wisconsin and one that has been growing quietly for many years.

Early in the history of Wisconsin it was common to organize lyceums, debating clubs or singing societies.

Later agricultural societies were formed to promote agriculture and to encourage co-operation. These clubs were not numerous, although they were of importance in the local community. Few were in existence in 1885. The grange movement followed, the first one being organized in 1870. In 1874 there were 505 granges in the state. At present there are but fifty-five, most of them being found in the upper counties.

The American Society of Equity began establishing local unions in 1902, and there are at present about 375 locals, with a membership of about 12,000.

During the past five years there has been a heavy increase in the number of independent or local neighborhood clubs. They now number 250, having a membership reaching 10,000 people. C. J. Galpin.

Madison, Wisconsin.

Milk Producers Organize.

Sixty-five farmers producing milk in the neighborhood of Janesville, Wisconsin, have organized for the purpose of securing, if possible, a better market price for their milk. They assert that much milk has been sold for $1.55 per hundred pounds which cost $2.25 to produce, and they further assert that the price paid them for milk at Janesville is not so high as is paid for milk at Beloit and other places. The hope is that practically all producers may be gathered together in the organization and that agreement may be reached to raise prices to local dealers to a fair basis or induce some condensery or other outside interest to come in and utilize the local products at better figures than are now obtainable. The officers of the new association are: President, W. O. Auston; vice president, H. C. Hemingway; secretary, George Woodruff; treasurer, Hugunin.

For the Ambitious Young Man.

YOUNG men who look forward to owning farms of their own, instead of paying out rent for the use of worn-out soil, will do well to investigate the advantages and possibilities of Montana. Montana has a big agricultural future before it, and the young men who go there now will have the benefit of the increase in land values which will come with increase in population. An opportunity to investigate Montana lands cheaply is offered by the low-fare excursions run every month by the Chicago, Milwaukee & St. Paul Railway. Read the advertisement on page 20 and write H. F. Hunter, General Agent, 613 Railway Exchange Building, Chicago, for full information. Tell him you read the advertisement in this paper.—Adv.

Want to buy or sell a farm? Make it known by inserting an advertisement in THE FARMERS' MARKET. Six cents a word each insertion.

STATEMENT OF THE OWNERSHIP, management, circulation, etc., required by the act of congress of August 24, 1912, of The Wisconsin Farmer, published weekly at Des Moines, Iowa, for October 1, 1916.

State of Iowa, County of Polk, ss.

Before me, a Notary Public, in and for the state and county aforesaid, personally appeared J. W. Wickham, who, having been duly sworn according to law, deposes and says that he is the Assistant Business Manager of The Wisconsin Farmer, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Publisher—James M. Pierce, Des Moines, Iowa.

Editor—James Atkinson, Des Moines, Iowa.

Managing Editor—James Atkinson, Des Moines, Iowa.

Business Manager—James M. Pierce, Des Moines, Iowa.

W. C. JENKINS' SALE

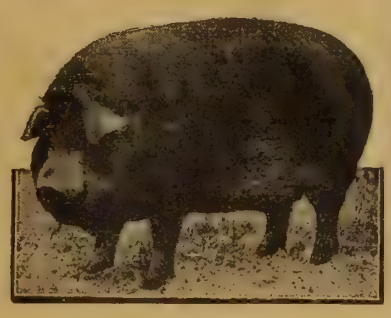
DUROC JERSEYS

BANGOR, WIS., TUES., OCT. 17

45 HEAD

25 SOWS
20 BOARS

45 HEAD



AN offering that will appeal to breeders and farmers alike. Some herd boar prospects and some great brood sows. Some great fall gilts and boars sired by **W. C.'s Disturber** by Disturber and **Col.'s Choice,** grandson of Chief's Col. Spring stuff by above boars and **Rego Col.** by High Model. One choice litter out of a granddaughter of old Tattletale. Also some Crimson Wonder breeding. The spring boars and gilts are of March farrow. Have more Durocs than I can winter, consequently these will be sold at your bid. They are in nice growing condition and will make good for you. This is the only fall sale where you will have a chance to buy sows and gilts. You will not be disappointed with the offering. J. L. McIlrath, auctioneer. Make arrangement to attend the sale. If you can't, send mail bids to T. P. Shreve, of The Wisconsin Farmer, in my care. **Be sure and write for my catalog.**

W. C. JENKINS BANGOR, WIS.

L. F. Atwater sells the following day.

AT THE HOME OF BIG DUROCS

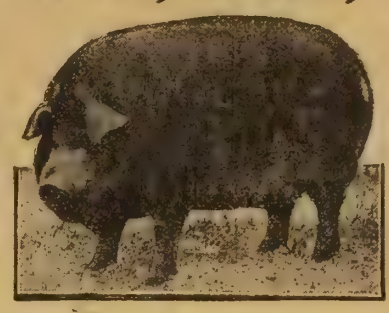
I WILL SELL

35 Boars of March Farrow 35

22 of them Breeder's Herd Boars
15 for the Better Farmer Trade

Bangor, Wis., Wed., Oct. 18

Sired by Lee's Defender by A's Defender, Prince Illustrator by Illustrator 2d, Model King by High Model—Son of Cherry Chief.



Sire of Dams—King the Col., Marion's Wonder, Lee's Defender, Illustrator, Col. Gano, Golden Model 2d.

AN assortment of breeding that has made good in every herd where it has been used. You take no chance with these blood lines. I have wanted to make a boar sale for three years, but never thought I had them good enough. I have them this year. Come and see how well I have succeeded. The tops of eighty spring boars, all of March farrow, and not a poor one in the offering. Not fat, but growthy, just what you want. My show boars included, they'll make good juniors next year. My sows are noted for size and quality. They are the dams of these boars. They'll improve most herds. Come to this sale, buy or look on, but come. If you can't, write T. P. Shreve, in my care, and tell him what you want. I'll guarantee his selection. Don't forget to write for a catalog. It contains Duroc history. When writing mention The Wisconsin Farmer. Auctioneer, J. L. McIlrath.

L. F. ATWATER **BANGOR, WIS.**

W. C. Jenkins sells the day before, and Geo. H. Willsie the day following. Arrange to attend all sales.

JERSEY CATTLE.

Fewacres Farm's Jerseys

IF you are in the market for a pure-bred registered Jersey bull, let us write you about some of our youngsters, ranging in age from one to ten months old. A variety of bloodlines to choose from, including Nobles of Oaklands, Oxford Majesty, Jacoba Irene, Loretta D. and Financial Countess. For descriptions, pedigrees, pictures, etc., address

FEWACRES FARM - - - Wauwatosa, Wis.
FREDRICH D. UNDERWOOD, Prop. A. M. SERSTED, Supt. Cattle.

ELMDALE FARM ... JERSEYS

REGISTERED bulls ranging in age from 9 to 15 months, sired by Inez Rosarie's Oxford, from heavy producing cows of choice type and breeding. Send for pedigrees, description and price.
H. Holt & Son **Oconomowoc, Wis.**

Yearling Jersey Heifers

AND bulls of serviceable age sired by Hutzeland King, a grandson of King of St. Lambert's King. **Big-Type Poland China** spring pigs of both sexes for sale. Prices reasonable.

The big Durocs you have read about. I sell

40 OF THEIR SONS 40

SPRING FARROW, AT

PROSPER, MINN., OCT. 19

I LOST **Big Col.** a month ago when fitting him for the fairs. He was a contender for the purple at the Minnesota fair and a prominent showman offered me a good price for him because he was a great individual as well as a sire. I will sell some of the growthiest boars to be offered this year. They are by **Big Col.** Many breeders have told me that they thought **Big Col.** the best son of **King the Col.** they ever saw. King the Col. breeding has certainly made good and no herd is complete without some of it. Also boars by **Chief Defender, litter mate to Disturber,** being by **Defender,** out of **Lucy Wonder 112th.** Where can you find better breeding? The dams by such boars as **Chief Select, Crimson Col., Crimson King, General Select** and by two herd boars. **Get size in your herd—these spring boars have it.** My catalog is descriptive of the offering and I want you to have one. Send your name and address. Mail bids should be sent to T. P. Shreve, Wisconsin Farmer representative, in my care. Auctioneer, H. S. Allen.

GEO. H. WILLSIE PROSPER, MINN.

Prosper is fifty miles west of La Crosse. Good connections from the Atwater sale the previous day.

AYRSHIRE CATTLE.

BEEF

As a rule, dairy cows when through milking, do not make good beef.

AYRSHIRES

when through milking fatten quickly, thus making the beef tender and delicious. Cut up to good advantage; bones are small; meat is red and well flecked with tallow. Calves bring highest prices for veal. Write for information and list of breeders.

AYRSHIRE BREEDERS' ASSN.
C. M. WINSLOW, Secy., 29 Park St., BRANDON, VT.

30 GALLOWAY bulls for sale, 14 to 18 months of age, sired by Standard Favorite and Stanley's Othello. Also cows and heifers and Oxford rams for sale. O. S. Hechtner, Chariton, Iowa.

SHORT-HORN CATTLE.

USE A SHORT-HORN BULL

ARE you raising beef? A Short-horn bull will give you more scale and bone and more pounds of flesh for a given amount of feed than any other breed. Are you a dairyman? A Short-horn bull will not reduce your milk supply and he will get you calves that will be quickly salable at a much higher price than you can get from a dairy bred bull. Are you a farmer? The Short-horn is the ideal for your purpose, because it is adapted to all conditions, of quiet temperament, takes on flesh readily, and yields a liberal flow of milk. The Short-horn always works improvement.

AMERICAN SHORT-HORN BREEDERS' ASS'N
13 Dexter Park Ave. Chicago, Illinois

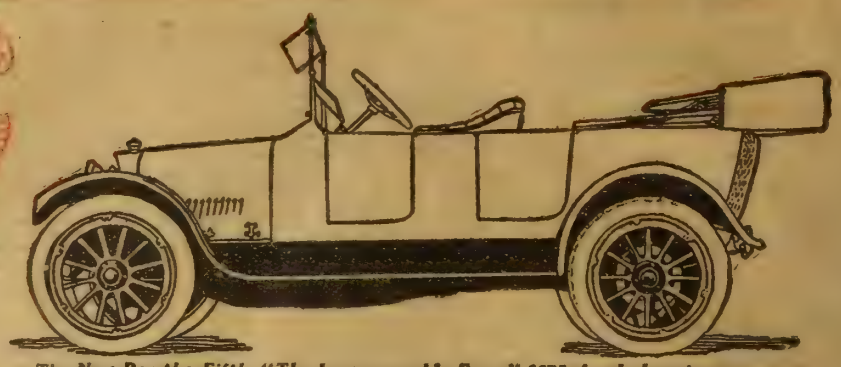
Reo



The New Reo the Fifth, "The Incomparable Four," $875, f. o. b. Lansing

Here's the Secret of Reo Reliability

DOUBTLESS YOU'VE WONDERED—knowing as you do, how absolutely dependable are Reo cars—how free from troubles and how low in upkeep cost:

YOU'VE WONDERED wherein lay the secret of that reliability that is Reo.

WELL, WE'LL TELL YOU. And then you'll wonder at its ridiculous simplicity.

YOU READ, IN THE ADS, how this engineer or that inventor has revolutionized the science of engineering and produced a wonder-working car.

YOU READ THAT every year—only this year it's another engineer. That revolutionary stunt of last year has been forgotten.

IT WAS AS IMPOTENT as a South American revolution—it didn't!

SO THE SECRET ISN'T to be found in any such feat or invention.

REO PERFORMANCE—reliability, dependability, uniformity of performance of all Reos, of whatever model or price—is the result of the taking of infinite pains in the designing, the making and the inspection of the Reo product.

IT'S THE LITTLE THINGS that count—not the big ones.

ANYONE—A BOY EVEN—can make a motor that will be "different." Or an axle, a transmission or a set of springs that might impress the tyro as new and wonderful.

BUT TO MAKE ANY of these vital units better—that is the task—that should be the aim. It has always been the Reo aim.

INFINITE CARE in the fabrication and then in the inspection, and finally in the testing of the assembled whole—that is the secret of Reo success in making, not the most but the best, automobiles.

IF THERE ARE 2000 PARTS in a motor car; and if there's an average of four machining operations on a part—that's 8000 chances for something to go wrong!

AND ONE DEFECTIVE PART—one, however small or seemingly insignificant—that does not fit absolutely, and you'd have a car that would be less than a Reo in performance—more than a Reo in cost of upkeep.

INFINITE PAINS, WE SAID: Perhaps that's too big a term. But if you could know how great is the task—how unremitting the care—to guard against even one little error creeping into any one of these 8000 places—you'd grant us the word "infinite."

"THOSE PESKY LITTLE TROUBLES that are always happening with other cars, are unknown to the Reo owner," says one Reo dealer, "and that's why the demand for Reos is so great."

WHEN YOU STOP TO THINK about it, the troubles you've had with other cars were not big troubles. Your motor didn't drop out of your car or your transmission strip or your frame break in two.

IT WAS THE LITTLE THINGS that pestered your motoring life—parts shaking loose or getting out of adjustment. Dust in bearings—oil leaks—everywhere. Squeaks and creaks and rattles.

ALWAYS THE DREAD WHEN STARTING out that you might not return. Always the fear when in a hurry that some pesky little trouble resulting from some pesky little defect, of which you were cognizant, might delay you. Wasn't there?

WELL THEREIN LIES the big difference between Reos and other cars—the big difference is in attention to the little things.

IT IS NOT UNCOMMON—in fact—it is the rule—for a new Reo owner to drive his car thousands of miles—a year, two years—without even seeing the inside of a garage or lifting the bonnet to make an adjustment or repair.

HONOR AND FAITH and a Good Intent—these and the attention to little things they dictate—result in Reo Reliability as it is known the world over, "The Gold Standard of Values" in automobiles and motor trucks.

Questions and Answers.

A Noisy Car.

I have a nearly new Ford auto. When I speed it up to about twenty miles per hour, it makes a grinding, scraping and cutting sound, as though some parts were getting hot and dry. Some seem to think it is in the transmission; others tell me it is in the brakes; and others say it is in the differential. Please give me your opinion.

Answer.—The noise might come from any of the parts mentioned. Since your car is new, the trouble is most likely to be noisy differential gears. The noise may or may not indicate trouble. If the car were older the noise would probably come from ...linings on the brakes or transmission. It is possible that the ...gears are noisy. The ...d is often used in ... to locate a noise ...btain a nice, ... feet long ... pencil. ...up

Clean the spark ...g the carbon from the ... is a spring to keep the button end of the lever up. By pressing down the button end of the key lever, L, the circuit is closed and the current from the batteries, MM, flows through the line wires to the sounder at the other end of the line, causing it to click. It clicks again when the circuit is broken. If the time between clicks is very short the operator considers it a dot; if longer, a dash. Use No. 12 or No. 14 galvanized steel wire for the line wire. While two line wires are better, only one is often used, the other being grounded at each end of the line, the ground forming the return circuit. The ground wire should extend deep enough to always be in moist ground. A small copper plate should be fastened to the end.

The sounder consists of a hardwood base, D, supporting two blocks, E. F, and the electro magnet, M. If E is made of wood a tack should be driven into it under the lower screw so that it will click. It is best to make E of metal. C is a brass bar with a piece ...oft iron, A, fastened to it. A ex- ...the poles of the horse- ... The

porcelains. Connect the wires to the plugs; lay them on top of the cylinders and turn the motor over, so as to see that each plug is giving a good spark. Then put the plugs back in place.

We presume you have a Model L Schebler carburetor. To adjust it proceed as follows: Adjust the auxiliary air valve so that it seats lightly. Close the needle valve completely and then open it four or five turns. Flood the carburetor by holding down the priming lever. Open the throttle about one-third the way and start the motor. Then adjust the throttle lever screw and the needle valve adjusting screw until the motor runs smoothly at the desired speed. Having obtained a good adjustment at low speed make no further change in the needle valve adjustment. Shift the pointers on the dials until a good adjustment on high and low speed is obtained. The final adjustments can best be made from the running board of the car while it is running. Remember that sooty, black smoke indicates too much gasoline.

With the spark fully retarded the ignition should occur just after the end of the compression stroke in each cylinder. The exhaust valve should close and the intake valve open soon after top center after the exhaust stroke. A properly timed motor having good compression, a good spark and the proper gas mixture cannot fail to run.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

FIRE PREVENTION.

FIRE PREVENTION DAY, which was observed in the cities last week, passed without any observance in the country. It might be well for all of us, however, to consider the matter here between ourselves for a few minutes. Having had the very unpleasant experience of seeing my business burned out three different times, the last one being less than three years ago, I have some very decided ideas on this subject and may perhaps be excused for obtruding them on my readers here in this manner.

It has always seemed to me that we should be far more careful in regard to fires in the country than in the city, for, while fires may spread over a large area more rapidly and cause a greater amount of devastation in the city, they have fire protection there, with trained men always on guard. In the country, however, it is altogether different. An overturned lantern or lamp, matches carelessly trampled under foot, a lace curtain blowing into any flame, and the next minute there is a conflagration against which there is no adequate protection in the great majority of our farmhouses today. For this reason we should all of us resolve to be exceedingly careful with fire, or with anything which might cause a fire, for not only is our hard-earned property at stake, but likewise the very lives of our loved ones.

Certain things are so fundamental in this respect that I hesitate to call attention to them, yet the large number of fires in the country, year after year, convinces me that many are not as prudent as they should be. That matches should be kept out of the reach of the children; that lanterns should be hung up in the barn securely, so as to minimize danger of overturning; that rubbish should not be allowed to accumulate, with spontaneous combustion always imminent; that open flames of any kind should not be allowed in close proximity to inflammable materials; that gasoline cans should be kept securely closed and removed at least twenty feet from any building—these things should be known to us all and observed by us all. Yet many—very many—are criminally careless in regard to matters of this kind.

Then there is the great danger at the holiday season: The lighted candles on the inflammable Christmas tree; the dangerous fireworks on Fourth of July, and so on. Shall we not take every precaution against accident? Scenes of joy and gladness may quickly be turned into scenes of sorrow and sadness, and we, who were responsible, will regret it all the rest of our lives.

Let us consider this matter of fire prevention at our farm neighborhood clubs, every now and then having a sensible talk on the subject. It is right in line with the improvement of the farm home; the substitution of electric lights, for instance, for the old coal-oil lamp, and so on. Whenever we think of farm improvement, let us likewise think of fire prevention, for the two are very closely connected. I am almost tempted to turn this preachment against unnecessary fire losses into a plea for the inauguration of electric lighting systems in our farm homes and outbuildings, for now that the storage battery has been perfected to such a high degree and generators have been put within the reach of most farm purses, there is little or no reason why the gasoline engine, which runs the cream separator a few minutes twice a day, should not be set to the task of generating the electricity with which to light farmhouse, barn, milk house and, in fact, all the buildings of the farmstead. We would then enjoy urban conveniences and minimize fire danger almost to the vanishing point.

Will you consider what I have said here and make up your mind to do everything possible to prevent the possibility of fire in your home, to the end that we may all dwell together in the country in greater comfort and security, unharrowed by any poignant thoughts of "what might have been."

FARM LOANS AT 4 1-2 PER CENT.

IT IS a little too soon to make any positive announcement, but I am privately advised that the federal farm-loan board is hopeful of making loans to farmers, under the new law, at as low a rate as 4½ per cent. This is practically 1½ per cent less than the interest which the farmers of Wisconsin, Iowa, Missouri and Illinois pay today (adding the commission and bonus to the rate which the mortgage bears on its face) and cuts in two the amount which farmers in the newer parts of our country are obliged to pay.

I am advised that members of the board are optimistic over the outlook, and believe that they will be able to dispose of the government land bonds (which, as I pointed out last week, will be in denominations as low as $25 and $100, and which I believe will find a ready sale) at as low a rate as 4 per cent, with ½ per cent all that is necessary to meet the administration expenses. The law prohibits loans being made to farmers at a rate more than 1 per cent above that which the bonds bear, so that, should the bond interest be 4 per cent, as is hoped, the mortgages cannot possibly carry more than 5 per cent. Inasmuch as the average rate here in the grain belt is given by investigators of the United States Department of Agriculture as 5.9 per cent, it can be readily seen we are in for a big saving, particularly in view of the fact that the farmers of Iowa are borrowers, on their farms, today to the extent of $204,242,722, Wisconsin farmers to the extent of $146,815,313, and so on. Were the farmers of Iowa and Wisconsin alone to save 2 per cent on their annual mortgage-interest charges, they would find themselves $7,021,160 better off at the end of each year, an amount well worth saving in these days of the high price of living.

I have good reason, moreover, to believe that farmers all over the country are already taking the necessary preliminary steps to avail themselves of the advantages of the new law. I have already told of the large number of letters of inquiry which I am receiving every day from farmers all over the grain belt. The same situation exists throughout the country generally. Here, for instance, is a report which a friend sends me from North Carolina, showing the formation already (several months before the land banks are open for business) of seven organizations of farmers seeking to obtain money from Uncle Sam at a lower rate of interest than they are now obliged to pay and for a longer period of time:

Seven applications for a charter to organize a National Farm Loan Association have been received as follows:

Chadbourn National Farm Loan Association, A. B. Bryan, secretary; $36,900 applied for.

Raeford National Farm Loan Association, W. F. McLellan, secretary; $22.750 applied for.

Youngsville National Farm Loan Association, S. A. Mitchell, secretary; $20,600 applied for.

East Arcadia National Farm Loan Association, Dr. J. D. DeVane, secretary; $20,700 applied for.

Council National Farm Loan Association, Ira W. Paul, secretary; $30,700 applied for.

Mecklenburg County National Farm Loan Association, H. M. Victor, secretary; $31,000 applied for.

Rutherfordton National Farm Loan Association, W. R. Hill, secretary; $21,750 applied for.

The loans applied for by these seven farmers' associations total $184,400, with farm property given as security valued at $463,530. It does not look as though Uncle Sam were taking many chances, with the security worth two and one-half times the loan and with at least seventy farmers (a minimum of ten to the association) standing back of one another's loan.

Letters continue to pour in upon me, asking for further details. I am only too glad to answer these to the best of my ability, and hope that the information, which I am thus enabled to give, will aid farmers in taking advantage of a law which, while it may not be perfect, seems to offer exceptional opportunities to the farmer anxious to increase his land holdings and to advance in his chosen field of activity.

A HOUSEHOLD TRAGEDY.

IN THE course of a year, I receive many thousands of letters, on divers subjects, from all sorts and conditions of people. There are few of these letters which do not interest me in some manner. Many of them are personal to the point of intimacy, although the writers and I have never seen each other. Some reveal the hearts of the writers as nothing else could possibly do.

In order to show you how interesting is this daily task of reading the mail and to attempt to solve the problem presented, I am going to take the liberty to reprint herewith a considerable portion of a letter written me by the wife of an Illinois farmer. Her letter deals with the age-old problem of the partnership between husband and wife; what are the rights and privileges of each, and so on. This woman is exceedingly capable; I should judge from her letter that she is well educated, extremely refined, highly talented and wonderfully capable withal. She does me the honor to read and to like what I write, for she says:

> I want to let you know how I enjoy your editorials. Your paper comes on Friday just before dinner. As soon as I have eaten my dinner I usually make a dive for the paper (providing that hubby or the hired man do not have it already) and I seek the comfortable davenport in the nice, cool living room and read your editorials, the story and the household page. The dishes have to wait and the two men have to seek consolation with the six other magazines and newspapers that come on that day.

Now, this woman, the wife of a hard-working, prospering Illinois farmer, has a grievance. On the surface, none are more fortunate than she. Although they do not yet own their farm, they possess most of the comforts of life and enjoy most of the conveniences of city folks. Yet, what she misses (having, according to her own story, been a working woman, earning her own money, before she was married) is an equal right in the partnership between husband and wife, money of her own, a voice as determining as her husband's in the family council which determines the ways and means of the household. I have her permission to quote from her letter, as follows:

> We have both worked hard. At the end of ten years of married life our wealth has increased many times. The stock has multiplied. All kinds of labor-saving machinery makes it easy for the hired men. We have an automobile. It is only a question of time before we will have a farm of our own. In spite of all this I, some days, cannot see that I have gotten very big returns for my amount invested. I have a nice home. Yes, but I had a good home before. A husband's love. Yes, but no access to his pocketbook. A very desirable position in the social life of our community. Yes, but I have won that by my own personality. An automobile and sixteen horses. Yes, but often when I want to go to town to some social doings I have to walk seven miles or stay at home. (I walk.) I have very respectable mail-order clothes, but not one dollar to go shopping on, so dear to a woman's heart. Our table is loaded with good things to eat. Because I am a good cook and spend half of the 365 days of the year cooking, baking, canning and preserving.
>
> My furniture is becoming somewhat old-fashioned and would not bring half its value on the market, although it will probably last a lifetime. I have no conomic value. It counts for little that I have cooked and scrubbed, mended and made over clothes, toiled for thirty-one different hired men, raised poultry and made butter. Every dollar spent in developing my own individuality is begrudged because I might get too high notions for a farmer's wife. Goodness knows all the money I have to spend as I please is the little bit of egg money that remains after the groceries are paid for. I am not allowed to have anything charged and never draw a check without permission and then have to prove that it is for necessities.
>
> My husband is hard working and saving, has no bad habits and never beats me or abuses me. In his heart he really thinks he is a kind and generous husband, and proud that he is able to support a wife so well. Many a time I have no doubt he smiles to himself on having so skillfully nut a curb on the extravagant ideas of his better half (?). How complacently he takes to himself the credit for this prosperity.
>
> I am being "supported." Yes, but I could support myself in other fields with one-tenth the back-breaking toil. I could take up office work tomorrow just where I laid it down, for I haven't allowed my brain to grow sluggish. I could teach school, for I haven't helped the neighbor children with their multiplication tables or algebra in vain. There are a dozen things that I could do. But I am no "quitter," so hubby need not worry.

My friends, there is a problem here—one so large that neither you nor I, individually, can solve it; yet, by counseling together, we may be able to improve conditions, not only in that household, but throughout the country generally. Shall we discuss this matter here between ourselves, in the hopes that the husband of this Illinois farm wife may himself be bettered and all of us enlightened? This brave little woman would not have written in such a vein, she adds, had it not been for the fact that her husband sold a carload of stock that day, and when she laughingly asked him to pay her off, he refused to turn over to her even a single dollar. Perhaps he had a good reason for refusing; perhaps there was a note coming due, some urgent indebtedness to meet. At least, however, he should have explained their financial affairs and refused her in such a manner that she would not have felt hurt and imposed upon. What advice shall I give her? Will all of you help me in this matter, which seems to me so vitally important not only in this one household, but throughout the country generally?

Wisconsin's Wealth in Crops.

THE government crop report covering the estimates on all crops in Wisconsin up to October 1st has just been issued. It is somewhat interesting to note the production which in many cases is practically the same as will be given on the final report.

In 1915 there were 40,825,000 bushels of corn raised in this state. On October 9th last year, this corn was worth 74 cents a bushel. On this basis of figuring, the corn crop last year was worth, in round figures, about $30,000.000. The estimate for production this year is 56,100,000 bushels. The final estimate will probably not reduce this figure. We have 15,285,000 bushels more of corn in Wisconsin this year than last. This tells only part of the story, as the corn this year is greatly superior in quality, having practically all matured. At this time corn is worth 79 cents a bushel. In round figures this means $44,000,000 or about $14,000,000 more than our corn crop was for last year.

In wheat, Wisconsin fell off in production this year, the total for 1915 being 4,662,000 bushels and the total for 1916 being 3,320,000 bushels, but wheat last year after harvest was only worth 97 cents a bushel. This means the wheat crop is worth $1.34 per bushel. This makes the crop this year worth $4,448,000, or in round figures $225,000 more money than it was last year.

In 1916 Wisconsin produced approximately 100,000,000 bushels of oats worth 33 cents a bushel, or $33,000,000. This year the production is approximately 80,000,000 bushels, worth 43 cents a bushel. This figures out $34,400,000 and makes the 1916 crop worth approximately $1,400,000 more than the 1915 crop.

In 1915 Wisconsin produced 26,000,000 bushels of potatoes worth 30 cents a bushel in October when most of the potatoes were sold. In 1916 it is estimated that the state will produce only 17,500,000 bushels, but the prevailing price is over $1 per bushel and the crop will bring in anywhere from $15,000,000 to $20,000,000.

The hay crop this year totals 4,375,000 tons as compared with 4,508,000 tons in 1915. This hay is worth $10.40 now, while most of it last year sold for $9 per ton. Hence, the deficiency in the crop is more than made up by the increased price. This is true of practically every product in the state.

The biggest gain in Wisconsin this year has been made by the tobacco growers who have produced about 20,000,000 pounds more tobacco than they did in 1915 and are selling it at from 33⅓ to 100 per cent more than they did a year ago. The production last year was 36,000,000 pounds and this year 55,000,000 pounds. There was some damage to tobacco in September from frost, but not so much as at first reported.

The apple crop in the state this year is only about half what it was in 1915. Prices are high for good apples, but unfortunately there is no very large amount of good apples on hand.

Taking it as a whole, from the figures quoted and based on the October 1st reports, it would seem that this is a tremendously rich year for Wisconsin despite the slump in yield on some crops. Last year Wisconsin produced between $90,000,000 and $100,000,000 in dairy products. This is very likely to be exceeded this year, as the prices paid for milk and for milk products is the highest which prevailing men have ever known. This is particularly true of cheese. Swiss cheese in 1915 in October was quoted at 18 cents—now it is 30 cents. Brick cheese a year ago was 13 cents and the recent quotation is 23 cents. Limburger has raised from 11 cents last year to 18 cents this year and block cheese from 15 cents to 25 cents, and similar advances are noted on practically all of the grades of cheese which are made in the state.

This looks like one of the very best years Wisconsin farmers have ever had. There was a dry spell for a few weeks in the summer which cut the milking production down some.

Wisconsin showed up fine last year during the wet season and fine this year during the dry season. The wet season had the largest yields, but the dry season will yield the biggest profits on account of the high prices. It is again proved that the Wisconsin farmer wins out in any kind of a year.

Our Editor-in-Chief at National Dairy Show.

THE National Dairy Show, in progress at Springfield, Massachusetts, this week, has brought together hundreds of the finest dairy cattle ever displayed in America. Early reports indicate that never before were the contests in the various classes so spirited; never before was interest in dairying (a branch of American farming which approximates in value $1,000,000,000 a year) so widespread or so keen; never before were dairymen and farmers generally so interested in the outcome, or so anxious to have the complete story of this stellar event in the dairy world told promptly, accurately and entertainingly.

The Wisconsin Farmer is pleased to be able to announce that its editor-in-chief, Mr. James Atkinson, is attending the National Dairy Show at Springfield this week, in person, and that he will write a full and detailed report of the big event, to appear in next week's issue of this paper. This insures the best, most accurate and most authoritative report which will be printed by any farm paper in the entire West, for Mr. Atkinson has won an enviable reputation in the journalistic world, combining an unsurpassed knowledge of the fine points of live stock with felicity of expression and conscientious accuracy of work. The Wisconsin Farmer is confident that Mr. Atkinson's report, in next week's paper, will be without a superior and that it will give to our readers such an intimate picture of this big national dairy show as will bring it home to all most vividly.

The National Dairy Show is of interest, not only as it brings together the kings and queens of the dairy world, for spirited contest in the show ring, but also as it assembles the largest and finest display of dairying accessories known. Mr. Atkinson's next week's Wisconsin Farmer, will accessory display and give a good idea est time-saving and labor-saving devices in the dairying industry. We are connothing bigger or better in a journalistic appear in any farm paper this year. for next week's Wisconsin Farmer and report of the world's biggest dairy ex- full.

Dirt in Milk.

GOOD breeding of dairy animals was not the only thing emphasized at the Dairy Cattle Congress held recently at Waterloo, Iowa. It is enough to have a well-bred dairy animal, of quantity production of high-test milk. These shows indicate plainly to us the value ding and the characteristics which may be but by good breeding, they tell only a part ry when they convince us that better stock ay on the dairy farm.

Exhibit of milk collected in sixteen western within the week preceding the dairy show special interest. There are a great many n Wisconsin who either furnish milk for sell milk which is sold for private conthrough the distributing houses. They terested in what was discovered concernilk which was picked up and exhibited at o. This milk was scored on a basis of 100 or perfect milk. Milk with a bacteria count was scored perfect and credited 35 points. her the bacteria count the lower the score good many of the samples were awarded on this part of the score card. Flavor and ounted 25 points in the score, and fat 10 Milk which tested 4 per cent butter fat was d 10 points and the score was cut down in tion to any percentage less than four. Solids fat counted 10 points, acidity 5 points and bottle cap 5 points. The lowest score was 53.77 and ghest 85.11. Each score represented the aver- f the score of nine bottles taken from different ery wagons in the cities where the milk was cted. In no case was any warning given the rman that his milk was to be taken or tested. best bottle of milk was picked up at Council fs, Iowa, from an unsuspecting farmer-dairyman se milk scored 94.25 points.

The writer and the inspectors who collected and ed the milk are acquainted with a number of dairymen whose samples were scored. Milk ich scored the lowest as a rule was cut most on bacteria count, several getting nothing on this re, and the count running from 250,000 to 00,000.

Two factors seem to enter very prominently into the matter of keeping milk free from dirt. First in importance is the man; second the surroundings in which the milk is produced. It may happen that a farmer or dairyman poorly equipped will get clean milk—at least within the 10,000 bacteria count, which is the standard set for certified milk. A man might give his cows so much personal attention in a poor barn that the presence of dirt and filth would be reduced to the minimum; but he could accomplish the same result much more easily with good equipment and plenty of running water. Large herds often suffer by reason of the fact that the dairyman cannot give the entire herd his personal attention, but must trust to hired men. There are hundreds and thousands of good hired men in the dairy business, and we regret to say there are a very large number of careless hired men. This is especially true where the hired men are not closely supervised by the owner of the dairy. Modern equipment is appreciated by the hired man who finds the task of keeping clean a much easier one and who will take more pride in a barn and dairy that is equipped with labor-saving and sanitary conveniences. The general average of this test, however, seemed to prove that the smaller dairy produced the cleaner milk, and especially the dairy which was directly supervised by its owner. If the owner makes his living by selling milk and does not look upon the dairy as a side line, it appears he is much more likely to have his place in a clean and sanitary condition. It is true in the dairy business as in almost every business that men and equipment count—men first, and equipment a mighty strong factor in putting efficiency into good intentions.

Learn Lessons on Draining Wisconsin Marsh Lands.

THE annual field meeting of the Wisconsin State Drainage Association was held at Racine last week. The meeting was well attended. With prop drainage in Wisconsin about 2,000,000 acres of wet marshes may be ready for the plow. This does not include tiling of unprofitable spots on thousands of farms. No one could have taken the field trip through Racine and Kenosha counties without being convinced of the possibility of draining marsh land. A number of instances were seen where before drainage one might easily drown a horse. After drainage this land is producing good crops and in a number of instances this year netting the owners $400 an acre. One of the visitors on the trip said that he would not have believed what he saw if it had been told him without seeing.

The first stop was made on the drained lands of W. J. Hansche. Three hundred acres are included in this drainage district with a fifteen-inch tile outlet to Lake Michigan. Mr. Hansche said if he had it to do over again, he would double the capacity of his outlet. One hundred twenty acres on his farm has been drained fifteen years and prior to that time had no productive value whatever. Now it is used for onions and yields 600 to 700 bushels to the acre. The same land has grown crops of corn and cabbage. Mr. Hansche estimates that drainage improved the value of this 120 acres 100 per cent. When asked what he would pay now for such land he said: "I wouldn't buy it. I would go out and buy some marsh and waste land and double my money by draining it."

Another stop was made at the F. W. Gunther farm in the Mt. Pleasant and Somers drainage district. This swamp included 2,500 acres. The drainage system has just been completed.

The third stop was at the A. P. Nelson farm in the Yorkville and Raymond district. Mr. Nelson's fine Holstein herd was grazing contentedly on an eighty that was not tillable until drainage made it so. Adjoining this eighty is a forty still unimproved. Although the same outlet runs alongside it, this forty grows nothing but wild hay, cattails and weeds. Mr. Nelson estimates the value of the drained land at $100 per acre. Before drainage it had no productive value and he failed when he made an effort to crop it, losing his time and money. Mr. Jaeger in this same district expects to get $400 an acre for his cabbage this year. Ten years ago this land was under a foot of water. Mr. Jaeger has used a little commercial fertilizer but no stable manure.

Another visit was made to the Irving G. Wheeler farm where a splendid crop of corn was raised this summer on fifty-five acres of peat soil. This soil was plowed for the first time two years ago. It was strictly a marsh piece before drainage. The corn stock this year which went into the silo measures eight to twelve feet.

The Wisconsin State Drainage Association elected the following officers: President, W. B. Coddington, of Plover; vice president, B. M. Vaughan, Grand Rapids; treasurer, A. C. Willard, Necedah; secretary, E. R. Jones, Madison. This association is doing a splendid work along a line greatly needed in Wisconsin.

International Show Is Next Important Event.

FROM first to last, the show season of 1916 has been a remarkably successful one and fair visitors as well as those who have followed the detailed reports of these affairs, as given by The Wisconsin Farmer, will enthusiastically endorse the above statement. These shows, taking them as a whole, constitute what may be called the preliminary events and they logically lead up to the climax—The International Live Stock Exposition—the date of which this year is December 2d to 9th.

The presence of foot-and-mouth disease in 1914 and 1915 prevented the holding of this great exposition, and it follows naturally, that there is a keener interest in this event than ever before, and we are calling our readers' attention to the Exposition, in the hope that the attendance this year will eclipse all former records.

There never has been a time when a livelier interest was shown in pure-bred animals of all breeds than was the case this year throughout the entire

show circuit and it is quite worth while for stockmen, who have their animals well fitted, to enter them at this final show. Entries must be sent to General Manager, M. H. Heide, Union Stockyards, Chicago, Illinois, before November 1st, that being the date when entries close.

There is a special reason why there should be relatively a larger number of entries in all classes this year than ever before, because a large delegation from South America will attend this show, for the special purpose of supplementing their herds with the best from this country. The various breeding associations have succeeded in establishing the most friendly kind of relations with the breeders of the southern countries, and it is no longer a secret that the United States will be looked to in the future to supply foundation material for all the leading breeds of live stock.

Flushing the Ewes.

IT BEHOOVES every sheep raiser to take the best of care of his flock this year, because both wool and mutton are high priced and destined to remain so for many years to come. It always pays to take good care of the flock, but we believe that sheep owners will find an unusual demand for their surplus during the next few years, as there will undoubtedly be many small farm flocks started.

The breeding season will soon be here, and it is a well-known fact that the condition of the ewes at breeding time has much to do with fertility. If possible, the ewes should be placed on succulent pasture for two or three weeks before the ram is turned with them, and in addition be fed from three-fourths to a pound of grain per head per day for two weeks before being bred. A good ration for this purpose is one composed of one-third each by weight of corn, oats, and wheat bran. If an ewe is in a thriving condition—gaining in flesh—she is much more certain to breed early, and there is also a bigger chance of her producing twins. To get all the ewes bred as nearly at the same time as possible shortens the lambing period, a matter of considerable importance to the flockmaster, and especially to the farmer whose sheep business is a side line.

It is important, too, that the ram be vigorous and strong, but on the majority of farms there is greater danger of the ewes being thin at this time of the year, especially if they have been nursing twin lambs through the hot summer months, and hence, the importance of giving them special attention at this time of flushing them, as it is called.

It is an excellent plan when turning the ram with the flock to paint his brisket with some color that will leave a mark on the wool of the ewes he serves. Twenty-one days later he should be painted with another color, so that the flockmaster may know how many of the ewes are "returning." The precaution of trimming the ewes about the dock should also be taken before the mating season opens.

Testing Associations Improve Dairy Conditions.

WHERE cow-testing associations have been formed, remarkable progress has been made by dairymen in increasing the production of individual cows. It may be accepted as generally true, that one-third of the cows used in the dairies of the corn belt are non-productive, and it stands to reason that the substitution of good cows in the place of these boarders, means more prosperity for the dairymen, at a smaller expenditure of labor.

Prof. O. E. Reed, of the Kansas Experiment Station, in a recent press bulletin, points out that the greatest advantage of the cow-testing associations is that of obtaining an exact record of each cow in the herd. Usually these associations do the work of testing between three hundred and four hundred cows, belonging to twenty-six individuals, thereby allowing one person to test each herd once during the month. From these monthly reports, the yearly records are calculated.

In addition to testing the milk and determining the yield, the amount and character of the food consumed is known, and the individual who makes the tests is placed in a position to advise the owner in regard to feeding methods. It has been found from actual experience, that the cows in the herds tested monthly show a substantial increase in the yield, as the direct result of more intelligent care they receive.

It is a well-known fact among the successful dairymen, that the same ration is not necessarily adapted to different cows in the herd. The individual that produces on the basis of 150 pounds of butter fat in a year can be carried through the winter on a very limited ration of grain, in conjunction with roughage of good quality. If she is fed liberally on grain, this will, in most cases, be converted into internal or external fat on the body, and this product is, of course, of no value unless the cow is disposed of for slaughter. On the other hand, the good cow will respond liberally to heavy feeding, it being in many cases desirable to feed as much as 12 or 15 pounds of grain daily, whereas her stall mate may be kept at a direct loss, even though she receives but 5 pounds of grain daily. The cow-testing associations have demonstrated in thousands of cases, that the proper way to feed cows is to apportion their ration in accordance with the amount of milk they produce.

One of the important benefits that comes from the work of the testing association is that it leads to community breeding, and this means that a part or all of the members of the association sooner or later undertake to handle one breed of cattle. There is an advantage in this, because members can co-operate in buying and selling their breeding stock, and they may trade herd sires, and thereby cut down expenses.

Turning Good, Deep, Honest Furrows.

AN EXAMINATION of fields that have already been fall plowed indicates that the old plan of skimming over three or four inches of the surface soil is being carried out as heretofore. In most cases the soil would be stirred more deeply, were it not for a lack of power, because nearly every man knows that deep-rooting crops, like corn, make a more vigorous growth on a deeply plowed soil, than will be the case when shallow plowing has been practiced. The advantages of deep plowing are set forth clearly in the volume, "Power and the Plow," by Ellis and Rumely, and from that volume, we now quote:

Deep furrows are more apt to be pulverized than shallow; hence to some extent the plow performs for the subsoil what pulverizing implements do for the surface layers. Three or four inches of the surface soil must be kept stirred as a dust mulch to check the capillary rise of water and consequent loss by evaporation. Underneath this mulch a dry crust inevitably forms during the growing season; hence the actual feeding area of the roots does not begin until a depth of five or six inches is reached. As between plowing eight inches and ten inches deep there is, therefore, a difference of at least 100 per cent in the zone available for the maintenance of the plant.

The moisture reservoir is increased in the same ratio. The deeper the moisture is stored, the greater is the assurance of an abundance for the needs of the crop, as each successive inch dries out more slowly. A soil weighing one ton per cubic yard weighs approximately 1,613 tons per acre, taken one foot deep. If such a soil will absorb and hold 20 per cent of moisture, and is plowed six inches deep, it will take up 161.3 tons of moisture per acre. A rainfall of 1.4 inches will supply this amount of moisture and fill up our six-inch reservoir; if the ground is plowed only three inches deep and the subsoil is hard, it would not be able to store a rainfall of more than seven-tenths of an inch, and should more water fall at one time, it will be lost and may wash the soil away with it. If plowed nine inches deep and put in good condition, such a soil reservoir would absorb and hold over two inches of rainfall at one time. A soil already containing considerable water would be filled up with less rain, and deep plowing would be still more important. Where the soils are light and winds drift them, shallow plowing may result in all the top soil down to the sole of the furrow, being blown away. Deep plowing, on the contrary, throws up heavier and rougher furrows, and tends to anchor the soil in place. Plowing deep, therefore, prevents both washing and drifting.

Deep plowing cannot be accomplished all at once on any new soil. Where the soil is heavy and compact, the prairie is apt to be covered with "short-grass" sod, indicating that only an inch or two of the surface is in condition to sustain plant growth. The soil underneath is apt to be cold and unproductive, hence must be mixed slowly with the upper layers and put into proper physical condition by good tillage and exposure to the sun and air. Fall plowing can be done more deeply on this account than spring plowing, owing to the weathering action of frost and snow. For a year or two after the ground is broken, the plowing should not be at the same depth as the first breaking, as this will expose undecomposed vegetation, the lack of moisture in dry climates retarding decay. The ultimate depth desired should be attained gradually, and afterward the depth should be varied from year to year, to avoid forming the "share hardpan." This is a hard, glazed condition of the sole of the furrow which renders it impervious to water. The trowel-like effect of the share and the tramping of the furrow horse's feet, bring it about.

Those who were fortunate enough to plow their corn land deeply last fall, have reaped a handsome reward this year for their forethought and foresight. In practically every case where deep plowing was practiced, the land stood the drouth better during the long period of dry weather in July and August, thereby furnishing a convincing argument in favor of stirring the soil deeply.

When soil has been repeatedly plowed to a depth of four or five inches, it would not be advisable to attempt to plow more than six or at the outside, seven inches deep this year, remembering that it is possible to bring up too much inert material at one time. Even this increased depth will call for much additional power, and at this point, the tractor owner will find himself in a position to do the work expeditiously, and without strain on man or beast.

It is the deep, honest furrow that counts after all in crop production, and this must be kept in mind, no matter whether the work is done by horse power on the one hand, or by gasoline or kerosene power on the other.

Increasing Consumption of Meat.

IN A RECENT issue of the Quarterly published by the American Short-horn Breeders' Association, reference is made to the campaign that is being waged against the consumption of meat. The Quarterly does not mince words, but points out that the attack on meat as a food product is frequently made under the guise of expert instruction. As thousands and tens of thousands of readers of this paper are engaged in animal production, this subject becomes of personal interest to each one, and we will, therefore, quote in part from that paper:

There is an apparent awakening to the extent of the campaigns being conducted in the interest of various manufactured foods, cereals and dairy products. The dairy people are aggressive and are assembling a fund of three-quarters of a million dollars—a much larger amount than they originally intended—and are laying the foundation for a broad and systematic campaign of publicity. That such an effort will bring results is a foregone conclusion.

Unfortunately there has been a tendency all too general to attack meat as a diet. A part of these attacks have been made under the guise of expert instruction. A part through lack of information and a part through an endeavor to stimulate a demand for some particular manufactured food as a substitute. Those who have been engaged in meat production have apparently proceeded on the assumption that these combined influences could not or would not adversely affect the consumption of meats. Happily the universal inclination toward a meat diet has, to a large extent, safeguarded the industry. But it is now conceded that the meat-producing interests are in need of an intelligently conducted campaign, educational in character, to instruct consumers in the matter of the food value of the variety of uses of the various cuts of the beef carcass.

A most important phase of such a campaign would be the instruction of the beef producers in the matter of holding down the cost of production. That beef may be produced profitably at a much lower range of prices than now prevails is common knowledge and the best interests of the industry will not be served if the tendency of the prices is higher. A lower range of prices of meats would unquestionably encourage greater consumption. The gradual reduction of the range area and privileges tends to improve the opportunity of the corn-belt farmer in the matter of beef production.

It is the forecast of authorities who have studied the question from every angle that the corn belt, regardless of the land values, must become and will eventually become the meat-producing territory of the future. It will be a fortunate day when this condition again exists. It will mean more general prosperity and the upbuilding and conserving of the soil. That the industry is in need of a campaign with the definite purpose of increasing production as well as extending consumption, the best informed agree.

What effect the close of the European war will have upon American meats is necessarily more or less of a conjecture; but from sources intimately identified with the meat-making interests, come the prediction that meat prices will decline. The European armies have been well fed at the government's expense, and, as a result of the most rigid economy on the part of those who remained at home and tilled the farms and conducted the various business activities. But when these soldiers go back to everyday pursuits relying upon their own resources, rigid economy will be the watchword in every household. If, as seems probable, our export demand is reduced, it is of the highest importance that a larger home consumption and a lower cost of production be encouraged.

A most important matter is touched on when attention is called to the need of stimulating home consumption by lowering the cost of production. This end can be attained first by a larger use of farm roughages, and secondly, by the improvement of grade herds, so that the largest possible proportion of the foods consumed are converted into valuable meat products. The pure-bred sire must be popularized, and particularly that type of sire that will impart early maturing qualities to the herd. There is no better way of increasing the demand for a product than by improving the quality of it; when coincidental with this improvement, there is made no advancement in price.

Reducing the Cost of Production.

THE more beef the American farmer can produce at a reasonable profit the better it will be for his land, because beef production tends to maintain fertility. From the standpoint of supply and demand, there is no reason why beef production should not be profitable for a long period of years. It is a well-known fact that the cattle in the United States, exclusive of dairy stock, decreased from 50,000,000 head in 1900 to 37,000,000 in 1915, while during the same period the population increased from 75,000,000 to 100,000,000. In other words, while our beef cattle decreased 13,000,000 head, our population increased by 25,000,000.

It is true that in spite of this condition and in face of the additional fact that European demand greatly increased our beef exports in 1915, the producer was unable to obtain profitable prices for his products last year, and much complaint was heard. Beef values have now returned to a profitable basis from the producer's point of view, and there are indications that there are better times ahead for the producer than there have been in the past.

One thing the cattle raiser should do is to pay special attention to methods of feeding. More roughage and less grain must be utilized from now on, because high-priced grain will be the rule in the future. We must utilize as nearly as possible 100 per cent instead of 60 per cent of the corn crop, which can be done by putting a part of it in the silo. Feeding tests have repeatedly shown that silage properly fed in the form of a balanced ration is one of the cheapest feeds that can be used, not only for growing, but also for fattening cattle. Legumes should be grown to supply at least part of the protein needed to balance the silage ration. Silage and alfalfa or clover make a well-balanced ration for beef-breeding cows and for growing stock intended to be roughed through the winter. For fattening cattle there is, of course, a limit to the amount of roughage that can be fed to advantage, but they even can consume large quantities of silage during the first thirty or sixty days of the feeding period, the exact amount depending upon the length of time the cattle are to be fed and their condition.

The important thing is to reduce the cost of producing a pound of beef to the lowest possible point, thereby making the profit that much more certain when the margin between feeding and fat cattle is narrow, as it often is.

LETTERS ON BARN EQUIPMENT.

Official Testers of Wisconsin Cow-Testing Associations Relate Their Judgment as to the Real Value of What Is Spoken of as Modern Barn Equipment.

Sanitary, Well-Lighted Barns are Economical.

To the Editor:—The three most profitable dairy farms in our association have what you would call special barn equipment. One member has wooden stalls equipped with steel stanchions. The other two have a complete arrangement of steel stalls, mangers and watering devices. I believe in installing modern barn equipment: First, because it is the most sanitary and the easiest to keep clean. Second, because I believe that it costs a farmer less money and time to install modern equipment than to be changing his wooden stalls every four or five years. Also the wooden stalls are excellent places for lice and mites and other insects to hide in. Third, a farmer with modern barn equipment will take more pride in seeing to it that his stock are in good condition, that is, he will take better care of them.

In summing it all up I think the most essential points about a dairy barn are good ventilation, plenty of good, large windows to supply light, clean stalls and mangers. From my observation I have noted that cold, dark, badly ventilated and dirty barns mean less profits for the dairyman; also it takes more grain and feed to keep up the milk yield when the cows are subject to chills in cold barns.

M. E. Smith,
Official Tester Alban and New Hope Cow-Testing Association, Portage county, Wis.

Cuts Down Work One-Half.

To the Editor:—The three most profitable farms are equipped with modern barn equipment and the most profitable herd have drinking cups. I also have a herd of cows in my association that have the same advantages as the most profitable herd as far as barn equipment is concerned and yet they are the lowest producers in the association, due to the lack of feed and care.

Several members have equipped their barns and find it half the work to care for the same herds.

Joseph Z. Feinberg,
Official Tester Rock County, Wis., Cow-Testing Association.

Good Men Usually Get Good Equipment.

To the Editor:—In my association the equipment of the dairy barns are on the average good. Some are a little more modern than others, but on the whole the majority are comfortable and fairly well equipped.

I think the equipment, as far as the comfort and sanitary conditions of the cows are concerned, will greatly add to the profits up to a certain point, and beyond that I think the increased profits are not so much due to the equipment, as to the man. Generally a man who has an up-to-date barn and equipment is up to date in his feeding and care of the cows also. I think one can go to extreme along the line of equipment.

I have seen herds on dirt floors in the old rigid stanchions that were making the owner a nice profit, but these same herds were well fed, well bedded and well taken care of, and with but a few exceptions this sort of a man will build a modern barn as soon as he is able. Swing stanchions add to the comfort of the cow and thereby add to the profits. Cement floors and gutters make conditions more sanitary, but a cold cement floor does not add to the comfort and production of the cow without a good layer of bedding.

I think, too, that a modern dairy barn is nice for the man, as it is really his home about two-thirds of the time.

T. L. Cuenot,
Official Tester for Fairwater Association, Green Lake county, Wis.

Increases Profits 10 to 50 Per Cent.

To the Editor:—A modern equipment will increase dairy profits all the way from 10 per cent to 50 per cent, other things being equal, that is a good bed and warm, dry stable. Water buckets will pay for themselves in one season.

A ventilating system keeps the barn dry and if kept around 40 to 45 degrees, with water with the chill taken off, gives the cow a chance to do her best.

My three most profitable dairies have partly modern equipment, swing stanchions, water in the barn in a tank, or run in the mangers, and a special ventilating system. The increased profit from the sanitary standpoint is about 50 per cent.

The Stanley Cow-Testing Association cannot boast very much as yet of modern equipment, but inside of two years, at the rate modern barns are being built, we will stand second to none.

R. F. Adams,
Official Tester Stanley Cow-Testing Association.

Many Interested in Better Barn Equipment.

To the Editor:—The most profitable dairy farms in my association are equipped with a well-known manufactured outfit and stationary stanchions. Two with the latter and one with the former. The man with the special equipment says he is very well satisfied and would not be without it. One of the men with stationary stanchions had the highest average production the past three months and promises well to have the highest for the year, as he gives his cows good care in spite of the [illegible] of stationary stanchions.

Judging fr[illegible]perience, it pays to install a [illegible]arn equipment. The conven[illegible]loing the barn work which [illegible]or, the comfort provided for [illegible] which they pay for at the [illegible]proved sanitary conditions [illegible]n brings higher prices for [illegible]duct produced, all goes to pay [illegible]f installing.

As yet [illegible]ot many modern barn equip[illegible]alled in the county, though [illegible]es well to come fast. A n[illegible]ve wood stalls and chains. [illegible]my notice that several r[illegible]ted.nts were being insta[illegible]mmet.

John Reckinger,
Langlade [illegible] Cow-Testing Association

Increa[illegible] Profits One-Fourth

To th[illegible]–The most profitable herd i[illegible]dsburg Cow-Testing Associ[illegible]wned by J. J. Marshall, [illegible]via. Mr. Marshall's herd c[illegible]leav of Holsteins, eight of which [illegible]grade cows, averaged for the si[illegible]ths that they were on test 5,842.5[illegible]nds of milk and 231.1 pound[illegible]utter fat at a feed cost of $14.5[illegible]e value of his total average prod[illegible]0.66, leaving a profit of $66.1[illegible].

M[illegible]'s dairy barn equipmer[illegible]ists of swing stanchions, con[illegible]floors and driveways. His bar[illegible]spotlessly clean and in wi[illegible]supplies his cows with an abu[illegible]bedding. Although lacking in equipment, Mr. Marshall makes up that lack by using good judgment and common sense in caring for his cattle.

The second best herd is a pure-bred Holstein herd of fifteen head, owned by Kirkpatrick Brothers, of Reedsburg. Their cows are not such heavy producers as Mr. Marshall's, but Kirkpatrick Brothers own a milk route, which accounts for the average profit of $66 per head for the six months. They have steel stanchions, stalls, manure carriers, water at every cow's place and all special equipment. They have a milking machine also. Their dairy house is nearly ideal.

The next profitable herd is owned by Wm. Alexander, of Ableman. His herd of eleven made an average profit of $53.10 for the six months. He has only common wood stanchions with dirt floors.

As most of the members of the association have fall cows, it is hardly a fair show for all of the members of the association. This association has only been running six months, so those are the only figures that are available.

As for what my judgment is on the question, I personally believe that modern dairy barn equipment has a great deal to do with the comfort of the herd. A person cannot do his work well and properly unless he is comfortable. So it is with the cow. Could John B. Irwin, of Minnesota, or Mr. Moscrip, also of Minnesota, have shattered all world's records if their cows had been put in a poor barn with dirt floors which would be often wet and muddy? You will agree with me that the chances were 100 to 1 against them.

In my estimation, a farmer who installs modern equipment will increase his profits 25 per cent. Nothing should be spared to increase the comfort of the cows.

I believe that the sooner farmers install good sanitary and comfortable equipment just so much sooner will dairying be advanced to its right position. I believe that the average dairyman is fifty years behind the time when it comes to dairying.

Alvin W. Wardas,
Sauk County, Tester for Reedsburg Association.

Cow Comfort Pays.

To the Editor:—Of the three most profitable dairy farms in my association two of them have what you call special barn equipment. The third farm is now finishing installing a modern system, with cement floors throughout. From experience and observation I think in most cases it will pay the farmer to install modern dairy barn equipment. I look at this from the standpoint of greater cleanliness and better sanitary conditions; also greater comfort for the cows and time and labor saved. As to just how much these improvements will pay, it depends upon the circumstances, with especial reference to feeding and interest taken in the stock. For the average herd a moderate amount of equipment will pay, but if too many costly fixtures are installed it is doubtful as to whether the added profits will pay for the layout.

C. M. Rydberg,
Official Tester Underhill Cow-Testing Association, Shawano county, Wis.

Tend to Prevent Cow Injuries.

To the Editor:—The dairyman in my association who by the records shows the greatest profit uses a special barn equipment. The next two in order of profit made use no special barn equipment, but one has homemade stalls and inside watering conveniences. From experience I find it pays, at least a majority of the farmers, to use some form of modern dairy equipment. There may be little if any direct profit derived. Such equipment facilitates feeding and watering live stock and also cleaning the stables. It also tends to prevent injuries from crowding or stepping, especially when a part of the cows are lying down.

J. L. Williams,
Official Tester Wood County Cow-Testing Association.

Better Stock and Lower Feed Cost.

To the Editor:—Where the dairymen in my association have special barn equipment you will find better looking stock and the feed cost is much smaller.

Ed Hoeft,
Official Tester East Troy Cow- Testing Association, Walworth county, Wis.

Comfortable Cow the Best Producer.

To the Editor:—From actual tests it has been proved that a cow which is more comfortable will actually produce more milk than one which is confined in a cramped and uncomfortable stable. The sanitary condition of a barn enters directly into the profits of the owner, as it will mean a saving of time and labor and also feeding costs. Besides the improved sanitary conditions will warrant and always bring an increased price for the dairy products.

Frances Woodward,
Official Tester Stratford Cow-Testing Association, Marathon county, Wis.

All Aim For Better Equipment.

To the Editor:—I am very pleased to note that The Wisconsin Farmer is publishing the list of the best record cows in the associations of the state. It stimulates interest in better dairying. Granting that a dairyman has a profitable herd, I certainly believe in a well-equipped barn and think it is a paying investment. Three of the most successful men in my association last year had such equipment in part, and where it was lacking they spent much time in trying to accomplish the work which proper equipment would have helped them do much more easily. Not all the best dairymen, to my observation, have the best equipment, but almost without exception they are working to that end.

M. Y. Graham.
Official Tester Dunn County, Wis., Cow-Testing Association No. 2.

EQUIPPING THE DAIRY BARN.

THE su[illegible]odern dairy barn equipment is one upper-most [illegible]inds of almost every Wisconsin farmer who is [illegible]o increase profits from the milk pail. Modern equipme[illegible]nice. It aids in keeping the dairy clean and in redu[illegible]work of the hired men. Recently we had letters of ex[illegible]from dairymen who are using milking machines. He[illegible]n are presented a series of interesting letters from offici[illegible]sters in this state. They have been asked to state wl[illegible]ir experience and observation leads them to believe [illegible]tern barn equipment pays. They have answered thi[illegible]n in an interesting, entertaining and practical way, [illegible]tters which appear here, and we feel sure every ma[illegible]s cows to milk will be interested in every letter.—T[illegible].

New State Entomologist.

Dr. E. D. Ball, who has succeeded Prof. J. C. Sanders as entomologist of the Wisconsin Department of Agriculture, is among America's best-known scientific men. Dr. Ball was director and entomologist of the Utah Experiment Station since 1907, when selected by Commissioner C. P. Norgord to succeed Professor Sanders.

Dr. Ball was born in Vermont in 1870. He is a graduate of Iowa Agricultural College, 1895; post-graduate 1898; assistant entomologist Iowa Experiment Station, 1895-1898; assistant entomologist Colorado Experiment Station, 1898-1902; professor of zoology and entomology Utah Agricultural College, 1902-1907; director and entomologist of the Utah Experiment Station, 1907-1916; assistant in the inspection service in Iowa and Colorado; member of state horticultural commission of Utah. He has studied and published many bulletins and articles on the leaf hoppers affecting grasses and grains. He has the largest collec-

DR. E. D. BALL,
State Entomologist who succeeds Prof. J. C. Sanders.

tions and one of the largest private libraries of leaf hoppers in the United States. Dr. Ball has studied methods of controlling the codling moth and discovered the "driving spray method" by which the poison is placed in the calyx cup where the little worm feeds. This method revolutionized the handling of the codling moth in the entire western country and has recently been adopted in the eastern apple sections.

Dr. Ball discovered the cause of sugar beet blight after a number of government and state scientists had investigated for years without being able to find any explanation for the disease. This disease proved to be transmitted by beet leaf hopper, and by studying the distribution and occurrence of this insect millions of dollars have been saved to the sugar beet growers.

He has investigated the subject of "arsenical poisoning" and proved that the spraying of fruit orchards with arsenic for the codling moth was not causing the death of the trees that had been alleged, but that the trees were dying from entirely different causes.

The new entomologist owns a farm and a bearing apple orchard and has great faith in the future of the fruit industry.

When Your Battery Needs a Drink

A little thing like drinking water for a storage battery may not seem important, but—

If you use water which contains minerals, these minerals will be deposited on the battery plates and cause serious damage.

Pure water is what your battery must have. That means either distilled or rain water.

The soft, pure water that used to flow from a shingle roof into the old rain barrel was all right.

But in these days of metal and slate roofs and metal gutters, the best plan is to use *distilled water*. It costs little and is absolutely safe.

Other Things You Should Know

Look up the nearest Willard Service Station and get acquainted with the storage battery expert in charge. He'll gladly give you valuable hints on keeping out of battery troubles—and if you do need repairs or other help, he's the man to go to for his one biggest job is to give satisfaction to Willard owners.

Ask about our special free service to new Willard owners.

Sugar Beet Crop and Drouth.

To the Editor:—The sugar beet crop, wherever it is grown in the state, has done well, notwithstanding the hot and dry weather experienced the past summer. The fact that it takes six months for the sugar beets to mature, when grain crops will mature almost in less than one-half of the time, affords the beet plants a better chance to make growth for a profitable crop, particularly so in times when seasonal factors vary. Usually during the months of July and August root crops make their best growth.

It is observed that during the past number of weeks the sugar beet plant has developed a well-balanced top root and a vigorous root system. This may in part be due to deep tillage and general condition of the soil in the field. In times of dry weather the plant will seek moisture at lower depth and, therefore, a good root development. Judging by the climatic conditions prevalent this summer with warm, sunny, clear days and reasonably cool nights, we have every reason to believe that sugar beets with well-developed top roots will test high in sugar content and in food value.

No better illustration for comparison could have been more forcibly presented this season that the condition exhibited by the growth of the different farm crops due to lack of moisture during the growing period. It was clear wherever drouth prevailed that the oats, barley, wheat, hay and even potatoes have suffered considerably, and in many cases not even a half crop is harvested. This does not seem to be the case with sugar beets. They braced up well. Beets have not grown very much during the same time, but have held their own, and, as soon as better growing weather came, they picked up wonderfully.

This is only another demonstration that the average farmer should not entirely depend on one or two crops for "selling off" or crops that he can turn into money. That he may prosper at all times he must practice a system of crop rotation. He must not only practice rotation of crops for the purpose of meeting adverse conditions of weather for plant growth but he must formulate a rotation in which the method of culture and action of the plant each year will leave the soil in the best condition for the following crop. Sugar beets do well after alfalfa, clover, small grain and potatoes. Farmers can do nothing better than include a root crop as one member of rotation whenever it is possible to do so. It is best to make provision for the growth of several crops somewhat varied in habits of growth, so that when one fails the others may at least partly recompense the loss sustained. What is true of the sugar beet crop is in a measure true of any root crop.

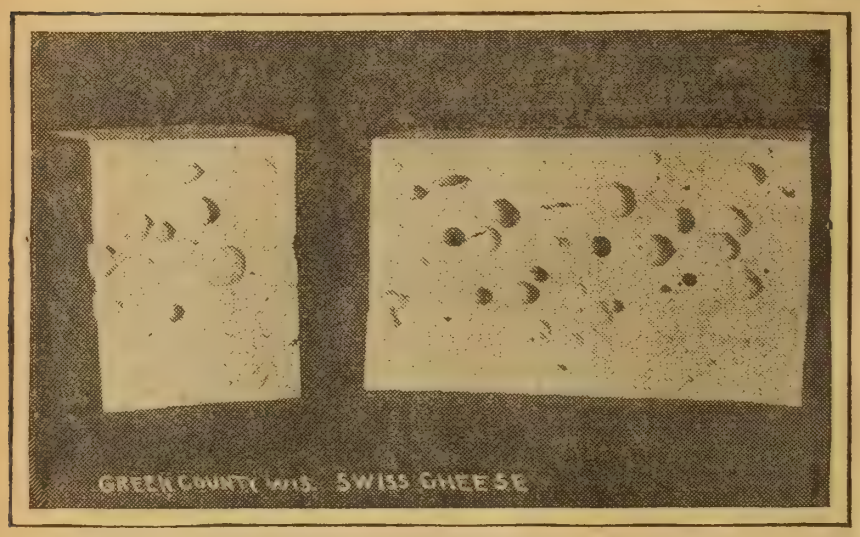
J. F. Wojta.

A new record was set in the St. Louis fur auction market when 2,000 silver fox skins were sold in less than an hour. The best price in this lot for a single skin was $1,060. The sales on silver fox skins amounted to $100,000.

The Wausau Canning Company has discontinued their local vineries. In this connection there is some talk of organizing a local institution.

CHEESE DAY AT MONROE.

Celebration Unique in the Dairy World Helps Spread Fame of Green County, Wisconsin, Where Cheese Production Is the Chief Industry.



SWISS CHEESE MADE BY SWISS CHEESEMAKERS AND AS GOOD AS ANY MADE IN SWITZERLAND.

BRANDS OF BRICK CHEESE MADE IN GREEN COUNTY, WISCONSIN.

GREEN COUNTY, Wisconsin, can well boast of its progress in dairying. The title of "premier cheese county" has been correctly bestowed, without doubt, considering that almost 12,000,000 pounds of the foreign types are manufactured yearly within its borders and the foresight of the first settlers in inaugurating dairying and cheesemaking promises to assert itself now in the perpetuation and further development of the industry through the holding of such celebrations as "Cheese Day."

On "Cheese Day" all Green county and a large part of those living in adjoining counties lay aside their daily tasks and gather at Monroe, the county seat, to take inventory of the great dairying resources of the county and to taste the cheese which has made this county famous. The third "Cheese Day" was held on Tuesday, October 10th, and surpassed from every standpoint the previous celebrations, it being estimated that 25,000 persons enjoyed the festivities. Cheese sandwiches, cheese pies and hot coffee were served to all, free of cost, and a better method to let the people know of Green county's food products and their delectable value could hardly be provided. The city was in gala attire for the occasion; the true Green county hospitality was everywhere evident and the success of the day more than exceeded the fondest anticipations.

Dairying has always been the big farming operation in Green county and cheesemaking was introduced in that county as early as 1854. Settled by Swiss colonists who brought from their native land a thorough knowledge of dairying and cheesemaking, this county was destined to forge ahead along these lines, and, while other farmers were stru[illegible] profitably with wheat, the [illegible]unty farmers were getting rich[illegible]heese. This was the foresigh[illegible] made this county, accordi[illegible] last federal census, the r[illegible]cally agricultural county in [illegible] with a per capita wealth of [illegible]aving gained the reputatio[illegible]ng cheese county, farmers [illegible]s are now determined th[illegible]e maintained and celebrati[illegible] "Cheese Day" are bound t[illegible] their part, as the 25,000 w[illegible]ated this year will be [illegible]dings wherever they go of [illegible]ers of Green county and th[illegible]e value of its cheese.

[illegible]s made on the farms m[illegible] 1870, when the co-operati[illegible] system was begun, and s[illegible]time the number of fact[illegible]ly owned by the farmers, h[illegible]ed to 153 by an official re[illegible]facturing in the neighbor[illegible],000,000 pounds of cheese, [illegible] the Swiss type. Mr. Fred Marty, of the state dairy and food commission, contends that there are now 170 factories in the county under license, while the official reports for 1915 show the manufacture of 11,743,395 pounds of cheese. Of this 6,100,000 pounds was Swiss, 3,040,000 pounds was Limburger, 1,580,000 pounds was brick and the remainder cheddar.

Dairying, of course, has kept pace with the cheese industry and in addition to the cheese factories there are three creameries and four condenseries, the total value of dairy products in 1915 being $3,785,074. The 38,992 dairy cows in the county produced during that year 196,312,000 pounds of milk. It is also interesting to note that there are 17,000 more dairy cows in the county than there are men, women and children, the population being 21,641. Green county is likewise one of the smallest counties in the state, only four townships square, and there are three or four cheese factories to each section.

With these statistics in mind it is immediately evident that almost every resident of the county is dependent either directly or indirectly on dairying and the subsequent turning of the milk into manufacturer products. It is, therefore, to be expected that such a celebration as "Cheese Day," planned primarily to promote this industry, should command such large support and co-operation.

The celebration has two angles to it. First attention is called to the cheese and dairying resources of the county, its great wealth and its prominence as a dairy county. This is the educational and promotion side. Second comes the social side, as "Cheese Day" is the one day when everyone turns themselves loose for a good time and the promoters of "Cheese Day" have seen to this side by providing games, dances, band concerts, etc. Mr. Burt Williams, democratic candidate for governor, was the speaker of the day and following his address there was a parade which was estimated to be two miles in length. This parade was made up of a number of dens of animals, floats representing the business firms of Monroe, decorated automobiles, patriotic tableaux, herds of pure-bred Brown Swiss, the original Green county cow, from the herd of Jacob Voegli at Monticello, all led by Swiss dairy maids handsomely garbed, ten bands and a steam calliope. Following the parade were band concerts by these bands, a program of Swiss wrestling, Swiss national games and singing and Swiss yodeling. The eve-

What the American Producer Must Face After the War

The importance of the election this year cannot be exaggerated. The world is facing a readjustment that must come as soon as the European war is ended. The producers of America will once more have competition. For over two years they have been protected by a wall of war more effectively than they could have been by any protective tariff. When that wall is down there must be a barrier erected, for the flood will come from other countries and bring American standards and American ideals down to the lower levels. This is not a reflection on any country or any people. It is merely a statement of facts.

The Republican party stands for protection and preparedness against the competition that would be unfair to American producers. The Democratic party is against protection and would let this country go into the commercial war which must come, as illy prepared to protect itself as it is for military defense now. This is a question that affects every man, woman and child, and is in the thought of every thinking person.

Vacillating Foreign Policy

The only argument the Democrats make is that President Wilson "kept us out of war." Who kept Switzerland, Holland, Denmark, Sweden and Norway out of war? The same influence that kept the United States out of war. The people did not want war if it were possible to prevent it. But none of these countries came so near the verge of war as did ours. The changing attitude of our administration several times brought us close to war, only avoided by a humiliating back-down or by a refusal of the European powers to antagonize the United States.

In Mexico, we have lost more American lives than we lost during the Spanish-American war. Our fleet attacked and seized Vera Cruz and then came back. Our army is now on Mexican soil. Our National Guard was mobilized on the Rio

Grande. All this happened because of the vacillating policy of the President. Mr. Wilson has not kept us out of war in Mexico, but his blunders, if continued, will surely put us in deeper than we are now.

In the meantime we have lost the respect and confidence of our neighbors.

Cost of Democratic Legislation

Four years ago the Democratic party had the following plank in its platform:

> "We denounce the profligate waste of the money wrung from the people by oppressive taxation thru the lavish appropriations of recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a democratic government and a reduction in the number of useless offices, the salaries of which drain the substance of the people."

The following are the total appropriations by Congress for the last six years (Congressional Record, September 8, 1916):

1912, $1,026,682,881.72.
1913, $1,019,412,710.91.
1914, $1,098,678,788.40.
1915, $1,116,118,138.55.
1916, $1,114,937,012.02.
1917, $1,626,439,209.63.

The item for "preparedness" may be obtained by taking the difference for Army and Navy for 1915 and 1916. This amounts to $349,103,590. The balance excess is the additional cost to the country of Democratic legislation compared with the promise made in the platform. In addition to the figures of appropriations, there have been "authorized" expenditures amounting to $231,945,275; that much more must be added to the bill.

Has the change been worth the money?

Over 30,000 Additional Offices

Over thirty thousand additional offices have been created by the last congress.

Mr. Hughes is an advocate of the budget system, is against pork barrel methods and his record as Governor of New York shows that he will hew to this line no matter where the chips fall.

For the Principle of Arbitration

The Republican party stands for the principle of arbitration. The Democrats say that the Adamson bill averted a great strike. A compulsory arbitration bill would have averted this strike just as effectively and would have protected for the future. Under the Adamson bill, the trouble is merely postponed. The additional expense to the railroads of millions of dollars every year must be paid in the end by the farmers and shippers. But the principle involved in the Adamson bill of yeilding to force and legislating without investigation, is more important than even dollars and cents. Arbitration and not force is to be the method of decision in the future and the party which has yielded to a supposed political advantage is out of tune with the spirit of the American people. Fair play and justice, with a hearing for every one, is fundamental. On this issue, the Republican party makes a confident appeal to the hearts and minds of the American people.

The Farmers' Open Forum

WITH CONTRIBUTIONS FROM READERS OF THE WISCONSIN FARMER

Home Project Work of the Warren High School.

To the Editor:—One of the largest problems of the school today is to win the interest and co-operation of parents, especially in vocational education. The home project movement is a means by which this is being accomplished. The parent receives the lesson and, becoming interested, gives his support to the member of the family carrying on the work. This interest soon passes on from one phase of school work to another and the teacher and pupil are bound by closer ties than ever which are strengthened by the good will of parents.

Such work is now being carried on at the Warren Union High School at Roberts, consisting of a series of contests in which the students are taking much interest.

The first or alfalfa contest, in which a number of boys are engaged, is for the purpose of inducing more of that valuable crop to be grown. Each boy has a half-acre plot which is cultivated thoroughly. After this process the soil is limed and inoculated in order to insure better growth. But as the alfalfa is not sown until some time in July, some of the boys conceived the idea of planting early potatoes which insured them double income and kept the land in condition and gave them a fundamental lesson in management. The prize given the boy who can show the best stand of alfalfa in June, 1917, is a registered Guernsey bull calf given by the Guernsey Breeders' Association of St. Croix county.

The second series of contests is the corn acre contest in which a number of boys in the high school and graded school are participating. The boy who can show the finest and largest yield per acre of corn is entitled to a free trip to the International Stock Show, which will be held in Chicago some time in November.

The third group of contests is the truck garden contest. Sixteen boys and girls of the graded school in the village and the rural schools of the town have entered this contest, eight of which have their gardens on the school plots and the remainder preferring to have their gardens at home. The gardens are visited several times during the summer by the judges, Mrs. A. H. Aldridge, Mrs. W. S. Lamson and Mrs. W. H. Ash. Ten and five-dollar prizes are given for the best two gardens.

The money for these prizes is given by the business men of Roberts. These men are enterprising enough to have the surrounding territory increase in value, as it will mean a greater income for them in the future. It also shows that there is a social spirit existing and that the co-operation of school and community is a thing to be proud of. Moreover, it is the result of Principal Hammer's interest in the pupils and their occupations.

Not only are the students of the high school carrying on experiments but a number of the farmers in the town are carrying on experiments with lime and nitrogen, phosphorus and potassium fertilizers. This work is done in co-operation with the high school and the college of agriculture. This shows a whole-hearted co-operation that insures the projects the highest state of perfection.

The principal carries on experiments on the school plots. These experiments show the public the value of liming and inoculating for alfalfa. Large placards have been placed on posts so that those who pass by cannot fail to read the results for themselves.

As these different projects develop it is necessary for the principal to mark the progress by visiting the homes of the pupils. This gives him useful information, especially introducing him to the relations of the child to the home and also his environment. This will mean a closer correlation of school work with the daily life of the community.

The final results of this project work are to stimulate interest in agriculture, bind the home and the school closer, arouse the lithargic parents and enormously enhance the value of agricultural education.

Not only has the home project work been advanced but also the work in domestic science and farm mechanics. These two courses have provided a great deal of interest for the boys and girls, the boys making wagon boxes, self-feeders, milk stools, work benches, hay racks, etc. The girls are trained in the art of housekeeping and this will help to insure better homes in the future.

A five-day farmers' school in co-operation with the college of agriculture has been successfully held during the past three winters. The little town on these days reminds one of a homecoming or some other celebration.

May this good work ever increase and these relations so dear to us all be made stronger and more helpful, thus opening a larger vista for us and for our posterity in the future.

C. F. Guggisberg.

St. Croix Co., Wisconsin.

Stevens Point Potato Contest.

To the Editor:—It gives me great pleasure to be able to give you an outline of our potato contest and also the effects.

The idea in putting on this contest was to start the education of the young people to work together and gradually help them to learn the value of organization and co-operation not only in the raising of potatoes but any enterprise that they may wish to undertake.

Everything that I promised to do I did, and now the confidence of the child and also the parent is with us and you see the way is clear for me to go on and carry out my plans.

As to our show, it was a perfect success, although not quite all of the boys and girls brought in potatoes, as they did not raise any, owing to the season in this section. We had bins around a large room that would hold a peck and the potatoes were placed in them, making a nice display.

The farmers could hardly believe that the potatoes were all the same seed, as the quality of the potatoes was so different. It was a good education for them to see that in the radius of the county the soil was so different and the production so varying.

I gave the farmers a good straight talk and explained what I was trying to do for their children and the benefit it would be to them in years to come. They were very much enthused and promised their support in the future.

We are going to have another contest next year and we are going to add 100 more boys and girls to our list, making 200 in the contest for next year. We will keep adding on some each year till we have every family in the county working in one direction.

Our association is known as Sater's Potato Growing Association. We had badges for each child to wear.

Each year we will raise a new variety of potato that has not been tried in this section and in that way keep the children looking to try something new.

Charles C. Sater.

Stevens Point, Wisconsin.

Useful Hints in Blasting Stumps.

To the Editor:—It is very much easier to make the holes for the powder with proper tools than to do it with a bar and a sledge. A good auger can be bought for about $5 and it will save that amount in one within a day or two.

The most efficient and economical removal of stumps depends to a considerable extent on the exact proportioning of the charges under the stumps. This is difficult to do with a bar. An auger you can bore out holes just where you want it out. Roots will not stop your hole but force it to one side. This is another feature in the use of the auger as against the bar.

There is a good deal of difference between a wood auger and a dirt auger. You can bore in dirt with a wood auger, but it is slower. The dirt auger has a long, heavily twisted leading point. Almost every big hardware store will supply dirt augers.

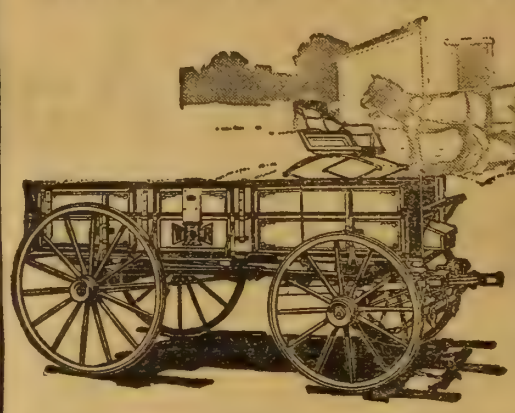
In the northwest blasters are accustomed to using what they call a spoon shovel. They usually have it made themselves at a blacksmith shop from an ordinary long-handled shovel. First they straighten the shank and make the blade stand almost straight with the handle. Then they turn up the edges of the blade almost at right angles and so have a narrow, deep spoon. If this is made from an ordinary shovel without first trimming the blade down it will be larger than it should and will force you to make the tunnel under the stump too big (you can't get the tamping back in as tight as the dirt was before). The spoon should be no more than two inches wide or deep.

Probably the most useful little tool of all, next to the auger, is a plain scraper. You get it made at a blacksmith shop from a half-inch iron rod. Turn one end over, like the toe of a boot and flatten it till it is thin, especially at the outer edges, and spreads out about an inch and a half long and nearly this wide. With this little tool you can enlarge a small auger hole as much as you want and you can enlarge it down where the powder is to go without making the rest of the hole, where the tamping goes, any larger.

Don't forget to equip yourself with a steel probing bar before you start to bore the holes under the stumps. This is just a quarter-inch rod with a handle at one end and a long sharp point at the other. You can run it down into the ground most anywhere and locate the proper position for the charges without guessing at them.

J. R. Mattern.

More for Your Money



International Harvester Wagons—Weber and Columbus

YOU can be sure of one thing when you buy a Weber or Columbus wagon—You get more service for your money. The good service they give is one of the strongest features of Weber and Columbus wagons. This service is the result of careful design and construction, such as is shown in the International fifth wheel.

Look between the front axle and bolster, where the king bolt goes through. There you will find the fifth wheel (an exclusive feature). Note the wide circular wearing surface of the two substantial fifth wheel plates. Those plates relieve the owner of a lot of trouble. They prevent breaking or bending of circle irons. They prevent the pitching of the bolster that breaks or bends king bolts. They take strain off the reach and keep the lower part of the front axle from sagging.

This one feature adds years to the life of the wagon, but, better even than that, it indicates the care and thought that have been given to every Columbus and Weber feature, and they are many.

Look over the Weber or Columbus wagon carefully, either at the local dealer's place or in the illustrated wagon folders we will send you on request. Then you will see why, if you want more for your money, your next wagon should be a Weber or Columbus.

In and Around Wisconsin

Cabbage is selling as high as $35 per ton for the best grade. This is 700 per cent higher than the 1915 price. Cabbage of the best grade last year sold around $5, while the bulk of the crop sold at $1.50 to $2.50 per ton. Unfortunately the acreage this year is lower than last. The growers in Racine, Kenosha and Walworth counties will realize handsomely this year from their cabbage patches.

Owing to the increased business at the Lodi, Wisconsin, creamery another addition is to be added to the building. Mr. E. H. Tucker is manager and has rapidly extended the market for "American Beauty" brand of butter. The increase in production over last year is expected to run as high as 75,000 pounds. On account of better facilities to manufacture Mr. Tucker has increased pay for cream He uses electric power for operating his plant and motor trucks for hauling cream.

There have been some reports of hog cholera in Buffalo, Rock, Pepin, Dunn, Barron, Calumet, Dane, St. Croix and Eau Claire counties this year. A greater demand for serum from the state plant at Madison has been made than in any previous year. The serum plant has been enlarged and equipped with more modern apparatus, including refrigerator room for storing a million cubic centimeters of hog cholera serum. It is announced at the college of agriculture that all orders for serum will probably hereafter be filled promptly.

The Wisconsin Bankers' Association has decided to continue, for the coming year, the publication of special monthly bulletins in co-operation with the college of agriculture. The subjects for the year's series follow:

November, "Feed an Economic Dairy Ration;" December, "Wisconsin's Best Crop—the Child;" January, "Ways to Solve the Labor Problem;" February, "Meat Making as a Business;" March, "Washing Made Easier;" April, "That Vegetable Garden;" May, "Prevent Weeds from Seeding;" June, "Getting Started with Alfalfa;" July, "Fly Time and Milk Production;" August, "Sanitation in Stables, Pens and Pastures;" September, "The Right Sire and How to Manage Him," and October, "How the Short Course Helps."

Members of the Geneva Cow-Testing Association in Walworth county have taken advantage of the suggestion made by Frank Drake, official tester, and purchased a considerable quantity of feed for winter. This feed has been bought at summer prices and much of it at a price considerably lower than the present price. The present price on wheat middlings and wheat bran is about 10 per cent to 15 per cent higher than last year, while the price on brewers' grains and oil meal is about the same as it was last year. Members of this association, however, effected a big saving by making purchases at summer prices. Inasmuch as there seems to be no prospect of lower winter prices, it is apparent that Mr. Drake has been the means of saving the members of his association considerable money.

The frost which visited the tobacco-growing sections of southern Wisconsin in the middle of September did a considerable damage, but probably not so much as first reported. Buyers have visited the farms where there was frost damage and in the main settlements have been fairly satisfactory to the growers. One writer says the most comforting part of the situation is the exceptionally good prices for low-grade leaf. As high as 8 to 10 cents has been offered for frosted leaf and this is about as much as some growers expected to get for their crop when it was put in. Most of the frozen portion of the crop has been harvested. The receipts may equal those obtained from sound tobacco in former years. With the extra good prices on sound tobacco the growers will be in very good shape.

Someone has suggested a Wisconsin Pound-A-Day Club. To become a member of this proposed club a dairyman would have to have ten cows which, on the average, are producing at least 365 pounds of butter fat a year, or one pound for each calendar day. According to official records taken there are a number of Wisconsin farm dairymen who are eligible to membership in such a club. Here are a few who have earned this honor by records made in their herds:

Emil Titel, Plymouth, 506.7, (1915-1916); Christensen Bros., Royalton, 473.1, (1915-1916); F. F. Thielke, New Holstein, 417.6, (1915-1916); Max Starchaska, Bear Creek, 409.1, (1915-1916); Ira Farley, Weyauwega, 407.0, (1915-1916); S. L. Mann, Waukesha, 406.1, (1915-1916); Wm. O'Leary, East Troy, 401.2, (1914-1915); H. W. Carr, Waukesha, 399.1, (1915-1916); Charles Olson, Kewaunee, 384.0, (1914-1915); H. J. Druecker, New Holstein, 383.2, (1915-1916); A. R. Williams, Waukesha, 380.0, (1915-1916); J. C. Kieffer, Auburndale, 375.1, (1914-1915); Gust Weber, New Holstein, 370.7, (1915-1916); Matt Cherveny, Kewaunee, 368.3, (1914-1915).

Mishicot Association.

To the Editor:—The following list of cows produced forty-five pounds of butter fat or better during the month of September, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
Walter Jander

PAIGE
The Standard of Value and Quality

We Can Deliver Your Fleetwood—Now

It is probably no exaggeration to say that the Paige Fleetwood "Six-38" is the most popular light six on the American market.

Up to the present time it has been absolutely impossible for us to supply the demand. Many purchasers have been obliged to wait thirty, sixty and even ninety days for their cars. And each month the "waiting list" has been growing.

But now our greatly increased production is helping the situation. Paige Dealers are now prepared to make prompt deliveries. There is a much coveted "Fleetwood" ready for YOU—if you will only take advantage of the opportunity.

Remember, we have repeatedly challenged any motor car manufacturer in the United States to produce a car of equal weight and power that will show gasoline, oil and repair records within 20 per cent of "Fleetwood" records.

It is a beautiful car—a wonderfully luxurious car. But—over and above all else—it is a strictly RELIABLE car. It is a true Paige every inch of it.

So, why not see the Paige Dealer at once. Place your order just as soon as you possibly can. Don't wait until it is too late to secure prompt delivery.

DAIRY

Improving Farm Butter.

The adoption of more careful methods of handling milk and cream and improved practices in the making of farm butter will reduce rather than increase the trouble incident to home production of this food, say dairy specialists of the U. S. Department of Agriculture, and will result in a superior product which can be sold more easily and for a better price than the average farm butter. Last year about 30,000,000 pounds of butter, much of which originated on the farm, was washed or renovated because it was of such poor quality that it could not be profitably offered on the regular butter markets.

Cream alone should be churned. It may be skimmed as soon as it rises, or may be separated by a mechanical separator. The latter plan is the more efficient, and, though requiring a considerable initial outlay, often will be profitable. The cream should be set aside in a clean place by separate milkings. A temperature of 50 degrees Fahrenheit, or lower, should be maintained until from twelve to eighteen hours before churning time, when the various batches should be stirred together well and brought to a temperature of about 70 degrees Fahrenheit by placing the container in a bucket of warm water. One of the first acts of the farm housewife, who decides to adopt improved methods, should be to purchase a dairy thermometer. Temperatures play an important part in the development of flavors in butter, and always should be determined with fair accuracy. After the cream is mixed it should be kept at approximately 70 degrees Fahrenheit until just before churning time, when it should be reduced to about 58 degrees Fahrenheit where this is possible (or to such temperature not above 65 degrees Fahrenheit as to complete the operation of churning within twenty-five or thirty minutes).

The barrel type has been found by dairy specialists to be one of the most satisfactory churns. The dasher or plunger type requires a somewhat greater expenditure of labor. Earthenware churns are especially undesirable unless perfectly glazed, since, if pores are exposed, they absorb milk and cream which later decay. Churns with mechanical devices inside them are difficult to clean and sometimes injure the body of the butter.

The churn should be scalded preparatory to churning, but should be cooled with water before the cream is placed inside. The cream should be poured in through a coarse strainer. Every few minutes during the early part of the churning, gas should be allowed to escape from the churn. If the temperature is right the churning should require about twenty-five or thirty minutes. The process is completed when the granules of butter are about the size of large wheat kernels. The buttermilk should then be drained off and the butter granules repeatedly washed with cold water while still in the churn. The washings should be continued until all milk is removed. Under no circumstances should working be depended on to remove surplus milk.

When the butter is free from all milk it should be taken from the churn with a paddle and placed on a worker. The hands should never touch the butter, both on account of sanitary reasons and because the body warmth may melt the fat. The working should be done carefully, to avoid making the butter greasy. Before the butter is worked, fine salt should be added at the rate of about an ounce per pound of fat.

The butter should be prepared for market in a rectangular mold, since, when in this shape, the product is more easily wrapped and handled and is more pleasing to customers. Regular parchment butter-wrapping paper should be used around the prints, as ordinary waxed paper tears easily and sticks to the butter. The placing of the wrapped prints in pasteboard boxes is a desirable final step, as it portects the package, gives it a better appearance, and permits the use of the maker's name or trade-mark as an advertisement.

After the butter-making operations are completed, the churn should be rinsed carefully with warm water. It should then be scrubbed with hot water, cleansing powder and a fiber brush, and finally should be scalded and set in a clean, sunny place to drain and dry.

Shawano County Association.

To the Editor: The Shawano County Cow-Testing Association there are five cows which produced over forty pounds of butter fat for the thirty-day period ending September 30th. The high cow for September belongs to Mr. F[illegible]man, Underhill, Wisconsin. She is a grade Durham cow, twelve years of age, and freshened July 1st. She produced during the thirty days period 1,395 pounds of milk testing 4.8 per cent and yielding fifty pounds of butter fat. Mr. Dittman's herd of fifteen cows had the highest average for the month, which was 726.8 pounds of milk and 31.8 pounds of butter fat. This herd gave a return of $6.39 for every dollar's worth of feed cost.

C. Y. Rydburg, Official Tester.

Makes Bad Land Productive.

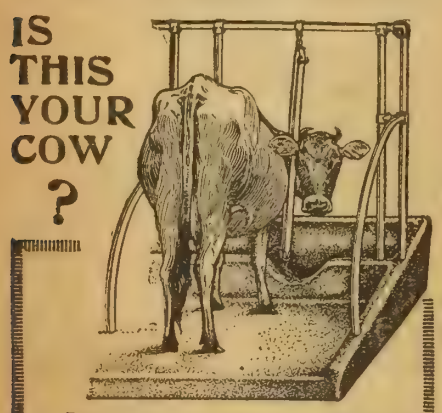
IT IS not necessary to pay taxes on unproductive land. Farmers can make their rough land productive by removing the stumps with Hercules dynamite. It is safe, easy to use, and clears the land at a very small expense. Hercules dynamite is manufactured by the Hercules Powder Co., 3 West 10th St., Wilmington, Del. The company has prepared an interesting and instructive booklet on "Progressive Cultivation," which any farmer may have for the asking. Write for a copy of the booklet, which tells not only about stump blasting, subsoiling, tree planting and irrigation work. Tell them you saw this notice in The Wisconsin Farmer.—Adv.

Metal Shoes Most Durable.

IF YOU have never tried a pair of American metal shoes you don't know how to appreciate them. They are made for service. The light steel or aluminum soles are durable, comfortable and cool, and they are easy to walk on. They are the most economical work shoe for men and boys and are good for school. Send to the manufacturers, the American Metal Shoe Co., 124 12th St., Racine, Wis., for the free shoe book.—Adv.

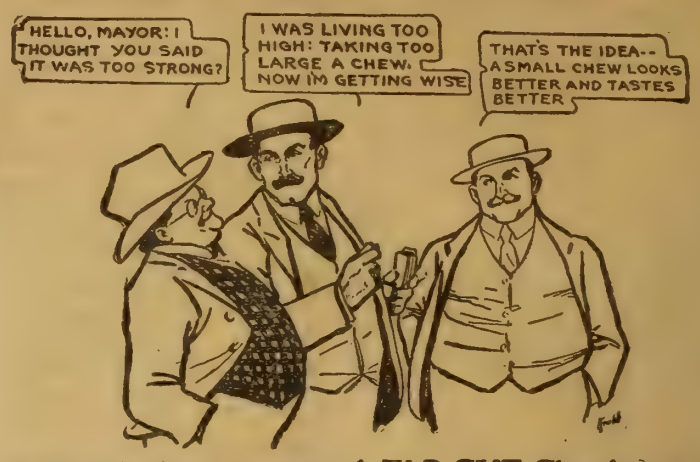
Keeps Work Shoes Soft.

WORK shoes stiff from water and damaged by farmyard acids are clumsy and uncomfortable. But an occasional treatment with P. & V. Farm Shoe Dressing, made by the Pfister & Vogel Leather Co., Milwaukee, will keep the work shoes soft and pliable and comfortable on the feet. Get a can from your dealer the next time you are in town or send to the company for a sample can. See page 17.—Adv.



SENIOR AND CHAMPION GUERNSEY BULL, LADYSMITH'S CHERO, WATERLOO, DAIRY SHOW. OWNED BY W. W. MARSH, WATERLOO, IOWA.

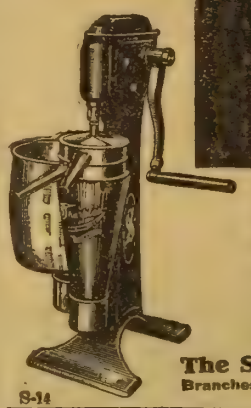
THE GOOD JUDGE WAS NOT SURPRISED.



THE tip from a user of W-B CUT Chewing to a beginner is:

"If you won't take a little chew don't take any. W-B CUT isn't ordinary tobacco. It's *rich* tobacco—a chew as big as a regular sized wad of plug is too much of a good thing. If you really want to know what *tobacco satisfaction* is, tuck a *little* nibble of W-B into your cheek, and notice how the good tobacco taste *lasts* and *satisfies*."

Made by WEYMAN-BRUTON COMPANY, 50 Union Square, New York City



SHARPLES
SUCTION-FEED
CREAM SEPARATOR

The *only* separator with just *one* piece in the bowl—no discs—easy to clean. Furthermore the Sharples saves up to $100 yearly over *every* other separator, because it skims clean at *any* speed. Saves cream that other separators lose at low speed (19 out of 20 operators turn too slow). Over a million Sharples users.

Study Consolidated School.

Rock County, Wisconsin, Young People and Their Parents Interested in the Harlem School Just a Few Miles Over the Line.

WHATEVER is best for the farm boys and girls the business and farming interests of Rock county, Wisconsin, can be expected to support. If corn growing needs encouragement you will find them conducting corn-growing contests; if roads need improvement efforts will be made to interest the boys in this; if rural schools need improvement they can be found back of this proposition. So it is with pleasure that the writer notes the efforts being put forth in this county by the various interests to focus the attention of the coming generation on matters of such great importance.

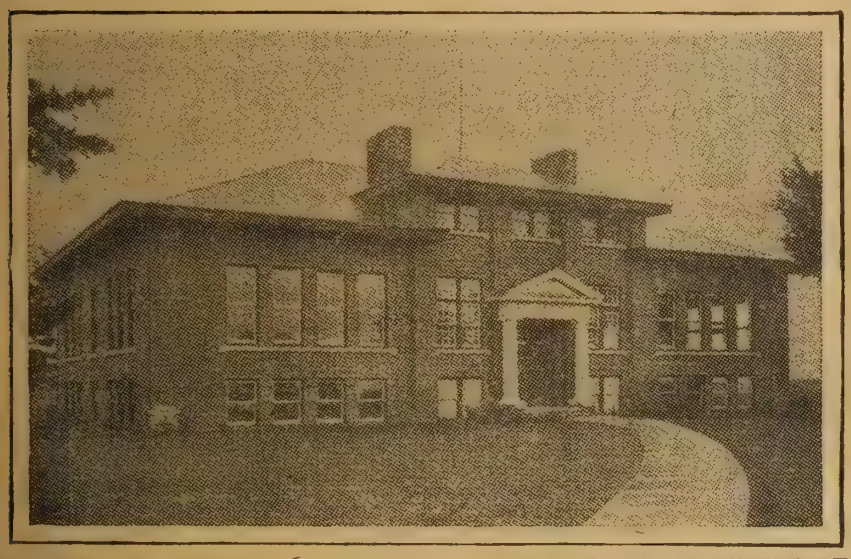
Rock county, we believe, now leads the state in boys' contest work. The acre and ten-acre corn contests will be concluded with the harvest and the show at Janesville about December 1st. The calf-raising contest has already been concluded, as has the road improvement contest. The baby beef contest at the county fair was a decided success. The rural school grounds improvement contest promises good results. These are merely five of the activities for the younger folks conducted under the direction of Mr. L. H. Markham, county Y. M. C. A. secretary, with the co-operation of business men, farmers, breeders and bankers.

Every year it is customary to give the boys in the corn and road contests an outing. The writer was asked to join the tour through southern Rock county and Winnebago county, Illinois, on Saturday, October 7th. About 200 boys in sixty automobiles made the trip, mention of which was made about the founding of the Harlem school was perfected in April, 1910, and the first school was organized the following September. Four one-room schools were taken in, the district now comprising about seventeen sections, and all the pupils either drive or come by the interurban. The school does not operate wagons, as is done in many places.

The building is a model of convenience and is the equal of many city schools. The first floor is devoted to class rooms, the basement to the manual training and domestic science departments and the chemistry and physic laboratories and everything is modern with toilets, running water, lights, heat, etc. As Mr. Earl M. Pallett jokingly remarked, there is just one objection to the school and that is that it takes an effort to get the children to go home in the evening. This longing to bake and cook and make wagon beds and other things in the manual training shop has led to the making of a rule that pupils cannot stay after a certain hour except by special permission.

The Harlem school brick building was erected at a cost of $13,695, not including equipment, from money voted by the four districts taken into the consolidation. This price included heat, water and plumbing. A spacious front lawn adds to the beauty.

Mr. Pallett, realizing the interest in the cost of operation as compared with the original four schools, prepared a chart for the occasion which showed the advantages of the consolidated school in dollars and cents. In 1908, before consolidation, the assessed valuation of the district now taken in was $200,038 compared with $532,631 in 1916, six years after consolidation. In 1909, the first year before consolidation, the assessed valuation was $354,425.



HARLEM, ILL., CONSOLIDATED SCHOOL DISTRICT BUILDING VISITED BY ROCK COUNTY YOUNG PEOPLE ON FARM TOUR.

In our last issue, ending with a picnic at Harlem Park, Rockford.

During the past year there has been considerable agitation for a concrete road connecting the twelve-mile link between the cities of Janesville and Beloit. There has also been much agitation favoring the consolidation of some of the small country schools with the idea of bringing greater efficiency into the school system. So the trip was twofold—first to give the boys an outing and secondly to acquaint them and their parents with the road and consolidated school work in Winnebago county.

The first stop was made at the Harlem consolidated school, situated in the country several miles from any town and between Roscoe and Rockford, Illinois, on the interurban. It was a treat to the eye to see such a magnificent building standing at a country crossroad with large cornfields on all sides and probably no better opportunity ever presented itself to become acquainted with the work of the consolidated school. It was not a school day, but the farm boys were at work in the manual training department and the farm girls were baking cookies to appease the appetites of the hungry tourists. Almost two hours were spent here inspecting the school and the grounds. The consolidated school idea is rapidly gaining a foothold in Wisconsin. Rock county, where the campaign is now on, does not have a single consolidated school. The consolidation which brought

In 1908 the total enrollment in the four schools was sixty-six. It fell to sixty-two in 1909, the year before consolidation, while in 1916 the enrollment was 115 in the consolidated school, an increase of almost 100 per cent, which tends to bear out the statement that such schools increase attendance. The cost per pupil in 1908 for the four schools was $27.41. In 1909 it was $28.56, while in 1916 it was only $25.93, which shows a decreased expense with better advantages. The cost per $100 valuation in 1908 was 89 cents. In 1909 it was 48 cents and in 1916 it was 56 cents, while statistics showed that in Winnebago county today there are ten one-room schools with higher taxes than the present Harlem consolidated school.

The Harlem school is more than a place to learn the A B C's. It is the meeting place for the community and it is estimated 2,730 persons used the school auditorium last year for this purpose, as thirty-nine meetings with an average attendance of seventy were held there.

The course includes all those usually taught in the country schools and in the seventh grade agriculture is added. As little text-book work as possible is given, the idea being to get pupils to do field work, and the work follows the seasonable sequence of farm operations when they are of most interest.

After finishing the eighth grade the pupil at this country school may go on into the high school, which now has nineteen pupils. On graduation a boy or girl may go into any university or college, the high school being accredited, and it is the only accredited school in the county outside the city of Rockford. During the four years in high school agronomy, animal husbandry, farm management, domestic science, domestic art, domestic economics and horticulture are taught in conjunction with the regular courses.

To keep interest high the school annually holds a fair for the exhibition of farm crops, plowing contests, etc., and these have proven very successful.

ATLAS EXPLOSIVES

Get "Better Farming" Free —Worth Dollars to You

Every farmer interested in increasing the productiveness of his soil should have this big illustrated book. In its 74 pages it tells how to reduce labor costs, how to get cheaper plant food and how to protect crops from drought and flooding by using

Atlas Farm Powder
THE SAFEST EXPLOSIVE
The Original Farm Powder

Clearing land is quick, easy and cheap with Atlas Farm Powder—made especially for farm work. No expensive tools are needed. Just punch a hole under the stump or boulder, load it, light a fuse, and the work is *done!*

You can blast deep ditches at half the cost of hand digging. You can break up the subsoil and liberate rich plant food, you can make holes for planting fruit trees—with Atlas Farm Powder. Dealers near you will supply your needs.

Mail the Coupon Now

and learn how to do many kinds of farm improvement work with the cheapest and best farm hand—Atlas Farm Powder, the improved farm explosive.

Trapping Pays the Farmer.

A Fine Sport in Wisconsin and One Which Results in Good Profits Now Because of the Very High Price of Furs.

TRAPPING is a fine sport and Wisconsin farmers have found out that in the past two years it has been very profitable. Prices of furs are high. Southwestern Wisconsin is one of the important sections for trappers and farmers in that part of the state annually reap large financial returns from this work. Wisconsin has many wild animals which supply furs which are greatly in demand. Not only can furs be sold for cash in hand but they may be sent to the tannery and transformed into beautiful fur coats or robes, and this is what is done in many instances. Many farmers who feel that they could not afford the fur coats or robes or mittens or other articles of apparel at the prices charged for them at the stores are able to get these in just as good style and appearance, and much cheaper, by trapping the animals themselves. The fur market this year is seeking the farmer-trapper, and furs will be found on shoes, hats, caps, gloves, etc., as well as in coats, robes, muffs and scarfs.

Until two years ago the fur situation was very discouraging and farmers laid aside their traps because the prices did not warrant the effort. Now conditions are reversed and hundreds of farmers will be interested in trapping as a profitable side line for the winter.

Wisconsin is regarded as one of the leading fur-producing states. A leading tanner of the state recently furnished The Wisconsin Farmer with a list of such animals as may profitably be trapped. Raccoon, skunk, muskrat, mink and white weasel are the fur-bearing animals most numerous in Wisconsin. Wisconsin mink is especially good and is used in making fur pieces such as muffs, neckpieces, etc., as it requires too many of these skins to make a coat. Coon skins are made into fur sets and rugs and are often mounted. Muskrat hides are used chiefly for fur sets and the white weasel fur for trimming. Almost any farmer residing near a stream or lake can trap one or two of these animals.

Prices for skins vary according to color, size and quality. Muskrat skins are worth about 25 cents now, but as the winter comes on they are worth more. Skunks vary in prices from 50 cents up. Mink is worth $1 to $4, raccoons from 50 cents to $2.50, gray fox from $1 to $3, red fox from $3 to $10. Muskrat, skunks, raccoon and mink provide the greatest sport for trappers. These animals are found in almost all sections of the state. By all means get rid of the skunks on the farm, as they are easily trapped. Skunk skin often masquerades as Alaskan sable, black marten, Hudson seal and mink, and this is no secret either among trappers or dealers. Most of these animals are caught in steel traps, although pitfalls, etc., are used by many. Fur-bearing animals should not be shot, as the shot will injure some portion of the skin and often spoil it entirely. Skins of the older animals are best and animals should be trapped during cold weather. It is a great deal of sport to chase the coon at night, but if he is to be turned into money trap him.

It is important to take proper care of the skins. Don't overstretch them. To stretch, draw over a board, flesh side out. There is a tendency to overstretch to get an additional price, but this often lessens the price by injuring the skin. Skins should be removed immediately and hung in a shady place to dry. In skinning always leave the ears and nose and never leave bones in the tail or paws, as it is almost impossible to remove them when the skin is well dried. Remove all fat and meat before drying and always stretch when skin is green.

Skunks may be trapped in all sections of Wisconsin now. The season closes in Ozaukee and Washington counties February 2d, but not in other counties. Beaver and otter are protected at all times, but if beavers are doing damage they may be removed and destroyed under [illegible]on of the conservation comm[illegible]n.

The open season i[illegible]n for fisher, marten and mi[illegible]ember 15th to March 16th; [illegible]Novem-ber 1st to Februar[illegible]ept in Ozaukee and Wash[illegible]ounties, November 15th to [illegible] 16th), and muskrat from [illegible] 15th to March 16th, excep[illegible]ake St. Croix, Lake Pepin[illegible]pi river and all inland [illegible]us and sloughs tributary [illegible]here the open season is Ma[illegible]pril 11th. Muskrat are als[illegible] in the counties of Polk, [illegible]ce, Rusk, Lincoln, Langlade[illegible]Marinette, Florence, Oneida, [illegible], Ashland, Sawyer, Washbu[illegible], Douglas and Bayfield, w[illegible] may be trapped from N[illegible]t to April 21st. There is [illegible]t on either coons, skunks, m[illegible]ink. The gray fox season[illegible]bruary 1st, except in Dodg[illegible]erson coun-ties, where it [illegible]nuary 1st. There is no o[illegible] season for fur-bearing ani[illegible].

Resident tra[illegible] take out a license costin[illegible]esident $10. It is illegal [illegible]her, marten, mink or musk[illegible]aid of spear, gun or dog; to[illegible]t with ferret; to disturb or [illegible]skrat houses, or beaver ho[illegible]ver dams, or raccoon den [illegible]he purpose of capturing ra[illegible] to set traps within 100 fe[illegible]eaver house or dam. Steel [illegible]e used for tak-ing fur anim[illegible] season and the possession [illegible]kins during the closed season [illegible]vful, as is also the possessi[illegible] time of skins of fisher, marten, mink or muskrat showing that they have been shot or speared.

Something New to Consider In Selling Furs

We have created a fur commission of three experts who have judged furs for years, to protect you. They grade every pelt you send us and price it according to highest market reports. You don't have to rely on the judgment of only one man. This may sound unusual. But for a firm of our size it is simply good business. We are the largest firm in our line in America. It is up to us to be the leader. We have large customers to supply. *You* have to be protected and satisfied if we are to receive a steady supply of furs. And we believe we will make more in the end by giving *you* more. We want high-grade pelts, and are helping trappers to get them by our free premium system—to equip all trappers who trade with us.

FREE TO HUNTERS AND TRAPPERS—AUTOMATIC REVOLVERS, GUNS, TRAPS, etc.—who join our co-operative plan. So don't be tempted to sell furs elsewhere until you read the particulars of this plan. We believe it will make a big year for both of us if you take advantage of it. Write for our Fur Club News, Fur Market Reports, Premium List, and List of Prices. All of these will be mailed to you free, upon request.

UPPER WISCONSIN

Upper Wisconsin Fair.

The Gogebic (Mich.) and Iron (Wisconsin) Counties' Fair, held at Ironwood on September 13th, 14th, 15th and 16th, proved to be a success as an agricultural and live stock exposition, although rain on the first two days of the fair lessened the number of cattle shown and hindered the placing of exhibits in other departments. The vegetable, grain and especially the corn and potato exhibits were the best and fullest seen in years. The live stock exhibit was not as large, but was far better in quality of cattle shown than in former years. Most of the cattle shown were registered and high-grade Holsteins and Guernseys, as these are the most popular breeds in these northern counties. Pine Grove Farm, the only exhibitors from Iron county, took a good number of the best ribbons on Holstein herd headed by Star Jewel De Kol 131513; also several of the best on potatoes and grasses.

Success With Fall Pigs.

Fifty-seven fall pigs at the University farm, St. Paul, Minn., were recently marketed with a profit of $4.56 a head. Mr. R. C. Ashby, of the animal husbandry department, writes as follows of the feeding tests:

Eleven sows farrowed fall litters for the tests, and the pigs were weaned December 16th. They were put on feeding tests two days later. The records kept cover all feeds consumed by sows and litters from farrowing to weaning and from the time the actual feeding test was begun until it was finished.

The total cost of feed for sows and pigs up to weaning time was $186.81. From weaning time to the time of marketing, the feed cost $577.88, making a total cost of $13.42 a head. The feed was counted at these prices: Shelled corn, 75 cents a bushel; ground barley, 65 cents a bushel; shorts, $26 a ton; tankage, $55 a ton.

The pigs averaged 191¼ pounds when sold May 6th. They were sold at $9.65 in South St. Paul, a price equivalent to $9.40 at home. The selling price of $17.98 left a balance of $4.56 each. No account of manure is taken in these figures.

The pigs were fed in five lots, three lots from self feeders and two lots fed by hand. Those in the lots in which the self feeders were used did better than those in the other lots. The corn-fed lots required about seven bushels of corn, forty pounds of tankage and from thirty to forty pounds of shorts for each pig from weaning time to the close of the test.

The pigs were fed again alone. They were given no milk and did not have access to the cattle yards. Mr. Ashby thinks that when milk is available or when the pigs can pick up after cattle the margin will be correspondingly increased.

Advertising Upper Wisconsin.

Mention has previously been made in this paper of the publicity campaign which is to be carried on this month and next through the co-operation of the "Omaha" road and the Wisconsin State Department of Agriculture. A special train has been arranged and this train is now touring through Minnesota and will visit a number of points in northwest Iowa. At the time we go to press the train is, according to its schedule, at St. Peter, Minnesota. The balance of the schedule is as follows:

Mankato, Minn., October 20th and 21st.
Blue Earth, Minn., October 22d and 23d.
Winnebago, Minn., October 24th and 25th.
Vernon Center, Minn., October 26th.
Lake Crystal, Minn., October 27th.
Madelia, Minn., October 27th and 28th.
St. James, Minn., October 29th and 30th.
Mountain Lake, Minn., October 31st.
Windom, Minn., November 1st and 2d.
Adrian, Minn., November 3d and 4th.
Rock Rapids, Iowa, November 5th and 6th.
Luverne, Minn., November 7th and 8th.
Sibley, Iowa, November 9th and 10th.
Sheldon, Iowa, November 11th, 12th and 13th.
Hospers, Iowa, November 14th.
Alton, Iowa, November 15th and 16th.
Le Mars, Iowa, November 17th and 18th.

The exhibit train consists of three cars, and the trip will take up five weeks. The choicest Upper Wisconsin farm products are displayed. Mr. C. P. Norgord, commissioner of agriculture, will accompany the train at a number of points and other men of prominence in the agricultural development will aid with the work. This is one of the greatest advertising boosts that Upper Wisconsin has ever had and it will undoubtedly result in a great deal of good.

Michigan Potato Show.

The annual potato show of the Michigan Potato Growers' Association will be held at Escanaba, November 1st, 2d and 3d. This convention will be combined with a meeting of the Upper Michigan Cloverland Associations, the clover growers organizing three years ago, holding their first meeting at Menominee.

Quality of Beans Good.

The Oconto Falls Canning Company recently shipped a car of beans to a wholesale house in Marshalltown, Iowa. The quality of the beans was good and the carload was very much appreciated in Iowa. "Beans is beans" everywhere this year and the price is high.

For your winter's comfort get a

Summit Knit-Nek Vest

Designed especially for the man who must be outdoors during the cold, windy days of winter.

You simply can't get cold in one of these strong, light weight, cold-proof garments.

Made to keep you warm where you need it most—at the throat and the wrists.

You can see how effectively the patented Knit-Nek fits around the throat, keeping out the cold and wind.

The wool wristlets do the same to your arms.

Dunn County Is Now in the Lead.

W. E. Anderson, of Dunn County Association No. 1, Has Best Cow in the State | Cow-Testing Association for Past Month.

WISCONSIN dairymen are widening the margin of advantage they have had over New York dairy farmers, their nearest competitors in cow testing. Prospects are good for the early formation of four more associations, which would bring the state's total up to fifty-seven. Dairymen near Kendall, Balsam Lake, Mt. Sterling and Prairie du Sac, who have seen that co-operative effort, applied continuously, pays in dairying, are seriously considering the formation of associations and the employment of testers.

Reports made for the month to N. A. Negley, Madison, who represents the United States Department of Agriculture, the college of agriculture and the State Dairymen's Association in cow-testing work, indicate some economical business moves on the part of numerous associations. These include getting rid of undesirable animals which could not be maintained at a profit and purchasing feeds in carload lots. The Shawano association sold six worthless cows during the period, while seven consignments of feed, bought in large lots at cash prices and taken directly from the car by members to save storage and delivery charges, were noted in four other associations.

The accompanying table is a summary of the reports received from testers in charge of various associations.

Fruits and Garden

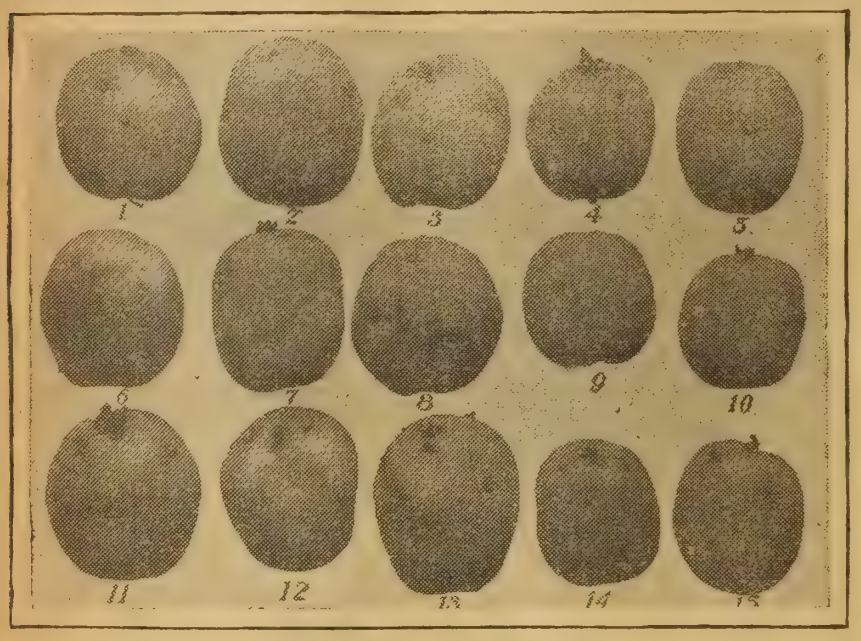
Nation's Greatest Potato Show at Eau Claire.

Notwithstanding the shortage in the potato crop in the Wisconsin counties which specialize on commercial varieties, arrangements are being made for a bigger potato show than ever this year. The annual event is to be held this year at Eau Claire, November 21st-24th. The season has offered unusual opportunities for investigation and in comparison with the wet summer and early frost last year gives a chance to study potato growing in practically all of its important lines. There were thirteen county exhibits at the Marinette show last year and it is understood that there will be several new ones in line this year which have not heretofore been entered in competition. County exhibits must show the product of ten or more growers and awards will be made exclusively on the merits of the stock show without reference to ornamentation of the boxes in which they are shown. The association has made an effort in advance to make clear its standard as to sizes, and it has been agreed that in the Rural New Yorker classes the accepted and approved size will be about ten ounces. In the showing of Triumph, Early Ohio and Irish Cobbler classes the approved size will be from six to eight ounces. Exhibitors are warned against washing potatoes or permitting them to be exposed to the light, as this tends to darken the skins. Cleaning should be done with a brush or cloth.

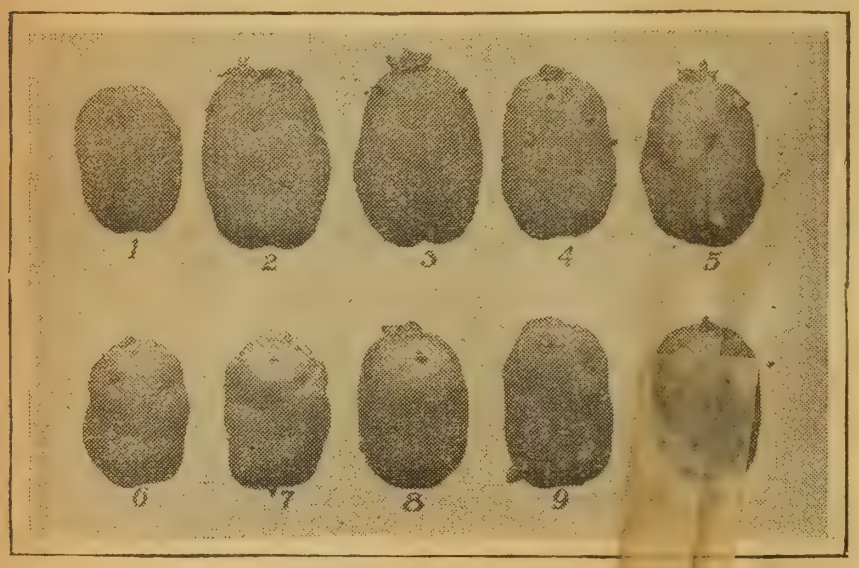
Special features of the Eau Claire show will be the attendance of potato loaders and shippers, representatives of community associations and boys' and girls' potato clubs. The exhibit of potatoes is expected to be the largest exhibit of standard market varieties ever shown in this country, and as such will attract as much or more attention than the national show. The officers of the Wisconsin Potato Growers' Association are, president, J. W. Hicks, of Prentice; vice president, O. C. Woodward, of Weyauwega; secretary and treasurer, J. G. Milward, of Madison.

The chairmen of committees at Eau Claire are as follows:

Entertainment—R. F. Kaiser, secretary civic and commerce association.
Transportation—George Wallace, general freight agent, Chicago, St. Paul, Minneapolis & Omaha railroad.
Publicity—W. L. Swift, of the Eau Claire Press.
Finance—Bankers' Agricultural Committee, of Eau Claire; Knute Anderson, chairman, Union National Bank; W. S. Woodruff, Eau Claire National Bank.



RURAL NEW YORKER TYPES.
General type of potato of this variety which is approved as a market standard for commercial growers.



GREEN MOUNTAIN TYPES.
A potato which has come to be popular in a number of W... best tuber-growing counties.

SIX STANDARD VARIETIES
Group A—Rural New Yorker. Group B—Green Mountain. Group C—Burbank. Group D—Triumph. Group E—Early Ohio. Group F—Irish Cobbler.

Lessons on Potato Harvest.

The potato harvest in Wisconsin has been on for some time and every grower should give particular attention to the selection of his seed for the 1917 crop. The crop is below normal, prices for commercial stock are already very high and good, sound, vigorous seed potatoes are sure to be high in price before the next planting season. All of which makes it more important that good seed be chosen now and properly stored.

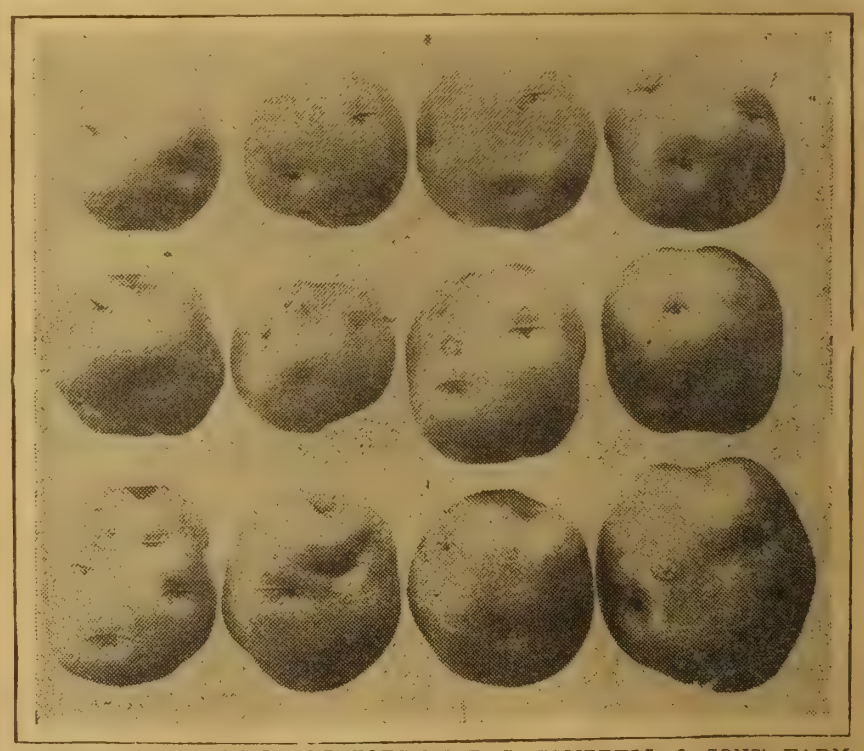
Field selection has been found the most satisfactory method of securing the seed and this is done best at harvest time when potatoes can be selected more easily for type than at any other time. The day of selecting seed stock from the bins in winter after a large amount of desirable stock has been sold from the field has passed with the better growers, who are now giving the improved methods of handling, storage and seed selection their careful attention. These three items are regarded as the fundamentals upon which permanent improvement must be based and interest is widespread throughout the potato-growing sections in the improvement of cultural methods and market standards. The average grower has not, as yet, taken advantage of the possibilities of seed selection for maintaining a high standard of commercial table stock, but this work has taken rapid strides in Wisconsin in the last two years, as has the growing of pure-bred seed as a separate phase of the industry.

Experiments have proven the value of the hill-selected seed. This is the method by which the seed stock is taken during harvest from hills where every potato is of uniform size, color and vigor. This means that the seed from the hill can be expected to produce like for like and it can be easily seen what a few years of such selection will mean to the grower who is endeavoring to grow a standard table potato. The old practice was to pick the largest and the best from the storage bin. But this has been abandoned in the commercial sections, to a great extent, as the large potato may have come from a hill with a half dozen small ones and such seed would produce likewise. So hill selection is being practiced more extensively each year.

Among Wisconsin growers who have been following field selection for many years are F. S. Campbell & Sons, of Three Lakes, Oneida county. The accompanying illustration showing a dozen Triumphs from one hill, which was photographed for Mr. J. G. Milward, secretary of the Wisconsin Potato Growers' Association, speaks for itself. This seed stock, it must be borne in mind, is from one field and every potato is of uniform size and vigor. Mr. Campbell has worked in hill selection for many years and the many fields of standard varieties now grown on the Campbell farm are from stock which was originally hill selected. Close attention to storage and improved methods of handling is also given by Mr. Campbell.

Late in August Mr. E. G. Wortley, director of the Bermuda Island Experiment Station, on a visit to Wisconsin, had an opportunity to visit Mr. Campbell's potato fields. Mr. Wortley is especially interested in Triumphs, as this is the principal variety grown on the Bermuda Islands, where the growers are anxious to secure seed stock from vigorous fields, comparatively free from such troubles known as leaf roll and the mosaic disease. Mr. Wortley, who is considered an expert on Triumphs, was highly pleased with the healthy condition of the foliage seen on some fields which he visited and was especially profuse in his praise of the work being done by Mr. Campbell and other growers in the matter of hill selection and commercial potato development work.

A practice in Wisconsin which is to be commended is the reservation of a limited amount of land for seed growing, but where this has not been done selection for type at harvest from the field should be done. The seed should then be stored at an even, cool temperature of approximately 35 degrees until the approach of planting time. It is then desirable to bring this seed to the light and induce, if possible, the starting of strong, vigorous sprouts just before planting. The influence of improper storage on quality is especially noticeable.



ONE HILL OF TRIUMPH POTATOES ON F. S. CAMPBELL & SONS' FARM, THREE LAKES, WIS.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Time to Get Busy in Poultry Yard.

This cool, comfortable weather has revived the interest in our flocks; has, in fact, revived interest in being alive. Before nothing seemed quite worth while.

In spite of the care, which we fondly hope was of the best, things went awry. Never since the writer has cared for poultry did our hens fall off so badly in the egg supply as this summer. It was just simply too hot, and that was all there was about it. Many a fat, healthy hen succumbed from the heat; hens that would have made good at the business of keeping us supplied with high-priced eggs next winter. Our hens were shut out of the hen house and took to the shrubbery where they did better.

The prices of eggs are rising and interest in getting ready to supply the winter trade is a natural consequence. Come to think of it, only a few weeks will elapse before the winter layers must be giving attention to their jobs. So hie away to the buildings and see what needs to be done; enough probably.

Well, one thing is cheering; that dropping board that was placed under the perches last spring has divided the work of cleaning the house to a small fraction. A handy boy is very desirable these days and, aside from a rather wry face, pulls the spring wagon for the purpose close to the door. First the dropping boards are cleaned off; only a few minutes' work, too, where formerly the droppings were mixed with the litter it required hours of back-breaking work. Have every reason to know how it was; have helped do it pretty nearly a hundred times.

SINGLE COMB WHITE LEGHORNS ON THE E. F. POMPLIN FARM, FOND DU LAC COUNTY, WISCONSIN.

Then the litter is to be raked out into the yards and burned. If it so happens that there are some cobs so much the better. Pour water over the fire when about half burned and there will be some good disinfectant in the shape of homemade charcoal. It is one of the best of appetizers and health-promoting substances imaginable.

The next thing, perhaps, is to remove the nests. They are in groups of six and ligthly tacked to the walls to keep them from being wobbly. They are easily loosened, and—horrors! rat holes, as you live! Rather carefully you work now; rats are pretty nearly a lot better than road dust. The dust box, by the way, is directly under the largest window, just as an easy chair is placed in the most desirable corner of our living room. Comfort goes a long ways for weal or woe in our flocks and the sooner we admit it the better.

Perches are left in the sun and wind a couple of days before being replaced, after their kerosene bath. When they are replaced that extra board is nailed onto the dropping frame. A very small space did a lot of mischief in letting

POULTRY FEEDING YARD ON E. F. POMPLIN FARM, FOND DU LAC COUNTY, WISCONSIN.

in a line with snakes, and this dread of reptiles is not confined to Eve's daughter alone. There is the straw where a nest has been made. And there goes one of them, a snaky, half-grown rodent! That explains where that last lot of young chickens disappeared. Must do better next time. Those nests are to be blocked up so there will be no hiding place for them. It seems that rats, in common with other pests, come at intervals.

The walls are swept, sprayed and followed with a plentiful sprinkling of lime, the windows washed, some broken lights replaced and new burlap tacked in the ventilation openings. The dust box is scraped to the bottom and refilled with fresh, moist earth from the garden. This kind of soil we find droppings through. All small details, aren't they? It is really a small affair though, all told, and each small item counts for much.

Profit in Baled Hay.

TIGHT, smooth bales of hay mean profit for the farmer. International Hay Presses, manufactured by the International Harvester Co., Chicago, will bale the hay in best of condition, and with bales of uniform size, so that they will bring the highest market price. They work fast and economically, proving an excellent investment for the farmer. Write to the company for the attractive folder showing illustrations of International Hay Presses.—Adv.

MY 1917 MODELS NOW READY!

NO OTHER SPREADER COMPARES WITH IT

COSTS ONLY $87.50

JUST READ THESE 1917 IMPROVEMENTS!

They mean that every Galloway Spreader is **built stronger and better than before.** The beater bolts are 1-16 in. larger with lock nuts. Beater bar bolts increased in size and strength. Beater teeth longer and stronger than ever which means they now tear the toughest manure finer than ever and spread it easier. Heavier bolts hold the beater bars in the beater head. Rear shaft increased in strength—higher carbon steel used. Additional bolts strengthen (beyond actual necessity) the beater bracket. Larger drive sprockets, which mean **lighter draft than ever.** The fifth wheel castings are larger and increased in strength—spreader box **steadier in turning.** Rear conveyor shaft now made of No. 40 carbon steel. All steel tongue. All metal parts thoroughly coated with asphaltum weather-proof paint. Spreader box better finished and painted. Galloway WIDE SPREADING V-RAKE on every machine WORTH $15 on any spreader, COSTS YOU NOTHING EXTRA. INVINCIBLE, IRRESISTIBLE, PATENTED ROLLER FEED—an EXCLUSIVE GALLOWAY FEATURE, makes it SUPERIOR to all other feeds on all other machines—the STRENGTH OF OUR LIGHT DRAFT. The mechanical principle is the same as MOVING A HOUSE ON ROLLERS. THIS FEATURE ALONE WORTH $25 on any spreader, EXCLUSIVE AGAIN on the Galloway, costs you NOTHING EXTRA. PATENTED AUTOMATIC STOP, uniforms clean out push board, WORTH $10 EXTRA on any spreader, EXCLUSIVE on the Galloway, costs you NOTHING EXTRA. These are a few of the features you will find on the Galloway, which are PROTECTED BY GALLOWAY PATENTS. Don't buy a spreader of any make or kind until you have tried a genuine GALLOWAY 1917 MODEL, No. 5, No. 1A or No. 8 at our risk, without obligating yourself in any way. Thirty days' field trial and returnable to us within one year if not perfectly satisfactory. Remember, we manufacture this spreader in our own factories and sell it direct from factory to farm. Do not confuse the Galloway spreader with lower priced machines made to sell for a price, which are all cheap, worthless imitations. Over 60,000 Galloway Spreaders in use. These and other features make the Galloway Spreader more invincible than ever in actual field work. No big, cumbersome, four-horse team or three-horse team needed to handle a Galloway. Two average horses can spread with the Galloway anywhere.
Complete particulars and details of this 1917 model spreader now ready.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Care of the Teeth.

We have commented time and again on the importance of taking care of the teeth, but we are going to bring up the subject again in the hope that every single boy and girl in every single home into which our paper goes will be taught how to properly care for his or her teeth.

It has been proved that bad teeth are the cause of many a child's backwardness in school—not only that but many undesirable tendencies and habits are directly traceable to decayed or crooked teeth. It is so easy nowadays to visit a dentist and have the teeth inspected periodically that there is no excuse for neglect. If the teeth are not right have them cared for by the dentist and then keep them clean and healthy.

Don't let the children neglect brushing their teeth and teach them how to do it properly. The teeth are full of crevices and crannies that cannot be gotten at by a sideways movement of the brush, but a careless boy will never think of brushing his teeth up and down unless you tell him to, and even then maybe he won't unless he has explained to him the danger of letting particles of food remain between the teeth. Either paste or powder may be used and some people prefer alternating the two. Paste contains considerable soap which is excellent for cleansing purposes, while powder not only cleanses but also gives a high polish because of the chalk which it contains. An occasional washing with salt is also beneficial.

After the teeth have their last brushing at night run a strand of dental floss between the teeth to dislodge any particles of food that may have been missed by the brush. Then rinse the mouth with water. This is very important, because such small particles, if allowed to remain between the teeth, will ferment and this fermentation results in the production of an acid that in time eats through enamel of the teeth and causes them to decay.

If the teeth are discolored by tartar they may be whitened by the use of lemon juice and powdered pumice. For this purpose wrap a bit of absorbent cotton around an orangewood stick, dip it in the lemon juice and then in the powdered pumice and rub the teeth briskly, being careful to get into the crevices. Rub gently next to the gums, so as not to loosen them from the teeth.

Home Canning Cheapest and Best.

To the Editor:—In regard to the relative cost of buying canned vegetables or canning them from the home garden I will give my experience in canning. For my small family of three, two rows each, 100 feet long, of beans, peas and tomatoes will produce enough vegetables for our summer use and also to can for winter, while eight rows of corn is more than sufficient.

One quart glass jar will hold twice as much of any of these vegetables as the ordinary tin can bought in town, because the vegetables are crammed into the jar and no excess of water is used.

The best grade of store goods (and that would hardly equal the quality of stuff fresh from the garden) retails at an average of two cans for a quarter, so one glass jar of vegetables is also worth a quarter. The average cost of jars is 75 cents per dozen and it takes about one gallon of gasoline for fuel for one boiler of jars. The ordinary boiler will hold eight jars, so for two dozen jars it would require three gallons of gasoline. Say the fuel cost of 75 cents and two dozen jars $1.50, the total cost would be $2.25 for the two dozen jars. They would equal four dozen cans of store goods at total cost of $6, leaving a balance of $3.75 in favor of home-canned goods. And that is assuming that the jars would have to be bought each year.

Assuredly, canning is hard work, but it only lasts a few days in each year and it means clean, pure food for the family, besides being always on hand and ready for use.

Of course, canned fruit costs more than canned vegetables, because of the sugar, but good canned fruit at the store costs more, too, and, as in the case of vegetables, the glass jar holds about twice as much. I am not lucky enough to have an orchard, but have found it cheaper to buy fresh fruit and can it than to buy the canned goods.

If the housewife figures in her labor I suppose it would be cheaper to buy canned goods, but if the average farmer's wife figured her labor at what it is worth and could get the money for it she wouldn't need to study home economics. Mrs. J. J. P.

Pretty Homemade Rug.

To the Editor:—One of our readers asked a few weeks ago how to make rugs from old coats and trousers and I would like to tell her how I make them.

Cut the material you want to use in pieces about four inches long by three inches wide and button-hole stitch the sides and round end with carpet chain, any color.

Make a foundation the size you want your rug, putting on the pieces as illustrated. Be sure to begin the outside row first, putting each row all

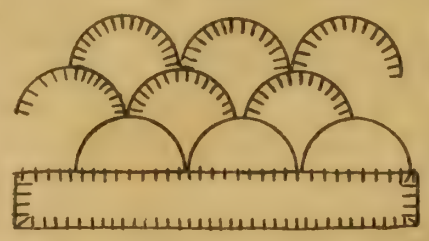

DIAGRAM SHOWING HOW TO SEW PIECES TO FOUNDATION.

around. Finish with a piece stitched all around in the center to cover the last ends.

Burlap or denim is a good foundation. I use denim.

For the benefit of M. C. O. about her braided rugs, hold the edges together, sewing as for overcasting through both braids. Use carpet chain. Round rugs are the best to make, but experience alone will teach you to sew them so they will lie flat and not cup. I have one on my floor over five feet across which lies perfectly flat and has been in use constantly for three years. A. E.

Likes Braided Rugs.

To the Editor:—I see by the paper that the lady who wanted to know how to sew her braided rug has had no reply, so I will tell her how from my experience.

I do not let the braids overlap, but join them together at the edges. I use heavy thread, No. 8, and double it. You can use black or white, whichever you prefer. Sew over and over, but do not take your stitches more than a quarter of an inch apart. Be very careful not to sew it too tight or too loose. After sewing around once or twice lay it on the floor each time around to make sure that it will not curl up or ruffle.

I use a dark strip all the way through and the other two a lighter shade of any pretty colors; or you could use all one solid color of dark or light, whichever you choose.

I hope I have made this plain so you will be able to make your rug.

I have made at least fourteen of these braided rugs and I like them better than any other kind, as they are heavy and stay in place.

I make mine oval-shaped, as I like them better than the round ones.

Mrs. H. A.

Geraniums That Do Not Bloom.

To the Editor:—I am a reader of this paper and find many helps in it.

Can anyone tell me what to do to make geraniums bloom? I have many nice geraniums, but they do not bloom. Please help me if you can. Mrs. G.

The School Lunch Basket.

At this season of the year when mothers are sending the children to school the old problem is before them of "what to give them" that they will eat and enjoy. It is more difficult to plan and prepare a lunch basket than it is to serve the meal at home, as there are many foods which will not carry well and many that must be served hot to be appetizing. The packing and arrangement of the lunch basket or box must be done carefully if it arrives with the food in any condition to eat after being jolted over country roads or joggled in the hands of the small person.

In preparing a luncheon for the school children two objects should be constantly in mind, wholesome, nutritious food and attractiveness of serving. The hearty, robust boy will demand food that the delicate girl would not care for, so the food must be suited to the person.

Many foods that were too moist to carry or dishes too troublesome may now be carried in wax paper and paper cups. Such foods as jellies, sauces, custards, cottage cheese and the like may be packed with little extra weight in these convenient little receptacles.

As the sandwich is the usual form of introducing bread into the diet of the lunch basket child, this should be served in sufficient variety of form and kind as well as a variety of fillings to escape monotony.

There are so many kinds of bread that this danger may be avoided. Whole wheat, steamed brown, graham, oatmeal, corn and rye bread may be varied with nut, raisin, date and currant, then with crackers, biscuits and rolls which may be filled after being hollowed out, with chicken or any meat salad, making a nice change from the usual sandwich.

Cup custards, egg cooked in the shell, baked beans, lettuce and celery sandwiches, small dishes of salad of various kinds, fresh fruits and many cold meats will give quite a variety. Nowhere can variety be more appreciated than in the lunch basket. The most delicious foods in the world will cease to be inviting if they appear day after day.

Another essential to the lunch basket is the surprise. Even the older children are not beyond the delight of a well-managed surprise in the form of a bit of candy well wrapped and placed at the very bottom of the basket. A little fruit, a handful of nuts or a pretty cake to be found and enjoyed at the last is always a whet to the appetite, for the thought of what may be hidden makes the plain food go down very easily. We who have grown older and have appreciated these joys can live them again in the pleasure of passing them on to the little people.—[Nellie Maxwell.

Recipes.

Mock Ice Cream.—Whip one pint of cream until stiff; sweeten with powdered sugar and flavor with vanilla. Put one heaping tablespoonful of gelatine in one-half cup of cold water, stand cup in hot water until gelatine is dissolved. When gelatine is cold stir into cream and add candied cherries or any kind of candied fruits, about one-half cupful that has been chopped, also one small cupful chopped walnut meats. Stir until mixture begins to thicken, then pour into a fancy mold that has bee wet with cold water. Stand on ice unti firm then turn out on platter and silc like ice cream.

Lyonnaise Potatoes.—Brown one third cup chopped onion in one-thir cup bacon drippings, and three cup cubed, cooked potatoes, salt and peppe and fry till nicely browned. Just befor serving sprinkle over one-third choppe parsley.

THE YOUNG FOLKS

All letters from boys and girls to this departme should be sent to office of The Wisconsin Farme Madison, Wisconsin.

A New Kind of Baby.

Dear Young Folks:—I have bee reading the letters in the paper and enjoy them very much.

I am going to write about our ca Her name is Tabby. One day I wen down to the barn and found her in th manger with six little kittens. Bu she didn't get to keep her babies lon because something killed them.

One day soon after that mamm missed one of her little chicks and w could not find it. That same day pa heard a little chick chirping, but cou not find it, so he called mamma an she found it in the manger with Tabb She had carried it down there to l her baby.

I am going to ask a riddle. Twel pears are hanging high; twelve m came riding by; each took a pear an left eleven hanging there. —Carl.

Wants to Be a Teacher.

Dear Young Folks:—I have be reading your letters and think the very interesting.

I am a little girl twelve years ol I go to Sunday school and day scho too. I live one mile and a half fro school. I am in the seventh grade.

I have four brothers and four s ters. One brother and one sister a married. My brother is in Michig training to be a minister. He has tw little girls.

We have two cows, eight hors four cats, two dogs and one white r bit named Billy. He stands on h hind feet and begs for something eat. I feed him apples, cabbage, ba and most any kind of plant.

Will some of the writers tell me h to press flowers to make them st their natural colors?

What do you Young Folks expect be when you get big? I want to be domestic science teacher and hope can. My favorite work is cooking.

We girls in this neighborhood had club this summer. We called it Bu Bee Club. We met once every tw weeks.

Will some of you girls send dir tions for a pretty yoke in crochet? surely love to crochet.

I enjoy reading the riddles and t to answer them, so will send o Patch upon patch and a hole in t middle.

I think the answer to Myrtle's Round as an apple, black as a bea tell me quick or I will pull your hair is a rubber ball. —Martha.

Likes to Go to Sunday School

Dear Young Folks:—As I am goi to write for the third time I hope m letter will be in print.

My papa has taken this paper f fifteen years now and we all like very much.

I am twelve years old and go school every day. I am in the sevent grade.

I can tat and crochet.

I like to go to Sunday school ve much. My mamma is our teach We get cards every Sunday. C class is called the Sunshine Class.

I am taking music lessons and I pl for Sunday school. —Rachel

SOMETHING FOR NOTHING

BUT YOU MUST BE PROMPT

A COMPLETE MANUAL OF CROCHET AND TATTING

By Anna Valeire

This book on crochet and tatting craft is most timely, as these arts in all their forms are very popular at the present time. It contains over sixty designs and combines new and original patterns of rare beauty combined with dainty simplicity and elegant taste. The abbreviations used to designate the different stitches in tatting and crocheting are given and their meaning explained in full. Instructions are given in detail for every design displayed in the book. Therefore, the novice in this art will have no trouble whatever in working the simple, though seemingly complicated, designs which have been compiled for her special benefit and in very little time will find that she may easily attempt the more complicated patterns intended for more advanced and experienced needleworkers. The lovely array of insertions, edgings and medallions suggest numerous ways in which they may be used to beautify both personal and household articles. The dainty tattings immediately bring to mind handkerchiefs of cob-web fineness. The simpler crochet insertions and edges suggest pretty bath-room sets and bed linen. There are no end of designs which may be used on dresses and lingerie; two yoke patterns which appear in the book make it particularly desirable. Designs for luncheon sets, scarfs, curtain edges and panels, and the new round pillow tops, and many more things which will suggest themselves to the worker are all contained in the wonderfully complete book on this fascinating art needlework.

This wonderful book of working size designs and explicit instructions will be sent Free and postpaid if you will send your order for any of the following combinations of magazines before November 10, 1916.

THE REASON FOR THE INCREASED COST OF MAGAZINES

The price of paper has increased over 100 per cent and the cost of inks and other materials entering into the manufacture of magazines has caused some publishers to increase their subscription price. The magazines offered below will accept orders from The Library Reading Club until November 10th at the prices which have prevailed for the past year. As an extra inducement for promptness, we will give a copy of Crochet and Tatting by Anna Valeire, to all who send us orders before November 10, 1916.

International Sunday School Lesson.

Lesson for October 22, 1916.
(By E. O. SELLERS, Acting Director of Sunday School Course.)

Paul's Defense Before Agrippa.

LESSON TEXT—Acts 26 (vv. 1, 24-32).

GOLDEN TEXT—I was not disobedient unto the heavenly vision.—Acts 26-19.

It is possible to use the Bible either as a music box or a telephone. We should let it speak the words of the Lord Jesus to us and our pupils. This lesson occurred probably A. D. 59, perhaps in August, the day after last Sunday's lesson. This was the same hall where Agrippa had heard the people calling him a god (Acts 12). Paul, the center of all interest, is chained to his Roman guardians. The prisoner has been vehemently accused as one worthy of death and had appealed to Caesar, but Festus, not being well acquainted with Jewish laws and customs, could not make any definite charge against him before the Roman court. Hence he turns him over to Agrippa, who was well acquainted with matters of Jewish law.

I. Paul, the Preacher (vv. 1-23). This was one of the great occasions in the life of this great man. Paul was preaching to a king and a woman of great influence (a sermon which little changed their lives evidently), and also to the coming ages. This king and queen were wedded to their infamy. God had in mind on that day an audience in comparison with which that which Paul saw faded into oblivion. Notice his argument. (1) He begins with his own experience. In these verses there are forty personal pronouns.

Men do not need so much light as they do need heat, and Paul was speaking out of the hot throbs of his personal experience. Paul stood before them a living miracle, an incarnate argument. We might tremble at the doctrine of the resurrection. He knew it was a marvelous thing that God should raise the dead, but that change had been wrought in him which was equivalent to the miracle of raising one from the grave.

Paul's plea was for the Roman as well as the Jew. Considering his personal testimony, he declares that he is a true Jew of the strictest sect (vv. 4-8), and as such he lived in the "hope of the promise" as predicted by Isaiah and Daniel. That promise has been fulfilled in Jesus, the crucified, who rose again from the dead, and Paul adds, "I have seen him, for which hope's sake, King Agrippa, I am accused of the Jews." (2) (vv. 9-15) Paul tells the audience that he, himself, was once a zealous persecutor of the Christians, more so than those who are now persecuting him, "being exceedingly mad against them." He then relates his Damascus journey and the conversation held on the road with the risen Lord.

The gospel Paul preached was to lead men into the kingdom of God that they might receive forgiveness of sins and an inheritance among those who were fitted for that inheritance, who were the sanctified. For this cause the Jews went about to kill him.

II. Agrippa, the Doubter (vv. 24-32). Five ways are suggested as to the reception of Paul's message. The high priest's way was to hate him and oppose. Felix's way was "go thy way this time. When I have a more convenient season I will call." Festus' way (vv. 24-26) was to charge Paul with madness. Much learning (literally, many writings) was turning him mad, making him a lunatic, a dreamer, one who lived in the atmosphere of wild imaginings. Paul's reply was not harsh. "Most noble Festus" (Am. R.) "I am not mad, but speak words of soberness," words of eternal life and spiritual life (of sound sense) that were true and earnest. Paul thereupon appeals to King Agrippa to confirm his statements (v. 2-6). The crazy man is he who lives for this world rather than for eternity. The devil has cheated many a man out of eternal life by the method which Festus followed. He has also cheated many a Christian out of the larger life in the same way. Paul's appeal to Agrippa (vv. 27-29) is very suggestive.

Some people believe that the contents of the prophecies are of no present day value, and some are trying to break their force. Some declare they cannot be true, yet these prophecies are the ones that declare that "Jesus is the Christ, the Son of God." The literal translation of Agrippa's answer is, "In a little thou persuadest me to be a Christian." It is said that Agrippa said this in sarcasm, but, like many another attempted jest, it revealed the real state of the heart.

Agrippa saw the cost of further consideration of the claims of Christ and was unwilling to pay the price (vv. 30-32). Thus Agrippa's soul was lost, and yet he was within one step of eternal life. Paul with great dignity took advantage of Agrippa's ambiguous expression, and said: "I would to God that whether with little or with much, not only thou, but also all that hear me this day might become such as I am except (raising his fettered hands) these bonds." (Am. R.)

Paul was willing and glad to suffer anything for the sake of Jesus Christ, his Lord (II Cor. 12-10).

POPULAR FICTION

AT HALF PRICE
While They Last

If you haven't read any of these books there is a treat in store for you .. ..

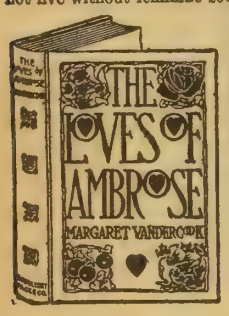
REMEMBER: Many of them are in the original cloth bindings and formerly sold for $1.00 to $1.50, none for less than 60 cents, postpaid. Your choice for only 30 cents each while they last.

THE MAID OF MIDDIES HAVEN
By Gabrielle E. Jackson

The fascinating tale of a sweet-natured, lovable young girl which will appeal to all. The heroine, Constance Howland, pays a visit to her Aunt who lives near the Naval Academy at Annapolis and is known as "Little Mother" to a select few of the cadets who have named her home Middie's Haven. Constance becomes a moving figure in the social life of the Academy. She is wooed by two of the cadets, Clinton Wayne and "Snap" Hunter, who are staunch friends. How these two young middies of Uncle Sam each try to win her fairly is splendidly told. A story of real interest from start to finish. Former price $1.20.

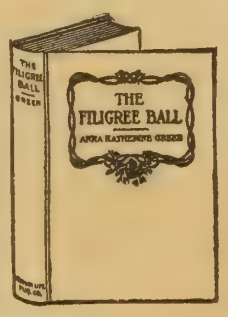
THE LOVES OF AMBROSE
By Margaret Vandercook

Ambrose Thompson was one of those men who could not live without feminine society and so in his four ages he makes four ventures into the field of matrimony in the quaint little Kentucky town in the "pennyrile" region in which he was born and spent all his days. He and his partner, Miner Hobbs, are eligible bachelors in whose future the whole town takes an interest and yet he manages almost every time to disappoint the gossips and make his own path. It is a great temptation to quote much from the book, but it must be read to be really appreciated, the adventures of the tall strange youth and his development will charm every reader. Former price $1.00.



THE FILIGREE BALL
A Detective Story
By
Anna Katherine Greene

This is something more than a detective story. It is a thrilling romance of mystery and crime, and a shrewd detective helps to solve the mystery. The plot is an intricate one, carefully worked out. There are constant digressions from the main problem, so that the reader cannot possibly imagine the conclusion. Unlike many mystery stories, "The Filigree Ball" is not disappointing at the end. Former price 60 cents, postpaid.



STORIES THAT END WELL
By Octave Thanet

These stories are models of good story telling, simple in plot, natural in character, delicate in touch, with true feeling. The genial humor and the happy view of life is characteristic of the book. Octave Thanet is an eminent writer, and her truthful studies of American life have gained for her an international reputation. She reads the hearts of women with delicate intuition, and knows with sympathetic insight the ambitions and the loyalties of men. Her style is cheerful. This book of 340 pages will provide entertainment for many delightful hours. Cloth binding. Former price 60 cents, postpaid.

TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright: Rand McNally & Co.)

PART III. "Prince Charlie"

CHAPTER III—Continued.

They did not speak, but after a little of the warm liquor had forced itself down the slight throat, Rachel left the cup in the mother's hands, and reached again for the whisky.

"You can get more from Davy MacDougall," she said, in a half conciliatory tone at this wholesale confiscation; "and—and you might give him some ammunition—not much."

"What a vanishing of resolves!" he remarked, measuring out an allowance of shot; "and all because of a copper-colored papoose. So you have a bit of natural, womanly weakness?"

The girl did not answer; there was a certain air of elation about her as she undid a scarf from her throat and wrapped it about the little morsel of humanity.

"Go past the sheep ranch," she directed the passive warrior, who stood gazing at the wealth in whisky and powder. "Do you know where it is—Hardy's? Tell them I sent you—show them that," and she pointed to the scarf; "tell them what you need for squaw and papoose; they will find it."

Skulking Brave signified that he understood, and then led Betty toward her.

"He is not very hospitable," she confided to Stuart, in the white man's tongue, "else he would not be in such haste to get rid of us."

And although their host did not impress one as having a highly-strung nervous organization, yet his manner during their halt gave them the idea that he was ill at ease. They did not tarry long, but having given what help they could, rode away, lighter of whisky and ammunition, and the girl, strange enough, seemed lighter of heart.

After they had reached a point high above the little creek, they turned for a look over the country passed. It lay in brown and blue-gray patches, with dashes of dark green on the highlands, where the pines grew.

"What is the white thing moving along that line of timber?" asked the girl, pointing in the direction they had come. It was too far off to see clearly, but with the aid of Stuart's fieldglass, it was decided to be the interesting family they had stopped with a little ways back. And the white thing noticed was a horse they were riding. It was getting over the ground at the fastest rate possible with its triple weight, for the squaw was honored with a seat back of her lord.

"I imagined they were traveling on foot, didn't you?" asked Stuart.

"What a fool he was to steal a white horse!" remarked the girl contemptuously; "he might know it would be spotted for miles."

CHAPTER IV.
A Trio in Witchland.

The noon was passed when they reached the cabin on Scot's Mountain, and found its owner on the point of leaving for the Maple range. But quickly replacing his gun on its pegs, he uncovered the fire, set on the coffee pot, and, with Rachel's help, in a very short time had a steaming-hot dinner of broiled bear steaks and "corn-dodgers," with the additional delicacy of a bowl of honey from the wild bees' store.

"I have some laid by as a bit of a gift to Mr. Hardy's lady," he confided to Rachel. "I found this fellow," tapping the steak, "in one o' the traps as I was a-comin' my way home; an' the fresh honey on his paws helped me smell out where he had spied it, and a good lot o' it there was that Mr. Grizzly had na reached."

"See here," said Stuart, noting that, because of their visit, the old man had relinquished all idea of going to the woods, "we must not interfere with your plans, for at best we have but a short time to stay." And then he explained the reason.

When the question of snow was taken into account, Davy agreed that Stuart's decision was perhaps wise; but "he was main sorry o' the necessity."

"An' it's to Owens ye be taken' the trail?" he asked. "Eh, but that's curious now. I have a rare an' good friend thereabouts that I would be right glad to send a word to; an' I was just about to take a look at his tunnel an' the cabin, when ye came the day, just to see it was all as it should be ere the snows set in."

"I should be delighted to be of any service to you," said Stuart warmly; "and to carry a message is a very slight one. Who is your friend?"

"It's just the man Genesee, who used to be my neighbor. But he's left me alone now these many months—about a year;" and he turned to Rachel for corroboration.

"More than a year," she answered briefly.

"Well, it is now. I'm losin' track o' dates these late days; but you're right, lass, an' the winter would ha' been ower lonely if it had na been for yourself. Think o' that, Charlie Stuart: this slim bit o' womankind substituting herself for a rugged build o' a man taller than you by a half head, an' wi' no little success, either. But," he added teasingly, "ye owed me the debt o' your company for the sending o' him away; so ye were only honest after all, Rachel Hardy."

Rachel laughed, thinking it easier, perhaps, to dispose of the question thus than by any disclaimer—especially with the eyes of Stuart on her as they were.

"You are growing to be a tease," she answered. "You will be saying I sent Kalitan and Talapa next."

"But Talapa has na gone from the hills?"

"Hasn't she? Well, I saw her on the trail, going direct south, this morning, as fast as she could get over the ground, with a warrior and a papoose as companions."

"Did ye now? Well, good riddance to them. They ha' been loafing around the Kootenai village ever since I sent them from the cabin in the summer. That Talapa was a sleepy-eyed bit o' old Nick. I told Genesee that same from the first, when he was wasting his stock o' pity on her. Ye see," he said, turning his speech to Stuart, "a full-blooded Siwash has some redeeming points, and a character o' their own; but the half breeds are a part white an' a part red, with a good wheen o' the devil's temper thrown in."

"She didn't appear to have much of the last this morning," observed Rachel. "She looked pretty miserable."

"Ah, well, tak' the best o' them, an' they look that to the whites. An' so they're flittin' to the Reservation to live off the government? Skulking Bob'll be too lazy to be even takin' the chance o' fightin' with his people against the Blackfeet, if trouble should come; and there's been many a straggler from the rebels makin' their way north to the Blackfeet, an' that is like to breed mischief."

"And your friend is at Owens?"

"Yes—or thereabouts. One o' the foremost o' their scouts, they tell me, an' a rare good one he is, with no prejudice on either side o' the question."

"I should think, being a white man, his sympathies would lean toward his own race," observed Stuart.

"Well, that's as may chance. There's many the man who finds his best friends in strange blood. Genesee is thought no little of among the Kootenais—more, most like, than he would be where he was born and bred. Folk o' the town know but little how to weigh a man."

"And is he from the cities?"

For the first time Davy MacDougall looked up quickly.

"I know not," he answered briefly, "an', not giving to you a short answer, I care not. Few questions make long friends in the hills."

Stuart was somewhat nonplussed at the bluntness of the hint and Rachel was delighted.

"You see," she reminded him wick-

Suppose You Spend Your Winter in Sunny California

See the land where you can farm 365 days in the year

Enjoy an outing there, while things are frozen up at home. Look around and study California farming conditions. Visit many localities, learn their good points, and pick out the place that suits you best, when ready to move west.

California has what you want—a year-round growing season—a climate where stock can be raised without costly shelter—good prices for your produce—good roads—ideal living conditions.

The heart of California is the **San Joaquin Valley**—50 to 90 miles wide, 400 miles in length. Rimmed by mountains, with streams that irrigate millions of rich acres. Room for four times present population. You can raise nearly everything, from alfalfa to wheat, apricots to oranges. Dairying and live stock, vineyards and orchards, are making money for their owners.

Go just for the outing, if nothing else. More than any other class, farmers need vacations. You will enjoy the trip over the Santa Fe. You will see Indian pueblos and petrified forests; the Grand Canyon, too, as a short side trip. Fred Harvey meals on the way. Go economically in a tourist sleeper; personally conducted excursions three times a week.

Reduced fares, with nine months' return limit.

San Diego Exposition closes December 31st. Go soon enough to see it.

Drop us a postal to-day for California land books. Ask any questions you wish about land and living conditions. We are glad to furnish the fullest possible information. Tell us what you want.

Last Chance Prices

THE cost of production of all magazines has been very seriously affected by the increase in cost of all materials, such as paper, ink, etc., and because of this many magazines are forced to increase their prices.

Owing to the fact that we have special arrangements with all magazines, we are in a position to make some special Last Chance, money-saving offers.

PICTORIAL REVIEW. After November 25, 1916, Pictorial Review will be included in all clubs at $1.50. Until that date we are able to offer the following clubs at prices which will never again exist.

The Housewife	$ .50	All for $2.00
Pictorial Review	1.50	
McCall's Magazine	.50	
The Housewife	$ .50	All for $2.25
Pictorial Review	1.50	
Ladies' World	1.00	
People's Home Journal	.50	
The Housewife	$ .50	All for $2.30
Pictorial Review	1.50	
Modern Priscilla	1.00	
The Housewife	$ .50	All for $2.80
Pictorial Review	1.50	
Etude (Musical)	1.50	
The Housewife	$ .50	All for $2.90
Pictorial Review	1.50	
Woman's Home Companion	1.50	
The Housewife	$ .50	All for $3.40
Pictorial Review	1.50	
Youth's Companion	2.00	

THE CHRISTIAN HERALD. After November 10, 1916, the price of the Christian Herald will advance to $2.00 a year. The Christian Herald is a non-denominational, religious weekly publication, well illustrated, and containing news of current events. The advance in the subscription price from $1.50 to $2.00 a year to the subscriber makes these offers particularly attractive at this time. Remember, the prices all advance November 10, 1916.

The Housewife	$ .50	All for $1.75
Christian Herald	1.50	
McCall's Magazine	.50	
The Housewife	$ .50	All for $2.10
Christian Herald	1.50	
Ladies' World	1.00	
The Housewife	$ .50	All for $2.10
Christian Herald	1.50	
Little Folks	1.00	
The Housewife	$ .50	All for $2.60
Christian Herald	1.50	
Mother'sMagazine	1.50	
The Housewife	$ .50	All for $2.75
Christian Herald	1.50	
Etude (Musical)	1.50	
The Housewife	$ .50	All for $2.80
Christian Herald	1.50	
Woman's Home Companion	1.50	

THE AMERICAN BOY. The subscription price of the American Boy, the biggest and one of the livest boys' magazines in America, will advance from $1.00 to $1.50 a year on November 10, 1916. The following special combination should be taken advantage of by our readers if they are anxious to save money.

The Housewife	$ .50	All for $1.25
American Boy	1.00	
Today's Magazine	.50	
The Housewife	$ .50	All for $1.60
American Boy	1.00	
Little Folks	1.00	
The Housewife	$ .50	All for $1.75
American Boy	1.00	
Modern Priscilla	1.00	
The Housewife	$ .50	All for $2.00
American Boy	1.00	
Mother'sMagazine	1.50	
The Housewife	$ .50	All for $2.15
American Boy	1.00	
Etude (Musical)	1.50	
The Housewife	$ .50	All for $2.75
American Boy	1.00	
Youth's Companion	2.00	

Two Special Offers for this Season

The Housewife	$ .50	All for $1.00
Ladies' World	1.00	
People's Home Journal	.50	Save $1.
The Housewife	$ .50	All for $1.00
Today's Magazine	.50	
McCall's Magazine	.50	

If you wish to take advantage of any of these offers and your subscription to any of the magazines offered above has not as yet expired, now is a good time to renew them, as we will have your subscription extended for one year from the expiration of your present subscription.

Remit by P. O. Money Order or Registered Letter and address:

THE HOUSEWIFE 30 IRVING PLACE NEW YORK

edly, "one can be an M. D., an L. S. D., or any of the annexations, without Kootenai people considering his education finished. But look here, Davy MacDougall, we only ran up to say 'klahowya,' and have got to get back tonight; so, if you are going over to Tamahnous cabin, don't stop on our account; we can go part of the way with you."

"But ye can go all the way, instead o' but a part, an' then no be out o' your road either," he said, with eagerness that showed how loath he was to part from his young companions. "Ye know," he added, turning to Rachel, "it is but three miles by the cross-cut to Genesee's, while by the valley ye would cover eight on the way. Now, the path o'er the hills is no fit for the feet o' a horse, except it be at the best o' seasons; but this is an ower good one, with neither the rain nor the ice; an' if ye will risk it—"

Of course they would risk it; and with a draught apiece from an odorous, dark brown jug, and the gift of a flask that found its way to Stuart's pocket, they started.

They needed that swallow of brandy as a brace against the cold wind of the hills. It hustled through the pines like winged fiends let loose from the north. Dried berries from the bushes and cones from the trees were sent pattering to sleep for the winter and the sighs through the green roofing and the moans from twisted limbs told of the hardihood needed for life up there. The idea impressed Stuart so much that he gave voice to it, and was laughed at grimly by the old mountaineer.

"Oh, well, it just takes man to be man, an' that's all when all's said," he answered. "To be sure, there be times when one canna stir for the snow wreaths, but that's to be allowed for; an' then ye may ha' took note that my cabin is in shelter o' all but the south wind, an' that's a great matter. Men who live in the mountain maun get used to its frolics; but it's an ugly bit," he acknowledged, as they stopped to rest and look up over the seemingly pathless way they had come; "but I've been thankful for it many's the time, when, unlooked for, Genesee and Mowitza would show their faces at my door, an' she got so she could make that climb in the dark—think o' that! Ah, but she was the wise one!"

Stuart glanced at Rachel, who was more likely than himself to understand what was meant by the "wise one;" but he did not again venture a question. Mowitza was another squaw, he supposed, and one of the companions of the man Genesee. And the other one they had passed in the morning?—her name also was connected with the scout whim the white girl seemed to champion or condemn as the fancy pleased her. And Stuart, as a stranger to the social system of the wilderness, had his curiosity widely awakened. A good deal of it was directed to Rachel herself. Hearing MacDougall speak of the man to her, he could understand that she had no lack of knowledge in that direction—and the direction was one of which the right sort of a girl was supposed to be ignorant; or, if not ignorant, at least to conceal her wisdom in the wise way of her sisters.

This one did nothing of the sort; and the series of new impressions received made him observe the girl with a scrutiny not so admiring as he had always, until now, given her. He was irritated with himself that it was so, yet his ideas of what a woman should be were getting some hard knocks at her hands.

Suddenly the glisten of the little lake came to them through the gray trunks of the trees, and a little later they had descended the series of small circular ridges that terraced the cove from the timber to the waters, that was really not much more than an immense spring that happened to bubble up where there was a little depression to spread itself in and show to advantage.

"But a mill would be turned easily by that same bit o' water," observed MacDougall; "an' there's where Genesee showed the level head in locating his claim where he did."

"It looks like wasted power, placed up here," observed Stuart, "for it seems about the last place in Christendom for a mill."

"Well, so it may look to many a pair o' eyes," returned the old man, with a wink and a shrug that was indescribable, but suggested a vast deal of unuttered knowledge; "but the lad who set store by it because o' the water power was a long ways from a fool, I can tell ye."

Again Stuart found himself trying to count the spokes of some shadowy wheels within wheels that had a trick of eluding him; and he felt irritatingly confident that the girl looking at him with quizzical, non-committal eyes could have enlightened him much as to the absent ruler of this domain, who, according to her own words, was utterly degraded, yet had a trick of keeping his personality such a living thing after a year's absence.

The cabin was cold with the chill dreariness of any house that is left long without the warmth of an embodied human soul. Only the wandering, homeless spirits of the air had passed in and out, in and out of its chinks, sighing through them for months, until, on entrance, one felt an intuitive, sympathetic shiver for their loneliness.

A fire was soon crackling on the hearth; but the red gleams did not dance so merrily on the rafters as they had the first time she had been warmed at the fireplace—the daylight was too merciless a rival. It penetrated the corners and showed up the rude bunk and some mining implements; from a rafter hung a roll of skins done up in bands of some pliable withes.

Evidently Genesee's injunction had been obeyed, for even the pottery, and reed baskets, and bowls still shone from the box of shelves.

"It's a mystery to me those things are not stolen by the Indians," observed Stuart, noticing the lack of any fastening on the door, except a bar on the inside.

"There's no much danger o' that," said the old man grimly, "unless it be by a Siwash who knows naught o' the country. The Kootenai people would do no ill to Genesee, nor would any Injun when he lives in the Tamahnous ground."

"What territory is that?"

"Just the territory o' witchcraft—no less. The old mine and the spring, with the circle o' steps down to it, they let well alone, I can tell ye; and as for stealin', they'd no take the worth o' a tenpenny nail from between the two hills that face each other, an' the rocks o' them 'gives queer echoes that they canna explain. Oh, yes, they have their witches, an' their warlocks, an' enchanted places, an' will no go against their belief, either."

"But," said Rachel, with a slight hesitation, "Talapa was not afraid to live here."

"An' did ye not know, then, that she was not o' Kootenai stock?" asked the old man. "Well, she was not a bit o' it; Genesee bought her of a beast of a Blackfoot."

"Bought her?" asked Stuart, and even Rachel opened her eyes in attention—perhaps, after all, not knowing so much as the younger man had angrily given her credit for.

"Just that; an' dear she would ha' been at most any price. But she was a braw thing to look at, an' young enough to be sorry o'er. An' so when he come across her takin' a beating like a mule he could na stand it; an' the only way he could be sure o' putting an end to it was by maken' a bargain; an' that's just what he did, an' a'most afore he had time to take thought, the girl was his, an' he had to tek her with him. Well," and the old man laughed comically at the remembrance, "you should ha' seen him at the comin' home!—tried to get her off his hands by leavin' her an' a quit-claim at my cabin; but I'd have none o' that—no half-breed woman could stay under a roof o' mine; an' the finish o' it was he hed to bring her here to keep house for him, an' a rueful commencement it was. Then it was but a short while 'til he got hurt one day in the tunnell, an' took a deal o' care before he was on his feet again. Well, ye know womankind make natural nurses, an' by the time she had him on the right trail again he had got o' the mind that Talapa was a necessity o' the cabin; an' so ye may know she stayed."

"In what tunnel was he injured?" asked Stuart.

"Why, just—"

"There's your horse ranging calmly up toward the timber," observed Rachel, turning from the window to Stu-

Splendidly Bound BOOKS

While They Last

Which Is Less Than Cost

THE LOVELY LADY

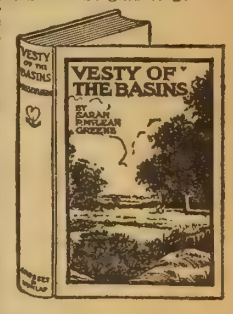
By **Mary Austin**

Mrs. Austin has infused into this story of modern work-a-day life a dream quality which makes it memorable. How Peter, as a lad, resolved to be rich, and how his Vision of a Lovely Lady became his watchful guardian till at last he found her, really and truly, is the theme Mrs. Austin develops with so much richness of truth and sentiment. Richly bound in dark green cloth and attractively stamped in gold. **Former price $1.00.**

VESTY OF THE BASINS

By **Sarah P. McLean Greene**

The readers who found the humor of "Cape Cod Folks" so thoroughly delightful will be glad to go with the author to the sea-washed villages of Maine and again meet the real New Englanders through her sparkling wit and humor. Vesty was a girl of surpassing beauty, with a power over the male population that would have won for her the marked disapproval of the ladies had she not possessed with her beauty a heart too kind to wound and a skill most astonishing in "doing" for others. Vesty and her love affairs, "Capt. Pharo," the city folks who summered on the Coast, and the wide range of characters found in a New England village—all help to make up a story that keeps one as interested as a humorous play. **Former price 60 cents, postpaid.**



ROMANCE ISLAND

By

Zona Gale

This is a complicated love story which is admirably handled by a clever and very popular writer. The book has been called an island of pure romance. The interesting characters are well-drawn, and it is just the sort of book which will satisfy those who wish for novelty and originality. Printed in open, readable type, nearly 400 pages, with many illustrations in half-tone by Herman C. Wald. Cloth Binding. **Former price 60 cents, postpaid.**

DOWN HOME WITH JENNIE ALLEN

By **Grace Donworth**

This tells of Jennie Allen's adventures when she goes back to her childhood home with her family and then returns, as a married woman, to Providence, there to set up her own home and spread her spirit. Her philosophy of life is strengthened and brightened by her wider outlook on life and the larger field for her activities but the old Jennie Allen is still there with her all-embracing affection for the whole world, especially any who are sick and suffering. This book is bound in cloth and is illustrated by Frederick R. Gruger. **Former price $1.25.**

art. "Do you want to walk to the ranch?"

"Well, not today;" and a moment later he was out of the door and running across the terraced meadow.

"Don't tell him too much about the tunnel," suggested the girl, when she and the old man were alone.

"Why, lass,"—he began; but she cut him short brusquely, keeping her eye on the form on the hillside.

"Oh, he may be all right; but it isn't like you, Davy MacDougall, to tell all you know to strangers, even if they do happen to have Scotch names—you clanish old goose!"

"But the lad's all right."

"Maybe he is; but you've told him enough of the hills now to send him away thinking we are all a rather mixed and objectionable lot. Oh, yes, he does too!" as Davy tried to remonstrate. "I don't care how much you tell him about the Indians; but that tunnel may have something in it that Genesee wouldn't want eastern speculators spying into while he's away—do you see?"

Evidently he did, and the view was not one flattering to his judgment, for, in order to see more clearly, he took off his fur cap, scratched his head, and then replacing the covering with a great deal of energy, he burst out:

"Well, damn a fool, say I."

Rachel paid not the slightest attention to this profane plea.

"I suppose he's all right," she continued; "only when somebody's interest is at stake, especially a friend's, we oughtn't to take things for granted, and keeping quiet hurts no one, unless it be a stranger's curiosity."

The old man looked at her sharply. "Ye dinna like him then?"

She hesitated, her eyes on the tall form leading back the horse. Just then there seemed a strange likeness to Mowitza and Genesee in their manner, for the beast was tossing its head impatiently, and he was laughing, evidently teasing it with the fact of its capture.

"Yes, I do like him," she said at last; "there is much about him to like. But we must not give away other people's affairs because of that."

"Right you are, my lass," answered Davy; "an' it's rare good sense ye show in remindin' me o' the same. It escapes me many's the time that he's a bit of a stranger when all's said; an' do ye know, e'en at the first he had no the ways of a stranger to me. I used to fancy that something in his build, or it may ha' been but the voice, was like to—"

"You are either too old or not old enough to have fancies, Davy MacDougall," interrupted the girl briskly, as Stuart re-entered. "Well, is it time to be moving?"

He looked at his watch.

"Almost; but come to the fire and get well warmed before we start. I believe it grows colder; here, take this seat."

(To be continued.)

Cheese Day at Monroe.

(Continued from page 8.)

ning program included free dancing on the public square, a mock police court, a carnival parade headed by the Monroe Dokie Band, and the day was brought to a close in a riot of carnival fun and glory.

One of the new educational features was a demonstration of Swiss cheese-making, Green county having long been known as the home of the Swiss cheese in the United States, and from this county are now being made large shipments to Europe. In fact, this county has practically captured the eastern markets with its foreign types of cheese and, though the making of these types originally began in the neighborhood of New Glarus, it has spread to adjoining counties, there now being quite a few factories in Dane, Iowa and Lafayette counties.

This demonstration was conducted by Fred Steinman, one of the well-known Swiss cheesemakers of the county. It was held in a booth on the public square and it gave thousands the opportunity to see at first hand how the Swiss cheese is made. Farmers delivered to this plant about 2,000 pounds of milk on the morning of the celebration and the cheese manufactured therefrom will be placed in the curing cellars and will be used next October at the fourth annual "Cheese Day" for sandwiches which will be given away.

"Cheese Day" also serves to draw back the curtain on the history of Green county and the settling at New Glarus seventy-one years ago of the little band of Swiss settlers who gave this industry its start. This band came over from Switzerland, via St. Louis to Galena, Illinois, from which place they walked into Green county, it resembling very largely from a typographical standpoint their native land. It is also interesting to note that in the early days when Limburger was being made some of the citizens of Monroe asked the village council to pass an ordinance prohibiting the Swiss from bringing their odoriferous Limburger into the city for shipment. But that day has all passed into history with the realization of the extent of this great industry and now Monroe joins with the entire county in paying homage to the dairy cow and the cheese.

Poland China Sale in Grant County.

The day was ideal, the roads were good and everything was in favor of the "boys" that held their first Poland China boar sale at Lancaster, Wis., October 10th. There was not room enough in the tent to hold the crowd, and many came to buy that were unable to get the boar they wanted. With the exception of a few that were a little under size, it was an exceptional offering of good boars. This being their first sale, a high average wasn't expected, yet the average made—$41—was entirely satisfactory to those concerned. Chris Kartman bought the snap of the sale by getting the fall boar that was second (and should have been first) at Milwaukee this year. At $75 he is the best we have seen made this year. This association will hold a sale of bred sows February 13th, and we feel sure it will be one of the good offerings of the winter. To Burly Dobson is due a great deal of credit for the success of this sale. Col. Ira Cottingham sold the offering in a very satisfactory manner. We follow with a list of those selling for $30 and over:

1.	Adolph Vesperman, Lancaster, Wis.	$42.00
2.	Albert H. Reyzek, Muscoda, Wis.	48.00
3.	Jas. Knutson, Livingston, Wis.	35.00

Folding Sawing Machines Save Labor.

HOW many of our readers have sawing jobs to do this winter? We presume that on almost every farm there is more or less of this work. There is a handier and better way than to use the old-fashioned cross-cut saw with a man at each end. There is now made what is known as the folding sawing machine, which was originally invented by M. O. Smith, a Michigan farmer. Mr. Smith found it often difficult to get help, so he rigged up the one-man folding sawing machine. The folding sawing machin not only obviates the necessity of an extra man, but it also permits sawing close to the ground. The one-man folding sawing machine does exactly the same work as two men with a cross-cut saw. The illustration used herewith gives a good idea of the machine in action. This machine is made by the Folding Sawing Machine Company, 161 West Harrison street, Chicago, and a booklet telling how the machine is operated, and giving scores of letters from farmers and settlers who have used the machine, will be sent to any reader of this paper upon request. See advertisement on page 15. The folding sawing machine is easily carried, easily set up, adjusted instantly, works easily on any ground, works rapidly, carries a thin saw which is guaranteed, carries the saw true and cuts thin, and does away with back-breaking work. The folding sawing machine is inexpensive and will be a great help on any farm where there is much wood cutting or felling of trees. We ask as a favor that readers of this paper will mention

OPERATED BY ONE MAN—CUTS CLOSE TO GROUND WITHOUT INCONVENIENCE TO OPERATOR.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Lame Cows.

About four weeks ago one of my five-year-old cows became lame and now one of my three-year-old cows is affected the same way. They take short steps as if they were stiff, but the lameness seems to be in their shoulders. They are running on wild pasture all the time. They lie down a great deal.

It would be impossible to make a diagnosis from the few symptoms given. You had better have these cows examined by a veterinarian before more become affected.

Unknown Disease.

I will give you a description of two calves about nine months old that are a mystery to me and others who have seen them. They seem to have a disease that the local veterinarian is unable to combat, but he thinks it was caused by forage poisoning. The symptoms of the disease are large drops of blood that form on their hide and run down the hair on their shoulders, and as far back as their hips. The salivary glands are slightly swollen. They breathe with difficulty and there is a harsh, grating sound. As the disease progresses there is an offensive smell. They seem to be in no pain and are strong up to the day they die. They eat well during the early stages, but later on they refuse to eat at all. About a week after they are taken sick the disease proves fatal.

It is purely a case for your local veterinarian to decide upon, as he has a better chance than anyone else, since, having examined them, he knows what was present. There are very few diseases which will cause this condition. However, it might be that forage poisoning is the cause.

Blackleg Vaccine.

Would you please inform me through your valuable paper whether or not blackleg vaccine, in pellet form, loses its strength or effectiveness when you have it on hand for some little time. Some dealers keep it in stock and it probably has been on their shelves indefinitely. Would this be all right to use and would it be as effective as if obtained directly from factory?

There is a time limit for the use of this vaccine and this should be so stated on the box or bottle. It should not be used after return date.

Garget—Congestion of the Udder.

I should like to know more about garget in cows, the cause and cure. Also if one is infected will the whole herd be likely to contract the same by running together.

In true garget, which is a congestion of the udder usually following soon after calving, the application of camphorated ointment to the affected parts and with considerable massaging usually brings about recovery. Simple garget is not spread from one to the other. Sometimes there are lumpy conditions of the milk found and this comes from some unhealthy condition of the udder.

Law Questions

Title by Adverse Possession.

A Subscriber, Brocton, Minn.—My farm has been cultivated for twenty-seven years and fenced for fifteen years. The adjoining farm has been cultivated for seventeen years and there has been no dispute about the division line. Can I claim my land up to the fence by adverse possession, if said fence is over on the adjoining farm?

Answer.—Under the law of Minnesota you can lawfully claim your land up to the division fence by adverse possession.

Collection of Notes.

A Subscriber, Lyle, Minn.—At an auction sale in the state of Idaho, I took the promissory notes of three men. The notes were due February 11, 1916. Neither the interest nor any part of the principal of said notes has been paid. (1) What legal steps can I take to collect the money? (2) Can you give me the name of a good collector in Idaho?

Answer.—(1) You will have to bring a suit in court against the man who signed the notes. (2) We are unable to do so. Write to the county clerk of the county in Idaho where the transaction took place.

Partition Fences—Contract of Minor.

A Subscriber, Iron Mountain, Mich.—(1) I own land in Michigan on both sides of a township road. Have I a right to take away my fences on both sides of said road? (2) My land is cultivated on both sides of the road. My neighbor drives his cattle along the road and they break through the fences and damage my crops. Can I recover damages for this? (3) My neighbor at night tore down part of the partition fence between our farms and my stock got through the same into his field and he wants a dollar for the damages, can he collect it by law? (4) Should owners of adjoining farms keep up the partition fence together, or should each one keep up half of it? (5) Can a minor child lawfully buy a farm on credit?

Answer.—(1)) There is no law to prevent you from taking away your fences on both sides of the road. (2) If you have lawful fences and the cattle break through them and injure your crops you can recover damages from the owner of the cattle, but not if your fences are not lawful. (3) Your neighbor cannot collect damages by law. (4) Each owner should keep up half of the partition fence. (5) He cannot. The contract of a minor is not binding upon him by law.

Bull Law of Wisconsin.

Mr. O. A. Olson, Rose Lawn, Wis.—In the legal department of The Wisconsin Farmer of August 24th you state in answer to a subscriber at Rubicon, Wis., that a man has a right to allow a bull a year and a half old to run with his cows in his own pasture field. I have always been of the opinion that it was unlawful. I have a nice herd of registered Holsteins and keep a high-priced bull of my own. My neighbor allows his scrub bull to run with his cows in his pasture, and I am constantly afraid that his bull will break through and serve my cows and young heifers. I have told his owner to keep the bull up, but he won't do it. Can I compel him to shut his bull up?

Answer.—You cannot. The law of Wisconsin in relation to bulls is as follows, viz.—"No bull over six months old shall run at large; if the owner or keeper shall for any reason suffer such animal so to do he shall forfeit $5 to the person taking it up and be liable in addition for all damages done by such animal while so at large, although he escapes without the fault of the owner or keeper and the construction of any lawful fence shall not relieve such owner or keeper from liability for any damage committed by the bull upon the enclosed premises of an adjoining owner." Under this law if the bull breaks through into your field you can take him up and get $5 forfeit and sue the owner and recover all damages done by the bull.

While a bull is running in the pasture of his owner he is not running "at large."

Experts Say! Put CHIEF SUNSHINE Windows In Your Hog House

Your hogs must have sunshine, nature's greatest tonic. It makes healthy hogs, bigger profits. Chief Sunshine Windows can be used in old or new hog houses. Let sunshine into your hog house, right into the pens where it is needed. Made of galvanized steel. Rot proof. Leak proof. Patented fasteners do away with putty. Cheap as ordinary windows. The biggest money's worth in permanent, efficient, satisfactory windows.

THE PIGS YOU SAVE PAY FOR THEM EVERY YEAR

They save the early pigs. Admit the bright sunshine warming and purifying the damp, chilly air. Most scientific window made. Endorsed by experts. Used by hundreds of breeders. The safest, surest, best way to cash in on biggest hog profits. Cold, damp pigs can't thrive.

NEW BARN WINDOWS

We are really specialists on window construction for farm buildings. Besides hog house windows we make cupolas for all buildings, windows for poultry houses, side wall windows for barns. Also ventilating side wall windows for cow barns. Work like a transom—give cattle plenty of air without drafts. All made of steel. Good for old or new buildings. Easy to install. Cheap as ordinary windows. Write for complete circular giving full details, prices, etc.

Blue Prints of Modern Hog Houses FREE
Send for them today. Find out how to build a real new hog house or how to improve the old. Plans show Sunshine Windows in use

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Anoka Farms Short-horn Sale.

THE annual offering of Short-horn cattle at Anoka Farms, Waukesha, Wis., Thursday, November 2d, will be entitled to take rank with the big events in the sale history of the breed. The writer, who has been thoroughly familiar with Anoka, its methods and sales, for many years, does not hesitate to class the cattle to be sold November 2d as carrying out in every particular the efforts of the management to improve each year's offering. Forty-five head will be sold, twenty-five females and twenty bulls, every animal carrying the Anoka stamp of excellence. Included will be all of the 1916 show herd, among them the ten head of youngsters that won at this year's Royal Show the coveted trophy offered by the Kansas City Stockyards Company, for the best ten head of Short-horns. The twenty head of bulls cataloged contain so much herd-heading material that individual mention seems needless. The majority of them are sired by Sultan Stamp, and are strong demonstrations of the right of that bull to rank among the great sires of the breed. Others are by Village Denmark, Regal Sultan and Imp. Rusper Champion. A good one in every way is Lavender Stamp by Sultan Stamp and out of an Avondale dam. A mellow-hided chap, with a strong head, good spring of rib, level and deep, he is an ideal proposition. Good Stamp by Sultan Stamp, should please anybody looking for a white bull. The fact that he was a junior champion at the 1916 Minnesota and Wisconsin State Fairs is all the statement needed to show that he is right in every way. A very breedy proposition is presented in Augusta Sultan 2d by Sultan Stamp, out of an Augusta dam. He has character, style, quality and finish, is a roan, level, even and close to the ground. This youngster was second at Minnesota and Wisconsin. Another good Sultan Stamp bull is offered in Loyal Stamp, a thick, level, well-ribbed roan, with lots of character. A strong breeding prospect will be found in Anoka Denmark 2d by Village Denmark, dam Imp. Maud 38th. This youngster is deep and well fleshed, very even in his lines, smooth and possesses the character that denotes prepotency. Proud Denmark by Village Denmark, out of an Uppermill Omega dam, is an even, smooth, well-fleshed, light roan that is not only good individually, but presents a very attractive combination of blood lines. A very strong senior calf will be found in Clipper Champion by Imp. Rusper Champion. He is red in color, is a very even, thick youngster, with a good head, strong back and lots of substance. Attention has been called to a few of the bulls in the sale, picked at random from the list. The story of the ones mentioned is the story of all in the sale. The female portion of the sale offering measures up with the bulls in every respect. In the next issue of this paper some individual mention will be made of the females cataloged. This offering must be considered as one of the most even and well-balanced lots of Short-horns that any breeder has ever offered. The handsomely illustrated catalog should have wide distribution. Write for it today to Anoka Farms Co., Waukesha, Wis., as per the advertisement on page 28. Kindly mention this paper when you write.—Adv.

Some Fine Jersey Offers.

WE have just had a letter from Fred Stubley, Black Earth, Wis., the breeder that has that fine herd of Imported and American-bred Jerseys. At this time he has for sale a dozen young cows, about twenty yearling heifers and bulls of different ages. He will sell a man a carload or in single lots. These are of Mr. Stubley's own breeding. The heifers and bulls are sired by his imported herd bull, Golden Maid's Viscount, a grandson of Double Time, whose official test for one year is 806 pounds of butter, the highest testing Jersey cow in Wisconsin. The cows are safe in calf to Noble of Avaranch, a son of the $15,000 bull, Noble of Oakland. As stated above Mr. Stubley has one of the best herds in Wisconsin and if you need Jerseys you will not be disappointed with his catalog. Write him for detailed description and in so doing kindly mention this publication. See page 30.—Adv.

The Lathrop Polands.

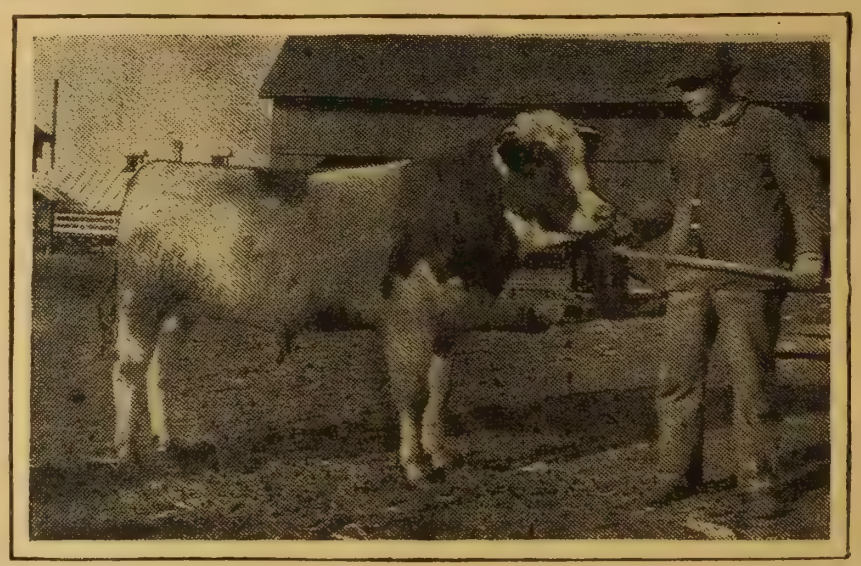
FRED LATHROP & SONS, Wauzeka, Wis., are one of the oldest breeders of Poland Chinas in the state of Wisconsin. They do a big business and a great deal of their trade is from their old customers, showing that they send out Polands that give satisfaction. Waukesha county has 147 voters and the Lathrops have sold sixty-five different men in this county. We mention these things to show that the Lathrop firm do business on the square. They breed big-type Polands and have a nice lot of boars ready for the trade at this time. Let them know your wants. When writing kindly say you saw the advertisement in The Wisconsin Farmer. See page 30.—Adv.

Ed Patterson Durocs.

REMEMBER that Ed Patterson, Jr., Bloomington, Wis., is a breeder of Duroc Jersey hogs and Short-horn cattle, and if you are in need of individuals of those breeds it will pay you to get his prices. We are certain he will give you a square deal. See page 29.—Adv.

Hagemeister Percheron Dispersion Sale.

ONE of Wisconsin's finest studs of Percheron horses will be dispersed at public sale Wednesday, November 15th. This is the stud of the late Henry F. Hagemeister, Green Bay, Wis. He took great pride in this stud of horses and spared neither time nor means in buying the best of breeding stock. The horses are being sold to settle the estate and the public will now have an opportunity to purchase at their own price the fine mares and stallions that Mr. Hagemeister kept for his own farm. We recently visited the farm and were greatly impressed with the horses seen there. They are without exception of high individual merit. They are big, but with strong backs, good hips, heavy bone, good feet and legs and good heads and necks. They represent both the blocky type and the more rangy type, but not the extreme either way. There are no "chunks" or no light weight "driving horse type." They are all black in color, except one gray stallion, one gray mare and two iron gray fillies. The aged stallion, Brilliant 47573, is one of the best stallions we have seen and farmers or breeders looking for a stallion are advised to look him over carefully. Many of the animals in the sale are sired by the imported stallion, Historique, one of the greatest Percherons ever imported to America. Nearly every animal in the sale also carries the blood of the great stallion, Baccarat, for which Mr. Kellog, a banker in Green Bay, paid $5,000. Many of the mares are out of daughters of Baccarat. It is a great lot of horses both in breeding and as individuals. Breeders and farmers who are raising horses, and stallion companies should plan to attend this sale. There will not be a poor animal or a blemished animal in the sale. Catalogs giving description and breeding are now off the press and will be sent on application to the Hagemeister Brewing Co., Green Bay, Wis. When writing for catalog kindly mention that you saw this write-up in The Wisconsin Farmer. See page 26.—Adv.



CONTEST COLANTHA CROWN DE KOL 98171, the twenty-seven-pound show bull owned by John Steel, Oconomowoc, Wis., whose advertisement appears on page 31.

Goodrich Offers Durocs for Sale.

DUROC spring pigs of either sex are offered for sale on page 29 by W. W. Goodrich, Ft. Atkinson, Wis. These were sired by Defender Major 2d 70335, a boar of good size and type. These pigs are from large, roomy sows and come from large litters. When writing kindly mention The Wisconsin Farmer. —Adv.

Shea Buys a Pathfiinder Boar.

WE have repeatedly called attention to that good herd of Duroc Jerseys owned by Dennis Shea, Melvina, Wis. This breeder is at all times on the lookout for something that might improve his herd and inasmuch as the great demand at the present time is for stuff sired by that great boar, Pathfinder, Mr. Shea was the first Wisconsin breeder to get some of this noted breeding in his herd. This boar was sired March 10, 1916, has great length, carries his width well from end to end, has an ideal head and ear and has plenty of scale. He is sired by the great Pathfinder and his dam is by Orion Chief 6th. As our readers know his present herd boars are sons of King the Col. and Cherry Chief, the most popular breeding at the present time and to follow them with this son of Pathfinder will get him a line of breeding second to none in the state. Shea has some wonderful spring boars for sale, as good as any we know of and if you are going to need a Duroc boar this fall get his prices. Write at once before the good ones are all sold. Good boars don't have to be peddled. Mention The Wisconsin Farmer. See page 28.—Adv.

A "Crackin' " Good Poland China Boar.

WHEN at the farm of Jacob Kreuscher, Somer, Wis., last week he told us that he would sell his senior herd sire, Long Prospect. Mr. Kreuscher has used him for three years, so is compelled to dispose of him. He is a "right good" boar, well up on his feet, extra heavy bone, a good back and hams. He is being offered at but little more than he would bring for pork, but he is so good that Mr. Kreuscher does not want to pork him. Send for breeding and price. See page 30.—Adv.

West's Victoria Swine.

ALTHOUGH we do not find Victoria swine as common as some of the other breeds, we find a few that convince us that they are profitable hogs to raise. They grow out quickly, are good rangers and are very prolific. If many farmers would use Victoria boars on their grade sows they would realize much larger profits from their swine breeding. The herd of H. P. West, Ripon, Wis., is one of the best in the state, a fact borne out by the winnings of this herd at the Wisconsin State Fair. He is now offering spring boars and gilts for sale on page 29.—Adv.

Herr Bros. & Reynolds' Short-horn Sale.

FORTY-EIGHT head of Short-horns, thirty-four females and fourteen bulls, will be sold at Lodi, Wis., Friday, November 3d, by Herr Bros. & Reynolds. Offerings of good Short-horns have been made by this progressive firm in the past, but the lot of cattle cataloged for the coming event will be by far the best they have ever sold. The firm of Herr Bros. & Reynolds is one of the most reliable in the Short-horns ranks. They have always recognized the value of a good bull, and a list of the sires used by them shows some of the best known bulls of the breed. Royal Sultan, the champion son of Whitehall Sultan, for which they refused $7,500, left an impress upon the herd that is enduring. After him came his son, Golden Sultan, a sire of champions. Then followed White Rock, a son of Whitehall Sultan; Royal Kintore, Cumberland's Prince by Cumberland's Last, and Cumberland's Ideal by Cumberland's Prince. The premier bull now in use is Master Ruby, a son of Archer's Hope. Master Ruby is proving himself a most prepotent sire, and the calves he is siring are meeting every exceptation of Herr Bros. & Reynolds. It is the get of the bulls mentioned that will be offered to the public at Lodi, Wis., November 3d. There will be both show and breeding propositions in abundance. The breeding of the cattle is of the best. There will be some young bulls by Master Ruby that should attract the attention of those wanting a bull carrying a line of breeding different from that now so much in evidence in the majority of herds. In addition there will be a number of females in calf to him. Master Ruby by Archer's Hope is out of a Brawith Bud dam, called by competent judges the best cow in the Dryden herd. He is a very impressive bull, with a wonderful head, great depth and thickness, carrying a wealth of evenly distributed flesh, has excellent heart girth and great spring of rib, a world of substance and everything else that goes to make up a truly great bull. Not only has he been a winner and a champion, but his get were winners at the Minnesota and Wisconsin State Fair this year. An opportunity to secure animals sired by this great breeding bull or cows in calf to him, should not be overlooked. Among the bulls by Master Ruby that are in the sale, might be mentioned Royal Ruby, out of Imp. Generosity, a Brawith Bud. He is a February calf, right in every way, third in his class at the Minnesota State Fair, and an excellent prospect in the International futurity, with all fees paid. Ruby's Archer is a Gwendoline, and a deep, smooth, well-ribbed youngster with quality and substance. Ruby's Chief, out of a Lancaster dam, is a November yearling, red, with a good head, thick, well balanced and close to the ground on good legs. There are outstanding young bulls by other strong sires. The entire offering is one of merit and will bear out any recommendation made regarding it. This sale follows that at Anoka Farms, Waukesha, Wis., November 2d and is the closing one in a series of four remarkable sales. It is worthy the support and patronage of all Short-horn men. Some of the most attractive cattle to be offered during that entire week of sales, will be presented at Lodi. The catalog tells the story. It can be secured by addressing Herr Bros. & Reynolds, Lodi, Wis., as per the advertisement on page 29. Kindly mention this paper when you write.—Adv.

For Those That Want Herd Boars.

THOSE that have been following the hog show at the various fairs have, no doubt, noticed the winning of Tommy Doyle, that good boar owned by the Van Meters, of Illinois. Tommy Doyle is sired by Cherry Chief's Wonder. Emmett Cook & Son, Richland Center, Wis., have a great spring litter by this boar out of an Illustrator sow. Tommy Doyle was first in class at Illinois and grand champion, also first in class at Omaha, so if you buy one of the Cook boars you get a half brother to this great show boar. Better get busy at once, for they only have a few for sale. Please mention The Wisconsin Farmer. See page 28.—Adv.

Richly Bred Ormsby Bull.

A 19.80-pound son of the 32.52-pound bull, Beauty Pietertje Prince Ormsby, is advertised for sale on page 31 by Dopp Bros., Ixonia, Wis. The dam of the bull for sale is the double Ormsby bred cow, Queen Ormsby Duchess. Send for a pedigree of this fine, richly-bred Ormsby bull.—Adv.

Big Demand for Shropshires.

THE Dane Stock Farm, Oshkosh, Wis., report a large demand for Shropshire rams. They have a goodly number of blocky, good type and of a heavy-shearing strain. The best of blood lines are represented. Write for

High Quality Farm Land In the South

GOOD, fertile land that will grow all the crops you are familiar with in the North, and many more besides. Here is a wonderful opportunity to get away from the bitter winters, the short growing season and the frequent drouths of northern states. We offer you a new home in a mild climate of generous rainfall, where live stock thrives and vegetable growth continues the year 'round. Well drained, gently rolling upland, in the "Ozone Belt" of the southwestern Louisiana Highlands, "the land of perpetual growth."

$22 An Acre Until November 2 Easy Terms

After that date **the price will be** $25 per acre. Climate, soil, shipping facilities, market—all combine here to make this the ideal locality for dairying, cattle feeding, hog and sheep raising. All-the-year pasturage; two and three crops a year on the same ground. Beef, pork and mutton can be produced far more cheaply than in any northern state. **You can grow**

Corn.....40 to 70 bu. per acre.
Oats.....40 to 50 bu. per acre.
Corn Silage.....12 to 20 tons per acre.
Cane.....10 to 20 tons per acre.

Send for our big sixty-four page illustrated book—**"Where Soil and Climate are Never Idle."** It's **free,** absolutely without obligation. With it comes a map of Louisiana in full colors; plat of land; and our latest Bulletin—all **free** to you. Send today and learn about the wonderful development now going on in this region. A postal brings it.

JUST AS A SAMPLE

Below Is Copy of Signed Statement of a Representative Golden Prairie Farmer

"Hillsdale, Wyoming, Sept. 18, 1916.

"Federal Land Company,
Burns, Wyo.

Dear Sirs:

"I have lived in Wyoming 6 years on E½ Sec. 30-16-64 and have raised good crops each year. This year I had 22 acres of winter wheat that made 19 bushels per acre. I have raised oats that yielded 60 bushels per acre and potatoes have made specially good crops each year. Our garden has always been good.

"I had two cows when I came here and now have 40 head of cattle and have sold 2 head, and have bought only 1, but have traded some steers for heifers. I milked this season 12 cows and my cream check for month of June was $96.00 even."

(Signed) FRANK KESLAR.

If you have not already received our literature describing the Golden Prairie District and the bargains we are offering in our Hillsdale Ranch just now being placed on the market, don't delay longer but drop us a card and we will send you some most interesting literature.

breeding and description and please mention that you saw their advertisement in The Wisconsin Farmer. See advertisement on page 30.—Adv.

Inter-County Holstein Breeders' Sale.

WE ARE pleased to announce the third sale of the Inter-County Holstein Breeders. This association is made up of the Holstein breeders of Dodge and Jefferson counties, which comprises the oldest and leading center of Holstein breeding in Wisconsin. The breeders have been raising animals of high production ability and conformation for many years. A year ago these breeders formed an association to promote the breeding of Holstein cattle and to put the public sale of cattle on a better basis than they had been formerly. They have been highly successful in their sales and this one promises to be better still. The class of cattle in this community is very high and the breeders are consigning many of the best things in their herds. In the past sales they have been very particular to give the buyer sound animals. Colonel French, of the Iowana Farms was present at their sale last spring, and was very high in his praise of the cattle offered and the honorable methods of selling. In order to insure the buyer against any possibility of purchasing tubercular cattle all of the cattle will be tested under the supervision of the Wisconsin State Live Stock Sanitary Board. To further insure the buyer against loss through tuberculosis they give a sixty-day retest guarantee. Most of the consignors are breeders who are known for their integrity, and, as master breeders. Among them are such men as Tompkin Wright, of Waupun; Ed Schultz, Hartford, and the best breeders in the vicinity of Watertown. The cattle this year are of even higher quality than in previous sales. There are a goodly number of A. R. O. cows with creditable records. The offering of herd sires is one that Wisconsin Farmer readers should look into. There will be two thirty-pound bulls offered. One is a thirty-pound son of King Segis Champion Netherland, also a thirty-pound son of Sir Beets Cornucopia Netherland, also a twenty-nine-pound son of King Segis Korndyke Sadie Vale, also a grandson of King Korndyke Sadie Vale from a twenty-five-pound three year old. Space will not permit going into detail in regard to the many fine animals in the sale, but this may be obtained in the catalog. Send for a catalog to Francis Darcey, Watertown, Wis. Plan to attend this sale, for you will have an opportunity to buy high-class cattle at a fair price, through a sales organization that is on the square. See page 27.—Adv.

Olson & Mac's Chief.

O. C. OLSON, Strum, Wis., is the fellow that owned Mac's Chief and sold him to J. D. McDonald, the latter winning grand championship on this boar at Milwaukee. Mr. Olson has a large number of spring boars sired by this champion that are for sale. They are good and can be bought worth the money. He will not sell any gilts, as they are reserved for his bred-sow sale in February. Championship blood is worth something in any herd, and Olson is the only man that has anything by this boar of spring farrow for sale. Write him at once for prices and description. He has a big herd of Poland Chinas and a good lot throughout. Please mention The Wisconsin Farmer. See page 30.—Adv.

A Splendid Young Bull.

A BULL, the three nearest dams of which average 26.45 pounds of butter in seven days, is pretty sure to be worth investigation and purchase. John Steel, Oconomowoc, Wis., is offering such a bull, with an attractive pedigree, which includes noted producers. See his advertisement on page 31 and write him for extended pedigree and other information about this fine young bull.—Adv.

Berkshires of Quality.

OUR readers are acquainted with the Berkshire herd of A. P. Cortte, Lomira, Wis., through the advertisement and field notes which have appeared the past few years. We wish to inform our friends and his friends, that his crop of spring pigs this year are the equal and in some ways the superior to those of past years. He is now offering some excellent boars and gilts sired by Pabst Rivaleer 3d and King of Rivals. Send for a description and breeding of what he has for sale. See page 27.—Adv.

Extraordinary Bull at Lake Mills Sale.

BULLS from 1,000 pound yearly record dams have seldom, if ever, been offered at public sale in Wisconsin. But C. C. Fries & Son, Richland Center, Wis., have included King Aaggie Hengerveld, son of Aaggie Texal Wayne 2d (30.6 pound, 1,078 pounds in one year) in their consignment for their big Holstein-Friesian sale at Lake Mills, October 27th and 28th. It is worthy of attention by all Holstein breeders. Another extra good bull, Richland Pontiac Butter Boy, whose dam made an unusual record, is in the lot, also several daughters of dams whose records have been written about. See his advertisement on page 31 and write for further information.—Adv.

Jake Erwin, Bloomington, Wisconsin.

THE above breeder of Duroc Jerseys is one of the "old timers" in southwestern Wisconsin, and we believe we are safe in saying that he has sold as many "red hogs" in that part of the state as any other breeder. He sends out stuff that makes good, and if you order from him you will get a boar or

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. Place your name and address to it, then, to know its cost, count the number of words. The rate is six cents per word, each insertion. For instance, if your advertisement, including the address, has 15 words, one insertion would cost 90 cents, which is one cent for every thousand copies printed. Note the low cost, and read what small advertisements in The Wisconsin Farmer have done for others

One **Wisconsin Farmer** seed corn advertiser says: "We are getting a nice response to our advertising. We will come back with a larger advertisement." Another says: "**The Wisconsin Farmer** has done good work helping me to sell lots of stock." And another writes: "Please discontinue my advertisement in **The Wisconsin Farmer.** I am getting pretty well sold out for the present."

These small advertisements did not have the advantage of the classified headings now available—under which your advertisement would appear.

Any "Wanted," "For Sale," or "To Exchange" advertisement will receive prompt attention and insertion will be made in first issue possible.

THE WISCONSIN FARMER **MADISON, WISCONSIN**

FARM LANDS.

REAL BARGAINS in improved farms in Taylor, Marathon, Clark, Langlade counties in Wis. With and without stock and machinery. A natural dairy section. Very liberal terms. Lists and literature free. Loeb-Hammel Realty Co., (not inc.) Owners, Medford, Wis.

gilt of the same caliber. Jake is a good fellow and will appreciate your business and take good care of your order. Try him. Don't forget to mention The Wisconsin Farmer. See page 29.—Adv.

Another Duroc Find.

AS WE go over the state we are continually running across herds of cattle and swine that have been "hiding their light under a bushel." When we were in the vicinity of Lake Geneva, Wis., a few weeks ago, we stopped to see the Ceylon Court herds and visit our friend, Gilbert, who is farm superintendent. We were impressed with the swine herds that he showed us, but when he showed us the registration papers we were very pleasantly surprised. It developed that the foundation stock of the Duroc herd comes from the best strains of the breed. There are several daughters of the great boar, Defender, in the herd. There are also granddaughters of Professor, Proud Advance and Cherry Chief. If you want to change your blood lines you can do so here without going into Illinois or Iowa to buy breeding stock. Write for the breeding and description of the boars and gilts they now have for sale. See page 29.—Adv.

Burn Brae Farm Durocs.

CHAS. PETERSON, proprietor of the Burn Brae Farm, Rosendale, Wis., has a fine lot of Durocs for sale which he is advertising on page 28. They are not only of proven and popular lines of breeding, but are well grown and of good type. When in the market for boars or gilts write him.—Adv.

28.71-Pound Bull for Sale.

THE twenty-eight-pound bull that A. G. Pingle, Chilton, Wis., is offering for sale is one of exceptional merit. He sires heavy-producing heifers of good, straight type, that show lots of capacity and constitution. We advise our readers to investigate the pedigree of this animal.—Adv.

Downing's Bull Offering.

DOWNING PONTIAC BUTTERMAN has been a state fair champion three times. M. W. Downing & Bro., Waukesha, Wis., are offering one of his sons for sale, out of a twenty-one-pound junior three-year-old daughter of King Hengerveld Pondyke that has two thirty-pound daughters.—Adv.

Solomon Anderson's Polands.

BIG-TYPE Poland Chinas are bred by Solomon Anderson, Green Bay, Wis., and are giving satisfaction to all who buy them. He breeds right, feeds right and is pricing them right, so you will be right if you buy of him. See his advertisement on page 30.—Adv.

Do You Want Holsteins.

IF SO write W. H. S. Rhoda, Watertown, Wis., whose advertisement appears on page 30. He has several fine young bulls ready or nearly ready for service that will interest you. Prices reasonable for such high quality breeding and individuality.—Adv.

WISCONSIN FARMER readers who are in the market for registered Holstein heifers and young cows will do well to write to John Hasse, Monroe, Wis. He is offering a fine lot, a number of which are due to calve soon. See advertisement on page 31.—Adv.

GEO. GIBSON, Washota, Wis., is offering a richly bred Johanna bull for sale. His dam is of the heavy producing Nig Johanna Alcartra family, that prove to be great milk and butter producing cows wherever found.—Adv.

WAUKESHA COUNTY HOLSTEIN ASS'N

4TH SEMIANNUAL SALE MONDAY, OCTOBER 23

95 HEAD PURE-BRED HOLSTEIN CATTLE

ARE you looking for foundation stock? If so, buy them from breeders who have the reputation of fair dealings. Thus far, to the best of our knowledge, no tubercular animals have ever passed through our sales. All animals are guaranteed to be breeders to the value of the purchase price. Every animal is inspected by a committee of three. We believe every animal to be sound and clean. No by-bidding allowed. Auctioneers, Perry, Mack and Love. The following men have consigned animals to this sale and stand back of their consignments to be exactly as represented:

150 HEAD SQUARE DEAL

Inter-County HOLSTEIN ASSOCIATION SALE

Watertown, Wis., Nov. 14-15

SPLENDIDLY bred, well conformed cows—a goodly number bearing creditable A. R. O. records, such as 20-lb. three-year-old and 15-lb. two-year-old record. Heifers of individuality and excellent breeding. **Bulls**—a 30-lb. son of King Segis Champion—a 30-lb. son of Sir Beets Cornucopia Netherland—a 31-lb. grandson of King Segis Pontiac Polkadot—a 29-lb. son of King Korndyke Sadie Vale—a grandson of King Korndyke Sadie Vale from a 25-lb. three-year-old—a show bull, son of Aaggie Cornucopia Johanna Lad, all tuberculin tested under the direct supervision of the state veterinarian, consequently the sale carries the approval of the state department of agriculture. We also offer the 60-day retest guarantee. Our consignors are breeders who have played a noble part in keeping Dodge and Jefferson counties to the front in Holstein circles. Such names as Tomkins Wright, Waupun; Edwin M. Schultz, Hartford, cannot help but convince the buyers of the absolute integrity of our sale and the high class of stock offered. Catalog ready November 1st. Watch later announcements.

HOLSTEIN-FRIESIAN CATTLE.

10 REGISTERED HOLSTEIN COWS

FROM 4 TO 10 YEARS OLD

5 SIRED by Sir Johanna Fayne Mooie, a line bred son of Sir Johanna Fayne, whose daughters are making wonderful 7-day and yearly records. 3 sired by Fobes Fayne De Kol, the 30-pound son of Homestead Jr. De Kol. All safe in calf to Johanna Chief De Kol, that is 62% the same blood as Johanna De Kol Van Beers. 2 bulls nearly ready for service. EDWARD O. MUELLER, Appleton, Wis.

Purebred Registered

HOLSTEIN CATTLE

One of the greatest investigations among dairy breeds was made by experts of the Wisconsin Experiment Station. Prof. F. W. Woll states that the "Holstein cows produced considerably more milk solids and fat than the cows of other breeds (19.5 per cent more butter fat than the Guernseys and 38 per cent more than the Jerseys), and they also give larger net returns for feed consumed." In all dairy breed competitions where Holsteins entered have been representative, they have produced a greater net profit for butter than any other breed entered. There's big money in the big "Black and White" Holsteins.

Send for FREE Illustrated Descriptive Booklet.

The Holstein-Friesian Association of America
F. HOUGHTON, Sec'y, Box 143, Brattleboro, Vt.

A Whale for Work

Willys Knight

Sleeve-Valve Motor

¶ When it comes to pulling long hard hills with twisting, turning country roads—

¶ When it comes down to real work, day in and day out, month after month, year after year—

¶ The Willys-Knight is the one type of motor that can stand up and deliver—never weakening but getting stronger all the time.

¶ It's the sleeve-valve motor—the Willys-Knight motor—a whale for work—and always at it.

¶ Carbon doesn't hurt it—valves can't get out of adjustment—so you say good-bye to the two chief causes of motor layups, when you get a Willys-Knight.

¶ It will pile up thousands upon thousands of miles more running than you can get out of any other type of motor.

¶ And the last miles will be better than the first.

¶ The motor almost never needs go to the shop—

¶ That's a vital advantage to the man who doesn't live on a paved street next door to the garage.

¶ Besides all the tremendous advantages of the Willys-Knight motor for everyday work in any kind of weather on every kind of road, the Willys-Knight has everything else you could ask in a strictly up-to-date motor car.

¶ Style—beauty—

¶ Comfort—conveniences.

¶ Is there any doubt in your mind about what car belongs on the farm? There's only one answer—

¶ It's the Willys-Knight—the beautiful car with the work-motor.

¶ See the Overland dealer—he'll show you the simple mechanical reasons for the greater power, durability and economy of the Willys-Knight motor.

¶ Get right down to business with him—go to the bottom of this motor question—get a Willys-Knight and know the satisfaction no other motor car can give you.

Catalogue on request. Please address Department 368

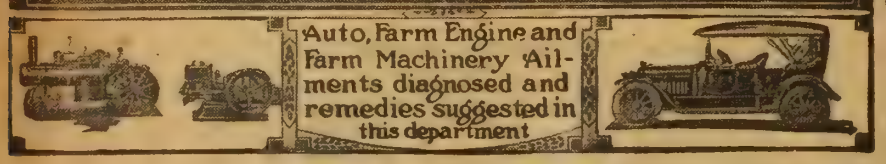
FARM MECHANICS



Questions and Answers.

Low-Tension Magneto for Lighting.

I have a low-tension magneto from another car. Can I fix it so as to make my lights by running it with my fan belt? If so, how can I connect it up?

Answer.—You could probably use your generator to charge a storage battery and run your lights from the battery. The rated voltage of the battery should be about 20 per cent less than the voltage of the generator. You should also have an automatic cutout to disconnect the battery from the generator as soon as the motor stops and to reconnect the battery with the generator when the motor starts again. A six-volt, eighty-ampere battery is often used for requirements similar to yours. The generator for charging it should generate eight to ten volts and not less than six amperes.

Engine Does Not Run Smoothly.

I have a new Ford car. It does not run smoothly when throttled down, running idle. It goes by jerks. The motor hits fine when pulling, and it pulls well. Can you tell me what will remedy this? Also mention some hints on adjusting vibrators on Ford cars.

Answer.—The spark plug gap may be too close, a vibrator may not be properly adjusted, the spark plugs may be dirty, the gas mixture may be too rich or too lean, or the valves may need grinding. Remove the spark plugs, take them apart and wash all the carbon off the porcelain with kerosene. When replacing the porcelain do not screw down the packing nut on the porcelain very tight. Adjust the spark gap to the thickness of a smooth dime. If the compression is good in all the cylinders your valves are all right. If the compression is poor in one or more cylinders grind the valves. To adjust the carburetor start the engine and place the throttle lever in the sixth notch and the spark lever in the fourth notch. Screw the needle valve to the right until the engine begins to misfire. Then very slowly turn the needle valve to the left until the motor reaches its highest speed, then tighten the binding screw on the needle valve. Black, sooty smoke indicates too much gasoline. Turn the needle valve to the right for less gasoline.

To adjust a vibrator start the engine and turn the adjusting screw up until the vibrator stops buzzing. Then screw down until the explosion in the cylinder becomes regular, after which give the screw another quarter turn. If the platinum points are pitted file them flat so that they make good contact, using a very fine file and not removing any more of the platinum than necessary.

Using an Old Auto Engine.

I have an old Reo twin-cylinder auto. The engine has exceptionally good power. Would it be possible to put a jack shaft on the rear end, and run the jack shaft to the transmission sprocket? I have an eight-tooth sprocket to put on the jack shaft, and the transmission sprocket has nine teeth. I was figuring on it for power for a silo filler, but local machinists discouraged me by saying that in order to get the power, I would have to run the motor so fast that a chain drive would not stand, and that the motor would overheat. Then I decided to wait and fix a wood saw on it for a trial and see how it worked. Would appreciate your advice.

Answer.—With such small sprockets we believe your chain drive would work fairly well, as the speed of the chain in feet per minute would not be very great. Your engine, too, could be run at a moderate speed for such an engine, say 800 to 1,000 R. P. M. At this speed a 4½x5 engine, two cylinder, should develop ten to twelve horse power. You should run with the transmission on high, as the transmission gears would soon wear out if run continually on low. Your jackshaft with the pulley and sprocket in place should be carefully balanced, as it will run somewhat faster than the engine.

Lacing a Belt.

Please publish in your Farm Mechanics Department directions and diagram for lacing a five-inch belt.

Answer.—Figure 1 shows a single lacing suitable for single belts and Figure 2 shows a double lacing suitable for heavy belts, a rawhide or "whang" lacing being used. This lacing is in common use on farm machine belts, but nearly all machine shops are now using a soft metal wire lacing. Wire lacing comes in coils of about fifty feet, directions for using being printed on the package. As comparatively small holes may be used the belt is not weakened so much as when leather lacing is used.

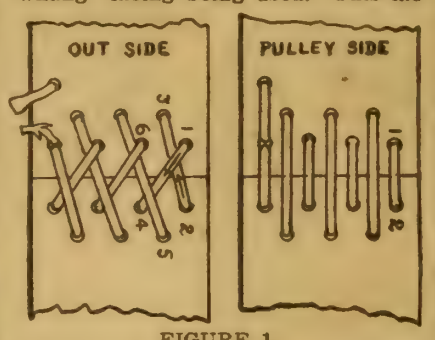


FIGURE 1.

The first thing to do is to trim the edges of the belt square. If this is not done the belt will not run well on the pulleys. For a five-inch belt punch a series of holes as shown in the figures. The holes should not be larger than necessary, as the larger the holes the weaker the belt. It will be noted that the lacing runs parallel with the belt on the pulley side. When making a single lace as shown in Figure 1 insert the lacing from the pulley side in holes 1 and 2 and pull the ends through equally on the opposite side.

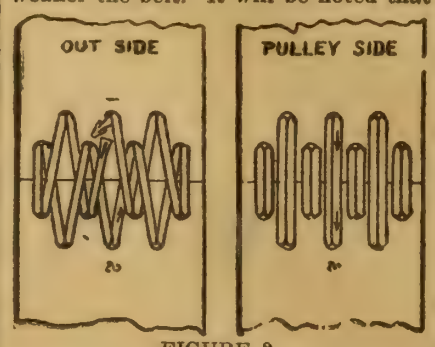

FIGURE 2.

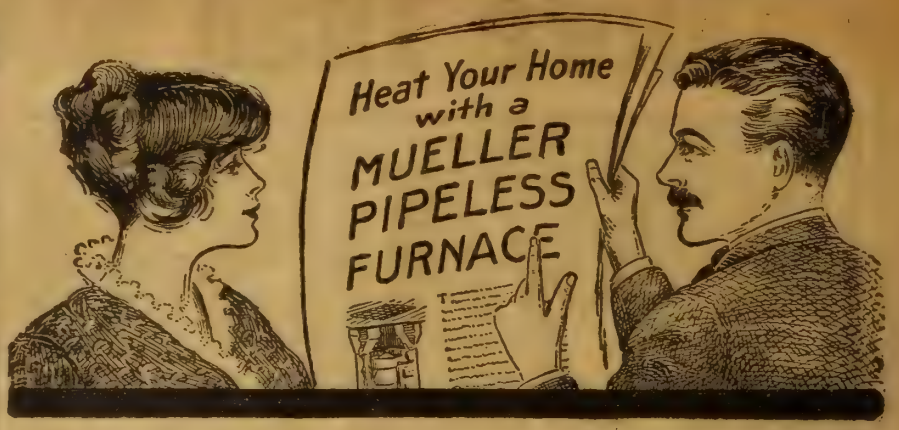
Then pass the lace from hole 2 to hole 3 and from hole 1 to hole 4 on the outside of the belt. Then pass the lacings on the pulley side from 3 to 5 and from 4 to 6. Continue until the end holes are reached; bring one end through the extra hole and fasten one end in the other by means of a slot and fork as shown. The methods of lacing a double lace is quite similar, but the lace is started and ended at the middle of the belt, holes 1 and 2, Figure 2.

The distance of the first row of holes from the edge of the belt should be about one and one-half times the thickness of the belt.

Running on Dry Cells.

Please tell me whether or not a 1915 Reo car equipped with self starter could be run on magneto without the use of the storage battery in case the battery is dead. Would it be possible to crank the car by hand without the use of batteries? Would it be necessary to change the wiring?

Answer.—The motor cannot be run on magneto without a battery. Dry cells may be used for ignition in case the storage battery is dead. The 1915 Reo cars were regularly equipped with a set of dry cells. To use the dry cells in place of the storage battery, turn the ignition switch to the position marked "Dry Battery," and remove the fuse mounted beside the cutout on the generator. Some of the generators on the 1915 model were equipped with a generator switch. If your generator was so equipped you will notice markings "Summer Driving," "Off" and "Winter Driving." It is only necessary to turn the switch to the "Off" position to allow the use of dry cells. In this case it is not necessary to remove the fuse. You would not be able to crank your motor with dry cells, as they would not supply enough current. Nearly all self-starting motors may be cranked by hand by removing the nut on the end of the starting shaft and putting on a starting crank.



Ask the Woman of the House

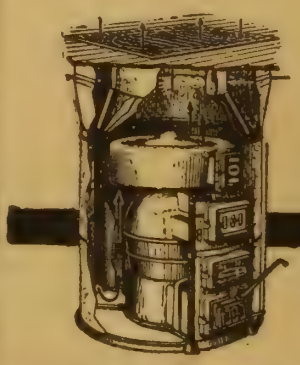
WHO, more than the woman of the household, will appreciate the comfort, cleanliness and coziness of a home heated by a *Mueller Pipeless Furnace*—the release from the dirt, drudgery and danger of the uncertain, air-contaminating stove or heater?

A *Mueller Pipeless* in your home means more uniform heat than stoves, purer air and better health. It costs less than a pipe furnace, is easily and cheaply installed in any house, old or new, without the muss, fuss and expense of pipes or flues.

The *Mueller Pipeless* heats your whole house, upstairs and down, from one register. Keeps you warm in the coldest weather. Burns coal, coke or wood. An all-round better heating system than stoves, at lower cost.

Nearly 60 years of successful furnace building back of the *Mueller Pipeless*. It is scientifically and substantially built of solid cast iron and will last a lifetime.

MUELLER PIPELESS FURNACE



Write for free book on heating. Gives you all the facts about pipeless heating and the MUELLER PIPELESS FURNACE, full details of construction and pictures of installation. Shows how easily it can be applied to any home, old or new—how to know a good pipeless furnace or a poor one—what to look out for and what to avoid. Booklet sent free.

L. J. MUELLER FURNACE COMPANY
204 REED STREET MILWAUKEE, WIS.

As we are makers of heating systems of all kinds since 1857—regular hot air pipe furnaces, steam or hot water boilers and vapor heating systems—we are in a position to give you honest advice on your heating requirements.

8 H.P. Portable Saw Rig

Weighs only 1285 lbs. One horse will handle it. Saw frame of tilting type. Blades 28 inches. Fitted for pole saw work if desired. Tongue, neck yoke and double-trees furnished instead of shafts when preferred. Saw may be detached, leaving portable outfit; also engine removed for other uses. Engine alone weighs only 320 lbs.

Cushman

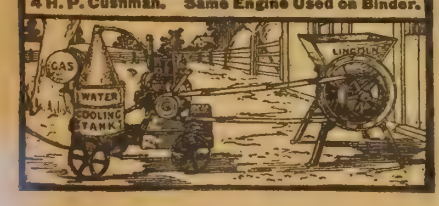
LIGHT WEIGHT ENGINES

Most useful engines for farm work. Run quietly and steadily because of Throttle Governor and perfect balance. No violent explosions or fast and slow speeds. Easy to move around from job to job. 4 H. P. weighs only 190 lbs. Besides doing all general farm work, it may be attached to grain and corn binders, saving a team.

In sawing, sensitive Cushman Throttle Governor responds instantly when saw strikes log, making it stand up and deliver steady, uniform speed. One man who uses the Cushman Saw Rig says it pulls more like a steam engine than any gas engine he ever handled.

Cushman Engines are not cheap, but they are cheap in the long run. 4 to 20 H. P. Engine Book mailed free on request.

CUSHMAN MOTOR WORKS
855 North 21st Street Lincoln, Nebraska
4 H. P. Cushman. Same Engine Used on Binder.



GOOD MEN WANTED to learn the Auto Business. Any capable, ambitious young man can make a success for himself, and if you will only prepare yourself YOU WILL GET WORK, because POSITIONS ARE OPEN, WAITING for competent men to do Auto and Electric work.

Learn a GOOD BUSINESS. Are you dissatisfied with your present work? Thousands of new men will go into the Auto and Electric Starter business within the coming year. YOU CAN, TOO. Do you want to?

You learn here by practical work in our large shops. We furnish TOOLS.

$900 to $3000 per Year Salary or Business Profits

Automobile and Tractor work, Electric Starter and Farm Light Plants. More calls from garages during 1916 for our graduates than ever before.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

THE REVOLT OF THE FARMERS.

NOTHING is more interesting to me these days than to note how the eyes of those who dwell in our cities are being opened to the political importance of the farmer. Never was there a time, within my memory, when measures were being made to conform to farm needs and men were studying farmers' welfare so much as now. Never was there a time when the farmers themselves were so convinced of the necessity and value of organizing for mutual protection and advancement. Thus it has come about that we are undergoing a political revolution in which the farmer is the central figure.

I have been greatly interested in the farmers' political movement in North Dakota ever since it began, and I have already written, at some length, in regard to it. But the revolution which began there has not confined itself to that state. The farmers of Iowa have revolted against similarly pernicious and insidious corruption and bid fair to make their vote and influence felt at the forthcoming election as never before. Perhaps the movement is an outgrowth of the co-operative idea, which has spread throughout the grain belt as nowhere else in the entire country, finding its greatest manifestation, I believe, in Wisconsin, where hundreds upon hundreds of co-operative societies of various kinds are now in flourishing existence. Whatever its inception, the fact is that the farmers' revolution against commercial unfairness and political injustice is spreading in a truly remarkable manner. It is hardly to be wondered at, therefore, that those who looked on first in alarm are now beginning to investigate, or that, having investigated, they should find that here is a revolution, the effects of which are progress rather than retrogression, the leaders of which are patriots rather than rebels.

I have just spent an interesting half hour reading an account of the farmers' movement in North Dakota, published by one of the leading magazines of New York City, which sent a noted progressive leader (candidate for United States senator in New York a year or two ago and one of the best-posted political economists in the country) to North Dakota to investigate the "revolution" now in progress. This investigator was surprised, in the first place, to find that the men at the head of the revolution are not wild-brained socialists or mad anarchists, but that they are progressive, prosperous farmers who own and who till their own farms, who pay heavy taxes and are the representative citizens of the community. He was surprised, in the second place, to find that so many of our national political reforms have come from the grain belt and from this very class of citizens. Here is his testimony on this matter:

> These rugged and embattled farmers swept everything before them and nominated a ticket of their own, from governor down to constable, pledged to a new program and a new life for agriculture in the Northwest. This farmers' revolt occurred in the flood time of the present year in North Dakota, and the bridges were down and the streams were swollen. But some farmers tied their clothes on their backs and swam across the opposing stream and some farmers drove as far as twenty-four miles around to get to the primary polling place and register their will.
>
> When this economic and political storm broke in North Dakota, it broke all at once in the present summer. But it has been brewing for ten years. In fact, it is but the latest phase of the agricultural revolution which has been at the basis of much of our progress during the last generation. The grangers and the populists are gone, but it would refresh and stimulate many a restive radical and shock many a calm conservative to look into the original program of the populists and find how much of it is part and parcel of the legislative history of state and nation.

But having found that the men at the head of the farmers' revolt are high-minded men, and that they are kin to those who have given the nation its greatest reforms, this eastern investigator was surprised most of all at the erroneous conception the city man, in general, has of this agricultural revolution. It astounded him to think that there are those who would dismiss the movement with scorn or sarcasm or ill-timed attack of a petty and personal character, when the aims are so far-reaching and unselfish and the leaders so patriotic and deserving. That it will not do to dismiss this revolution of the farmers of the grain belt in any hasty manner, calling it a mere "flash in the pan," or attacking the honesty and integrity of the revolutionists, is asserted by this eastern investigator in this manner:

> My judgment is that this latest addition to the political propagandism of the country needs intelligent examination, sympathy, guidance, limitation and perhaps modification, and not attack and misrepresentation. The men of North Dakota are not in danger of becoming a race of socialists. They are sturdy individuals, with a stake in the soil and stern notions of property rights. But in that commonwealth, as in so many others in the United States, the ruling political class have had narrow vision. It is another case of building a political dam without a spillway, and when the break comes it seems dangerous.
>
> Whether it is permanently dangerous in a political sense depends upon whether it is sympathetically handled by the alleged wise ones in the republican leadership. For it is a republican movement; it is in complete control in North Dakota, and it is spreading rapidly through the surrounding states.

I am looking to the November election to demonstrate, once and for all, not only in North Dakota and Iowa, but elsewhere throughout the entire grain belt, that the farmer has awakened to his political importance, his personal influence and his patriotic possibilities. We are doing more this year, my friends, than electing a president, governors, congressmen, and so on; we are emancipating the people of 6,000,000 farms and placing in their strong hands the reins of government, which I hope and pray they will never drop or lay down to the end of time.

FARM-LOAN SWINDLES.

WORD comes to me from a number of sources that frauds are being perpetrated on farmers under the guise of the new farm-loan law. The situation has become so serious that the Federal Farm Loan Board has issued a public warning, in the course of which it says:

> Farmers who borrow through the National Farm Loan Associations are not required to pay any advance commissions. So all of these enterprises requiring payments from farmers are declared by the board to be fraudulent and the attention of the department of justice has been called to the matter and an attempt will be made to bring the offenders to justice.

The trouble has come about largely in this manner: The new law provides not only for the creation of federal land banks (to loan through farm-loan associations to individual farmers on their land) but also for joint stock land banks, to be formed by ten or more persons; these joint stock land banks to be authorized to issue farm-loan bonds, under the supervision and direction of the Federal Farm Loan Board, after their minimum capital stock of $250,000 has been paid in full. The government limits the amount of the bonds which these joint stock land banks can issue to fifteen times the amount of their capital stock and surplus. The interest on loans made by these private land banks, under government supervision, is limited to 1 per cent in excess of the interest on the bonds they issue, and the principal is to be paid back on the annual installment plan, as is provided for the regular federal land-bank loans. The law is very explicit on these points, but inasmuch as it is all new and untried, I can very readily see where there is likely to be confusion and chance for the unscrupulous to prey upon the trusting.

That this is just the case has been proved in a number of ways, for the reports are numerous of men using the new law as a means of collecting commissions and bonuses from farmers who thought they were patronizing Uncle Sam direct, but were merely taken in by private promoters. So numerous are the stories of graft that the Federal Farm Loan Board has issued this notice:

> In several states it was called to the attention of the board that the joint stock land banks were being organized by questionable means by stock salesmen or promoters who are taking advantage of the farmers' desire for loans on the amortized plan to sell stock to farmers. Farmers are advised that there is no necessity for subscribing to the stock of any private corporation for the purpose of obtaining such a loan, and are cautioned not to do so except upon an investment basis. The board suggests that farmers make no investment in such land banks until they have first inquired of the Federal Farm Loan Board in Washington as to the character and responsibility of such organizations. No joint stock land banks can be organized except with the approval of the Federal Farm Loan Board.

I am in receipt of several complaints, which lead me to believe that many farmers will be victimized unless they are extremely careful. I want to repeat what I have before suggested, in this connection; that farmers who are proposing to form local loan associations should write to the Federal Farm Loan Board, at Washington, for the proper blanks and all necessary information. Above all, do not pay any sum, for commission or any other purpose, to any individual, no matter how plausible his talk, or how glittering seems the chance to get a farm loan under the new system at a low rate of interest. The federal land banks will be ready for business about the first of February; they are not even located now. All that can be done at present is to form local associations, draw up articles of agreement, and so on, but no loans can be secured for three months at least, and no money should be paid for any purpose whatever until the banks are actually open and ready for business.

I am in receipt of an article written especially for this paper by a representative of the Federal Farm Loan Board, supplementing my numerous editorials on the subject. I will print this article in a week or two. Watch it, read it carefully, write the Federal Farm Loan Board, at Washington, for blanks and particulars, and, above all, keep aloof from men who represent that they are able to give you the advantages of the new law right away, ahead of its actual operations, which are dependent upon the locating and the opening of the twelve federal land banks, to start with.

A PICTURE OF WAR.

A STRIKING picture of the contrasts of war—waving grain, lowing herds, farmers plowing alongside batteries wheeling into action and soldiers dropping in their tracks, their lifeblood ebbing out at the base of grain shocks—is given by a soldier on the firing line in Belgium. I find it so interesting, so thought-compelling, that I am going to reproduce part of it here, so that we may all of us look upon it, together, for a few minutes:

> One can hardly tell where peace ends and war begins in this country. I saw a field with one or two rather fresh shell holes in it, from which the grain was being harvested. Farmers carry their operations up to and even beyond our gun positions. In fact, we drove our guns and wagon into a field which had been fertilized and partly plowed. A field of oats was neatly shocked in front, and some of the shocks had to be moved out of the way. In some cases we have had to put barbed wire around our aiming posts to prevent the cows from knocking them over. It is something of a nuisance to have to drive the beasts out of the way of our shooting irons. Even when carrying on his operations in the war zone the Belgian farmer maintains his reputation as a careful and skillful tiller of the soil; indeed, fields actually under fire appear to be cleaner and better cultivated than some of those farther back.

Is there not something in this picture—both the farmers and the fighters in the foreground and the shocked grain in the background—which serves to hold us back from war, even though there are among us some who, largely because of personally selfish reasons, would plunge us into the awful maelstrom in which sixteen nations across seas now find themselves? What if the hand of the Great Artist should paint such a picture here in peaceful, prosperous America, where you and I, while the rest of the world is fighting, have been permitted to go about our daily toil, serenely confident that the shades of night would find us returning to a peaceful home, which the despoiling hand of militarism had not touched? Supposing it was your field of shocked oats or wheat which the soldiers trampled down in order to make way for the cannon, belching their death-destroying shells clear across the county. Supposing it was your fine cattle which poked their inquisitive noses against the hot mouths of these cannon, to be pushed back by the bayonet and the barbed-wire entanglement, so that death might go hurtling through the air to lay low a man who had never done you or yours any harm. Supposing it was your home which the flames destroyed, your little ones whom the stray bullet or the shot and shell sacrificed, your wife who dropped at your feet, her lifeblood gurgling out in awful protest against the criminal uselessness and waste of it all. Does not the picture fairly scream against war, with its barbaric injustices, its pangs for the innocent, its far-reaching effects which unborn generations must shoulder? Can you and I, to whom has been granted the privilege of bringing bumper crops through to maturity, look upon this picture and then do or say aught which would plunge our beloved nation into war?

We who have escaped so long from war's ruthlessness, shall we not do everything possible to preserve our neutrality, to keep sweet peace enshrined in our midst? Shall any voice, which we might raise, be for war? Rather, shall it not be for such peace, with national honor, as shall continue to keep us the flagbearer of civilization, the hope of a world which by this time is sadly chastened and sick unto death of the war which is devastating so large a part of it?

Report of National Dairy Show.

WISCONSIN made a splendid showing at the National Dairy Show, held at Springfield, Mass., last week, and every dairyman reader of this paper will be interested in the detailed report of that show which appears elsewhere in this issue of The Wisconsin Farmer. It is gratifying to note that, in two of the five dairy breeds shown at the National, the names of Wisconsin breeders figured prominently. In the Ayrshire classes, the Seitz herd was well to the front and captured many blue ribbons as well as the junior championship in the bull classes. In addition, this herd won the $100 cash prize for the best twelve animals exhibited in the name of the state. One condition in the payment of this premium was that the herd had to be selected by a representative of the experiment station, or by a committee named by the state breed association. This premium was a coveted one, and the state of Wisconsin should be proud of the record made in capturing it.

In the Brown Swiss classes, the Ayers entries were more than a match for all the competitors combined. Out of six championship and grand championship honors, three were won by the Ayers herd, and the credit is all the greater when it is considered that some of the most renowned Canadian herds were entered at the National show.

The Wisconsin Farmer points with pride to its extended report of this show, which was held 1,200 miles away. It is accompanied by a number of illustrations of winners at this great show. Thousands of our readers who could not attend the National are interested in the outcome of the ring contests engaged in last week, and we make the suggestion that this issue of The Wisconsin Farmer be preserved, because the National was indeed a historic event to dairymen. The winning animals at that show and their progeny will be the dominating forces in years to come, and the types set up by the judges will be the ones that will be patterned after in future years.

Our readers will find the beginning of this report on page 8, and it is there complete in every detail.

Some Suggestions About Farm Drainage.

IN A BULLETIN entitled "The Principles and Practice of Land Drainage," published by the Wisconsin station some time ago, a brief but comprehensive summary of some of the important points in farm drainage was given, and these are contained in the following brief paragraphs:

Don't dodge the wet spots in cultivated fields. A few dollars spent in drainage will make these spots yield valuable crops, and will make the cultivation of the whole field more convenient.

Don't be content with raising marsh grass on muck and peat marshes. Drainage is the step that begins their adaptation to tame grasses and other farm crops.

Don't condemn the muck and peat marshes on which timothy has died but once. Drain thoroughly and then apply barnyard manure or commercial fertilizers, as is done on uplands. In other words, give the marshes a square deal.

Don't wait for nature to drain the wet lands without assistance. Nature alone did not remove the stumps and stones from the wooded, stony lands. Neither does she irrigate the arid lands of the West without the aid of man.

Don't let damaging water get on to land, if it can be prevented. An ounce of prevention is worth a pound of cure in drainage.

Don't think it takes a wizard to lay tile properly. Have a survey made sufficient in detail to show that there is sufficient fall. An intelligent use of this fall will then insure success.

Don't install a part of a drainage system to which the remainder of the system cannot later be joined with advantage.

Don't let the waste banks of ditches grow up to weeds. Get them sodded and make them both valuable and attractive.

Don't let outlet ditches remain idle when they should be working. Have surface ditches and tile to keep them busy.

Don't spend a dollar for small ditches or tile on a marsh, until an outlet is assured.

Don't fail to give land drainage the attention and thought it deserves.

Comment is scarcely necessary on these suggestions. However, we would like to call special attention to the necessity of having a survey made of the land to be drained in all cases where the fall is light. Many instances can be found where the fall is not more than an inch or two in each hundred feet, and in cases of that kind guesswork in laying the tile is never in order. By having a survey made and following this up by stretching a line over the tile, an absolutely uniform grade may be obtained without any depressions to fill with silt. To be sure, it adds to the cost of the drainage to make a survey and to stake out a system in a suitable manner, but it must be remembered that tile drainage must be well-nigh perfect, otherwise it is wholly or partially useless.

We do not deny the practicability of laying the tile accurately without a survey when there is abundance of fall, but in that case the work must be done at a time when there is sufficient water in the soil to indicate the depth of the grade, on every foot of the line. In the absence of water, the use of a grade line or the drainage level must be insisted upon. We have known many individuals who considered themselves to be expert drainage men, who have made costly blunders by assuming the responsibility of running a line without a level, in the absence of water.

Wisconsin County Farm Experiments.

SOME interesting facts have been brought out this year at the Wisconsin Auxiliary Farms. By auxiliary farms are meant the various county farms which have co-operated with the experiment station workers in distributing pure-bred seeds and in holding various demonstrations. Weed eradication and smut control have been discussed extensively. At all of these auxiliary farms, soy beans have been given a trial. Soy beans seem to do well on soil which is properly drained, and may be depended upon for a catch crop on like soils subject to long dry periods.

There have been some experiments in growing Sudan grass. Members of the experiment association recommend Sudan grass as a reliable substitute for millet. Sudan grass has not, however, proved a certain crop in this climate and on Wisconsin soils. There have been many failures with it in the state. These may have been largely due to lack of knowledge concerning the handling of the crop. Grain sorghums, milo, feterita and kafir were given same trial at some of the county farms. It is suggested by some of the experiment workers that these crops may make good silage substitutes for corn. However, these crops are largely designed to be raised where there is not enough moisture for corn, and it is our opinion that the average Wisconsin farmer is wasting his time experimenting with milo, feterita and kafir.

The work at the auxiliary farms is educational in character and is a work of great importance. We believe that a great deal of attention should be paid to bettering the yields on crops now known to be successful in this climate. It is very interesting at times to study the development of crops imported from foreign countries, but it is likely to be more profitable to make a strenuous effort to increase the yield on crops already established in this state.

Wisconsin Land-Clearing Conference.

DEAN H. L. RUSSELL, of the Wisconsin College of Agriculture, made a statement at the first land-clearing conference, held recently at Rhinelander, Wisconsin, which is significant. He said that it will take fully half as much money to reclaim Wisconsin cut-over lands as it has taken to build the Panama canal. Land clearing will cost hundreds of millions of dollars before all available lands in Wisconsin will be opened to farming. And when the clearing is done and the land farmed, Upper Wisconsin will be the greatest dairy section on this continent. When Dean Russell makes this statement, he means that Upper Wisconsin will some day give the world more dairy products than the great dairy state of New York. Or to put it closer to home, more dairy products than the state of Wisconsin now produces. To reclaim this great territory means to give to this state and nation a rich agricultural and dairy section larger than either Holland, Belgium, or Denmark. Western irrigation projects reclaiming a few thousand acres or even a few hundred thousand acres dim into insignificance compared to this big problem in our own dooryard. When these acres are reclaimed, subdued and made tillable, they will represent a value four times their present worth and the cost of reclamation added, says Dean Russell. These outstanding statements were the body blows delivered in the interest of a greater Wisconsin at the land-clearing conference, which was the culmination of an educational campaign promoted by the Wisconsin College of Agriculture, manufacturers of stump pullers and explosives, The Wisconsin Advancement Association, landowners, bankers, and the Northwestern and Soo Line railroads. These same agencies have been responsible for the two land-clearing special trains and the demonstrations conducted in thirty-one towns, including eighteen counties and attended by between 20,000 and 25,000 people. The special train traveled 3,000 miles. It has been the most important single factor in developing Upper Wisconsin since the days when the lumberjacks first went into the uncut forests.

Financing this great undertaking of reclaiming an empire is the big problem. The land is owned by lumber companies or settlers. The lumber companies have preferred to sell the land without clearing it.

Interest has been aroused by the demonstrations. Now, the problem is where to get the money to continue the work. Of late years we have been looking largely to the banker to finance agricultural enterprises. The banker's business activities must extend further than industrial lines. The bankers have realized this as much as anyone else, and they have been doing a great deal of good before anyone suggested it. They have helped to bring in cattle. In Rusk county, Mr. Ben Faast advises us, they have loaned money for fencing timber or brush land when the settler has agreed to seed the land to clover, and pasture stock on it. They have loaned money for the purchase of dairy and beef stock. They have loaned money for the purchase of stump pullers, pilers, and dynamite. They have even gone so far as to loan money for the entire stumping operation, allowing a certain loan per acre as each piece was cleared up. If the farmer agreed to clear ten acres and the estimate of the cost was $15 per acre, the bankers have been willing to let him have $15 on each acre as it is cleared. Such a plan extended through twenty or thirty Wisconsin counties would accomplish wonders in a few years. It is not enough to get the settler located.

We believe the bankers of this state may be depended upon to do their part on any legitimate enterprise. Money is plentiful at this time, and if land which is cleared is worth four times what it was before it was cleared, it would seem feasible that some plan for getting the money for the comparatively inexpensive cost of clearing, could be arranged. Every man who owns cut-over land should be clearing as much of it each year as he possibly can. Any good, well-drained Upper Wisconsin soil can be made a profitable farm. There will be other conferences on this subject of financing the land-clearing business, and The Wisconsin Farmer hopes there may be some definite results.

Raising Poultry on Wisconsin Farms.

ATTENTION of our readers has previously been called to the possibilities of the poultry business in this state. Wisconsin is well adapted to the raising of poultry, and, what is more to the point, it is well situated for the disposal of poultry and poultry products at a good profit. We are not referring to the few poultry men who raise fancy birds for exhibition at the state fair and the poultry shows. There is a splendid profit in the poultry business for the man who raises poultry to sell the stock, or the eggs on the open market. A year ago this month, according to statistics in the department of agriculture, eggs in Wisconsin were selling at an average of 23.2 cents per dozen. The average for the same time in October this year is 28.1 cents per dozen, or an advance of about 6 cents a dozen. A good many of our readers can remember back to the time when eggs sold at 6 cents a dozen in the late spring and early summer weeks. It was not so long ago that eggs could be bought three dozen for a quarter, and even our younger people will remember the time when many eggs were sold off the farm at two dozen for a quarter.

Poultry offers a profitable side line for the average Wisconsin farmer, not only in the sale of eggs, but also in the sale of meat. The best judges on meat prices, other than poultry, assert that there is not going to be much decline in beef, pork or mutton at least for two or three years. The demand for beef is increasing and the supply diminishing year by year. There is every reason to believe that poultry for table use will demand a good price for years to come. We would like to see more poultry on Wisconsin farms, and the better grade of poultry.

Shredding Fodder Means Convenience in Feeding.

IT IS conceded by the majority of stockmen that the silo offers the best solution for those who are in a position to use a considerable quantity of corn fodder. The placing of corn in the silo at the proper time and in the proper manner means that it will practically all be saved, the percentage of deterioration being so small as to be almost negligible. In spite of this fact, dry corn fodder is used extensively for feeding purposes, and the question comes up as to the best way of handling this product so that it will feed out well.

There is considerable waste in feeding the dry fodder direct from the shock. It is bleached out in the field and its feeding value is lessened day by day. Furthermore, its economical use requires that the corn be snapped out or husked out, and this is an expensive proposition from the standpoint of labor. It is true fattening cattle may be fed liberally on corn fodder if there is plenty of hogs in the yards, but taking all things into consideration, it is a wasteful and extravagant plan of feeding.

The use of the shredder solves the problem in most cases, because it means that the fodder is stored in a comparatively short space of time, and if precaution is taken that it is dry at the time of shredding, there will be very little loss from deterioration of the product.

When the fodder is shredded, it means that the corn is separated from stover then and there so

that each may be handled separately in feeding. Shredded fodder may be fed with practically no waste attending its use, because the stalks and leaves are so mixed together that cattle will not separate them, but consume the product in its entirety. An additional advantage is that the shredding of fodder does away with much disagreeable work that must otherwise be done during periods of storms. There is no meaner task on a stock farm than to go to field daily regardless of weather conditions and chop out a few shocks of fodder and haul them to the yards. In windy weather it is an abominable task, and there is a heavy waste from handling, because the best part of the fodder is apt to be blown away. It is shattered a great deal by handling, whereas the shredding is usually done before the fodder is brittle.

A few precautions must be taken in the shredding of fodder. In the first place, it should be allowed to dry out thoroughly, and this means that it will require practically a month or possibly five weeks in the shock. Unless well dried out, it is apt to mold in the mow or stack, and there will be a heavy loss because of this. After allowing the fodder to dry out, it is a serious blunder to do the work of shredding while there is external moisture on it, either in the form of water or snow. Where fodder is wet, there will be too much heating, and we have known instances where an entire stack has been spoiled just because it was shredded at the wrong time. It might be added that shredding of fodder makes the product much better adapted to use as bedding than where the stalks are fed whole. Where there is a liberal supply of shredded material on hand, one can usually afford to feed it in quantities, so that there will be some waste from the mangers, and in that case it will furnish a splendid material for bedding the stalls, yards or pens.

Warning and Advice to Wisconsin Hog Men.

J. B. KEENAN, instructor of agriculture at the Fennimore school, Grant county, sounds a warning to farmers against hog cholera. He says that up to this time there has not been discovered any methods of curing hog cholera, and that the only safeguard is prevention. He points out that hogs, men, horses, dogs, cats, birds, and even flies, may start the cholera by carrying disease germs. Hog cholera, like all other germ diseases, goes where it is invited and stays only when it is well treated. We quote from Mr. Keenan's letter to the farmers of Grant county:

Take, for instance, tuberculosis. Where do we find the most cases of it? Why, in the crowded homes in the crowded cities, where there is dirt, and where water and fresh air are complete strangers. So it is true with cholera, because unclean yards, poorly ventilated hog houses, poor food, and hogs of low vitality all work together to make the success of the germ greater. Ask yourself these questions:

Are my barnyards clean?
Wouldn't it be better to put fresh, clean straw in for bedding?
Do my hogs have a house or pen that is clean?
Do they get enough sunlight and ventilation?
Am I feeding them enough good, wholesome food?
Does it pay to have runts, sickly, deformed and ruptured hogs around?
Does it pay to raise scrubby hogs?
Why not get some pure-bred stock and sell the scrubs?

Besides all these questions, we can do much more. It is found that charcoal is good for hogs, not saying it will prevent hog cholera, but it will keep them in better physical condition. A day spent spraying your yards and hog houses with some good germicide is a day well spent, because it makes it all the more safe. A little whitewash in the hog house often means much. Plenty of good, clean water to drink, and food that is not half rotten or molded is another safeguard.

All of these preventions, along with vaccination, all add to lessening the danger of an outbreak of that disease which is today causing great losses in some sections of the country. Do we want Grant county wiped out, the county noted for its great hog production? No, of course, we don't. Then let us all work together to clean up our hog houses and yards and take every precaution you can for yourself and your brother farmer.

Mr. Keenan has made a good statement of the case as to the matter of prevention. Grant county, as noted, is famous for its number of hogs and for the quality, and it would indeed be a calamity for the cholera to get any foothold in this favored section. Wisconsin has a fine record in that hog cholera has made little progress here. We agree with Mr. Keenan that we want to keep the cholera out.

Another Successful Creamery-Laundry.

THE Wisconsin Farmer first brought to the attention of the farmers and creamery men of this state the fact that a successful laundry, patronized largely by farmers, had been established at Chatfield, Minnesota. Since the first article on this subject was published in The Wisconsin Farmer now about three years ago, there have been established several co-operative laundries in this state, most of them backed by companies which had already been making a success in the creamery business. The creamery-laundry which is said to have secured the largest number of farmer patrons in Wisconsin, is that at River Falls, which is written up in this issue of The Wisconsin Farmer. We believe it will pay readers of The Wisconsin Farmer to call this article to the attention of their creamery manager. The creamery-laundry renders a great service to the farm housewife, and should be encouraged. There is some prejudice against a laundry in the same building as a creamery. This can be obviated either by entirely separate rooms for the laundry, or for a building aside which will be close enough to utilize the creamery power. Very few creameries in these days have any space available for a laundry, and if a laundry is decided upon as a side line, something must be done to get room. In the case of the River Falls company, the old creamery building was turned into a laundry. There are a great many creameries in Wisconsin which will build anew within the next few years, and it is well to keep in mind this possible opportunity to utilize the old structure. In connection with this subject, we do not wish to forget to give proper credit to the Wisconsin College of Agriculture, which took up the creamery-laundry three years ago this winter and invited one of the Chatfield, Minnesota, men to speak at a special session farmers' week at Madison. Nor can we overlook the good which has been accomplished from the generous donation of $300 by former Dean Henry, for the purpose of enlisting creamery interest in this important subject.

The Importance of Plenty of Scale in Hogs.

IT IS not too early to begin rounding into shape the hogs that will be used for breeding purposes to raise the 1917 crop. Those who handle pure breds are generally shrewd enough to emphasize the qualities most sought after by the general public, and they select their breeding stock accordingly. The same careful attention is not given to grade hogs, and the one mistake that is made more frequently than all others is the selection of individuals having insufficient scale or size.

One must recognize the fact that there is a constant tendency for animals fed freely on corn to become too refined or, in other words, too small. Corn is lacking in mineral matter and there is, therefore, a tendency when it is liberally fed to reduce the size of bone and frame of farm animals. Because of this, it is exceedingly important, in selecting gilts for breeding purposes, that those of good size and stretch be selected first. It is possible to overdo the matter by going too much to coarseness and not making allowance for feeding qualities, but for the average grade herd it is our opinion that a mistake had better be made in this direction than in the opposite, namely, that of getting the breeding stock too much refined.

It is scarcely necessary to say that a pure-bred male should be used even in raising hogs for the farm, because if they are rightly selected, this will impart feeding qualities and uniformity to the herd. This is not equivalent to saying that all pure breds are good enough to use even on grade herds. Look for plenty of size in the male with reasonably heavy weights for a given age. There is a sufficient supply of pure-bred foundation stock in the corn belt to meet the needs of the situation, and it is not necessary to pay an exorbitant price for males to use on grade herds.

While the practice of crossing the breeds is quite common, it is seldom justified excepting possibly in the first cross. To carry the matter on further, introduces the element of variation, and the herd will not be uniform either in color or size. Where a good start has been made with Poland Chinas, by all means use a pure-bred Poland China male; whereas, if Duroc Jersey blood predominates in the herd, let the Duroc Jersey be used again and again until all the hogs in the herd show good color and form, and so on through all the breeds. In these days of high-priced feed, an extra 25 or 50 cents per hundred on a carload of hogs amounts to something, and one may easily spring the market as much as this if he has a uniform bunch of hogs and they are well finished.

It is an easy matter to find men who will take sides on the question of using gilts or old sows for breeding purposes. Ordinarily it is a good thing to have a few of each. The old sow will bring through larger litters, but, of course, there is considerable outlay for wintering, whereas the gilt may raise a fairly good litter and be ready for market ninety days after her pigs are weaned. This plan has been followed by many successful men for a series of years with good results. Mature stock is more to be advocated in the case of those who handle pure breds, where closer attention is given in caring for the litter and where great importance is attached to growthiness. The old sow's pigs will be larger and studier at six months than will pigs from a gilt, and this is of some importance to those who are raising pure-bred hogs.

Sturdy Wire Fencing the Best.

IN THE following communication, one of our subscribers calls attention to the importance of using material of good quality and ample strength, in the building of far fences:

It is unfortunate that we cannot at once adapt ourselves to what is best. To begin with, in many farm necessities and equipments, it seems we must experiment a great deal before finding out what is best. This is what I had to do after I began fencing with woven wire. Some way I conceived the idea that a fence made by steel would last almost a lifetime, but what a mistake. I am not certain yet that I have arrived at perfection.

There are reasons why I failed to get good and durable wire fences: For a long time fence makers, not knowing any better, flooded the country with rolls of wire fencing made of very light wire. The parallel strands were usually of No. 11 wire, and the web or stay wires were of No. 16. Each wire fencing factory for a number of years tried to produce a fence cheaper per rod than others, and that is the main reason why our fences were not only weak, but very short-lived.

To make a bad matter worse, most of us did not employ good and durable timber for posts, and the posts when set were not deep enough in the ground along the lines of fences, and the end and corner posts were not at all well braced. Disappointment was the general result, and we were almost ready to condemn "steel" as farm fencing.

A brighter day dawned. We found it was not the cheap, light fencing we wanted. Then we learned to employ the very best timber for posts, and set them deeply, and braced securely. Now we are largely using the re-enforced concrete posts, for they are the most durable and the most satisfactory of any. They are cheaper, too, than those made from red cedar or yellow locust timber. These two kinds are the very best timber posts we know anything about.

To conclude, I will say that for the woven web I can fully recommend the all No. 9 wire as being the only kind one should stretch up. It is strong and when well put up lasts many years. Whatever kind of posts used, I recommend setting the line ones twenty feet apart and three feet in the ground. The corner, or end posts, anchor and brace strongly and set them in the ground four feet. It does not begin to pay any farmer to buy light web for farm fencing, or to carelessly put it up with posts of a short life. Employ the best material and the best workmanship all the way through and the results will be satisfactory.

Of course, it must be understood that the process used in steel making has much to do with the lasting quality of the product. Many instances can be found where the wire on fences erected twenty-five years ago is still in good condition, whereas other fences, built ten years ago with wire of the same weight, have entirely rusted out. In some cases the depreciation has been due to improper galvanizing, while in others the composition of the wire itself has contributed largely to its corrosion. It is doubtless true that the heavy forms of fencing proved to be the cheapest in the end, and it is possible to practice false economy by placing the posts too far apart. The favorable comment made by this subscriber on the concrete post, is borne out by the experience of men who have used this type of post, particularly so when it has been manufactured with plenty of re-enforcing material. Concrete, in itself, has a crushing strength, but has no tensile strength, and for that reason there must be ample re-enforcement.

Cows Make $50 a Year.

WHILE no figures are available showing the profit realized on the cows in the average dairy, yet it is fair to assume that this profit is not more than $25 per head after allowing market prices for food consumed. It will, therefore, interest our readers to hear from a dairyman who is able to make at least double this profit, as indicated in the following communication from an Illinois subscriber:

One of the most essential things in dairying is to know how much it costs to feed the cows. This is a matter of which a great many keepers of cows do not keep a close enough account. Without knowing the cost of the feed consumed by the cows, it is impossible for one to know how much money the cows are making for him. It is just as necessary to know the cost of feeding a cow as it is to know how much milk she produces or the quality of that milk.

On our farm we have for years kept a close record of the feed bill of our cows. We figure that $60 will feed a cow producing 10,000 pounds of milk for one year. The feeds that we raise on our farm are alfalfa, clover, silage and oats. The feeds that we buy are cottonseed meal, oil meal and bran. In arriving at our cost of $60 per cow a year, we figure the feeds grown on our farm at their full market value. We value the silage in accordance with its feeding value, as compared with feeds that we buy.

Our cows yield an average profit of $50 a year. We know that some cows yield better than this, but most keepers of cows do not get this amount of profit because their cows are not good enough and, of course, they cannot afford to feed $60 worth of feeding stuffs in a year. So the first essential in profitable dairying is good cows. A cow that will yield 10,000 pounds of milk in a year is a good one and she must be given a plentiful supply of the proper kinds of feeds.

When we commenced to keep cows a good many years ago we did not feed as well as we do now. We have been paying close attention to the feed bills since and, while we do not claim that our methods of feeding are absolutely correct, we are thoroughly convinced that good feeding pays big. We have found that the nearer we feed a cow to her full capacity, the less energy she will waste, for when she gets full she will lie down and chew her cud in contentment.

As to what a maintenance ration for a cow for one year would cost, we are not at all sure about that. If we had a cow that we intended to keep for ten years without milking or fattening her, we should judge her annual cost would be about $25, to say nothing of her care. For ten years this would amount to about $250 in addition to the work of caring for her during this period. Suppose we add $15 worth of feed to the $25 estimate. The cow would probably pay for her keep, and perhaps she would return a little profit besides. For that extra $15 she would produce about $35 worth of milk and butter fat.

So far, we have but little, if any, profit for ourselves. We must get the profit by adding more expense. Of course, it comes from what the cow can consume over and above her maintenance. Suppose we add to her maintenance ration $25 worth of feed. A well-bred dairy cow will return for that extra $25, $50 to $60 worth of milk and butter fat. If we add $10 worth more feed we will get more milk and butter fat in proportion. Hence, with good cows, more feed means more milk and butter fat, and more milk and butter fat mean more money to add to our bank account.

The secret of success in dairying lies in the fact that the cows of high productive capacity must be fed liberally on grain, whereas those that are inclined to convert feed into fat must be carried along on the cheaper forms of feed. It must be borne in mind, as pointed out by this subscriber, that the profit from a dairy cow is realized on the food consumed over and above that required to maintain her. It is poor business to attempt to carry a dairy herd through the winter on corn and corn fodder, because in that case a real milk-making food is not supplied and the income from the dairy products will not actually cover the cost of the food consumed.

The Farmers' Open Forum

WITH CONTRIBUTIONS FROM READERS OF THE WISCONSIN FARMER

The Making of Hominy.

To the Editor:—I saw your articles on hominy and thought I would tell you how I make it. We always make it as soon as the weather gets cool enough, so it will keep a few days without souring. I use box lye. My mother used hardwood ashes and made, what she called, white lye, by boiling the ashes and letting them settle. She then boiled the hulls off the corn in the lye. I use about two or three quarts of water and a heaping tablespoon of dry lye to a quart of corn. Let it boil—put the corn in and keep boiling and stirring. The water will get thick and the hulls will slip between the thumb and finger. Run cold water over and stir and stir. Boil up several times, changing and stirring. Towards evening, one wants to pick the swelled-up kernels out and eat them. Some eat them with milk; we like them best heated in butter or drippings, exactly like potatoes. My father, G. G. Younglove, was a miller in Little Green, between Mt. Hope and Woodman, Grant county. He cracked the corn, then mother washed the hulls off in cold water. The hulls floated. She poured the water through a sieve. She stirred and stirred and poured and poured, and she boiled it all day in the water she washed it in. That is, I had to stir and stir until it got quite thick. Then the kettle was set back and stirred once in a while. It was so good with rich milk for the evening meal, and sliced and fried for breakfast, with sorghum. By the way, I wish I could get some sorghum. Making it must be another lost art. I always take a farm paper.

Mrs. I J. Dietrick.

Crawford Co., Wisconsin.

Effect of Modern Dairy Barn Equipment.

To the Editor:—In this association the three highest-producing herds, and at the same time the three most profitable herds, were kept in approximately modern barns. The best two herds had patented swing stanchions set in wooden frames with wooden mangers. They had drinking cups for each two cows, box pens for calves and fairly good ventilation systems. The third best herd had special equipment of stanchions, stalls, mangers and cow, calf and bull pens, with a good system of ventilation, but there were no drinking bowls in the barn.

I believe it pays to install modern dairy barn equipment if for no other reason than its moral effect on hired help and growing children, as they seem to take more interest in caring for cattle properly when they have proper equipment to work with.

I do not believe the high production of these three herds was the direct result of the modern equipment, but was the result of the interest taken in the herds by their owners and the modern equipment in these barns was the visible sign of that interest which had caused the farmers to grade up their herds and dispose of poor producers for years back. However, the increased comfort of the cows is undoubtedly no small factor among the causes of their good performance.

Ross H. Root,

Tester, Westby Cow-Testing Association.

Best-Paying Dairies Well Equipped.

To the Editor:—Two of the three most profitable farms in our association have special dairy barn equipment. They have steel stanchions and stalls, concrete feed troughs, with galvanized lift mangers, drinking fountains, manure carriers, concrete floors with planking where the cows stand and a special system of ventilation. The third farm has none of this modern equipment. His stable is in quite a dark log barn. He intends to build next year and will put in all modern equipment. I believe that the comfort of the cow, through the installation of modern and sanitary equipment, will increase profits, but just how much I am not prepared to say. I would think at least 8 per cent.

Erwin H. Meinke,

Official Tester, Mishicot Cow-Testing Association, Manitowoc county, Wis.

In and Around Wisconsin.

The annual session of the Wisconsin Buttermakers' Association will be held at Sparta, December 5th-7th.

On October 1, 1916, the department of agriculture report shows 22,408,699 pounds of cheese in storage in 126 storages. This is approximately the same as cheese in storage a year ago.

The Fond du Lac Association of Commerce has established a rural development bureau. There are great possibilities in this big county and if the men at the head of this bureau can interest farmers and work with farmers they may accomplish a great deal of good. Fond du Lac county is rich, but has plenty of room to grow richer.

There are approximately 6,000 rural school-teachers in Wisconsin. Of this number 4,339 receive from $40 to $49 per month. About one-fourth of the school-teachers in the rural schools of Wisconsin are paid salaries ranging from $60 to $69 per month. There are four teachers in the rural schools receiving from $80 to $89 per month and only two who receive less than $40 per month.

There is considerable interest in sheep raising throughout the state, owing to the present high price of mutton and also wool. For instance, in Fond du Lac county, where sheep have been neglected for a number of years, a considerable number may be seen. Almost every county in Wisconsin is adaptable to sheep raising. There is apparently no prospect of an early decline in the revenues to be made in sheep.

The Central Wisconsin Dairymen's Butter and Cheesemakers' Advancement Association met recently at Vesper. The next meeting, date of which has not been decided definitely, will be held at Thorpe. The following are scores of butter and cheese exhibited:

CHEESE.

J. G. Fischer, Stratford	94
E. Toelle, Auburndale	94¼
W. F. Naulin, Marshfield	95
O. E. Dix, Auburndale	95½
C. A. Voight, Chili	93¼
Cloverhill D. Co., Rozellville	95¼
G. Ridderbush, Marshfield	91½
R. Schmitz, Unity	93½
A. B. Johnson, Vesper	94½
Jos. Brickheimer, Vesper	93¾
J. Sternot, Arpin	90
W. Bymers, Junction City	93½
O. Klemme, Thorpe	90½
Geo. Hauser, Arpin	93¾
Geo. Trepkino, Arpin	93½
Jos. Henseler, Marshfield	93¾

BUTTER.

E. Beck, Vesper (Print)	94
H. Ames, Pittsville (Tub)	93½
Ed. Beck, Vesper (Tub)	91

A great many Wisconsin buttermakers are interested in the National Convention and butter exhibit which will be held at Minneapolis, November 14th-16th. Wisconsin buttermakers have doubtless practically all arranged for their exhibit by this time. The butter must be in Minneapolis by the last of October. Those who have not yet received their entry blanks should write at once to M. H. Meyers, 888 44th St., Milwaukee, Wisconsin. It is urged that all exhibitors thoroughly chill their packages of butter before wrapping in burlap. Mr. Geo. H. Bekendorf recommends that this chilling process take at least twenty-four hours in a cold refrigerator.

The Columbia Cheese Company, of Newark, New Jersey, has had representatives in Wisconsin canvassing for cheese and a good many regular shipments have been arranged for. There has never been a time when Wisconsin cheese has been in such great demand or the price so uniformly high. This is indeed the great day for the cheesemaker.

An interesting local celebration was recently held at Loyal, Clark county. Six years ago a stallion owner in this county offered a substantial prize for the best colt from his sire. Farmers who used this sire brought their colts to Loyal this fall to have them judged. This was just a part of the regular village fair which included exhibits of cattle, vegetables, fruits and poultry. The live stock features of the meeting were in the main suggested by the Wisconsin Live Stock Breeders' Association. It was a good-sized fair, all starting from the efforts of J. B. Bashford six years ago to interest the farmers of the community in better horses.

IF you want to buy a product of any kind that you do not find advertised at this time, write us. We will try to tell how to get it.

Waste Land Turned Into Money-Making Soil

You can't get the maximum income from your farm when stumps and boulders are eating up the profits. Every obstruction on your farm is not only an obstacle to your farm work but to your farm earnings as well.

BURTON

"Good Luck" Dynamite

enables you to easily, quickly and cheaply clear your farm, restoring what was once a money-wasting section of land to a rich, productive, profitable soil.

"Good Luck" Dynamite is safer to use and costs less because a smaller charge is required. It can also be used—and *is* being used by hundreds and hundreds of farmers—for ditching, subsoiling and tree-planting.

Our distributing facilities enable us to guarantee prompt deliveries

Ask your dealer for Burton "Good Luck" Dynamite. If you can't locate a Burton dealer, write at once. If [you] have] any perplexing farm clearing problems to solve, write us and we will help you.

Rhinelander Clearing Conference.

Land Clearing and the Financial Problem Involved in Connection With It Were Discussed by Prominent and Influential Men.

THE first land-clearing conference, held recently at Rhinelander, Wisconsin, decided after some debate to gather more facts and meet later to discuss them. A committee was appointed, composed of Dean H. L. Russell, of the college of agriculture; C. P. Norgord, commissioner of agriculture; Ford Allen, dairy commissioner of the Northwestern-Omaha lines; W. H. Killen, industrial commissioner of the Soo Line, and Carl Livingston, of the college of agriculture engineering division, who has been in charge of the land-clearing demonstration work. This committee will investigate the subject of finance. There is no disagreement as to the advisability of clearing millions of acres of stump land in Upper Wisconsin. There is a considerable financial problem involved. When this committee has been able to gather more information on the subject and to confer with bankers and railroad men and others, another land-clearing conference will be called, at which some definite action will probably be taken. At a conference recently held the discussion was largely informal, the main object being to arrive at some plan which will result in the farmer-settlers doing more clearing each year than they have been doing. The subject of organizing farmers' clubs for purchasing machinery for co-operative work was discussed. It was also suggested the town boards might buy a machine and furnish a man five months of the year to clear land in his town at so much per acre. Another plan was for bankers to advance money for fencing and sowing clover seeds so that good pasturage may be provided on the new lands. It was thought also advisable to urge bankers to make loans for the purchase of stump-pulling machines and also for the purchase of explosives in carload lots in order that the work of these two agencies might be accomplished at a minimum cost. Mr. Ben Faast, of Eau Claire, explained the plan which has been adopted by several banks in Russ county. These banks loaned money for the purpose of encouraging clearing, although not directly for tools with which to clear land. Dean Russell suggested that the Upper Wisconsin banks dispose of their first mortgage paper in southern Wisconsin and use this money over again. As stated, all of these suggestions were taken under advisement.

Dean Russell presided at the conference, which was attended by about seventy interested persons. Mr. Livingston was made secretary and in calling attention to the purposes of the gathering Dean Russell dwelt upon the wonders of Upper Wisconsin as an agricultural section; that it surpasses the older sections in its dairying possibilities; its nearness to the great markets and that the only barrier to the rapid development of this section is the stumps. "The question is the best method to carry on this work begun by these demonstrations," he said. "What is it? During the next few years half as much will be spent in clearing as it cost to dig the Panama canal and it is important to learn the cheapest as well as the best methods of clearing. We all know of the productiveness of this stump land, once it has been cleared, so all that remains is the working out of some plan by which every settler can carry on the work."

C. P. Norgord, commissioner of agriculture, also spoke of the possibilities of Upper Wisconsin and advocated the use of sheep, goats and cattle until the green woods rot, as it is a great forage crop and pasturing among the stumps is profitable. Mr. Faast spoke along similar lines, referring to his experience in Rusk county, and advocated the use of dairy rather than beef cattle, as the market is better and it also starts a settler into dairying in which he expects Upper Wisconsin to eventually lead. Mr. E. O. Browne, a banker of Rhinelander, spoke of the banker's viewpoint of the land clearing work. In the past he said the banks had not had to consider the farmer. He spoke of the local work that has been done in various communities and expressed himself as believing that much good can be accomplished by some statewide move towards financing and promoting the work. Others who spoke were Dale Bumstead, of Duluth; A. J. Kirstin, of Escanaba, Mich.; Wm. C. F. Zimmerman, of Davenport, Iowa; F. A. Williamson, W. J. Bissell and A. D. Campbell, of the Wisconsin Advancement Association; William Martin, vice president of the Soo Line; T. W. Haverstad, of the Soo Line; Omaha lines; Frank Hayes, of Superior; Mr. Livingston and others connected with the land-clearing special who told of the good work accomplished.

The arrangements at Rhinelander were in charge of W. D. Juday, county agricultural representative. The crowd was not only large at the demonstration but very attentive, showing a splendid interest in this work. The final demonstrations of the present tour, which began at Birchwood on September 18th, were held this week at North Crandon and Armstrong Creek.

An added feature at Rhinelander was the showing of the motion picture film "Seeing Upper Wisconsin," which the Soo Line has prepared for extension work in other sections. It was the first showing and a splendid film of four reels, showing in detail the possibilities of the country and calling attention to its great resources.

Potato Show at Antigo.

The Langlade County Potato Show is to be held at Antigo, November 15th. There are a number of silver cups and cash prizes and other small prizes.

The winter course in the Wisconsin Dairy School at Madison begins Wednesday, November 8th, and continues for the customary period of twelve weeks.

Same HUDSON SUPER-SIX Again Breaks Ocean to Ocean Record

On Return Trip Across America It Beats Best Previous Time and Establishes World's Endurance Record

The same Hudson Super-Six Touring Car which ran from San Francisco to New York in 5 days, 3 hours and 31 minutes, started back from New York on its arrival there and again made the transcontinental trip in shorter time than any other car ever made it.

Last spring the wonder record for the one-way trip made by a famous eight was 2⅓ days longer than the time required by the Super-Six.

No other automobile ever made the round-trip against time. Yet in both the going and return trips the Hudson Super-Six lowered the best previous one-way record.

In a little more than 10 days the Super-Six covered 6,952 miles.

Counting all stops, and slowing down to the speed restrictions of 350 cities, towns and villages each way, the average time from San Francisco to New York and back to San Francisco was almost 700 miles a day.

In the last leg of the return trip, between Elko, Nevada, and San Francisco, heavy mountain rains were encountered. In the going trip that distance was covered in 20½ hours. On account of the rain and mud, 35 hours were required on the return. Under similar road conditions as were met in the going trip the return would have been under 5 days.

Hudson Holds Every Worth-While Record

There are no important world's records which refer to a stock car that the Hudson Super-Six hasn't won. The best former records are too easy for the Super-Six. The events are too easily won. For instance, in the 24-hour record, 1819 miles, it exceeded the best former record by 52%.

And the Super-Six made the best time in the world's greatest hill-climb up Pike's Peak. The best time for 100 miles. The greatest distance covered in one hour and the fastest time for a stock chassis at the rate of 102½ miles an hour.

Such Endurance Is Convincing

Here we prove again that the Hudson Super-Six has more endurance than we have ever claimed for it.

What can be more convincing than that round trip across the continent made with a Hudson Super-Six light weight 7-passenger phaeton? Previous records were made with roadsters and stripped cars, but the Hudson at all times carried three, and sometimes four, passengers, and with its baggage weighed in excess of 5,000 pounds.

No Engineer Hopes to Excel It

Remember that the Super-Six is a Hudson invention controlled by Hudson patents.

A hundred cars have motors of like cylinder capacity. Many cars have more cylinders. But in the Super-Six vibration has been reduced to almost nothing. That adds 80% to efficiency.

The Super-Six is not one of the passing sensations. Ours is not one of those claims to motor supremacy which yields in a year or two to another. Mark what these records mean. There is plenty of evidence now to convince you that it cannot be superseded.

Save $175 Now

For many reasons, now is the time to get a Hudson Super-Six.

In the first place you can get delivery now. Last summer thousands had to wait, and thousands must wait next spring.

Then by buying now you can save $175. The price will be advanced December 1. The models will not be changed. You get the same Super-Six motor, the same wonderful chassis, and the same beautiful body. Your car you get now will be identical with those we shall sell after December 1, except for some minor details.

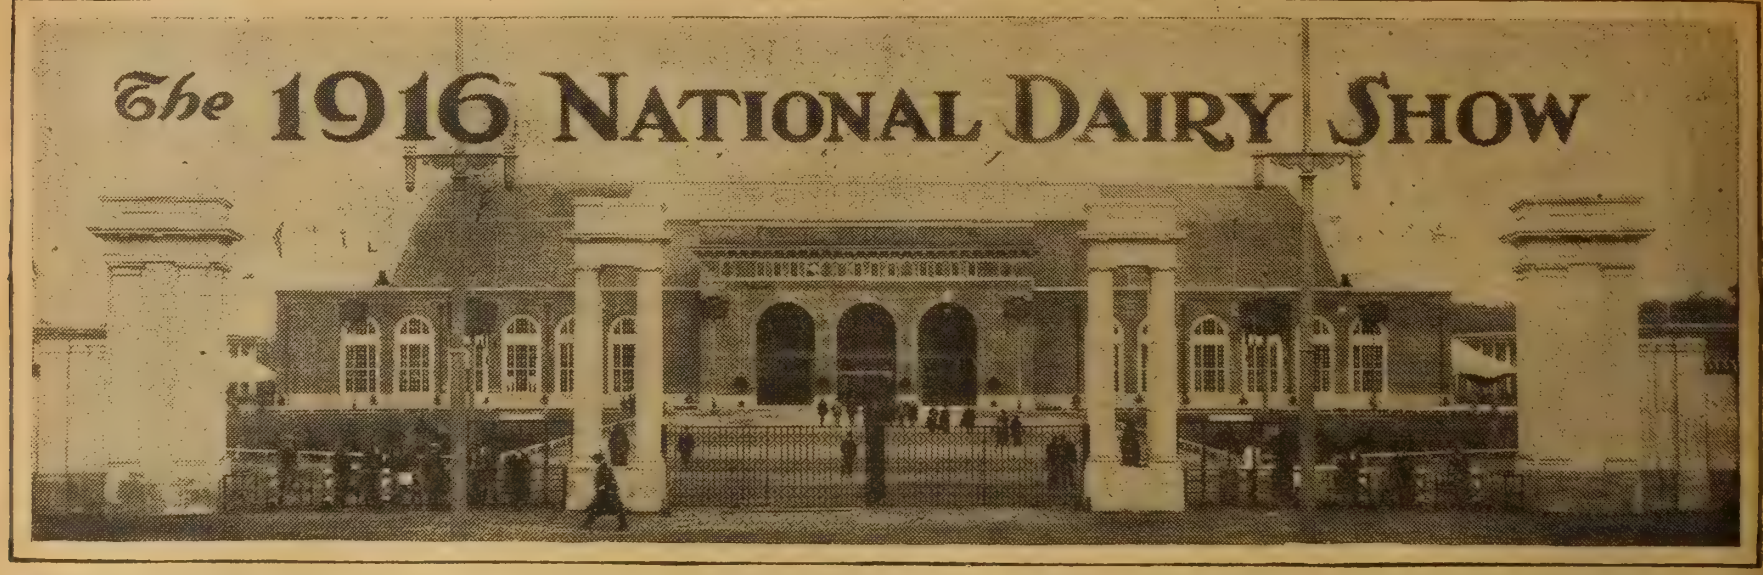
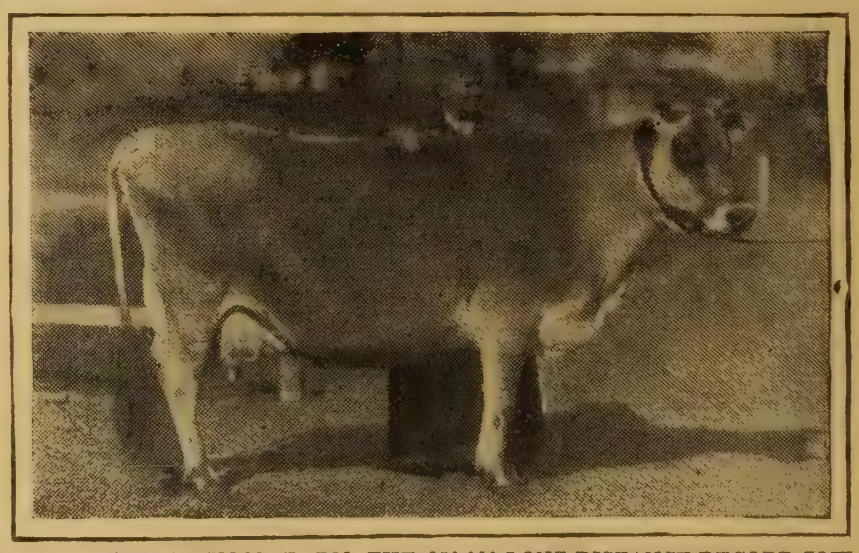
HUDSON MOTOR CAR COMPANY, DETROIT, MICHIGAN

The 1916 National Dairy Show



NEW ENGLAND furnished the setting for the tenth National Dairy Show, the first event following that memorable occasion when the live stock industry of the United States was jeopardized by the breaking out of foot-and-mouth disease at the Chicago show in 1914. From that scourge there has been a complete recovery and the whole dairy industry faces a brighter future today than ever before, because the National Dairy Council has succeeded in uniting into one compact organization not only the breeders of dairy cattle through their respective associations but the milk producers, the creamery, butter and cheese manufacturers, and in addition the milk dealers, the ice cream manufacturers and the dairy machinery equipment and supply interests, each having its own organization to zealously guard its affairs. With these separate branches of the dairy industry combined it can be easily understood why an eastern meeting place should be chosen for at least one of these great gatherings, and those who attended last week were unanimous in expressing themselves favorably to the choice of the officers of the council in locating the event at Springfield, Mass.

It fell to the lot of the National Dairy Council to dedicate the grounds and buildings of the Eastern States Agricultural and Industrial Exposition, an institution designed to foster progressive agriculture in all its branches throughout the New England and the eastern states. On an area comprised of nearly 200 acres there has been erected what experts have described as the finest exposition plant in the country, or, for that matter, anywhere in the world. The coliseum is 200x300 feet and the roof is supported by ten steel arches of 200-feet span and these are seventy feet high. To the west of the coliseum stands machinery hall, a structure of irregular ground plan, its dimensions being 301 feet, 220 feet, 234 feet and about 300 feet. On the east stands the horse and cattle barns, with stall room for 1,200 head. The four corners of the main building under the seats furnish suitable quarters for conventions and exhibits and all available space was crowded last week. The relation of the outer wings to the main building is such that there is no exposure of animals during the showing period. The judging ring, 100x200 feet, was taxed last week to furnish space for all classes, so to begin with this first great show to test out the new structures had but little elbow room to spare. In the matter of seating capacity for visitors the available space was highly inadequate. In past years there has been nothing to compare with the national of 1916 in attendance. The 6,000 seats surrounding the judging arena were gobbled up early in the day, while thousands in the overflow crowds filled the stables, the machinery hall and the boys' demonstration building. Under such circumstances complaint would be made naturally, particularly so because many who came to witness the judging failed to get within hailing distance of the classes while showing. They packed the center and sides of the judging ring itself, making it exceedingly inconvenient for those in the seats to follow the work of the judges. There was growling, to be sure, from those who proposed to follow the work of the judges as they sat at the ringside, catalog in hand, but what could be done? The show was in charge of Mr. W. E. Skinner, the same Skinner who so successfully managed the International Live Stock Exposition for so many years. With this expert showman it was simply a case of using every available foot of space whether in the ring or out of the ring and let the matter go at that. The show was simply too big for its housing quarters. In every respect possible the wishes of the visitor were catered to. Every animal led into the ring was numbered and cataloged and when the premiums were placed thousands of catalogs were instantly marked. Every man, woman and child present seemed to be interested in dairy cows and an amazingly large percentage of them were familiar with the blood lines of many of the winners. No such appreciation of pure blood can be found in the central states as was shown by the New Englanders last week.



SOPHIA 19TH OF HOOD FARM, THE $50,000 LONG DISTANCE RECORD COW OF THE WORLD.

An important part of the National Show was the exhibits made by the boys' and girls' demonstration clubs of the ten eastern states. The membership in these clubs number 148,000 youths between the ages of ten and eighteen. Congress appropriated the sum of $15,000 to be used in illustrating the work of these clubs and this was done in a masterly way last week at Springfield. There were demonstrations in canning of fruit and vegetable products and upward of a thousand exhibits of home-canned materials were on display. Thirty-nine boys entered a pig and each pen was well placarded with information as to the cost of every pound, the kind of feed used, the age, the weight, etc. Clothing exhibits were made by the girls, because garment making is given special attention in all these demonstration clubs. Then there were handicraft displays, fruit and potato exhibits as well as corn—all offered in competition for valuable prizes, including, among other things, numerous pure-bred dairy bulls. This was the first demonstration of this character ever fostered by the federal government and it was well received. It will be far reaching and beneficial in its effect. It enlists the interest of boys and girls. They are started along lines of sensible industry and there is a pleasing hope of splendid achievement in their lives.

In the household economics division daily demonstrations were given in the use of milk, butter and cheese, because it is believed by those in charge of the affairs of the National Dairy Council that there is not as yet a full appreciation of these materials as to their food value. Some interesting classes were held by Miss Laura Comstock, of the Massachusetts Agricultural College, as she demonstrated the use, for example, of sour milk in making quick breads, cookies, cakes, pie fillings and cottage cheese. Instruction was also given in the use of milk for children and invalids and the attention given to these lectures during the week indicated that the dairy cow is likely to be a more important factor as an agency of food supply in the future than she has been in the past.

In another department the hand of the National Department of Agriculture was shown. This was a demonstration to show that "blood will tell." Here stood nine cows, each with her record placarded on the stall. Some were mere boarders of the costly kind, because the cost of producing a pound of butter fat in some instances ran as high as 36 cents per pound, while other cows in the row produced butter as low as 12 cents. The problem, therefore, is to get rid of the boarders as quickly as possible. Use the scales and the testers, say the experts in charge of the cows, and feed your grain and hay only to cows that will use them at a profit. Thousands of visitors were impressed as they studied the record of these nine cows with the great basic truth involved, because they had it plainly demonstrated to them by the records that some cows can make economical use of one pound of grain for every three pounds of milk produced, while a stall mate will be wasteful and unproductive on the same ration, requiring possibly a much larger proportion of roughage and less grain. This

FIRST AGED HERD HOLSTEIN-FRIESIANS, OWNED BY R. E. HAEGER.

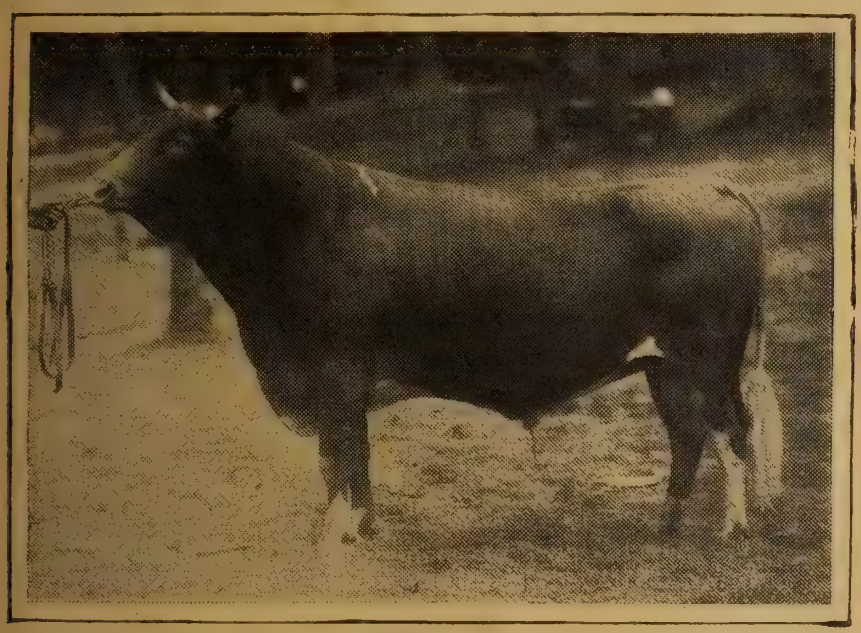
FIRST PRIZE ADVANCED REGISTRY GUERNSEY COW AND TWO OF HER PROGENY OWNED BY C. H. MACKEY

proved to be a practical and useful exhibit. It was alive and people are drawn to living things.

No such exhibits have ever been made by manufacturers of dairying utensils as was shown at Springfield last week and a mere list of the names of the exhibitors would occupy several columns of space in this paper. At a reasonable rental charge the National Dairy Show realized the sum of $67,000 for the space leased to these firms. Every conceivable type of labor-saving device to be used in the dairy, creamery and cheese factory was on display, and, taken as a whole, this department was highly educational. Special reference should be made to the interest that was taken in milking machines, and the four companies which exhibited in this department found themselves to be important centers of interest during the entire week. The labor question on the dairy farms of New England and the eastern states has reached the point where the industry is menaced because of the scarcity of workers, and more and more the milking machine is being looked to as a solution of part of the labor difficulties. In recent years these machines have been so radically improved that now they have passed the experimental stage, so that under a sensible system of management just as good milking may be done by these machines as by hand. The metal barn equipment exhibits were noteworthy. The emphasis that is now being placed on sanitation in dairy matters has resulted in popularizing this modern form of equipment and that explains why the booths of the Lowden Machinery Company, of Fairfield, Iowa, and the James Manufacturing Company, of Ft. Atkinson, Wisconsin, were popular centers during the entire period of the show. Here could be found not only sanitary stalls and stanchions but also calf and bull pens, hog pens, litter carriers, feed trucks, as well as ventilators and ventilation equipment—all an important part of modern equipment required on every dairy farm.

It should be gratifying to breeders of pure-bred dairy cattle of the central West to find that the best herds of this region are more than a match for the renowned herds of the East when pitted against them in the show ring. In four breeds out of the five the best premiums were captured by central West breeders, namely, in the Holsteins, Guernseys, Ayrshires and Brown Swiss. In the latter two Wisconsin herds carried away the premier honors; while Iowa and Illinois came to the front in the Guernseys and Holsteins. The judges in these four breeds frankly admitted the superior dairy type that had been worked out by the breeders of the central West. In every instance the cattle had plenty of scale to be characteristic of the breed, but they had a marvelous degree of dairy quality and they were fitted to a point never before excelled in an American show ring. Only in the Jersey classes did the volume of honors go to eastern and southern breeders and it was in this Channel Island breed where the North, the South, the East and the West met in contest. They were there from California, Texas and Kentucky, as well as from New York and Pennsylvania and all the New England states, resulting in the greatest show of Jersey cattle that has ever been made in this country, but to win highest honors in four out of the five breeds, as was done by central West breeders, this is a creditable record indeed and one that we believe will be fully appreciated by the home people.

Eighteen teams from the various agricultural colleges took part in the judging contest at the National Dairy Show. Each team composed of three judges was called upon to pass on eight classes of males and females in four of the leading breeds and it is interesting to note that the corn belt again came to the front. The students representing the University of Nebraska scored the highest with 3,632 points out a possible 4,800. Second in the list was Kansas State Agricultural College with 3,534, and third the Iowa State College with 3,530 points. Included in this competition were students from Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Vermont and Rhode Island. It will be observed, therefore, that competition was not lacking in this contest and the outcome demonstrates that in educational matters the East is by no means in the lead. The highest individual in this contest came from Nebraska, Mr. W. F. Roberts, who won the De Laval scholarship of $400. Two of the four trophies that were offered by the various record associations for the teams scoring highest in their respective breeds were captured by the central West, the Kansas team winning the trophy offered by the Guernsey Cattle Club, while the Nebraska team won the trophy offered by the Holstein-Friesian Association. This contest was the largest that has ever been held in connection with the dairy show and it unquestionably accomplished much in the direction of fixing in the minds of young men the type of dairy cows that give the best account of themselves in production.



MARSH'S HAYES' CHERUB 2D, SENIOR AND GRAND CHAMPION GUERNSEY BULL.

HAYES' MOSS ROSE, JUNIOR CHAMPION HEIFER, OWNED BY W. W. MARSH.

GUERNSEYS.

It was a case of the East battling with the central West in the Guernsey classes at the National, the latter leading by a large margin. The Marsh and Jean Duluth herds had contested all season and these were the herds that confronted those of the New England and eastern states. The Marsh bull, Hayes' Cherub 2d, came through, a winner in his class, but met defeat in the senior championship class by his two-year-old son, Ladysmith's Cherub, the purple ribbon winner of the final show. This defeat is all the more interesting when it is considered that Hayes' Cherub 2d was the grand champion bull at Iowa and Minnesota State Fairs. And it was practically the same story over in the female classes from the time the first blue ribbon was captured by the Marsh entry, Princess Bergere, until she was made grand champion Guernsey cow of the show against the wonderful calf from the Marsh herd, Hayes' Moss Rose. The Frazier herd from the Old Bay state, offered some stiff competition in a number of classes as a perusal of the award list will show, but the most coveted ribbons were brought west of the Mississippi by the Marsh and Duluth herds. The tail end of many of the classes was not at all creditable for a National show. The judging by a committee of three was tedious at times for the onlookers, but the good ones were discovered in the end and the ribbons placed mainly where they properly belonged. The ringside interest shown in the Guernsey classes indicated that New Englanders (who unquestionably made up the great body of the audience) have a special fondness for this Channel Island breed.

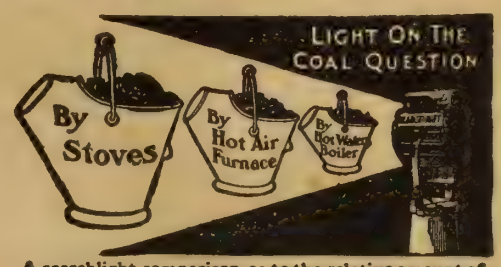
Burn *less* Coal —and get *more* Comfort



A searchlight comparison as to the relative amount of coal required by the different heating methods to do an equal amount of heating work

When you honestly consider all facts and know what great savings and comforts will result from IDEAL heating, you cannot help but decide to have it.

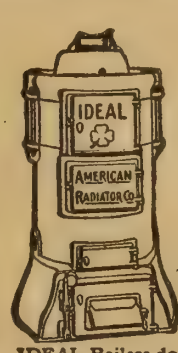
Briefly—here is what you get:

AMERICAN RADIATORS & IDEAL BOILERS

A warm-all-over house. No repairs, no setting up or taking down. No labor, dust, gases, or smoke. An even, healthful heat all winter. A fuel saving that pays for the outfit. Adds big value to your home.

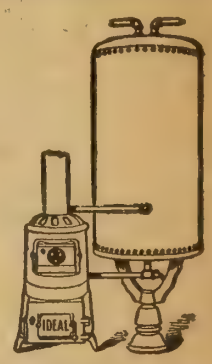
Thousands of farmers have found this out by installing IDEAL heating and their families now enjoy Winter better than Summer. There is such a thing as paying for IDEAL heating even if you don't have it *now* because in the meantime, you suffer all the ills and bills of old fashioned heating—but you can't get *real comfort* by only wishing for it. Why not decide *now* to have IDEAL heating and all the comforts and conveniences it brings to your home.

An IDEAL Boiler and AMERICAN Radiators can be put in any old or new house whether you have a cellar or not. Water system is not required as the same water is used over and over for years. IDEAL heating lasts longer than the building and frees you forever from labor, drudgery, and the dangerous effects of a cold, drafty house. Burn *any local fuel.*



IDEAL Boilers do not rust or wear out—no repairs.

A No. 020 IDEAL Boiler and 262 ft. of 38-in. AMERICAN Radiators, costing the owner $185, were used to heat this farm house, at which price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which vary according to climatic and other conditions. The IDEAL outfit is the *only* feature of the house which is never worth *less* than you paid for it.



Our IDEAL Hot Water Supply Boilers will supply plenty of warm water for home and stock at small cost of few dollars for fuel for season.

Get this book about Ideal Heating

Don't put it off another day. Read up and get all the information as to comfort, cost, and fuel economy that an IDEAL Boiler and AMERICAN Radiators will give you. Write today and get a copy of "Ideal Heating." Puts you under no obligation to buy.

Sold by all dealers. No exclusive agents.

Judges: C. L. Hill, Rosendale, Wis.; J. L. Hope, Madison, N. Y.; F. G. Benham, Canandaigua, N. Y.

The awards:

Bull 3 Years or Over (11 shown)—1st Marsh on Hayes Cherub 2d; 2d Buckley on Imp. Roberts Criterion of Bellevue; 3d Bedminster Farms on May King of Bedminster; 4th Mackey on Imp. Masher's Galore; 5th Lehmann on Pinecrest King France; 6th Frazier on Florham Monarch.

Bull 2 Years and Under 3 (7 shown)—1st Marsh on Lady Smith's Cherub; 2d Jean Duluth Farms on Starlight's Excelsior; 3d Frazier on Tosterin's Lad of Great Hill; 4th Barron on Don Iago of Linda Vista; 5th Branford Farms on Florham May King; 6th Whitney on Nyebrook May King.

Bull 1 Year and Under 2 (8 shown)—1st Cleveland on Sunnybrook Aristocrat; 2d Sherman & Armer on Florham Nestor; 3d Jean Duluth Farms on May Rose Yeksa Starlight; 4th Frazier on Uplands May Sequel; 5th Mackey on Aristocrat of Harbor Hill; 6th Wendover Farms on Wendover's Charmer.

Bull Calf 6 Months and Under 12 (14 shown)—1st Jean Duluth Farms on Marathon Rose King; 2d Marsh on Flora's Momento; 3d Buckley on Fisherman's Chief of Rockstone; 4th Wendover Farms on May King's Best of Bedminster; 5th Barron on Helen's Golden Count; 6th Branford Farms on Branford May Rose Lad.

Bull Calf Under 6 Months (10 shown)—1st Marsh on Kitchener's Empress; 2d Barron on Dewdrop's Golden Noble; 3d Marsh on Lady Smith's Bo-peep; 4th Marsh on Nonpareil Blossom; 5th Mackey on Esquire of Harbor Hill; 6th Jean Duluth Farms on Lady Gree's May King.

Cow 5 Years or Over (17 shown)—1st Marsh on Princess Bergere; 2d Frazier on Florham Minuet; 3d Lehmann on Thelma Glenwood; 4th Branford Farms on Laurentie; 5th Marsh on Rose des Howards; 6th Lehmann on Ragapple.

Cow 4 Years and Under 5 (7 shown)—1st Frazier on Ultra Lady; 2d Marsh on Polly of Briquet; 3d Marsh on Figtree 4th; 4th Buckley on Imp. La Fleur Jardin; 5th Marsh on Hayes' Golden Cherry 11th; 6th Seaman on Sunshine of Follyland.

Cow 3 Years and Under 4 (11 shown)—1st Frazier on Florham Princess; 2d Marsh on Hayes' Express 9th; 3d Buckley on Atwood's Dancaway; 4th Marsh on Lady Elizabeth of Maple Farm; 5th Frazier on Imp. San Toy's Star; 6th Jean Duluth Farms on Jean Duluth Phyllis.

Heifer 2 Years and Under 3 (19 shown)—1st Marsh on Hayes' Mabel; 2d Jean Duluth Farms on Jean Duluth Coronet; 3d Frazier on Huld of Ledyard; 4th Marsh on Bo-peep Marie of Iowa; 5th Frazier on Upland's Ellen; 6th Mackey on Harbor Hill Hope.

Heifer 18 Months and Under 24 (13 shown)—1st Marsh on Mar's Blossom; 2d Frazier on Upland's Ruby; 3d Marsh on Figtree of Prairie; 4th Marsh on Cherub's Jersey Rose of Prairie; 5th Jean Duluth Farms on William's May Rose of J. D.; 6th Lehmann on Raymond's Princess.

Heifer 12 Months and Under 18 (9 shown)—1st Gayhead Farms on Criterions Prinette; 2d Marsh on Mac's Fernleaf; 3d Jean Duluth Farms on Lizette's May Rose; 4th Marsh on Carduns of the Prairie; 5th Marsh on Hayes' Express 11th; 6th Barron on Glenwood Boy's Topsy.

Heifer Calf 6 Months and Under 12 (27 shown)—1st Marsh on Cherub's Fleurie Mar; 2d Cleveland on Sunnybrook Mignonette; 3d Jean Duluth Farms on Chene's May Rose; 4th Marsh on Cherub's Lily La Pine; 5th Jean Duluth Farms on Gree's May Rose of J. D.; 6th Marsh on Memento's Snowdrop.

Heifer Calf Under 6 Months (10 shown)—1st Marsh on Hayes' Moss Rose; 2d Gayhead Farm on Gayhead's May Queen; 3d Frazier on Upland's Faith; 4th Buckley on Anna Josephine of Bellview; 5th Bedminster Farm on Polly of Bedminster; 6th Marsh on Hayes' Golden Cherry 16th.

Cow With Official Yearly Record (7 shown)—1st Marsh on Princess Bergere; 2d Lehmann on Thelma Glenwood; 3d Wendover Farm on Florham Charm; 4th Cleveland on Jason's Enchantress of Upper Freehold; 5th Wendover Farm on Imp. Daisy of Ida Cottage; 6th Barron on Madge Cole of Westwood.

Exhibitors' Herd (6 shown)—1st and 3d Marsh; 2d Frazier; 4th Duluth Farm; 5th Buckley; 6th Mackey.

Breeder's Young Herd (7 entries)—1st Marsh; 2d Duluth; 3d Frazier; 4th Buckley; 5th Smith; 6th Mackey.

Breeder's Calf Herd (6 shown)—1st Duluth Farm; 2d Marsh; 3d Mackey; 4th Frazier; 5th Barron; 6th Branford Farm.

Produce of Cow (6 shown)—1st Marsh on produce of Hayes' Golden Cherry 3d; 2d Frazier on produce of Princess Pretoria; 3d Duluth Farm on produce of Imp. Lady Minnie; 4th Frazier on produce of Imp. Donnington Emerald 2d; 5th Duluth Farm on Coquette of Haddon; 6th Seaman.

Advanced Registry Cow With 2 of Progeny (2 shown)—1st Mackey; 2d Smith.

Dairy Herd, 5 Cows in Milk (5 shown)—1st Marsh; 2d Frazier; 3d Buckley; 4th Lehmann; 5th Branford Farm.

Get of Sire, 4 Animals (10 shown)—1st Frazier on get of Ne Plus Ultra; 2d Marsh on get of Hayes' Cherub 2d; 3d Duluth Farm on get of May King of Bedmister; 4th Frazier on get of Longwater Cavalier; 5th Branford Farm on get of May Rose King 4th; 6th Buckley on get of Imp. Roberts' Criterion of Bellview.

Senior Champion Bull—Marsh on Ladysmith's Cherub.

Junior Champion Bull—Cleveland on Sunnybrook Aristocrat.

Grand Champion Bull—Marsh on Ladysmith's Cherub

Senior Champion Cow—Marsh on Princess Bergere.

Junior Champion Cow—Marsh on Hayes' Moss Rose.

Grand Champion Cow—Marsh on Princess Bergere.

HOLSTEINS.

In the Holstein classes the herds from the central West swept the boards literally from top to bottom. Take out the entries of the Iowana Farms, the Galloway-Messer Farms and R. E. Haeger—all from the heart of the corn belt—and the story would be a short one, as the eastern and New England states failed utterly to check the superior forces from the middle West. The grand champion bull, Oak De Kol Ollie Homestead shown by the Iowana Farms ended the show season in a blaze of glory, as he captured the purple just two weeks before at the Waterloo Dairy Congress. Judge Moscrit, who knows the Holland breed as well as any living man at home or abroad, pronounced this five-year-old bull "a good one from end to end, a type of Holstein sire that you'll ramble a long way to find another one as good." In both the bull and cow classes the Galloway-Messer Farms forced the issue with younger offerings capturing the junior championships on Korndyke Pontiac Ormsby and Nellie Segis Pontiac. The roll of honor was completed with Minerva Beets from the Haeger herd, the winner of purple in the cow classes. This means that the best ribbons in the Holstein classes must leave the eastern territory to be flounted by the breezes of the broad prairies. Comment on the work of Judge Moscrit is unnecessary, save only that he captured the good will and wishes of both exhibitors and visitors. His work in the ring demonstrated beyond a shadow of doubt that when the right man is put in the right place, the single judge system far excels that of a committee of three. Some of the entries farther down the line in most of the classes gave indication that a few corn-belt Holstein crosses might work a vast change for the better in eastern herds.

The awards:

Bull 3 Years or Over (7 shown)—1st Iowana Farms on Oak De Kol Ollie Homestead; 2d Haeger on Paul Calamo Korndyke; 3d Lotmian Farm on Pietertje Hengerveld Sir Korndyke; 4th Mt. Hermon School on Mt. Hermon Aaggie Creamelle; 5th Haeger on Paul Calamo Korndyke 14th; 6th Kelsey Ranch on Count Pontiac Spofford.

Bull 2 Years and Under Three (7 shown)—1st Galloway-Messer Farms on King Segis Johanna Ormsby; 2d Haeger on Joe Calamo Hengerveld; 3d Mt. Hermon School on Mt. Hermon Sir Colantha Battels; 4th Prentiss & Gregory on The King; 5th Balsam Farm on Balsam Raggle Apple Burke; 6th Hall on King Segis Pontiac Wellington.

Bull 1 Year and Under 2 (8 shown)—1st Haeger on King Segis Arcady Posch; 2d Balsam Farm on Balsam Korndyke Segis; 3d Galloway-Messer Farms on King Segis Pontiac Combination; 4th Balsam Farm on Balsam Changeling Segis; 5th Mt. Hermon School on Mt. Hermon Colantha Korndyke; 6th Hall on King Segis Inka Fayne.

Bull Calf 6 Months and Under 1 Year (12 shown)—1st Galloway-Messer Farms on Korndyke Pontiac Ormsby; 2d Hall on King Segis Colantha Pontiac; 3d Prentiss on Maplemont King Colantha; 4th Haeger on King Segis Pontiac Bonheur; 5th Balsam Farms on Balsam Segis Korndyke; 6th O'Brien on King Alcartra Abbekirk.

Bull Calf Under 6 Months (8 shown)—1st Haeger on King Segis Pontiac Isaac; 2d Haeger on King Segis Pontiac Nora; 3d Mt. Hermon School on Mt. Hermon Sir Colantha Milo; 4th Kelsey Ranch on Lincoln Colantha Korndyke Lad; 5th Prentiss on Maplemont King De Kol Segis; 6th Moyer on Joh Lyons.

Cow 5 Years or Over (14 shown)—1st Haeger on Minerva Beets; Woodcrest Farm on Paula of Chagrin Falls; 3d Mt. Hermon School on Miss Gladice Butter Boy; 4th O'Brien on Johanna Alexantha; 5th Iowana Farms on Johanna Rue Burke 2d; 6th Haeger on Netherland Clothilde Idyl Burke.

Cow 4 Years and Under Five (8 shown)—1st Haeger on Princess Hengerveld; 2d Balsam Farm on Woodside Queen Beets De Kol 2d; 3d Haeger on Fannie Vale Mercedes 2d; 4th Haeger on Beulah Shepard Empress; 5th Hall on Highlawn Mercedes; 6th Mt. Hermon School on Lady Creamelle of Mt. Hermon 3d.

Cow 3 Years and Under Four (7 shown)—1st Galloway-Messer Farms on Jewel Walker Gerben of Cedarside; 2d Hall on Braeside Amarilla Colantha; 3d Haeger on Mohamet Osma Butter Girl; 4th Highlawn Farm on Countess Colantha Ramsdell; 5th Balsam Farm on Korndyke Rag Apple Patty; 6th Iowana Farms on Iowana Prima Donna.

Cow 2 Years and Under 3 (7 shown)—Mt. Hermon School on Mt. Hermon Gladice Colantha; 2d Haeger on K. S. P. Spofford Beets; 3d Prentiss on Maplemont Pietje Lyons; 4th Gray on Dora Burke Segis; 5th Haeger on Aconeth Lady Hengerveld; 6th Iowana Farms on Rollingdale Model Julia.

Heifer 18 Months and Under 2 Years (10 shown)—1st Galloway-Messer Farms on Nellie Segis Pontiac; 2d Haeger on K. S. P. Idol Rose; 3d Mt. Hermon School on Mt. Hermon Lady Gladice Colantha; 4th Hall on Braeside Amarilla Colantha 2d; 5th Galloway-Messer Farms on Abbie Burke Cornucopia 2d; 6th Hall on Maplemont Pietje Manor Beets.

Heifer 1 Year and Under 18 Months (7 shown)—1st Haeger on Nancy Calamo Korndyke; 2d Iowana Farms on Iowana Fayne Julia; 3d Mt. Hermon School on Mt. Hermon Colantha Beauty; 4th Hall on Martje Segis Johanna; 5th Balsam Farms on Balsam Segis Johanna; 6th Prentiss on Maplemont Pietje Segis.

Heifer 6 Months and Under 1 Year (23 shown)—1st Haeger on Lady Calamo Korndyke; 2d Highlawn Farm on Pearl Model; 3d Mt. Hermon School; 4th Galloway-Messer Farms on Jewel Walker Segis Pontiac; 5th Mt. Hermon School on Mt. Hermon Colantha Catrina; 6th Galloway-Messer Farms on Delphia Segis Mercedes.

Heifer Calf Under 6 Months (15 shown)—1st Haeger on Tatalus Calamo Korndyke; 2d Mt. Hermon School on Mt. Hermon Colantha Princess; 3d Mt. Hermon School on Mt. Hermon Colantha Mildred; 4th Galloway-Messer Farms on Eudora Maid Pontiac Ormsby; 5th Stone on Shelter Valley Dora Lyons; 6th Hall on K. S. P. W. Maud.

Cow Having Official Record, Ring Rating Only (8 shown)—1st Woodcrest Farm on Paula of Chagrin Falls; 2d Hall on Braeside Amarilla Colantha; 3d Iowana Farm on Johanna Rue Burke 3d; 4th Woodcrest Farm on Woodcrest Ina De Kol 3d; 5th Hall on Highlawn Mercedes; 6th Woodcrest Farm on Woodcrest Rita Plum 2d.

Exhibitor's Herd (7 shown)—1st Haeger; 2d Galloway-Messer Farm; 3d Mt. Hermon School; 4th Haeger; 5th Iowana Farms; 6th Balsam Farm.

Breeder's Young Herd (4 shown)—1st Haeger; 2d Mt. Hermon School; 3d Balsam Farm; 4th Prentiss.

Breeder's Calf Herd (6 shown)—1st Haeger; 2d Galloway-Messer Farm; 3d Mt. Hermon School; 4th Stone; 5th Highlawn Farm; 6th Hall.

Get of Sire (8 shown)—Galloway-Messer Farm on get og King Segis Pontiac Combination; 2d Haeger on get of Paul Calamo Korndyke; 3d Haeger on get of King Segis Pontiac; 4th Mt. Hermon School on get of Colantha Sir Walker Korndyke; 5th Galloway-Messer Farm on get of King Segis Johanna Ormsby; 6th Balsam Farm on get of Dutchland Sir Rag Apple Creamelle.

Produce of Cow (6 shown)—1st Galloway-Messer Farm on produce of Daisy Mercedes Johanna Ormsby; 2d Mt. Hermon School on produce of Miss Gladice Butter Boy; 3d Haeger on produce of Queen Spofford Beets; 4th Iowana Farm on produce of Johanna Rue Burke; 5th Balsam Farm on produce of Jane De Kol Manor Beets; 6th Hall on produce of Braeside Amarilla Colantha.

Advanced Registry Cow With 2 of Produce (6 shown)—1st Mt. Hermon; 2d Hall; 3d Iowana Farm; 4th Balsam Farm; 5th Hall.

Senior Champion Bull—Iowana Farm on Oak De Kol Ollie Homestead.

Junior Champion Bull—Galloway-Messer Farms on Korndyke Pontiac Ormsby.

Senior Champion Cow—Haeger on Minerva Beets.

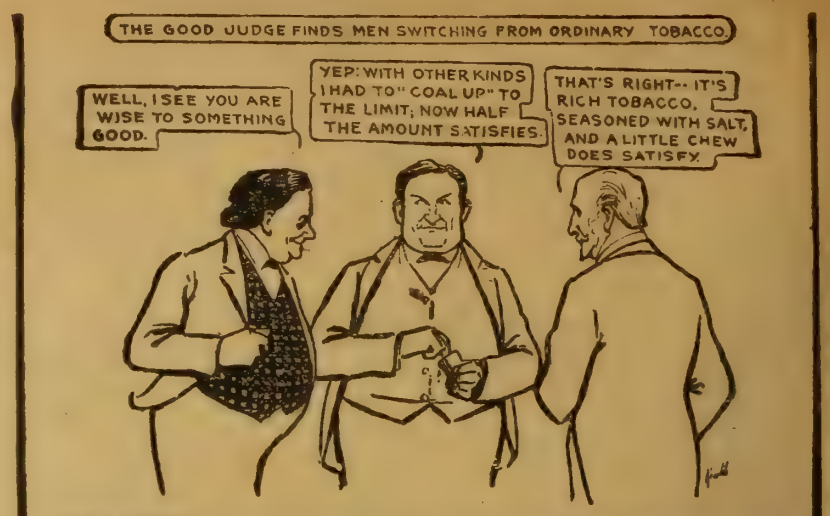
Junior Champion Cow—Galloway-Messer Farms on Nellie Segis Pontiac.

Grand Champion Bull—Iowana Farm on Oak De Kol Ollie Homestead.

Grand Champion Cow—Haeger on Minerva Beets.

JERSEYS.

New standards were set in the classes of this popular Channel Island breed at the National last week. They were there from the East and from the West, as well as from both the North and South. Not only were the best American bred herds of the continent entered, but the Island had been searched in recent times for "sure enough" winners. There were 295 Jerseys in the stalls and every one bearing an entry tag, so that this breed carried away highest honors in point of numbers. Unfortunately the heavens were opened and the rain descended during the two days when the Jerseys were assigned the ring and for this reason the interest lagged, otherwise the Jersey judging would have been the main feature of the National. From the beginning the judging interest centered in the newly imported bull, Golden Fern's Noble, considered to be one of the greatest show bulls and sires that ever left the Island of Jersey, and purchased by Mr. Ross Proctor, of Barryville, N. Y., at a cost of $25,000. He is a seven-year-old bull and a little past his prime for show ring purposes, but withal good enough in the opinion of the judges to be first in a class of sixteen aged bulls, good enough to capture the senior championship and finally good enough to carry off the grand championship ribbon for the best Jersey bull any age. His five-year-old son was his chief contender in the aged clas-



WHEN a gentleman gets acquainted through and through with W-B CUT Chewing, he finds that the common sense of it helps him across a feature of ordinary tobacco he never did like. The shreds of tobacco give up the tobacco satisfaction *without so much grinding and spitting*—the salt helps bring out the good tobacco taste—and because it's *rich* tobacco, a *small* chew lasts and satisfies.

but finally fell to second place. Eighteen of this noted sire's get were entered at the Nationad and the group of these shown by Mrs. H. H. Galbraith, of Knoxville, Tenn., won second place in the get of sire class. A daughter also won junior championship in the cow classes. Another feature of the Jersey exhibit was the world's "long distance" dairy cow, Sophia 19th of Hood Farm. Here is an eleven-year-old cow that has produced 5,216 pounds of butter, but her greatest fame comes from her record of producing more than 1,000 pounds of butter a year for three consecutive years, her best year's production for a twelve months' period being 1,175 pounds of butter. It goes without saying that this cow captured first place in class for official record cow with a record beginning after five years of age. A notable record was made by A. V. Barnes, of New Canaan, Vt., in winning first and second in a class of thirty-one aged cows, first for dairy herd of five cows and the female grand championship, the latter honor captured by the six-year-old cow, Gloria Benedictine.

Exhibitors: Allen Dale Farms, Shelbyville, Ky.; Catherine S. Auchincloss, Darien, Conn.; A. V. Barnes, New Canaan, Conn.; F. J. Bannister, Kansas City, Mo.; George Batten, Montclair, N. J.; Robert J. Blackburn, Dayton, Ohio; George T. Chaffee, Rutland, Vt.; Colt Farm, Bristol, R. I.; T. S. Cooper & Sons, Coopersburg, Pa.; Geo. E. Davis, Becket, Mass.; Dreamwold (Thomas W. Lawson), Egypt, Mass.; Thomas Dyer, Springfield, Mass.; Mrs. Nelle Fabyan, Geneva, Ill.; E. C. Lasater, Falurrias, Tex.; Mrs. Harry Galbraith, Knoxville, Tenn.; R. Y. Gibson, Jacksonville, Ill.; Hood Farm, Lowell, Mass.; Kingston Bros., Avon, Ill.; F. C. McQuade, Chatham, N. Y.; M. D. Munn, St. Paul, Minn.; William Ross Proctor, Barryville, N. Y.; George T. Slade, White Bear Lake, Minn.; R. T. Story, Freehold, N. Y.; L. V. Walkley, Southington, Conn.; J. P. Otis, Norwell, Mass.

Judges, Hugh G. Van Pelt, Waterloo, Iowa; Tom Demsey, Westerville, Ohio; W. D. Warner, Pawling, N. Y.

The awards:

Bull 3 Years or Over—1st Proctor on Imp. Golden Fern's Noble; 2d Galbraith on Noble's Sultan Golden Fern; 3d Bannister on Noble's Handsome Prince; 4th Barnes on Fanvic's Prince; 5th Blackburn on Cora's Oxford Raleigh; 6th Lasater on Noble's Eminent Lad.

Bull 2 Years and Under 3 (17 shown)—1st Bannister on Flora's Queen Raleigh; 2d Allen Dale Farm on Harmony's Golden Jolly; 3d Lasater on Windsor's Nobleman of F.; 4th Walkley on Golden Veno; 5th Walkley on Raleigh's Du Con; 6th Lasater on Eminent's Nobleman of F.

Bull 1 Year and Under 2 (17 shown)—1st Allen Dale Farm on Meadow Queen's Fairy Lad; 2d Slade on Noble Prince Jolly; 3d Lasater on Aldan's Noble of Texas; 4th Galbraith on Sam Loate's Warrier; 5th Bannister on Golden Fern's Pathfinder; 6th Lasater on Lady Windsor Aldam.

Bull Calf 6 Months and Under 12 (13 shown)—1st Kingston on Majesty's Cora's Noble; 2d Lasater on Sultana's Eminent Lad; 3d Bannister on Society Lad; 4th Allen Dale Farm on Golden Ben Ali; 5th Galbraith on Golden Fern's Figgis Fox; 6th Fabyan on Golden Lad O' Dreamwold.

Bull Calf Under 6 Months (15 shown)—1st Galbraith on Champion Goddington; 2d Allen Dale Farm on Bella's Fairy Boy; 3d Lasater on Miss Nora's Village Knight; 4th Welkley on Harbinger's Oxford Lad; 5th Hood Farm on Magnetic Pogis; 6th Blackburn on Mabel's Noble Raleigh.

Cow 5 Years or Over (31 shown)—1st Barnes on Gloria Benedictine; 2d Barnes on Imp. Maitland's Ruth; 3d Walkley on Oxford Majesty's Gypsy; 4th Barnes on Golden Jolly's Wonder; 5th Lasater on Aldan's Golden Fern; 6th Colt Farm on Raleigh's Finance.

Cow 4 Years and Under 5 (13 shown)—1st Hood Farm on Lass 89th of Hood Farm; 2d Bannister on Agatha's Maiden Fern; 3d Walkley on Premier's Golden Maid; 4th Galbraith on Chesnut 4th; 5th Bannister on Warder's Fern Blossom; 6th Dreamwold Farm on Figgis Foxy Maid O' Dreamwold.

Cow 3 Years and Under 4 (10 shown)—1st Barnes on Bonnie Beauty of Granville; 2d Walkley on Warder's Primrose; 3d Hood Farm on Champion's Torono's Chloe; 4th Kingston on Fern's Pine Daisy; 5th Bannister on Golden Fern's Silver Thread; 6th Blackburn on New Wave.

Cow 2 Years and Under 3 (18 shown)—1st Walkley on Rower's Charm; 2d Walkley on Sweet Bread Lady; 3d Munn on Burnweb's Helen; 4th Bannister on Indulate Nena; 5th Hood Farm on Sophie's Torono's Daisy; 6th Allen Dale Farm on Knollwood's Fairy Gem.

Heifer 18 Months and Under 2 Years (11 shown)—1st Bannister on Fern's Oxford Ever; 2d Allendale Farm on Butter Lad's Blanchia; 3d Bannister on Golden Fern's Jolly Beauty; 4th Lasater on Nobleman's Leonette of F.; 5th Kington on Noble's Leda; 6th Blackburn on Minette's Sultana.

Heifer 1 Year and Under 18 Months (17 shown)—1st Bannister on Houpla's Panola; 2d Lasater on Eminent Lad's Brightness; 3d Walkley on Oxford's Dream; 4th Kington on Noble's Pride Princess; 5th Galbraith on Goddington's Cowslip; 6th Colt Farm on Dolly of Oaklands.

Heifer 6 Months and Under 12 (23 shown)—1st Lasater on Aldan's Noble Jessica; 2d Bannister on Noble's Champion Gauntlet; 3d Blackburn on Prue's Milkmaid; 4th Allendale Farm on May Fair's Dainty Belle; 5th Colt Farm on Viola's Golden Pansy; 6th Blackburn on Algier's Fairy.

Heifer Calf Under 6 Months (18 shown)—1st Walkley on Curly's Fairy Second; 2d Bannister on La Cima Louise; 3d Lasater on Cowslip's Golden Queen of Falfurrias; 4th Lassater on Cowslip's Handsome Grace; 5th Blackburn on Lady Noble Raleigh; 6th Galbraith on Golden Fern's Bright Jewel.

Cow Having Official Yearly Record begun at 5 Years or Over—1st Hood Farm on Sophia 19th of Hood Farm; 2d Hood Farm on Lass 47th of Hood Farm; 3d Allen Dale Farms on Fairy Lad's Pallas; 4th and 5th Dreamwold on Figgis Queen O' Dreamwold and Dreamwold's Royal Maid; 6th Barnes on Morny Cannon's Queen Bess.

Cow Having Official Yearly Record Begun Under the Age of 5 Years—1st, 2d and 3d Hood Farm on Lass 89th of Hood Farm, Lass 64th of Hood Farm and Figgis 97th of Hood Farm; 4th Barnes on Imp. Maitland's Ruth; 5th Lasater on Majesty's Madam of Falfurrias; 6th Allen Dale Farm on Fairy's Lad's Pallas.

Exhibitor's Herd—1st Bannister; 2d Walkley; 3d Lasater; 4th Allen Dale Farms; 5th Galbraith; 6th Kington Bros.

Young Herd—1st Allen Dale Farms; 2d Lasater; 3d Kington Bros.; 4th Slade; 5th Chaffee; 6th Dreamwold.

Breeder's Calf Herd—1st Lasater; 2d Allen Dale Farms; 3d Kingston Bros.; 4th George T. Chaffee; 5th Dreamwold.

Get of One Sire—1st Walkley on get of Imp. Oxford Majesty; 2d Galbraith on get of Golden Fern's Noble P.; 3d Bannister on get of Golden Fern's Noble P. S. 4570 H. C.; 4th Allen Dale Farms on get of Fairy Glen's Raleigh; 5th Lasater on get of Aldan's Noble; 6th Dreamwold on get of Figgis' Fox o' Dreamwold.

Produce of One Cow—1st Bannister of produce of Cowslip's Noble Eda; 2d Allen Dale Farms on produce of Ben Ali's Frolic; 3d Kington Bros. on produce of Noble's Maggie; 4th Lasater on produce of Lady Windsor's Princess; 5th Galbraith; 6th Dreamwold on produce of Maid-o-the-Marshes.

Dairy Herd, 5 Cows in Milk—1st Barnes; 2d Walkley; 3d Bannister; 4th Lasater; 5th Allen Dale Farms.

Senior Champion Bull—Proctor on Imp. Golden Fern's Noble.

Junior Champion Bull—Allendale Farm on Meadow Queen's Fairy Lad.

Senior Champion Cow—Barnes on Gloria Benedictine.

Junior Champion Cow—Bannister on Fern's Oxford Ever.

Grand Champion Bull—Proctor on Imp. Golden Fern's Noble.

Grand Champion Cow—Barnes on Gloria Benedictine.

AYRSHIRES.

It was the East against the central West in the Ayrshire classes and honors were well divided. A few herds from Canada only added interest to the fray. The Seitz herd from Wisconsin upheld the honors for the grain belt and when judge Kildee had finished his work on Thursday evening he had placed some of the best ribbons on entries from this herd, including the junior championship in the bull classes and also first place on exhibitor's herd, first on calf herd and first on get of sire. In addition the Seitz herd won the $100 cash prize for the best group of twelve animals exhibited in the name of the state in which they were owned. Still another herd from the corn belt—the real cattle region of old U. S. A.—figured prominently in the Ayrshire classes, the Galloway-Messer entries furnishing the winner of the junior championship in the cow classes an exceedingly attractive senior yearling and none other than the grand champion female at the Waterloo Dairy Cattle Congress. She was defeated for highest honors by the Iroquois Farm's aged cow, Auchenbrain 6th, one of the best individuals that has been found on the show circuit for many a day.

Exhibitors: G. H. Dunsmon, Swanton, Vt.; John A. Ness, Auburn, Maine; River Valley Stock Farm, Orford, N. H.; Adam Seitz, Waukesha, Wis.; C. B. Stevens, St. Johnsbury, Vt.; Woronoake Heights, Woronoco, Mass.; J. H. Black, Lachute, Que., Canada; Iroquois Farm, Cooperstown, N. Y.; R. R. Ness, Howick, Que., Canada; Hector Gordon, Howick, Que., Canada; J. P. Cavers, Ormstrom, Que., Canada; J. T. Elder, Glenelm, Que., Canada.

Judge, Prof. H. H. Kildee, University of Minnesota, St. Paul, Minn.

Bull 3 Years or Over (6 shown)—1st River Valley Farm on Hillside Bonnie Scotland; 2d Seitz on Bargenock Rising Star; 3d J. A. Ness on Copestone's Masterpiece; 4th Woronoake Heights on Stonehouse Pansy Boy; 5th Stevens on Lochfergus Ensign; 6th Dunsmore on Archer of Fayre.

Bull 2 Years and Under 3 (5 shown)—1st J. A. Ness on Strathglass Gold Chunk; 2d Black on Imp. Hobsland Piecemeal; 3d Seitz on Cavalier's Kilnford Ringmaster; 4th Dunsmore on Halton Messenger of Fayre; 5th Iroquois Farm on Patricia Baron.

Bull 1 Year and Under 2 (7 shown)—1st Seitz on Cavalier's Lord Rosebery; 2d R. R. Ness on Burnside Ypres Masterpiece; 3d Stevens on Pleasant View Not Likely; 4th Seitz on Cavalier Fond Stamp; 5th Iroquois Farm on Netherall Keystone; 6th Dunsmore on Messenger Croker of Fayre.

Bull Calf 6 Months and Under 1 Year (14 shown)—1st Seitz on Cavalier's Lord Stuart; 2d Stevens on Howie's Golden Bar; 3d R. R. Ness on Burnside Flomaster; 4th Galloway-Messer Farm on Dalpeddar Good Gift; 5th Stevens on Pleasant View Hugh; 6th Iroquois Farm on Iroquois Ardbar.

Bull Calf Under 6 Months (6 shown)—1st Seitz on Cavalier's Kilnford Marquis; 2d Iroquois Farm on Iroquois Brother Alex; 3d Stevens on Pleasant View Joe; 4th Gordon on Master's Derby; 5th River Valley Farm on River Valley Lad; 6th Dunsmore on Raymond of Fayre.

Cow 5 Years or Over (21 shown)—1st Iroquois Farm on Auchenbrain Hattie 6th; 2d Wendover Farm on Imp. Hobsland Miss May; 3d Woronoake Heights on Imp. Lessnessock Madeline; 4th Cavers on Pickens Pearl 2d; 5th Seitz on Imp. Kilnford Belle 4th; 6th Iroquois Farm on Barcheskie's Favorite Rose.

Cow 4 Years and Under 5 (9 shown)—1st R. R. Ness on H lehouse Randy 9th; 2d Seitz on Bargenock Carnation; 3d J. A. Ness on Copestone Lily of Maplegrove; 4th River Valley Farm on River Valley Kirsty; 5th J. H. Ness on Lily Mayflower 3d of Maplegrove; 6th River Valley Farm on River Valley Morton Main.

Cow 3 Years and Under 4 (7 shown)—1st Elder on Mapleleaf Jean; 2d Iroquois Farm on Lady Voca of Avon; 3d Woronoake Heights on Springhill Pansy 2d; 4th River Valley Farm on River Valley Molena; 5th Dunsmore on Glenna of Fayre; 6th Iroquois Farm on Hobsland Rosie.

(Concluded on page 16.)

Better Mondays on the Farm.

Co-operative Laundry Backed by Same People and Officers as the Creamery Is Offering Valuable Help to 250 Farm Houses in Pierce County, Wisconsin.

"BLUE MONDAY," through the organization and operation of the River Falls Co-operative Laundry, has become a thing of the past on some 250 farms in Pierce county, Wisconsin. A long step has been taken in lessening the burdens of the farmer's wife. No longer need the farm woman of that favored community live in dread of Monday and Tuesday with its back-breaking rubbing, rinsing and wringing, for the opportunity to be relieved of this work lies at her door and last year 246 farm patrons took advantage of it.

The River Falls Laundry has the largest farm trade of any in Wisconsin. It was patterned after the co-operative laundry at Chatfield, Minnesota, which has been in successful operation for several years. The River Falls plant is now in its second year, having passed through the first year with a small profit. From all parts of the United States, and even from England, come inquiries as to how it was organized and along what line it is being operated.

Recently an editor of The Wisconsin Farmer had the pleasure of spending a half day in this laundry, which is in reality the outgrowth of the very successful co-operative creamery at River Falls. Although separate associations, the stockholders of both the creamery and the laundry are very much the same, and the steam is furnished from the creamery, although the laundry association is just now considering putting in its own steam plant as an economy step. But the two are very closely identified. The laundry now occupies the old building vacated by the creamery when it moved into its new building two years ago this month, and it was the erection of this new creamery that really brought about the organization of the laundry. With an available building, the "Home Culture Club," an organization of farmers' wives, started the ball rolling that resulted in the River Falls Co-operative Laundry, the purpose being to equip and operate it at actual cost, so that as many persons as possible could take advantage of this opportunity to have their washing done away from home.

During the first year the amount of work done totaled $7,609.21, at an expense of $7,566.08, which left the laundry a profit of $143.13 net. This was even better than had been anticipated, as 876 persons took advantage of the laundry, 246 of whom were farmers, 580 city patrons, and fifty out-of-town patrons. There was considerable expense attached to starting a new venture which will not come in after years. During the first eight months of the present year the laundry has had a larger patronage than for the same period last year, and the officials of the association feel very gratified at the way things are going. Expenses are heavy, wages last year alone amounting to $4,589. Steam bought fro the creamery cost $465. Other expenses for insurance, water, lights, etc., amounted to $1,066.26.

Stockholders were not disappointed at not receiving a dividend the first year, as it was a public enterprise and convenience, and it has proven such to the residents of Pierce county. The capital stock is $5,200, of which $3,455 is represented by equipment, $1,000 by real estate, and $1,180 by building account. Both the laundry and the creamery are organized under the Wisconsin co-operative laws and no stockholder can hold more than twenty-five shares, and he is entitled to only one vote, regardless of his holdings.

The entire effort in the organization was to bring the farmers into the laundry enterprise and induce the farm women to patronize it. The creamery was owned by farmers, so why not the laundry? This led to extended work among the farmers' wives, and, while the larger part of the work turned out is for River Falls patrons, it is pleasing to note that the amount of work done for farmer patrons last year reached the total of $2,103.08. There are eighty-four farmer stockholders owning $2,180 worth of stock and 15 citizens of River Falls as stockholders, owning $3,020 worth of stock. D. E. Fowler, a Holstein breeder, is president; Mrs. Nancy Younggren, a farm woman, is vice president; M. Norseng, merchant, is secretary-treasurer; and S. Schuyler Hamilton, merchant and Mrs. Nettie Bliss, a farm woman, are members of the board with the officers.

Business has been increasing rapidly since the very first, and during the past summer the average was nearly $175 per week, which is quite an increase over the corresponding months the year previous. Prices are kept as low as possible and vary with the kind of work that is done. Rough, dry work is done for 5 cents a pound, and this means the average farmer's family washings so reasonable as to be within reach of all.

The laundry is equipped with two large and one small washer, soap tank, extractor, dry room, five-roll mangle, body ironer, starch cooker, and a complete equipment of machines for shirt, collar and cuff work with electric irons, and ironing boards for ironing pieces that cannot be put through the mangle or body ironer. The building is bright, well lighted and sanitary, while a twenty-six-inch exhaust fan has been installed to insure good ventilation. The machinery is run by two motors—a three horse power and a seven and one-half horse power—and can be run by either, or both, as necessary. The laundry and creamery co-operate in the use of steam which is furnished for both plants by a thirty-horse-power boiler located at the creamery. Water is secured both from the city main and from a tank located overhead and filled from a well inside the building. All condensation from the machines is carried to this tank and this results in a slight economy in the matter of heat and time.

Farmers bring in their laundry and call for it themselves. All work is cash upon delivery of the work. The laundry is brought in at the street door, where it is marked and sorted. It then passes through the washers and extractor and the flat work is run

BUNDLE MACHINES—MANGLE AND BODY-IRONER

ON THE ROUTE

Scenes in River Falls, Wis., Co-operative Laundry, which is largely patronized by farmers' wives who are relieved of the drudgery of wash-day.

WASHERS AND EXTRACTOR

through the mangle, while the rough, dry work is placed in the dry room. It is then taken into the sorting room, where it is sorted and wrapped up and placed in readiness for delivery. The work can be delivered two days after it is brought, unless it is shirt and cuff and collar work. The work is done at the rate of 5 cents per pound for washing and drying as well as the ironing and folding of all flat work. If hand or body ironing is done, an extra charge is made by the hour.

As before stated, the object of the enterprise is to do family washing at actual cost. Instead of each household owning and using a small equipment of washing apparatus, the community has organized and collectively owns and operates for its own benefit an efficient and adequate laundry. Most patrons admit that the work cannot be done as cheaply at home if all items are taken into consideration and no home laundry will get the clothes as clean and white as they are when they return from the laundry. All the fuss and muss of wash day is taken from the home, and life is thereby made pleasanter for the women and men folks.

The equipment used would cost about $3,500, while the cost of operation at present amounts to about $130 per week, everything taken into consideration. In the neighborhood of $200 worth of work could be handled per week without any considerable increase in cost of operation. Without the flat ironer and the shirt, cuff and collar machinery, the cost of equipment could be easily cut in half, while the cost of operation would amount to less than half.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Increasing the Egg Production.

To the Editor:—A normal chick has in its body about 3,000 ovules which under favorable conditions could be developed into eggs. Think for a moment what that means! Just this, that an ordinary hen, if given the correct care and handled in a manner so as to promote the maximum of egg production, would be able to lay 300 eggs per year over a period of ten years. Let me cite you an instance of one test which will show just what is happening. The professor in charge of the investigations at one of our foremost experiment stations selected a flock of hens that had been bred from the best layers that could be obtained. A careful record of the egg production of each hen was kept. At the end of a year one hen had laid six eggs; another had laid 259.

Please do not stand up and say that this test showed an abnormal variation. On the contrary, if we will omit two or three of the best layers in this flock it can be easily demonstrated that the variation shown was no greater than that of an ordinary flock of farm hens.

Let me lay down this principle: Success with poultry comes by means of the same methods as success with dairying, or any other line of animal husbandry. Blood will tell. The 300-egg hen which was so widely advertised a short time ago was not the result of a chance selection of a good producer. She was the result of years of careful breeding and close selection of the best layers. If we could bring every member of our flocks to that production there would be received plenty of remuneration from our flocks.

There is no best breed for all purposes. No, nor even for egg production. This is proven by the egg contests that have been carried on throughout the country the last few years. Some breeds won in one contest, other breeds won in others. The only safe rule to follow is to select that breed which you like best. Then stick to it.

There is no way of keeping individual records of the different members of your flock except by means of the trap nest. At any rate, do not neglect to trap nest in the winter. It is then that the better layers show themselves. Most any hen can lay in the summertime. The winter layers are your most profitable birds. In the winter there is more time for the average farmer to attend to his nests. Other work is not usually so pressing.

Going to the basket and getting the setting of eggs from the production of the poor layer along with those of the good layer will not get you anywhere in breeding for egg production. Breed from year-old hens. Before that you do not know their record. Mate them with mature males. If you value the vitality of your stock do not breed from immature birds. Early maturity is a desirable point in any line of production. Early hatchings from hens that have laid early is an important point in breeding for egg production.

While breeding for egg production is a factor which must not be neglected in any attempt to increase the production of your flock, feeding for egg production is quite as important. That no best rule has yet been found for the feeding of poultry for egg production does not mean that any old thing will do to feed the flock of laying hens. You cannot expect hens to lay eggs if they are not fed the food from which eggs are produced. That we do not know all of these foods nor the correct proportions of the different food elements does mean that no progress has been made along these lines.

When we consider the fact that 65½ per cent of the egg is water we begin to realize the importance of this material as a factor in egg production. And you cannot get the hen to cut down on the amount of water in the egg, either. The only recourse is to supply her with the amount of water she needs. Let this be fresh and clean. The best of poultry feeding will not make profitable egg production if there is not a constant supply of fresh water accessible. An easily constructed homemade drinking fountain can be used with good results if you do not care to invest in those on the market.

The price of the food and its palatability, as well as the health of the hens, are factors which must be considered in feeding poultry for egg production. Linseed meal is an excellent food and is a constituent of most of the commercial foods which are on the market. Clover leaves are good food and the hens relish them. As a rule, hens do not relish cooked food. It is a mistake to cook anything, with the exception of potatoes. These are best when cooked.

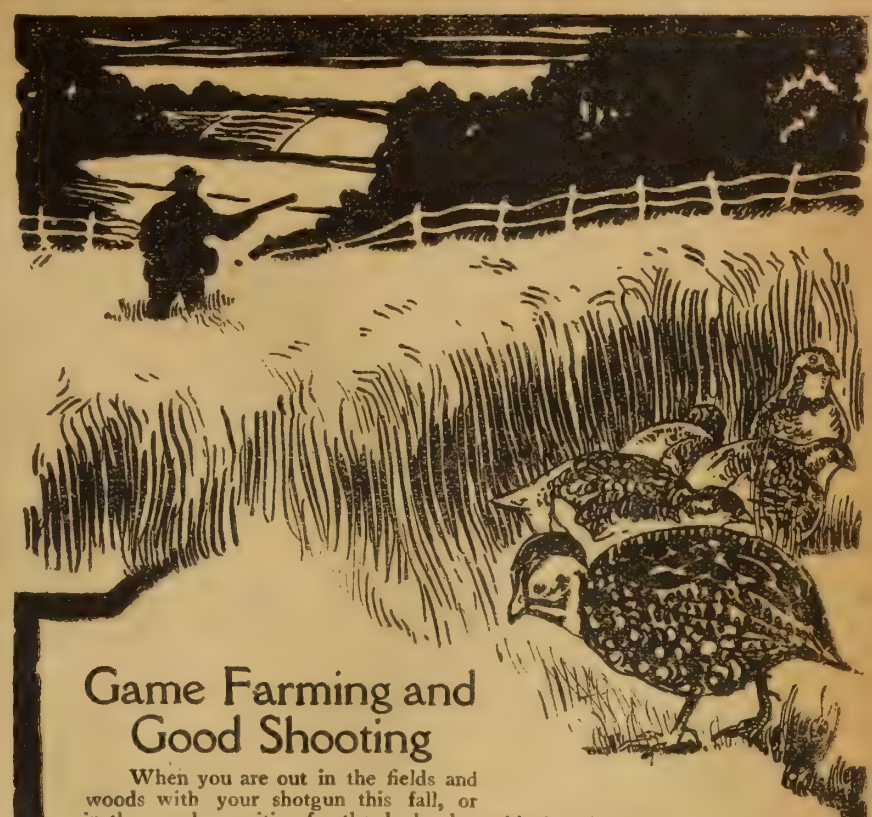
J. H. Hulett.

Taylor County Plowing Contest.

The third annual plowing contest in Taylor county, provided a great day of demonstrations and entertainment in the town of Halway, October 10th. Interest was greater than in former years, as the town voted an additional $25 in prizes at the spring election, the money to be used for the purchase of a bull calf. Also all the banks in the county donated this year for the first time, so the winner will have $100 cash and a registered bull calf for his trouble.

The forenoon was taken up to agricultural topics, Price County Agent Richards taking up the subject of, "Care of the Dairy Sire," and Farmers' Institute Conductor John Imrie talked on "Swine Raising in Connection With Dairying." The plowing took place in the afternoon, eight contestants vying with each other for the prize. Following were the contestants: John Kohn, E. Ketelhut, Gunder Nelson, Earl Packard, Harry Jensen, Ray Harry, Cornelius and John Weinzinger. Prof. F. M. White had charge of the contest, with Mr. Imrie and Mr. Richards to assist with the judging.

When the scores were totaled Earl Packard stood high with a score of 95 points, John Kohn came second thereby winning the Tamworth boar donated by the county agent; Gunder Nelson, who had come thirty miles to attend the contest, won the cultivator donated by the International Harvester Company for third prize; Harry Jenson won fourth place, the prize being a horse collar donated by Fred Meier, of Holway.



Game Farming and Good Shooting

When you are out in the fields and woods with your shotgun this fall, or in the marshes waiting for the ducks, bear this fact in mind—*your shooting would be much better if scientific game farming were conducted more extensively in this country.*

Game farming is being carried on much more extensively than formerly, especially so during the past year. Evidence is plentiful to the effect that eventually we will pay as much attention to this important subject as have the people of Europe for many years. The wonderful grouse shooting in Scotland is one example of the results obtained there.

Game farming not only means much to the sportsman through an increase in game but also to the people as a whole through decrease in price and a greater supply of game birds for the table.

Those conducting game farms find both profit and pleasure in the work. Why do not you become a game farmer? Write us for our booklet, "Game Farming for Profit and Pleasure". You will find it well worth reading. Please use the coupon below.

When You Buy Loaded Shotgun Shells

How much do you know about the powder you shoot in the fields or at the traps? You should be thoroughly informed regarding it and specify a given powder when you buy shells.

If you will write us we will gladly tell you all about the two Hercules Smokeless Shotgun Powders, Infallible and "E. C.". These powders are of unusually high and uniform quality. They give even patterns, high velocity, light recoil. You can always depend upon them. The next time you buy loaded shells specify either Infallible or "E. C." Smokeless Shotgun Powder. They may be obtained in all standard makes of shells.

Butter Scoring at Madison.

E. H. Farrington, of the dairy school at Madison, urges more Wisconsin buttermakers to send their product to Madison for scoring. The dairy school is making a commendable effort to better the quality of butter in the state. The purpose of scoring exhibitions is not so much to discover who has the best, as to discover who has poor butter and help him to better it. An effort will be made to help any buttermaker who desires to be helped. In several instances Mr. Farrington and his associates have been able to advise buttermakers and help them to the extent of raising their scores three or four points. Mr. Farrington speaks of another way in which scoring exhibitions may help the buttermakers. He says:

It will be remembered that we make a moisture and salt determination of the butter sent by each exhibitor as well as giving the butter a commercial score. This information concerning the moisture content may be very valuable to the creameries as an evidence that they are not in the habit of making butter containing an illegal percentage of moisture.

A creamery recently had a shipment of butter seized because of excessive moisture and immediately appealed to us for instruction concerning the best thing to do to prevent this in the future, as well as inform them how to rework the butter already made so as to bring it below the legal limit on moisture content. This buttermaker, like a good many others, has been in the habit of testing each churning of butter made for moisture. Other buttermakers possibly may get caught in the same way at any time unless they know the moisture content of each churning. The accuracy of their apparatus as well as their method of making moisture determination can be easily checked by sending a package of butter occasionally to our scoring exhibitions where moisture tests of each entry of butter is made regularly.

Influence of Age on Value of Dairy Cows.

A bulletin has recently been prepared by the U. S. Department of Agriculture, showing the results of an investigation of the influence of age on the value of dairy cows and farm work horses. The information set forth in this publication was secured by personal interviews and correspondence with a large number of the best informed farmers and live stock breeders in the United States, and includes 1,844 estimates on the values of dairy cows at different ages, so that the facts may be looked upon as accurate and dependable. Most of the estimates were obtained from New York, Pennsylvania and the north-central states, but the average include figures from nearly every important agricultural district in the United States.

Four breeds of cattle, Holsteins, Guernseys, Jerseys and Ayrshires, were used in the investigation, but no attempt was made to compare breeds in any way. In order to get a scale of values which would vary only according to the age of animal, arbitrary values for animals at three years of age were assumed as the starting point, and four classes of three year olds were used for each breed, namely, the $80 grade cow, the $100 grade, the $200 pure bred and the $300 pure bred. Furthermore, to eliminate all factors except age, a cow that was with calf at three years of age was considered to be in the same stage of pregnancy each succeeding year, and in the case of pure bred stock, changes in the advanced registry of the cow herself, or of animals related to her, were not considered. Having assumed the value of the animal at three years of age, estimates were then secured, stating what such an animal in good health would be worth each year from birth to fourteen years of age.

The results obtained are intended to be of use in buying and selling cows and in taking live stock inventories. As the result of this investigation, it is demonstrated that the price of dairy cows in good health is greatest between the ages of five and seven years, and most of them reach their maximum value at six years of age.

Old cows and calves are cheaper in the northeastern states than in the north-central states, while cows between the ages of four and eight years are cheaper in the north-central states. The bulletin suggests that this is due to the lower price of feed in the latter district.

At the ages of four and eight, cows are priced about the same. The promise of a longer period of usefulness of the younger cows is balanced by the demonstrated worth of the older animals.

The prices of fourteen-year-old pure breds are much greater than those of grades, which is partly due to their greater milk production and partly to the fact that they may yet produce valuable calves.

Cows depreciate rapidly in value after their eighth year.

The difference in value of the various classes of cows of the same breed is greatest when the animals are in their prime and least when they are calves and old cows. The pure bred has a much greater value in her prime as compared with the grade, because she has a much greater productive power, which is at its height during this period.

SENIOR AND GRAND CHAMPION GUERNSEY COW, HAYES VENA, 4TH, AT WATERLOO DAIRY SHOW. OWNED BY W. W. MARSH, WATERLOO, IA.

The AMERICAN MESSENGER

IS THE BEST Illustrated Religious Monthly Published In This Country at the Low Subscription Price of Only 50 Cents a Year.

AMONG its editorial contributors may be mentioned such popular religious writers as Rev. David James Burrell, D. D. LL. D., Pastor of the Marble Collegiate Church of New York City; Rev. Charles Carroll Albertson, D. D., Pastor of the Lafayette Avenue Presbyterian Church of Brooklyn, N. Y.; Rev. J. Wilbur Chapman, D. D., the famous evangelist; Rev. Edgar Whitaker Work, D. D., Pastor of the Fourth Presbyterian Church of New York City, and Rev. George Ernest Merriam.

It is especially valuable to Christian Endeavor and other Young People's Societies. Each issue contains stories of fascinating interest, suitable for home reading and other articles relating to the family life. The American Messenger endeavors to present a comprehensive view of the progress of the Kingdom, both at home and abroad; to tell of the forward movements that are being initiated for the uplift of humanity and the betterment of mankind; to call attention to those phases of Christian work and thought that are of unusual interest; to record the manifold activities of the Christian Church; and to spread abroad the cardinal teachings of Jesus Christ, as revealed in the Gospel which He proclaimed as the message of God.

The paper is interdenominational and admirably suited for every home. All those who subscribe now to the American Messenger for 1917 at fifty cents will receive the paper until January 1, 1918. New subscribers will thus receive the issues for October, November, and December, 1916, free of cost, if they subscribe at once. If you do not know the paper, send for a free sample copy.

Address, AMERICAN MESSENGER, Dept. 5, Park Ave. and 40th St., New York City, N.Y.

TO SILO OWNERS—you who did and didn't see the Blizzard at your state fair

BLIZZARD Ensilage Cutters

Write today for catalog showing the simple construction and the mechanical superiority of the Blizzard. Also ask for booklet "What Users Say" in which farmers tell about the Blizzard: the power required, elevating ability, capacity, even cut silage, repair expense, etc. You probably have made up your mind not to go through another silo filling season without a cutter of your own. Perhaps you want a better one. Begin investigating now. Write for these booklets.

Word From The Cow Testers.

HEREWITH we publish records made by some of Wisconsin's good dairy cows in September and verified by the official tests made under the direction of cow-testing associations. It is very interesting to note that unprofitable cows are being eliminated from the herds of members of associations, and also that preparation has been made for winter by co-operative purchasing of dairy feeds.—The editor.

Forty-Five-Pound Cows in Manitowoc County.

A report has come to The Wisconsin Farmer from H. R. Brewster, official tester of the Manitowoc Cow-Testing Association, Manitowoc county. In this report Mr. Brewster states that there has been seventeen non-profitable cows sold within the past month; there have been two new sires purchased and a co-operative live stock shipping association organized. The report which is herewith given covers the month ending August 31st, and in that period there were twenty-one forty-five-pound cows, which is a very good record considering the fact that this was the tag end of the dry season and many of the cows were drying up. In September and October a good many of the cows freshen. Many of the members of this association are feeding grain and silage. The following is a list of cows in the association which produced forty-five pounds of butter fat or better for a thirty-day period, ending September 1st:

Owner, name and breed	Age	Lbs. milk	Per cent fat	Lbs. B. fat
Christ Muth

Edwin T. Weeks, Sec.-Treas.

Reedsburg Cow-Testing Association.

To the Editor:—The Reedsburg Cow-Testing Association has completed six months' work. It was the first association organized in Sauk county. Other farmers have seen the benefit of this movement and have organized an association at Baraboo and the prospects are bright for another association at Sumter. Our association has been very successful in weeding out the boarders. Eleven head have been sold to date. The best herd up to date is that owned by J. J. Marshall, of Cazenovia. The cows in this herd have averaged 5,842 pounds of milk for the six months' period and 231 pounds of butter fat at a feed cost of $14.56. The value of the product was $80.66, making a net profit per cow for six months of $66.10. Below is a list of the cows producing 240 pounds for the 183-day period ending October 6th. Also report of the cows showing forty-five pounds of butter fat or better for the month ending at the same time.

RECORD FOR SIX MONTHS.

Breeders Banquet at Waukesha.

To the Editor:—The Waukesha County Guernsey Breeders' Association will give a banquet at the Hotel Waukesha, Waukesha, Wisconsin, to Guernsey breeders and friends at 7:30 p. m., October 31st. This is the evening previous to the big two-day Guernsey sale.

The purpose of this banquet is to entertain visitors and to give the Waukesha breeders an opportunity to meet their friends from a distance and get acquainted. We request that those planning to attend please notify F. E. Fox, Waukesha, Wisconsin, secretary of the Waukesha County Guernsey Breeders' Association. It is expected that there will be a large number in attendance. The secretary is anxious to know who will be present so that he may make the necessary reservations.

F. E. Fox, Sec.

For Perfect Work in Any Soil

These plows have found favor with farmers everywhere, because they do not worry and wear out horses. No motion of the rear wheel affects front wheel; no motion of front wheel affects the rear—runs as straight as a wagon. Plowmen declare the Best Ever pulls one horse lighter than others.

Easy Control—Even Plowing

Self leveling foot lift raises plows from full depth to full height. Guiding lever makes bottoms take more or less land—straightens crooked rows. Equipped with the famous Acme Steel Shares—can be retempered. Bottoms for all soil conditions. See your Moline dealer about the Best Ever; write for illustrated literature.

MOLINE Best Ever Sulky and Gang Plow

Moline Plow Co., Moline, Ill. Dept. 30,

THE MOLINE LINE INCLUDES Corn Planters, Cotton Planters, Cultivators, Corn Binders, Grain Binders, Grain Drills, Harrows, Hay Loaders, Hay Rakes, Lime Sowers, Listers, Manure Spreaders, Mowers, Plows (chilled and steel), Reapers, Scales, Seeders, Stalk Cutters, Tractors, Farm Trucks, Vehicles, Wagons.

APPLETON Husker and Shredder

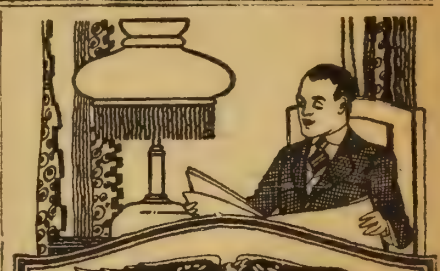
Every year hundreds more farmers buy huskers, as they find the most economical, efficient way to save all the *value* of a corn crop is to husk the ears and make fodder of leaves and stalks. Appleton was the first successful husker. Appletons made years ago are giving good service today. Few parts, extra strong, mean long life, few repairs and sure *dependability*.

GUARANTEED TO DO MORE WORK WITH LESS POWER

than any husker of equal size. Appleton husks cleanest, shells least; has most efficient corn saver. Cuts or shreds leaves and stalks while husking ears. Fodder value saved from small acreage pays its cost. Easiest, safest to operate. Works in all conditions of corn.

Free Husker Book: describes 4 sizes for engines of 4 h.p. and up. Write for it now.

Appleton Mfg. Co., 5122 Fargo Street, Batavia, Ill.



AMERICAN PORTABLE LAMPS

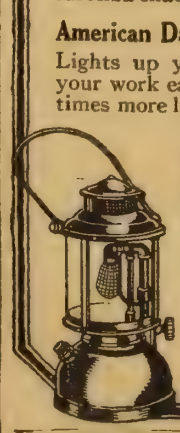
give ten times more light than a kerosene lamp. You can sew or read for hours with comfort, adds to the hospitality of your home when company comes.

Lights with a match. Easy to operate. Costs little to run. Carry it anywhere. Tip it over—no danger. Absolutely safe.

Very attractive. Highly polished nickel plate finish, with beautiful Alba shade to soften the light.

American Dark Chaser Lantern

Lights up your barn. Makes your work easier. Gives twenty times more light than a kerosene lantern. **Lights with a match.** Made of heavy brass, nickel plated, with non-breakable mica chimney. Kick it over—no danger. Storm and rain proof.



Write for name of nearest dealer.

Assembled Herd of 12 Head—1st Seitz.

BROWN SWISS.

The work of Judge Frandsen in the Brown Swiss ring last week will do more to hasten the day when the real dairy type will be fixed within this breed than any event in recent years. He persistently demanded the "form" that has been demonstrated over and over again in other breeds to be associated with "function," with the result that the winners in the female classes were animals of marked dairy character. Ayers carried off the purples in the bull classes, winning the grand championship bull prize on Merney's 2d Son, a grand champion at Iowa and Minnesota State Fairs, also at the Southwest Dairy Show and the Dairy Cattle Congress held at Waterloo, Iowa. Hull captured both championships in the cow classes, winning the grand championship with his beautiful senior calf, Vera of Lakewood. This radically reversed the rating made two weeks before by Judge W. A. McKerrow, who placed the Ayers entries, Jane C. and Columbus Merney, above the Hull heifer. Judge Frandsen liked the Hull heifer from the beginning and gave proof of his admiration for her when he placed her above the two-year-old heifer, Reuben's Ruth, when they met for final honors. The uniformity of the Ayers type, taking the whole herd through, resulted in capturing the blue on aged as well as young herd.

Exhibitors: H. W. Ayers, Honey Creek, Wis.; Bonnie Brook Farm, South Sudbury, Mass.; Foxhill Farm, Westwood, Mass.; Geo. W. Harris & Sons, Wethersfield, Conn.; Hull Bros., Painsville, Ohio; T. N. Vail, Lyndonville, Vt.

Judge, Prof. J. H. Frandsen, Lincoln, Neb.

Bull 3 Years or Over (6 shown)—1st Ayers on Merney's 2d Son; 2d Hull on Mercedes De Kololo; 3d Vail on Tom Phylis; 4th Fox Hill Farm on Clarence of Harris Hill; 5th Harris on Oscar of Harris Hill.

Bull 2 Years and Under 3 (3 shown)—1st Hull on Tom of Walhalla; 2d Foxhill Farm on Splendor of Hinton Way; 3d Harris on Zerelda's Son.

Bull 1 Year and Under 2 (5 shown)—1st Ayers on Merney's Nephew; 2d Hull on McAvoy H.; 3d Vail on Vettendorf; 4th Bonnie Brook Farm on Doeskin; 5th Bonnie Brook Farm on Wachusett.

Bull Calf 6 Months and Under 12 (4 shown)—1st Hull on Edgar H.; 2d Harris; 3d Ayers on Toney; 4th Vail on Trius; 5th Vail on Thurgen.

Cow 3 Years and Under 5 (6 shown)—1st Hull on Rhona of Lakeview; 2d Hull on Innis of Lakeview; 3d Vail on Geneva of Speedwell; 4th Ayers on Zelia; 5th Harris on Mawnantuck Girl 3d.

Heifer 2 Years and Under 3 (8 shown)—1st Hull on Rueben's Ruth; 2d Hull on Ruth Wilson 2d; 3d Ayers on Zell's Merney; 4th Vail on Vittiken; 5th Vail on Winan.

Heifer 18 Months and Under 2 Years (7 shown)—1st Hull on Swiss Valley Girl 9th; 2d Ayers on Master's Cuma; 3d Ayers on Master's Alpha; 4th Hull on Bessie May 2d; 5th Harris on Colette.

Heifer 1 Year and Under 18 Months (8 shown)—1st Hull on Reuben's Ruth 3d; 2d Bonnie Brook Farm on Bernice of Bonnie Brook; 3d Hull on Georgia Maid; 4th Vail on Phylis Tratzen; 5th Bonnie Brook Farm on Irma of Bonnie Brook.

Heifer Calf 6 Months and Under 12 (9 shown)—1st Hull on Vera of Lakeview; 2d Ayers on Columbus Browney; 3d Ayers on June C.; 4th Harris; 5th Hull on Olive of Lakeview.

Heifer Calf Under 6 Months (9 shown)—1st Ayers on Columbus Merney; 2d Ayers on Queen of Campus; 3d Hull on Swiss Valley Girl 10th; 4th Hull on Cressie of Lakeview.

Cow With Official Record, Ring Placing (6 shown)—1st Hull on Lottie G. D.; 2d Vail on Nell W.; 3d Harris on Actress 4th; 4th Harris on Zerelda; 5th Harris on Mawnantuck Girl.

Cow With Official record Begun at 2 Years (6 shown)—1st Vail on Kunary; 2d Hull on Swiss Valley Girl 7th; 3d Hull on Innis of Lakewood; 4th Vail on Princess of Speedwell; 5th Hull on Rhona of Lakeview.

Exhibitor's Herd—1st Hull; 2d Ayers; 3d Vail.

Young Herd—1st Hull; 2d Ayers; 3d Vail.

Breeders Calf Herd—1st Hull; 2d Ayers; 3d Vail.

Get of Sire—1st Hull on get of Reuben; 2d Ayers on get of Columbus; 3d Hull on get of McAvoy of Lakeview; 4th Vail on get of Speedwell.

Produce of 1 Cow—1st Ayers on produce of Merney; 2d Hull on produce of Ruth H. 4th; 3d Hull on produce of Swiss Valley Girl; 4th Vail on produce of Nell W.

Senior Champion Bull—Ayers on Merney's 2d Son.

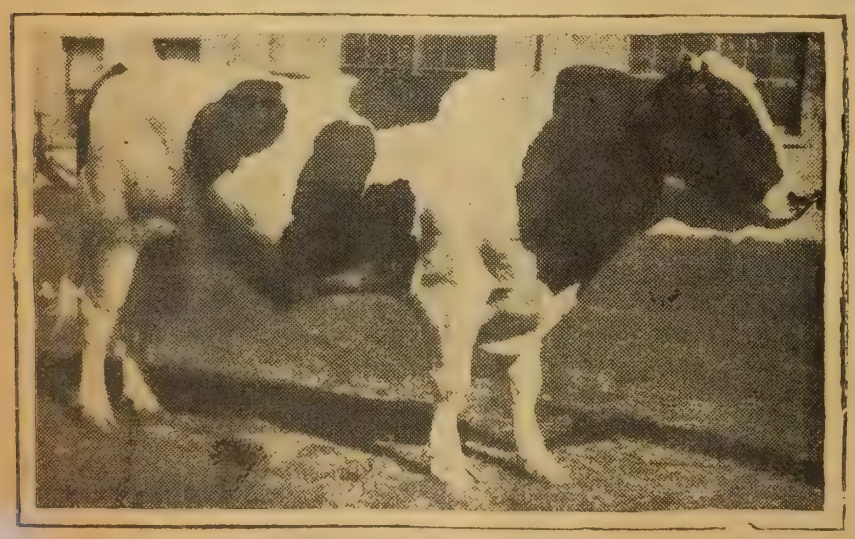
Junior Champion Bull—Ayers on Merney's Nephew.

Senior Champion Cow—Hull on Reuben's Ruth.

Junior Champion Cow—Hull on Vera of Lakeview.

Grand Champion Bull—Ayers on Merney's 2d Son.

Grand Champion Cow—Hull on Vera of Lakeview.



GALLOWAY-MESSER FARM'S KING SEGIS JOHANNA, FIRST-PRIZE TWO-YEAR-OLD HOLSTEIN BULL.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Lame Cows.

About four weeks ago one of my five-year-old cows became lame and now one of my three-year-old cows is affected the same way. They take short steps as if they were stiff, but the lameness seems to be in their shoulders. They are running on wild pasture all the time. They lie down a great deal.

It would be impossible to make a diagnosis from the few symptoms given. You had better have these cows examined by a veterinarian before more become affected.

Garget—Congestion of the Udder.

I should like to know more about garget in cows, the cause and cure. Also if one is infected will the whole herd be likely to contract the same by running together.

In true garget, which is a congestion of the udder usually following soon after calving, the application of camphorated ointment to the affected parts and with considerable massaging usually brings about recovery. Simple garget is not spread from one to the other. Sometimes there are lumpy conditions of the milk found and this comes from some unhealthy condition of the udder.

Bog Spavin.

I have a horse that was kicked about six months ago on the hind leg at the lower part of the hock joint right where the spavin usually comes. The place has healed up but the joint seems to be larger than the other, so when you stand directly in front of the horse it looks as though he has large bone spavin. It is soft. What can I do for it or can anything be done?

It is very probable your horse has a bog spavin brought about through injury. If the enlargement does not inconvenience the animal any it might do well to leave it alone. However, if it seems to get larger you might get results by use of the following blister: Take pulverized cantharides, two drams, and mix with vaseline or lard, one ounce. There is enough to blister two or three times, according to the size of the bog. Rub in well and in three days grease. Repeat the blister in a few weeks as soon as the skin is healing up nicely. It may be necessary to blister several times before the enlargement is reduced.

Grinds oats, too

The David Bradley Feed Grinder is an all 'round utility machine. It's a wonder for corn-and-cob meal. And it will grind oats fine and fast. See page 1440 in our big new General Catalog.

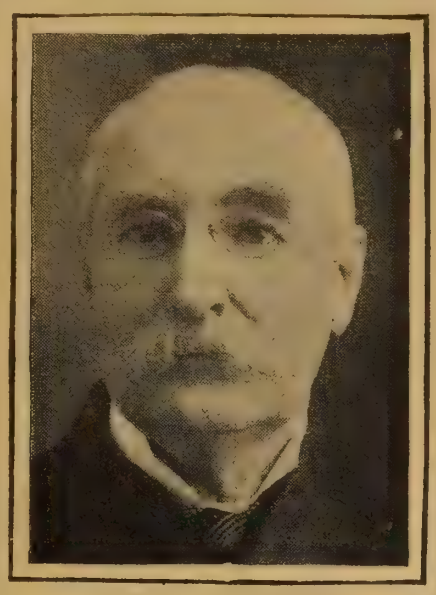
DEATH OF EBEN E. REXFORD

Wisconsin Song Writer and Author on Floral and Garden Topics Dies of Typhoid Fever in Hospital at Green Bay.

EBEN E. PEXFORD, Shiocton, Wisconsin, well-known throughout the country as a song writer and contributor to floral and horticultural magazines, ied October 18th of typhoid fever in ie hospital at Green Bay. Mr. Rexord was best known because of his ong, "Silver Threads Among The old." He was also author of "Only Pansy Blossom," and other songs ot so well known. He lived in the tmosphere of music and flowers. He as organist at a church in Shiocton r twenty-five years. Mr. Rexford's avorite flower was the gladiolus. He as an expert on floriculture and garening, and his views on these subcts were regarded as authority. mong the works of his pen may be cluded the following: "Brother and ove," "A Poem of the War," "Home loriculture," "Grandmother's Garen," "Flowers and How to Grow hem," "Four Seasons in a Garden," Indoor Gardening," "Amateur Garening," A book of poems entitled, Pansy and Rosemary." The deceased as a member of the Author's Club Boston and the Press Club of Chiago, and at the time of his death ad two books in press, entitled, "A C's of Vegetable Gardening" and The Makings of a Home."

While Mr. Rexford was widely nown throughout the country, he ever courted popular favor and was rely seen in public outside of his ome village. A year ago there was me talk of the University of Wisnsin recognizing him as a distinuished citizen of the state. On account of the fact that Mr. Rexford was nable to be present at the recogni-on services at Madison, the intent of ie University authorities was never ade public. Mr. Rexford was in the East, looking after the publication of a book at the time.

Mr. Rexford was born in Johnsburg, N. Y., July 16, 1848. He was educated at Lawrence University, Appleton, Wisconsin, and was married in 1890 to Mrs. Harriett Marsh. The articles and books which he wrote on flowers and gardening were eminently practical, and the outgrowth of his rich experiences at his own home place. He was invariably spoken of as the author of "Silver Threads Among the Gold," and this rare contribution to American ballads was his chief bid to fame.



EBEN E. REXFORD.
Author of "Sil er Threads Among the Gold," a Wisconsin horticulturist who died last week.

EBEN E. REXFORD, SONG WRITER AND LOVER OF FLOWERS, LIVED IN THIS HOUSE AT SHIOCTON, WIS.

Start Your Boy Right

Montana is your boy's opportunity for independence. Here are millions of acres of rich farm land that can be bought at small cost, waiting to yield thousands of dollars in profits to hustling, hard-working young men. Soil is fertile—climate ideal. Good schools and churches and everything that makes for a happy community life.

Onward has ever been the watchword of Montana. Within the present year an event of world importance has been staged there—the electrification by the *"St. Paul Road"* of its main line across the state, at a cost of over $12,000,000. This mighty achievement is to be a big factor in the future progress of Montana, developing new industries, broadening the farmers' market, increasing land values, and adding generally to the welfare of the state. Travel comfort also has been greatly enhanced by Electrification—smoother riding, with no trailing smoke or cinders to annoy.

Chicago, Milwaukee & St. Paul Railway

NOW is the time to take advantage of Montana's opportunities. Low fare excursions on certain dates every month. Send for literature giving interesting facts and figures. Address:

HAVE MORE POSITIONS than we can fill. Grand opportunities for young men. Telegraphy, Typewriting, Ry. Accounting, R. R. Wire. Wisconsin School of Telegraphy, Oshkosh, Wis.

Wean Spring Foals Before Winter Comes.

Now is the time to wean spring foals.

Allowing them to roam with their mothers on frosty nights, when pastures are short and the natural milk supply is limited, puts young foals in poor condition to make good growth during the winter.

"It is best to separate the mare and foal at once and place the youngster in a comfortable box stall, where it can be handled and halter broken," says J. G. Fuller, of the Wisconsin Horse Breeders' Association.

"Where there is but one foal it may be advisable, just prior to weaning, to train it by tying it several times for an hour or two beside its mother in a double stall. But in any event, when the foal is once removed from the mare, it is best to keep them separate until the foal is entirely weaned. The mare can be 'dried up' easily by hand, feed being given sparingly during the process.

"When there are two foals of about the same age, weaning is an easier matter. They can be handled together and soon become used to the halter after having been tied for several times, and can be led about with little trouble. Small amounts of a mixed grain ration, fed four or five times daily, may be given them. Grain consisting of oats and bran, four parts of the former to one of the latter, makes a satisfactory ration for foals at this stage. Good quality alfalfa or clover hay is preferable for roughage. As foals drink frequently, a supply of fresh water within easy reach at all times is essential."

Buy goods you see advertised in The Wisconsin Farmer

Ask your dealer for them by name

If he hasn't them in stock ask him to get them for you

$18.95 at the factory

That's the new low price on our David Bradley Corn and Cob Crusher and Feed Grinder. For full information see page 1440 of our big new General Catalog. Satisfaction guaranteed always.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Simple Tests For Textiles

It is most important these days for the buyer of any material to be able to discover any adulteration, artificial dressing or misrepresentation in the goods she wishes to purchase. There are a great many tests that may be used to determine the genuineness and value of materials, but only a few that are practical for the home.

If the buyer is not absolutely sure that the material in question is as represented it is best to ask for a small sample and apply some of the home tests before making the purchase.

For instance, to ascertain if a material is all linen and not mixed with cotton, apply a drop of water. The moisture spreads rapidly on linen, but will remain unabsorbed on cotton for some time. However, this is not always a safe test, as cotton and linen are often heavily sized with dressing which prevents the water from being absorbed. Another test for cotton and linen is a drop of glycerine. Linen will become transparent, but cotton will not be affected. Crushing in the hands will show the difference between cotton and linen, as linen wrinkles more than cotton. Sizing may be discovered by rubbing the materials between the hands to see if the dressing will come out. Washing, also, will remove the dressing and reveal the true nature of the material.

Cotton and wool mixtures when moistened wrinkle more than pure wool materials.

In examining materials it is well to know that cotton fibers are short with fuzzy ends, while linen fibers are long and have even ends. Wool fibers are short, kinky and stiff. Silk fibers are long, straight and lustrous.

The nature of the material may also be ascertained by burning a small sample. Cotton burns quickly with flame. Linen burns in the same way, but does not catch so readily, as it has less oil in the fiber and less air in the woven cloth. Wool burns slowly, giving off an odor like burnt feathers and leaving a gummy residue. Silk burns more slowly than wool and with less odor, and leaves a crisp ash.

Cut Shoe Bill.

With a little thought and care of shoes the family shoe bill may be reduced at least one-third. The present-day liquid polish used on shoes is apt to crack the leather and ruin it. Most liquid dressings have a certain amount of acid and this destroys the oils in the leather. If one must use liquid dressings once in two weeks wash off every bit of dressing from the shoes and apply a liberal coating of castor oil and set the shoes in an airy place for two days. The elasticity of the leather will be renewed and the shoes become soft and pliable. Wipe shoes carefully before applying the next coat of liquid dressing.

Hygiene of the Ears.

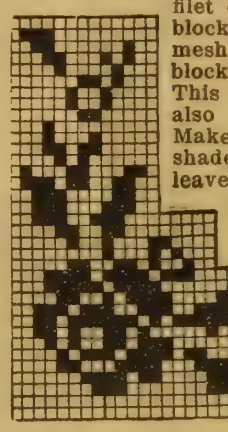
Earache in children is best treated by using hot water. This not only gives the most prompt relief from pain but is also one of the best remedies employed to stop inflammation and prevent a running ear. Fill the ear with water as hot as it can be borne, using a common medicine dropper. Next remove a dropperful of water and replace it with a dropperful of hot water, pressing the bulb between the thumb and finger three or four times to mix thoroughly. Keep this up for twenty minutes and repeat every two to four hours as needed to control the pain. In case the pain continues after two or three treatments, a physician should be consulted. Boils in the ear are treated in the same manner.

Eczema of the external portion of the ear is usually relieved by the application of zinc oxide ointment, keeping the surface covered continuously. This can be procured under this name from any druggist. Children with sensitive ears should protect them by wearing a little plug of cotton in the ear when out of doors in cold or windy weather, especially if driving in an open vehicle.

Frozen or frosted ears should first be thawed out by very cold water or snow and then covered by olive oil or vaseline. In case an insect gets into the ear, drop a few drops of sweet oil (olive oil) in the canal and then wash out gently with warm water, using a medicine dropper. The insect will usually float out. A foreign body should be treated in the same way, but if it does not come out easily a physician should be seen at once. Under no circumstances should the removal be attempted by means of forceps or other instruments, as the foreign body is very apt to be pushed down so far in the canal that it will be very difficult to remove.

Rose Design For Doily.

The accompanying illustration shows a block pattern of corner for doily in filet crochet, the white blocks representing the mesh and the black blocks the solid crochet. This is a pretty design also for cross-stitch. Make the rose in two shades of pink and the leaves in green and dull brown. Done in cross-stitch on linen the pattern is



suitable for table runners or dresser scarfs.

Terms Used in Recipes and Menus.

Anglaise (al) English style. Something plain roasted or plain boiled.
Au Gratin. Covered with sauce, bread-crumbs, etc., and browned in the oven or under a salamander.
Aspic. Savory jelly.
Blanc-Mange. A white, sweet-food. A sweet cream set in a mold.
Bouillon. A plain, clear soup. Unclarified beef broth.
Braise or Braising. A slow cooking process. Meat cooked in a closely covered stewpan or brasiere to prevent evaporation so that the meat thus cooked retains not only its own juices but also those of the articles added for flavoring.
Caramel. Burnt sugar. A substance made by boiling sugar to a dark brown.
Compote. Usually applied to a delicately prepared dish of stewed fruit, or fruits and jelly.
Consomme. Clear, strong gravy soup. The clarified liquor in which meat or poultry has been boiled.
Croutons. Thin slices of bread cut into shapes and fried; used for garnishing dishes and in soups.
Escallops. Thin, round steaks of veal called "collops."
Eclair. A French pastry filled with cream.
Emince. Finely sliced or shred.
Filet. The under cut of a loin of beef, mutton, veal, pork and game.
Foie Gras. Fat goose liver.
Fricassee. A white stew of chicken or veal.
Forcemeat. Meat for stuffing.
Fritter, Beignets. Anything dipped in batter, crumbed or egged and fried.
Glace. Frozen, iced.
Gumbo. The American term for okra soup or other preparations from okra.
Mayonnaise. A cold salad sauce, or dressing.
Souffle. Literally "puffed up." A very light baked or steamed pudding, an omelet.
Tutti-Frutti. A mixture of various kinds of fruits or cooked vegetables.

Tells How to Cook Kahl.

To the Editor:—In answer to the lady who would like to know how to cook kahl I will tell her how I cook it. First wash the kahl well, cut fine and boil with a small piece of pork until the kahl is tender. Then add a little oat meal or flour to make a gravy. Be sure not to use too much water. Salt to taste. If onion is liked, a little may be added. Kahl also may be put up for winter use the same as other vegetables. Miss M. B.

Household Hints.

To prevent pie crust puffing up in the middle when baked, prick in several places with a fork before putting in the oven.

A basin of cold water placed in an oven will soon lower the temperature.

To clean enameled bathtubs rub with salt moistened with lemon juice. Then wash with hot water and soapsuds.

Sprinkle carpets before sweeping with salt. It keeps the dust down effectively and the carpets will look fresher. Salt also prevents moths attacking carpets.

Oil stains can be removed from linen and cotton goods by rubbing the material on both sides with talcum powder. The powder should be left on for a few hours and then brushed off.

To clean wicker chairs wash with salt and water, then rub as dry as possible and place in the open air to finish drying.

Fresh grape stains may be removed from white goods by slowly pouring boiling water through the stain.

Cheese Recipes.

Cheese Squares.—Out of a pint of milk take enough to wet a quarter of a cup each of flour and cornstarch, seasoned with a half teaspoon each of salt and paprika. Add this to the remainder of the milk, scalded in a double boiler. Stir constantly until the mixture thickens, then occasionally for twenty minutes. Add the yolks of two eggs beaten up with a quarter cup of creamed butter and a half cup of grated cheese. As soon as these are cooked turn out into a shallow pan, and when cold cut in shapes. Lay these in a baking pan apart from each other, cover thickly with grated cheese, reheat and brown in a quick oven.

Cheese Timbales.—One level tablespoon butter, one level tablespoon of flour, one-half cup of milk, one-half level teaspoon of salt, one-fourth level teaspoon of paprika, one-fourth cup fresh soft bread crumbs, one-fourth cup of grated American cheese, one egg. Melt the butter, add the flour, salt and paprika. Mix well, gradually add the milk, cheese and bread crumbs. Cook three minutes, and then stir in the egg, well beaten. Butter six timbale molds well. Place one-half a pimento-stuffed olive in the bottom. Add the mixture. Place the cups in a pan of hot water and cook fifteen minutes in a moderate oven. Allow to stand three minutes, and remove from the molds. Serve hot with creamed peas.

Cheese Custard.—Remove the crusts from half a loaf of bread and cut in slices. Cut these in one-inch squares and put a layer in a buttered baking dish. Sprinkle thin sliced cheese over; add a dash each of salt and paprika. Alternate layers of bread and cheese, using one cupful of cheese and seasoning as directed above. Beat two eggs, add one pint milk and pour the mixture over the bread and cheese. Bake about one-half hour in a moderate oven; unless oven is very moderate it would be well to set this in a pan of hot water.

Nut and Cheese Roast.—One cup grated cheese, one cup chopped English walnuts, one cup bread crumbs, two tablespoonfuls chopped onions, one tablespoonful butter, juice of one-half lemon, salt and pepper. Cook onion in butter and a little water until tender. Mix other ingredients and moisten with water in which onion has been soaked. Put into shallow water baking dish and brown in oven.

Cheese Souffle.—Two tablespoonfuls butter, three tablespoonfuls flour, one-half cup milk, one-half teaspoonful salt, one-half cup grated cheese, three eggs, cayenne. Mix butter, flour and milk as for white sauce, remove from fire, add salt, cayenne, cheese and well-beaten egg whites. Put into buttered baking dish and bake in slow oven about twenty minutes. This should be served immediately from oven.

Creamed Cheese and Eggs.—One-half teaspoonful salt, three hard boiled eggs, one tablespoonful flour, one cup milk, speck of cayenne, one-fourth cup grated cheese, bread crumbs. Make a thin white sauce with the flour, milk and seasonings, add the cheese and stir until melted. Add chopped eggs to this sauce. Put into a buttered baking dish, cover with buttered crumbs and bake in a moderate oven until brown.

THE YOUNG FOLKS

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer Madison, Wisconsin.

Has She a Twin?

Dear Young Folks:—I have been reading the Young Folks' page and think it very interesting. I am eleven years old. My birthday is the 2d of January. Have I a twin? I am taking music lessons on the organ. We have a car and I take lots of joy rides.

I live three and one-half miles from town. The people hold a fair there. They call it "The Community Fair."

I have one and one-half miles to go to school and I am in the fourth grade.

As my letter is getting rather long I will close for this time, hoping to see this in print. —Grace.

A Visit to the City.

Dear Young Folks:—If you will allow me a little space, would like to join the Young Folks' page. I am ten years old. I go to school every day. There are four of us in the family. I have one sister.

I made a visit to the city last fall. My uncle took me around the city where I saw many sights. He also took me through the park, where I saw many animals and birds.

I am the oldest child in the family and I have many pets. We have a piano in our home and I have learned to play a few pieces on it.

I would like an answer to my riddle from some of the young people.

A boy said to his sister, "I saw something down town that would tickle you." "Oh," she said, "was it a monkey?" "No." "Was it a dancing bear?" "No, it was a ————." What was it? —Alice.

Is Going to Buy an Organ.

Dear Young Folks:—I am a girl nearly fourteen years old and I want to send a letter to the Young Folks' page. I have read all of your letters. I am in the eighth grade and I like to go to school very much.

I live on an eighty-acre farm. I have a cow and a calf of my own. The cow's name is Beauty and the calf's name is Buster. I want to see the calf and buy an organ. I have seventy chickens of my own, too, and when I get the organ I will sell them and take music lessons.

We live four miles from town. I like to go to town, and do so every time I get a chance.

I have four brothers and two sisters and I think a great deal of them. We all love to play out of doors together.

I help my mother just as much as I can. I love to cook and do housework. —Jessie.

Last Chance Prices

THE cost of production of all magazines has been very seriously affected by the increase in cost of all materials, such as paper, ink, etc., and because of this many magazines are forced to increase their prices.

Owing to the fact that we have special arrangements with all magazines, we are in a position to make some special Last Chance, money-saving offers.

PICTORIAL REVIEW. After November 25, 1916, Pictorial Review will be included in all clubs at $1.50. Until that date we are able to offer the following clubs at prices which will never again exist.

The Housewife ...$ .50 Pictorial Review... 1.50 McCall's Magazine .50	All for $2.00
The Housewife ...$ .50 Pictorial Review... 1.50 Ladies' World .... 1.00 People's Home Journal ... .50	All for $2.25
The Housewife ...$ .50 Pictorial Review... 1.50 Modern Priscilla .. 1.00	All for $2.30
The Housewife ...$ .50 Pictorial Review... 1.50 Etude (Musical)... 1.50	All for $2.80
The Housewife ...$ .50 Pictorial Review... 1.50 Woman's Home Companion.. 1.50	All for $2.90
The Housewife ...$ .50 Pictorial Review... 1.50 Youth's Companion..... 2.00	All for $3.40

THE CHRISTIAN HERALD. After November 10, 1916, the price of the Christian Herald will advance to $2.00 a year. The Christian Herald is a non-denominational, religious weekly publication, well illustrated, and containing news of current events. The advance in the subscription price from $1.50 to $2.00 a year to the subscriber makes these offers particularly attractive at this time. Remember, the prices all advance November 10, 1916.

The Housewife ...$ .50 Christian Herald .. 1.50 McCall's Magazine .50	All for $1.75
The Housewife ...$ .50 Christian Herald .. 1.50 Ladies' World 1.00	All for $2.10
The Housewife ...$ .50 Christian Herald .. 1.50 Little Folks..... 1.00	All for $2.10
The Housewife ...$ .50 Christian Herald .. 1.50 Mother'sMagazine 1.50	All for $2.60
The Housewife ...$ .50 Christian Herald 1.50 Etude (Musical)... 1.50	All for $2.75
The Housewife ...$ .50 Christian Herald .. 1.50 Woman's Home Companion.. 1.50	All for $2.80

THE AMERICAN BOY. The subscription price of the American Boy, the biggest and one of the livest boys' magazines in America, will advance from $1.00 to $1.50 a year on November 10, 1916. The following special combination should be taken advantage of by our readers if they are anxious to save money.

The Housewife ...$ .50 American Boy.... 1.00 Today's Magazine .50	All for $1.25
The Housewife ...$ .50 American Boy.... 1.00 Little Folks..... 1.00	All for $1.60
The Housewife ...$ .50 American Boy.... 1.00 Modern Priscilla .. 1.00	All for $1.75
The Housewife ...$ .50 American Boy.... 1.00 Mother'sMagazine 1.50	All for $2.00
The Housewife ...$ .50 American Boy.... 1.00 Etude (Musical)... 1.50	All for $2.15
The Housewife ...$ .50 American Boy.... 1.00 Youth's Companion..... 2.00	All for $2.75

Two Special Offers for this Season

The Housewife ...$ .50 Ladies' World .... 1.00 People's Home Journal ... .50	All for $1.00 Save $1.
The Housewife ...$ .50 Today's Magazine .50 McCall's Magazine .50	All for $1.00

If you wish to take advantage of any of these offers and your subscription to any of the magazines offered above has not as yet expired, now is a good time to renew them, as we will have your subscription extended for one year from the expiration of your present subscription.

THE HOUSEWIFE 30 IRVING PLACE NEW YORK

International Sunday School Lesson.

Lesson for October 29, 1913.
(By E. O. SELLERS, Acting Director of Sunday School Course.)

The Voyage.

LESSON TEXT—Act 27:1-38.

GOLDEN TEXT—Commit thy way unto Jehovah; trust also in him, and he will bring it to pass.—Ps. 37:5.

Paul sailed from Caesarea August, A. D. 59 (Ramsey), a few days after his address before Agrippa. He reached Malta about November 15th. Paul knew how to meet mobs, but none of his adventures are more outstanding than the one we are studying today. Luke, his physician, was a companion, and the historian, Josephus, states that on board the ship there were more than 600 people traveling with Paul. Paul was a man of distinction, a Roman citizen. He had his own hired house in Rome. Aristarchus may possibly have been his servant to furnish comfort for the journey. Ramsey believes Paul had received hereditary property, thus making him a Roman citizen of rank, of learning and of standing financially.

I. Fair Weather and Contrary Winds (vv. 1-12). Sidon was about seventy miles north of Caesarea on the coast of Palestine. Here Paul received liberty to go ashore and visit his Christian friends. Myra is in Asia Minor. It requires fourteen days to reach this point from Sidon, a distance of about 400 miles. Here, instead of going up the Aegean sea route, often used in going to Rome, the centurion found a grain ship bound from Alexandria to Italy, and put his prisoners on board. September 1st they started for Italy. The direct course would have been westward, but the wind was contrary, and the progress was slow. On the 23d they were opposite Cnidus, the southwest point of Asia Minor, 130 miles from Myra. September 25th they entered the harbor of Fair Haven, near the middle of the south shore of the island of Crete. The fast day, October 5th, the day of the great atonement, was observed in this place. The question of going farther was a debatable one, yet the commander persisted, and about the 10th of October they sailed for Fair Haven.

II. The Hurricane (vv. 13-20). Taking advantage of a gentle wind they put out of Fair Haven, and almost immediately encountered the hurricane. It was perhaps hard for Paul during those fourteen days to discern the wise, gentle hand of God. (Jonah 1-4). God's most faithful servants do not always find smooth sailing. (Phil. 4:6, 7; Isaiah 26:3; John 16:33), but they may, no matter how fiercely tempest tossed, know that God has not ceased to look upon them with favor. Sometimes the best thing for us to do, when thus tempest tossed, is "to lighten the ship" (v. 18).

III. The Message of Cheer: "I Believe God" (vv. 20-26). Neither sun nor stars having shone for many days, and all hope that any should be saved seemingly taken away, yet God is able to save in the darkness as well as in the sunshine, in the tempest as well as in the calm, and there was in that boat one man at least whose hope was not gone, for God had said to him, "Thou must bear witness at Rome also" (23:11). Paul's message of cheer in the midst of this despair and after they had been so long without food, immediately stamped him as a leader of wisdom and power.

Paul could make this promise because "an angel of God whose I am and whom I serve" had come to him and assured him that God would redeem the promise made two years before. This implies that Paul had given himself to prayer. Observe how one godly man can save many ungodly men (Gen. 18:22-33). God's vision came to Paul, but Paul used it for the comfort and cheer of the whole ship's company (II Cor. 1-4). A modern illustration of a similar experience was that of Mr. Moody and General Howard, returning from Europe on the steamship Spree in 1892.

General Howard relates that Mr. Moody did a great deal to cheer the passengers, by both his words and his actions, during those days of stress and storm. The darker and stormier the night, the more likely are the angels of God to appear if we are indeed his (v. 23: Cf. Ch. 18:9-23:11).

Sometimes these angels stand beside us and we do not see them, we are taken up with the darkness and the howling of the storm. It is a great thing to be able to look up to the infinite God and say, "I am his." To make this statement intelligently, and with deep realization of its meaning will give significance and solemnity to all.

IV. Paul, the Life Saver (vv. 27-37). Paul did not stop with simply saying that God was his, but went on to say, "Whom also I serve." Many say they are God's but do not prove it by their lives of service. Paul loved to think and speak of himself as the servant of God (Rom. 1:9; II Tim. 1:3; Titus 1:1). Some of the sailors thought to launch the boat, leaving the passengers to their fate.

All the hurricanes that ever struck the sea or the ships of the sea could not prevent the fulfillment of God's promises, and Paul fully accepted the significance of God's word "fear not."

Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

Catalog of Fall and Winter Fashions

Send 10c in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses', and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wis.

1636—Ladies' dress. The skirt is a three-piece model. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6 yards of 44-inch material for a 36-inch size.

1496—Ladies' house dress with reversible closing. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6 yards of 44-inch material for a 36-inch size.

1749—A stylish waist model, with or without chemisette and peplum and with sleeve in either of two lengths. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3½ yards of 36-inch material for a 36-inch size. Without peplum, ⅝ yard less.

1591—Ladies' night dress, perforated for sack length and short sleeve. It is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 4 yards of 27-inch material for the sack style and 7 yards for the gown style for a 36-inch size.

1857—Ladies' corset cover and drawers. The pattern is cut in 3 sizes: Small, medium and large. It requires 3¾ yards of 36-inch material for a medium size.

1878—Girls' one-piece dress, with or without shield. The pattern is cut in

4 sizes: 6, 8, 10 and 12 years. It requires 3⅛ yards of 44-inch material for a 6-year size.

1866—Ladies' dress, with removable chemisette. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6⅜ yards of 44-inch material for a 36-inch size.

1862—Juniors' skirt and blouse. The pattern is cut in 3 sizes: 12, 14 and 16 years. It requires 3⅛ yards of 36-inch material for the waist, and 2⅞ yards for the skirt, for a 16-year size.

1858 Waist-1853 Skirt.—A dress of dignified simplicity, comprising ladies' waist pattern 1858 and ladies' skirt 1853. The waist pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. To make the entire dress for a medium size will require 6½ yards of 36-inch material. Two separate patterns, 10 cents for each pattern.

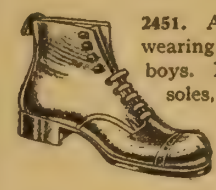
1609—Girls' dress, with or without bolero, with sleeve in either of two lengths. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 3⅝ yards of 44-inch material for a 6-year size.

1865—Boy's Russian coat suit, with straight trousers. The pattern is cut in four sizes: 3, 4, 5 and 6 years. It requires 3⅜ yards of 44-inch material for a 5-year size.

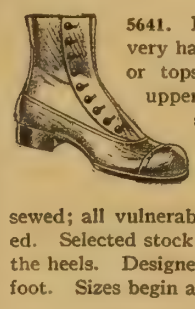
1850—Ladies' yoke apron. The pattern is cut in 3 sizes: Small, medium and large. It requires 5¼ yards of 36-inch material for a medium size.

FIT—Comfort—Value. Qualities that make Foot-Schulze Footwear best to buy. They are built in by our wonderfully efficient organization, made certain by our buying, manufacturing and selling plans. No waste at any point. Dollar for dollar they are better shoes. Try them—that's the best proof. See a Foot-Schulze dealer—they're everywhere.

This Mark On the Sole Denotes Quality.



2451. A sturdy, long-wearing, dressy shoe for boys. Dull calf, heavy soles, durable inner soles and counters—real economy if you consider the cost "by the year, not by the pair."



5641. For girls who are very hard on the uppers or tops of their shoes; uppers of good weight, smooth, tough calfskin. Heavy cotton drill lining. Seams well sewed; all vulnerable points reinforced. Selected stock for the soles and the heels. Designed for the growing foot. Sizes begin at five years.

FOR A BIG CORN CROP IN 1917.

Wisconsin Experiment Association Urges Careful Attention to the Curing of Seed Corn—There Are Better Ways Than the Old-Fashioned Ones.

PROSPECTS for a profitable corn crop in Wisconsin next season depend very largely now on the curing of the seed that has already been selected. Many Wisconsin farmers have gathered two and three times the amount of seed

Seed corn tree, six feet long and eight inches through, with nails two and one-half inches apart, will cure corn to plant fifteen acres.

they expect to use next year in order to be prepared for any emergency such as confronted them this past year and the care in curing now will do much towards supplying seed that will have strong germinating qualities when it is tested for planting next spring.

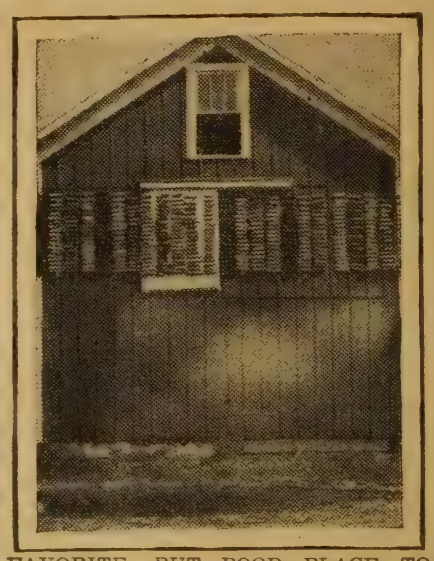
Most of the seed has been selected. This operation should be concluded in Wisconsin before the heavy frosts, during September. There may be some corn in the cribs that has not been exposed to the heavy frosts that have visited the entire state to date and the farmer who failed to select his seed from the field should go over his crib and select the ears he considers best suited for seed and then hang them properly for drying. Only those ears should be retained for seed which are of a medium size, straight of row and uniform of kernel, and in going over the ears for drying, whether field or crib selected, all imperfect ears should be discarded. All sections of the state secured ripe corn this year and with the proper care of the seed there should be sufficient seed to tide Wisconsin over two or three seasons, even if a mature crop should not be secured next year.

During the past few weeks the writer, in his travels throughout the state, has noticed considerable seed corn being cured on windmills, fences and other poor places. On some farms it seems that the methods of many years ago still prevail despite the fact that experiments have proven that had samples furnished by farmers been properly selected and cured the yields would have increased from 25 to 30 per cent with little additional labor or expense. There are too many good places on every farm for curing seed properly to use the poor methods. Corn hung on the south side of a building is exposed to sudden changes in temperatures which, influencing the moisture content, make it subject to injury by frost, and this is especially true when the sun strikes it. Under the porch, in the stable, over bins of grain in the granary and damp and poorly ventilated rooms are all poor places and should be avoided when almost every corn grower can use the attic, furnace room, a heated house room, tool or wagon shed or any dry and well-ventilated building.

Tests carried on by the Wisconsin Experiment Association several years ago proved conclusively that artificial heat is necessary to produce good seed corn in Wisconsin. Corn cured indoors with artificial heat gave an average germination test of 88.3 per cent, while that cured outdoors without artificial heat gave a test of only 51 per cent. For curing large quantities a kiln house should be provided, but, as the average farmer wishes only to cure sufficient seed for his own use, the simpler methods appeal mostly to him.

For small amounts of seed the farm kitchen or the furnace room are probably best. Fifteen medium-sized ears will plant an acre, so that the simple hanging devices will take care of enough seed for the ordinary farm. An attic, well ventilated and warmed by a chimney passing through or directly over a heated room, makes a good place, but whatever place is chosen the essential thing to bear in mind is perfect ventilation of air around the ears, no exposure to sunlight and no overheating while moist.

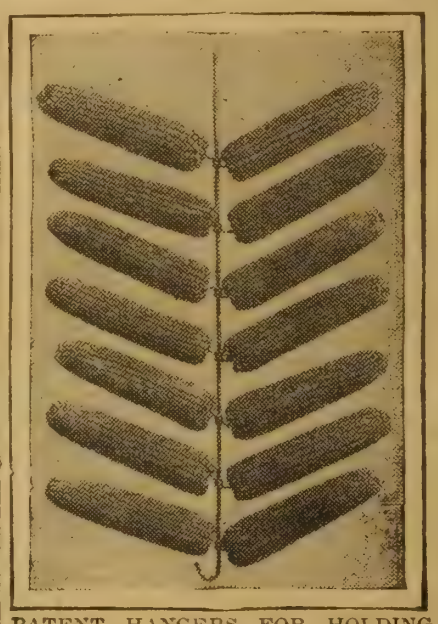
Wire racks are very convenient and may be made from electrically welded lawn fencing and the cutting of the fencing into these racks can be done without any waste. The "corn tree" is also a handy device and, as it is portable, it can be moved about and placed between windows or in currents of air so that every ear will dry well. Such a tree, six feet high, with nails two and one-half to three inches apart, will hold enough seed ears to plant fifteen acres. It is so easy to secure good seed corn by curing with



FAVORITE, BUT POOR PLACE TO CURE CORN.

artificial heat and be sure of having a high germinating seed that no other method except fire drying can be equally recommended for Wisconsin.

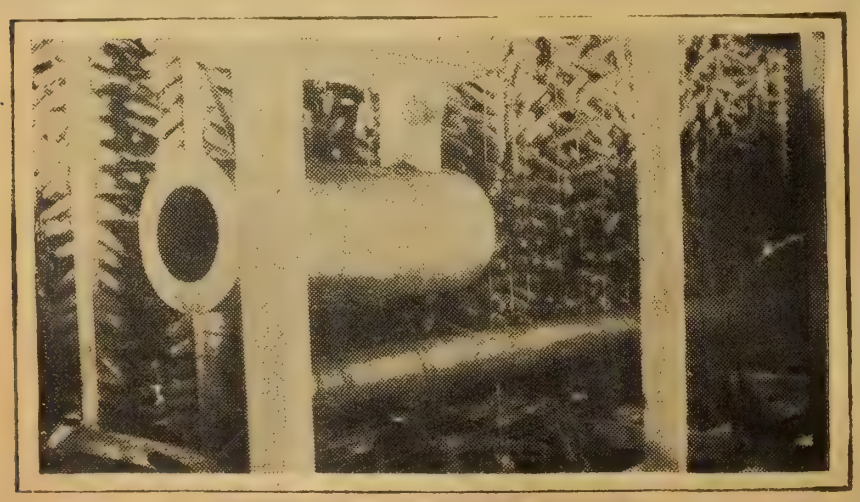
Many farmers have built special houses for kiln drying or remodeled



PATENT HANGERS FOR HOLDING CORN.

with the idea of providing a place to cure seed corn as well as a work shop which will be warm during the winter. In the successful houses of this sort the ears are piled on slat or wire floors, instead of being racked, thus

DOUBLE STRING METHOD OF HANDLING SEED CORN.



INTERIOR OF A SEED DRYING HOUSE.

saving much labor at time of selection. In these cases a constant current of heated air must pass up through the corn or it will mold. When corn is dry and the ears are solid and cannot be twisted the curing is complete and the corn, if kept in a dry place where there is no circulation of air, will not be injured by freezing weather.

After hanging in the shed or lying on the racks for two months the seed ears should be as dry as a bone and contain less than 10 per cent of moisture. They can remain where they dried or be stored in mouse-proof barrels, boxes or crates during the winter, but in either case they must not be exposed to a damp atmosphere, as they will absorb moisture and be injured. Some farmers place the thoroughly dried seed ears in the center of a wheat bin and fill the bin with loose dry wheat.

Answers Almost Any Question That Arises on the Farm

Here is a book you can carry easily in in your coat pocket that will tell you instantly and to a penny just how much money is coming to you when you sell your hay, grain or stock at the market price. It is Ropp's New Lightning Calculator—a wonderful time and labor saver for the busy man. It never makes a mistake—and answers a thousand perplexing questions that arise on every farm.

FREE to LANDOWNERS ONLY

Hundreds of thousands of copies of this wonderful book have been sold and the regular price of this edition is 50 cents. However, to acquaint the readers of this paper with the unusual merits of **Square Deal Fence** we will gladly send a copy of Ropp's New Calculator just as illustrated FREE and POSTPAID. We will also mail our latest catalog of

Square Deal Fence

the favorite field and stock fence of discriminating farmers everywhere. The Square Deal Lock double grips the one-piece stay wires to the wavy strand wires without cutting, breaking or slipping. Combines solid strength with remarkable flexibility. The self-draining shape of the Square Deal Lock prevents rust. The one-piece stay wires prevent sagging, bagging and buckling, require fewer posts—the wavy strand wires give springiness, elasticity and life. Landowners! write at once for catalog and get your copy of Ropp's New Calculator free, postpaid. Address

UPPER WISCONSIN

Dairying Pays in Polk County.

If any substantiation were needed of the often heard predictions as to the dairying possibilities of Upper Wisconsin, Polk county affords it. This county, once a lumberman's paradise, is rapidly being turned to farming and is becoming one of the state's great dairy centers.

Dairying has been the backbone of this county ever since the farmer followed the lumberjack as he went farther into the interior and today the quantities of butter and cheese shipped from this county is surprising when it is considered that only two decades ago a dairy herd was a curiosity.

MRS. ANNIE JENSEN'S FARM, NEAR LUCK, POLK CO., WIS.—200 ACRES IN THIS FARM—MONTHLY CREAM CHECKS AVERAGE ABOUT $150.

Recently we overheard an enthusiastic Polk county resident objecting to Polk county being classed with other counties in Upper Wisconsin.

TYPICAL POLK COUNTY ALFALFA FIELD ON W. F. HOWEY FARM, NEAR BALSAM LAKE, POLK CO.—FORTY-FIVE DAYS AFTER CUTTING.

"It is more like some of our southern counties than it is like some of the northern counties," he remarked, and in this he was correct to the extent that Polk county belongs to that series of Upper Wisconsin counties which have been longer under the plow and which have had a great many more years of development in an agricultural way. It lies in the great St. Croix valley; its growing season is considerably longer than many counties in the same latitude and it is in the Golden Glow corn belt for this reason. However, Polk county was once covered with timber and stumps just as the counties that are now opening up to development were a few years ago. Farming has been carried on in this county for thirty years, more or less, and there still remains considerable stumping and clearing to be done, so that Polk county affords a splendid example of what may be expected of other Upper Wisconsin counties in the future.

Today the dairy cow is queen and with the great development going on in the cheese and butter factories, of which there are thirty-six, mostly cooperatively owned, is following the building up of many pure-bred dairy herds. The scrub sire is no more. The unprofitable cow is rapidly being sent to the shambles and we have the authority of Mr. C. E. Lee, assistant dairy and food commissioner, that the creameries in this county are making such progress that the records of today will be insignificant when compared with those of a few years hence. This comes about through a desire of the farmer to provide good milk and cream, to build up his herd to the highest standard and through the effort of the factory operators to make a product that ranks with the best. The Holstein breeders now have an active association with sixty-five members. The Guernsey breeders are organized and on a recent trip through the county the writer was surprised to see so many splendid herds.

The butter production of the county is estimated at 3,000,000 pounds annually, cheese at 1,500,000 pounds. The Soo Railroad reported that from stations on its lines 1,760,000 pounds of butter were shipped last year to outside markets and one station alone, Luck, a village of less than 400 persons, shipped 492,000 pounds. These figures do not include shipments on other roads, but serve to convey the importance of dairying in this county. Luck creamery products are sold in New York City.

BUILDINGS ON M. KIRK'S FORTY-ACRE FARM, NEAR LUCK, WIS.—TWENTY-TWO COWS KEPT AND PRACTICALLY NO FEED BOUGHT OUTSIDE.

Polk county is unusually interesting and unique in many ways. It is typically rural—we do not recall a county of 23,000 where the proportion of population is so largely rural. There is not a village of more than 900 persons in the county and yet its fifteen banks hold more than $3,000,000 of deposits, mostly farmers' money, and dairying has been the big farming operation. The 1910 census showed that approximately half the acreage of the county was then under cultivation.

No mention of the county would be complete without reference to the rural school system or the work of Mr. John S. Klinka, county agricultural representative. There are twenty-seven state graded schools in the county. In this respect Polk county leads the state, Dane and Milwaukee counties having given way to Polk county recently. These schools are all modern and in addition there are 100 one-room schools, and all are doing a splendid work in agricultural lines.

Mr. Klinka has been serving as agricultural representative for three years and is doing a splendid work along the lines of better dairying through encouraging the building of silos, growing of alfalfa, better barns, etc. Potatoes are also an important crop and he is doing special work in these lines as well as with pure-bred grains, etc. Clovers and grasses thrive in this county, as in other Upper Wisconsin counties, and clover can be seen growing wild by the roadsides. There are several beef herds in the county, as well as swine, but Polk county farmers years ago staked their monthly fortunes on the dairy cow and they are winning, with good monthly cream checks.

Most of Polk county was originally covered with hardwood with a mixture of white pine around the lakes and in the eastern section. This leaves the settler with a little different clearing problem than the settler in those counties which once grew only the big pines, but, while hardwood stumps are rotting, excellent pasture is secured among the stumps and no doubt this led many of the first settlers into dairying, that they might utilize this land while awaiting the help of nature in rotting the stumps and in this way keeping down the cost of clearing.

Dairying in Polk County.

Interest in dairying is increasing rapidly in Polk county. At a recent county fair there were eleven exhibits of creamery butter which scored above 91½. There were three exhibits of dairy butter scoring 90 or over and four exhibits of cheese scoring 92 to 95. The best creamery butter was exhibited by Oscar Rydquist, St. Croix Falls, and the score was 95½. More than twenty farmers in the vicinity of the Georgetown creamery in Polk county received $50 or over in cream checks for the month of September. The highest check paid was $125.62 and there was another for $111.73.

Oneida County Potato Show

Farmers of Oneida county, one of the foremost potato-producing regions of the state, are holding their annual "spud show" at Rhinelander this week. Mr. W. D. Juday, county agricultural agent, writes that farmers selected liberal amounts of show stock on the fields at digging time. One of the purposes of this county show is to get the best possible entries for the exhibition at Eau Claire, November 21st and 24th, under the auspices of the Wisconsin Potato Growers' Association. Oneida county hopes to win first place in county exhibits at the state association show.

HIDES AND FURS.

Insures Full Value on Your Furs

Here is a plan, new and unusual for trappers. There will be no more down grading on *your* furs if you follow it. We have appointed a commission of three fur experts who have judged pelts for years. They grade every fur you send us and price it according to highest market reports. They protect you. You don't rely on only one man's judgment. This may sound unusual to you. But it is simply good business. We are the largest firm in our line in America. But we have big customers to supply. If we do not grade your pelts properly you avoid us in the future. But now the Silberman plan eliminates dispute. The best trappers send us their pelts year after year, and we keep the high-class business. We believe we make more in the end this way, and so do *you*. In addition we are encouraging trappers of high grade pelts by a premium system. Premiums in new equipment.

FREE To Hunters and Trappers—Automatic Revolvers, Guns, Traps, etc.—who join our co-operative plan. So don't be tempted elsewhere. For this plan, we believe, means a bigger year for you if you take advantage of it. Write for our Fur Club News, Premium List, and List of Prices. All mailed to you free, upon request.

S. SILBERMAN & SONS, Established 1866 1119-1125 W. 35th St., Chicago, Ill.
Largest Fur and Wool House in America (24)

Ship Your FURS to Funsten

Boys—men—experienced trappers—beginners—**we need skins.** Write for new price list on raccoon, skunk, mink, fox, muskrat and other furs.
We pay top prices and send money same day we receive shipment. Thousands send us their catch yearly because they get a square deal from Funsten on one pelt or a thousand.
Write for valuable FREE Trapper's Guide. Gives full instructions on trapping; all Game Laws; prices on steel traps, guns, etc. Send for it today. FREE.

TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

PART III. "Prince Charlie"

CHAPTER IV—Continued.

"Well, I will not," she answered, looking about her; "don't let your gallantry interfere with your comfort, for I've a chair of my own when I visit this witchy quarter of the earth—yes, there it is."

And from the corner by the bunk she drew forward the identical chair on which she had sat through the night at her only other visit. But from her speech Stuart inferred that this time was but one of the many.

"What are you going to do here, Davy MacDougall?" she asked, drawing her chair close beside him and glancing comprehensively about the cabin; "weather-board it up for winter?"

"Naw, scarcely that," he answered good-humoredly; "but just to gather up the blankets or skins or aught that the weather or the rats would lay hold of, and carry them across the hills to my own camp till the spring comes; mayhaps he may come with it."

The hope in his voice was not very strong, and the plaintiveness in it was stronger than he knew. The other two felt it, and were silent.

"An' will ye be tellin' him for me," he continued, after a little, to Stuart, "that all is snug an' safe, an' that I'll keep them so, an' a welcome with them, against his return? An just mention, too, that his father, Grey Eagle, thinks the time is long since he left, an' that the enemy—Time—is close on his trail. An'—an' that the day he comes back will be holiday in the hills."

"The last from Grey Eagle or yourself?" asked Stuart teasingly. But the girl spoke up, covering the old man's momentary hesitation.

"From me," she said coolly; "if any name is needed to give color to so general a desire, you can use mine."

His face flushed; he looked as if about to speak to her, but, instead, his words were to MacDougall.

"I will be very glad to carry the word to your friend," he said; "it is but a light weight."

"Yes, I doubt na it seems so to the carrier, but I would no think it so light a thing to ha' word o' the lad. We ha' been neighbors, ye see, this five year, with but little else that was civilized to come near us. An' there's a wide difference atween neighbors o' stone pavements an' neighbors o' the hills—a fine difference."

"Yes, there is," agreed the girl; and from their tones one would gather the impression that all the splendors of a metropolis were as nothing when compared with the luxuries of "shack" life in the "bush."

"Can yet hit the trail down at the forks without me along?" asked MacDougall, with a sudden remembrance of the fact that Rachel did not know the way so well from the "Place of the Tamahnous" as she did from Scot's Mountain. She nodded her head independently.

"I can, Davy MacDougall. And you are paying me a poor compliment when you ask me so doubtfully. I've been prowling through the bush enough for this past year to know it for fifty miles around, instead of twenty. And now if your highness thinks we've had our share of this fire, let us 'move our freight,' 'hit the breeze,' or any other term of the woolly West that means action, and get up and git."

"I am at your service," answered Stuart, with a graciousness of manner that made her own bravado more glaring by contrast. He could see she assumed much for the sake of mischief and imitation to himself; and his tone in reply took an added intonation of refinement; but the hint was lost on her—she only laughed.

"I tell you what it is, Davy MacDougall," she remarked to that gentleman, "this slip of your nation has been planted in the wrong century. He belongs to the age of lily-like damsels in sad-colored frocks, and knights of high degree on bended knee and their armor hung to the rafters. I get a little mixed in my dates sometimes, but believe it was the age when caps and bells were also in fashion."

"Dinna mind her at all," advised the old man; "she'd be doin' ye a good turn wi' just as ready a will as she would mak' sport o' ye. Do I not know her?—ah, but I do!"

"So does the Stuart," said Rachel; "and as for doing him a good turn, I proved my devotion in that line this morning, when I saved him from a lonely, monotonous ride—didn't I?" she added, glancing up at him.

"You look positively impish," was the only reply he made; and returning her gaze with one that was half amusement, half vexation, he went out for the horses.

"You see, he didn't want me at all, Davy MacDougall," confided the girl, and if she felt any chagrin she concealed it admirably. "But they've been talking some about Genesee down at the ranch, and—and Stuart's interest was aroused. I didn't know how curious he might be—Eastern folks are powerful so"—and in the statement and adoption of vernacular she seemed to forget how lately she was of the East herself; "and I concluded he might ask questions, or encourage you to talk about—well, about the tunnel, you know; so I just came along to keep the trail free of snags—see?"

The old man nodded, and watched her in a queer, dubious way, as she turned, a moment later, to speak to Stuart at the door, she noticed it, and laughed.

"You think I'm a bit loony, don't you, Davy MacDougall? Well, I forgive you. Maybe, some day, you'll see I'm not on a blind trail. Come and see us soon, and give me a chance to prove my sanity."

"Strange that any mind could doubt it," murmured Stuart. "Come, we haven't time for proofs of the question now. Good-by, MacDougall; take care of yourself for the winter. Perhaps I'll get back in the summer to see how well you have done so."

A hearty promise of welcome, a hand-clasp, a few more words of admonition and farewell, and then the two young people rode away across the ground deemed uncanny by the natives; and the old man went back to his lonely task.

On reaching the ranch at dusk, it was Rachel who was mildly hilarious, seeming to have changed places with the gay chanter of the dawn. He was not sulky, but something pretty near it was in his manner, and rather intensified under Miss Hardy's badinage.

She told the rest how he divided his whisky with the squaw; hinted at a fear that he intended adopting the papoose; gave them an account of the conversation between himself and Skulking Brave; and otherwise made their trip a subject for ridicule.

"Did you meet with Indians?" asked Tillie, trying to get the girl down to authentic statements.

"Yes, my dear, we did, and I sent them home to you—or told them to come; but they evidently had not time for morning calls."

"Were they friendly?"

"Pretty much—enough so to ask for powder and shot. None of the men sighted them?"

"No."

"And no other Indians?"

"And—why?"

"Only that I would not like Talapa to be roughly unhorsed."

"Talapa! Why, Rachel, that's—"

"Yes, of course it is—wtih a very promising family in tow. Say, suppose you hustle Aunty up about that supper, wont you? And have her give the Stuart something extra nice; he has had a hard day of it."

CHAPTER V.
A Visit in the Nighttime.
Yahka Kelapie.

The snows had dropped a soft cloak over the Kootenai hills, and buried the valleys in great beds of crystallized down. Rachel's prophecy had proven a true one, for the clouds that day had been a visiting card from winter.

That day was two weeks gone now; so was Stuart's leave-taking, and at the ranch life had dropped into the old lines, but with an impression of brightness lost. Miss Margaret had not yet got over the habit of turning quickly if anyone entered the room, and showing her disappointment in a frown when it was not the one looked for.

Aunty Luce declared she "nevah did see a chile so petted on one who wasn't no kin."

All of them discovered they had been somewhat "petted" on the genial nature. Again the evenings were passed with magazines or cards; during his stay they had revived the primitive custom of taking turns telling stories, and in that art Stuart had proven himself a master, sometimes recounting actual experiences of self or friends, again giving voice to some remembered gem of literature; but, whatever the theme, it was given life, through the sympathetic tendencies of the man who had so much the timber of an actor—or rather an artist—the spirit that tends to reproduce or create.

If Rachel missed him, she kept quiet about it, and ridiculed the rest if any regrets came to her ears. No one minded that much; Rachel ridiculed everyone—even herself. Sometimes she thought Fate seemed more than willing to help her. One night, two weeks after that ride from the "Place of the Tamahnous," she was struck with a new conviction of the fact.

Andrews had gone to Holland's for the mail and domestic miscellany. A little after sun-up he had started, and the darkness was three hours old, and yet no sign or sound. The rest had finally given up the idea of getting any letters that night, and had gone to bed. As usual, Rachel—the night owl of the family—was left the last guard at the warm hearth. Upstairs she could hear Jim's voice in the "boys'" room, telling Ivans some exploit whose character was denoted by one speech that made its way through the ceiling of pine boards:

"Yes, sir; my horse left his'n half a length behind every time it hit the ground."

Ivans grunted. Evidently he had listened to recitals from the same source before, and was too tired for close attention; anyway, the remarks of this Truthful James drifted into a monologue, and finally into silence, and no sound of life was left in the house.

She had been reading a book Stuart had sent back to her by Hardy, the day he left. She wondered a little why, for he had never spoken of it to her. It was a novel, a late publication, and by an author whose name she had seen affixed to magazine work; and the charm in it was undeniable—the charm of quiet hearts and restful pictures, that proved the writer a lover of the tender, sympathetic tones of life, rather than the storms and battles of human emotions.

It held the girl with a puzzling, unusual interest—one that in spite of her would revert from the expressed thoughts on the paper to the personality of the man who had sent it to her, and she found in many instances a mystifying likeness.

She sat there thinking drowsily over it, and filled with the conviction that it was really time to go to bed; but the big chair was so comfortable, and the little simmer of the burning wood was like a lullaby, and she felt herself succumbing, without the slightest rebellion, to the restful influence. She was aroused by the banging of a door somewhere, and decided that Andrews had at last returned; and remembering the number of things he had to bring in, concluded to go out and help him. Her impulse was founded as much on economy as generosity, for the late hour was pretty good proof that Andrews was comfortably drunk—also that breakages were likely to be in order.

It was cloudy—only the snow gave light; the air was not cold, but had in it the softness of rain. Over it she walked quickly, fully awakened by the thought of the coffee getting a bath of vinegar, or the mail mucilaged together with molasses.

"Oh, here you are at last!" she remarked, in that inane way people have when they care not whether you are here or in the other place. "You took your own time."

"Well, I didn't take any other fellow's!" returned the man from the

SOMETHING FOR NOTHING

BUT YOU MUST BE PROMPT

A COMPLETE MANUAL OF CROCHET AND TATTING

By Anna Valeire

This book on crochet and tatting craft is most timely, as these arts in all their forms are very popular at the present time. It contains over sixty designs and combines new and original patterns of rare beauty combined with dainty simplicity and elegant taste. The abbreviations used to designate the different stitches in tatting and crocheting are given and their meaning explained in full. Instructions are given in detail for every design displayed in the book. Therefore, the novice in this art will have no trouble whatever in working the simple, though seemingly complicated, designs which have been compiled for her special benefit and in very little time will find that she may easily attempt the more complicated patterns intended for more advanced and experienced needleworkers. The lovely array of insertions, edgings and medallions suggest numerous ways in which they may be used to beautify both personal and household articles. The dainty tattings immediately bring to mind handkerchiefs of cob-web fineness. The simpler crochet insertions and edges suggest pretty bath-room sets and bed linen. There are no end of designs which may be used on dresses and lingerie; two yoke patterns which appear in the book make it particularly desirable. Designs for luncheon sets, scarfs, curtain edges and panels, and the new round pillow tops, and many more things which will suggest themselves to the worker are all contained in the wonderfully complete book on this fascinating art needlework.

This wonderful book of working size designs and explicit instructions will be sent Free and postpaid if you will send your order for any of the following combinations of magazines before November 10, 1916.

THE REASON FOR THE INCREASED COST OF MAGAZINES

The price of paper has increased over 100 per cent and the cost of inks and other materials entering into the manufacture of magazines has caused some publishers to increase their subscription price. The magazines offered below will accept orders from The Library Reading Club until November 10th at the prices which have prevailed for the past year. As an extra inducement for promptness, we will give a copy of Crochet and Tatting by Anna Valeire, to all who send us orders before November 10, 1916.

Last Chance Prices!

	Price Now	After Nov. 10th

dark corner where he was unsaddling the horse.

Andrews was usually very obsequious to Miss Rachel, and she concluded he must be pretty drunk.

"I came out to help you with the things," she remarked from her post in the doorway; "where are they?"

"I've got 'em myself," came the gruff tones again from the corner. "I reckon I'll manage without help. You'd better skip for the house—you'll catch cold likely."

"Why, it isn't cold—are you? I guess Aunty left a lunch for you. I'll go and warm the coffee."

She started, and then stopped.

"Say, did you get any letters for me?"

"No."

With a grumble about her ill-luck, she started back toward the house, the late arrival following a little ways behind with something over his shoulder. Once she looked back.

"I rather think Andrews gets on dignified drunks," she soliloquized; "he is walking pretty straight, anyway."

She set the coffee pot on the coals and glanced at the bundle he had dropped just inside the door—it was nothing but a blanket and a saddle.

"Well, upon my word!" she began, and rose to her feet; but she did not say any more, for, in turning to vent her displeasure on Andrews, she was tongue-tied by the discovery that it was not he who had followed her from the stable.

"Genesee!" she breathed, in a tone a little above a whisper. "Alah mika chahko!"

She was too utterly astonished either to move toward him or offer her hand; but the welcome in her Indian words was surely plain enough for him to understand. It was just like him, however, not to credit it, and he smiled a grim understanding of his own, and walked over to a chair.

"Yes, that's who it is," he remarked. "I am sorry, for the sake of your hopes, that it isn't the other fellow; but—here I am."

He had thrown his hat beside him and leaned back in the big chair, shutting his eyes sleepily. She had never seen him look so tired.

"Tillikum, I am glad to see you again," she said, going to him and holding out her hand. He smiled, but did not open his eyes.

"It took you a long time to strike that trail," he observed. "What brought you out to the stable?"

"I thought you were Andrews, and that you were drunk and would break things."

"Oh!"

"And I am glad to see you, Jack."

He opened his eyes then. "Thank you, little girl. That is a good thing for a man to hear, and I believe you. Come here. It was a good thing for me to get that word from Kalitan, too. I reckon you know all that, though, or you wouldn't have sent it."

She did not answer, but stopped to lift the pot of coffee back from the blaze. The action recalled him to the immediate practical things, and he said:

"Think I can stay all night here?"

"I don't know of any reason to prevent it."

"Mowitza was used up, and I wanted a roof for her; but I didn't allow to come to the house myself."

"Where would you have slept?"

"In my blanket, on the hay."

"Just as if we would let you do that on our place!"

"No one would have known it if you had kept away from the stable, and in your bed, where you ought to be."

"Shall I go there at once, or pour your coffee first?"

"A cup of coffee would be a treat; I'm dead tired."

The coffee was drunk, and the lunch for Andrews was appropriated for Genesee.

"Have you come back to the Kootenai country for good?" she asked, after furnishing him with whatever she could find in the pantry without awakening the rest.

"I don't know—it may be for bad," he replied doubtfully. "I've taken the trail north to sound any tribes that are hostile, and if troops are needed they are to follow me."

"Up into this country?"

"I reckon so. Are you afraid of fighting?"

She did not answer. A new idea, a sudden remembrance, had superseded that of Indian warfare.

"How long since you left Fort Owens?" she asked.

"Fifteen days. Why?"

"A friend of MacDougall's started in that direction about two weeks ago. Davy sent a kind message by him; but you must have passed it on the way."

"Likely; I've been in the Flathead country, and that's wide of the trail to Owens. Who was the man?"

"His name is Stuart."

He set the empty cup down and looked in the fire for a moment with a steadiness that made the girl doubt if he had either heard or noticed; but after a little he spoke.

"What was that you said?"

"That the man's name was Stuart."

"Young or old?"

"Younger than you."

"And he has gone to Fort Owens?"

"Started for there, I said."

"Oh! then you haven't much faith in a tenderfoot getting through the hostiles or snowbanks?"

"How do you know he is a tenderfoot?"

He glanced up; she was looking at him with as much of a question in her eyes as her words.

"Well, I reckon I don't," he answered, picking up his hat as if to end the conversation. "I knew a man called Stuart once, but I don't know this one. Now, have you any pressing reason for loafing down here any longer? If not, I'll take my blanket and that lounge and get some sleep. I've been thirty-six hours in the saddle."

In vain she tried to prevail on him to go upstairs and go to bed "right."

"This is right enough for me," he answered, laying his hat and gloves on a table and unfastening his spurs. "No, I won't go up to the men's room. Good night."

"But, Jack—look here—"

"I can't—too sleepy to look anywhere, or see if I did look;" and his revolvers and belt were laid beside the growing collection on the table.

"But Hen will scold me for not giving you better lodging."

"Then he and another man will have a shooting match before breakfast tomorrow. Are you going?"

He was beginning to deliberately unfasten his neckgear of scarlet and bronze. She hesitated, as if to make a final protest, but failed and fled; and as the door closed behind her, she heard another half-laughing "Klahowya!"

Early in the morning she was downstairs, to find Aunty Luce half' wild with terror at the presence of a stranger who had taken possession of the sitting room during the night.

"Cain't see his face for the blanket," she whispered shrilly, "but he's powerful big; an'—an' just peep through the door at the guns and things—it's wah times right ovah again, shueh as I'm tellen yo' chile."

"Be quiet, Aunty, and get breakfast; it's a friend of ours."

"Hi-yi! I know all 'bout them kind o' friends, honey; same kind as comes South in wah times, a trampen' into houses o' quality folks an sleepen' whah they liked, an' callen' theyselves friends. He's a moven' now!—less call the folks!"

The attempted yell was silenced by Rachel clapping her hand over the full lips and holding her tightly.

"Don't be a fool!" she admonished the old woman impatiently. "I let the man in last night; it's all right. Go and get him a good breakfast."

Aunty Luce eyed the girl as if she thought her a conspirator against the safety of the house, and despite precautions, managed to slip upstairs to Tillie with a much-garbled account of thieves in the night, and war-times, and tramps, and Miss Rache.

Much mystified, the little woman dressed quickly, and came down the stairs to find her husband shaking hands quite heartily with Genesee. Instantly she forgot the multitudinous reasons there were for banning him from the bosom of one's family, and found herself telling him he was very welcome.

"I reckon in your country a man would wait to hear someone say that before stowing his horse in their stables, or himself in their beds," he observed.

His manner was rather quiet, but one could see that the heartiness of there greeting was a great pleasure, and it may be, a relief.

"Do you call that a bed?" asked Tillie, with contemptuous warmth. "I do think, Mr. Genesee, you might have wakened some of us, and given us a chance to treat a guest to something better."

"I suppose, then, I am not counted in with the family," observed Rachel, meekly, from the background. "I was on hand to do the honors, but wasn't allowed to do them. I even went to the stable to receive the late-comer, and was told to skip into the house, and given a general understanding that I interfered with his making himself comfortable in the hay-mow."

"Did she go out there at night, and alone, after we were all in bed?" And Tillie's tone indicated volumes of severity. (To be continued.)

Live Stock and Commercial Field Notes

Herr Bros. & Reynolds Short-horn Sale.

ONE of the most desirable lots of Short-horn cattle to be offered at public sale this fall will be presented at Lodi, Wis., Friday, November 3d, by Herr Bros. & Reynolds, a firm of breeders that have forced their way to the front through hard work and constructive breeding operations. For this sale they have listed forty-eight head—thirty-five females and thirteen bulls, nearly all produced by the owners, all richly bred along Scotch lines and possessing very marked individual merit. Many of the younger things in this sale are by Master Ruby, their champion bull, and one of the best sons of Archer's Hope, conceded by competent judges to be the greatest breeding bull in Canada. Others are the get of White Rock by Whitehall Sultan, Cumberland Ideal, a grandson of Cumberland's Last and Golden Sultan by White Rock. The females in this offering are all good young ages and those of breeding age are practically all bred to Master Ruby, a fact which should give them added value in the eyes of the buying public. There are only four females in the sale that are over three years old, and one of them, Lucille, sells with a heifer calf at foot by Master Ruby. The other three, Shirly by Ceremonious Crown, Sultan's Gift by Golden Sultan and Lancaster Lady 5th are all in calf to Master Ruby. There are some outstanding show propositions in the younger females that should certainly attract the attention of those wishing the best. Lodi Wimple by Cumberland Ideal is a senior yearling good in every way, while Lady Holly by White Rock and out of Christmas Holly, the show cow that sold at their last sale, is a fast goer in any company. Princess 6th and Princess 7th are a pair of twin heifers by Golden Sultan that are right in every way. They won first at the Wisconsin State Fair this year for produce of dam. There are five junior yearling heifers by White Rock that are an extra good bunch, all running very even as to size and quality. Two senior heifers and one junior heifer by the same bull are listed and they deserve special attention sale day. One of the seniors is a Duchess of Gloster and the other is an Acanthus heifer out of a Golden Venus dam by Royal Robin. There is much of merit throughout the entire offering. In former sales buyers have secured some very desirable bargains at Herr Bros. & Reynolds. In fact several animals were sold at their last year's sale on which the purchasers more than doubled their money. For the coming sale they are sending forward the very best that their herds afford and their enterprise in this matter should certainly meet with hearty appreciation. Catalogs can be secured by addressing Herr Bros. & Reynolds, Lodi, Wis. When you write kindly mention this paper. See page 29.—Adv.

How Comfort Came to Father.

By Walt Mason.

IN labor savers nothing's greater than yonder little radiator, that keeps my shanty warm; while it's on deck the weather agent may bring along his whole blamed pageant—I laugh at wintry storm. When I was young the winter weather made all sit up and roar together, so much of grief it brought; day after day we had to rustle, and wear out morals, mind and muscle, to keep the old house hot. In autumn, when the winds were gusty, we'd polish stoves all red and rusty, and pack them from the shed; and while with stovepipes we were fussing, a mile away you'd hear us cussing enough to raise the dead. Oh, comrade, did you ever teeter around a punk old-fashioned heater, that ate up elm and oak? And have you ever, gentle reader, packed in the logs of birch and cedar, until your back was broke? No wonder Daddy was a snarled: the open fireplace in the parlor would make him gasp and cough; when he sat there to thaw his system, a streak of fire flashed out and kissed him, and burned his whiskers off. The rooms wherein no stoves were roaring were colder than the waters pouring down Greenland's frozen hills; one room would roast us to the center, and when the next room we would enter, we'd have attacks of chills. The stovepipes evermore were choking, and then the stoves would do some smoking that drove us out of doors; and we would stand out there a-freezing and saying bitter things and sneezing, and raising frenzied roars. But times have changed and now the blizzard may whoop until it strains its gizzard, there's comfort in my home; 'twas brought here by that radiator; no more, to feed the "heater's" crater, for cordwood do I roam. No more am I a weary toiler; down cellar there's an Ideal boiler, I 'tend to twice a day; and day and night the house is cheery, there is no room that's cold or dreary, and life is glad and gay. See page 9.—Adv

Meinking's Poland Chinas.

R. MEINKING, the pioneer Poland China breeder of the state, located at Bangor, Wis., has about twenty spring boars that would look good at the head of most herds. Mr. Meinking does not raise the extreme big-type kind and no doubt many of our readers prefer Polands of the medium type, if so Mr. Meinking can supply your wants to your satisfaction. Get his prices and don't forget to mention The Wisconsin Farmer. See page 28.—Adv.

Waukesha Guernsey Sale.

GUERNSEY breeders will be particularly interested in the sale of Guernsey cattle to be held November 1st and 2d by the Waukesha Guernsey Breeders' Association. They are dividing the sale into two days and are offering an exceptionally high class of animals. The first day they will sell only registered females and a few high-class bulls, most of which will be from high record A. R. cows. It will be an outstanding offering of females, a number of which have completed very creditable Advance Registry records. Most of the heifers offered are from A. R. sires and a number are from A. R. dams as well. The second day a fine lot of high-class grades and a number of good bulls will be sold. A sale of grades is an innovation in Waukesha county. The Guernsey Breeders' Association has received requests for a sale of grade cattle in connection with its sale of registered cattle, so this year have complied with this request. It is becoming more apparent each year that the integrity and reputation of the seller is of equal or even of more importance to the buyer than the breeding of the animals offered. This is of even more importance at a public sale than when buying cattle at private treaty, as the opportunity of talking with the seller and of examining the cattle is more limited. We are pleased to be able to recommnd the Wauksha Guernsey breeders as men of honor, who consider every promise an obligation, and every buyer is entitled to know exactly what he is buying. No side bidding is allowed and every animal offered is straight and right; defects, if any, are announced. Send for a catalog to F. E. Fox, Waukesha, Wis., and kindly mention The Wisconsin Farmer when writing.—Adv.

Sold His Surplus Bull Supply

M. B. MAGOON, Whitewater, Wis., has found The Wisconsin Farmer a valuable salesman for his live stock. A recent advertisement sold his four bulls in a very short time. Read what he says:

My last advertisement in The Wisconsin Farmer did fine, as I sold the four bulls that I had within a short time. When your field man is in the vicinity of Whitewater have him call on me, as I will have some yearling bulls to advertise.

What The Wisconsin Farmer has done for Mr. Magoon and many other breeders it may do for you if you will let it carry your message to the over 90,000 possible buyers who read The Wisconsin Farmer every week.

The Wisconsin Farmer Madison, Wis.

Guaranteed Circulation, 90,000.

Miller Chester Whites.

WE recently stopped a few minutes at the fine farm of W. F. Miller, West Salem, Wis. He is a breeder of Chester Whites and still has some boars that will suit the buying public. These will not last long, so if you are going to need a boar of this breed better send in your order at once. See page 31.—Adv.

An Angus Sale Out of the Ordinary.

THERE will be a sale of Aberdeen Angus cattle at Canton, Minn., on Thursday, November 9th, that should appeal to all men who are interested in this good breed of beef cattle. Wisconsin especially needs more and better beef cattle and there are fewer good herds of Angus cattle in that state than of any other breed. This sale will contain animals suitable for foundation stock or to improve the herd that you already own. M. C. Willford, Canton, Minn., and Roy Miller, Prosper, Minn., have been breeding Angus cattle for many years and we believe we are safe in saying that they have two of the best herds in that state. The tops of these two herds have been selected for this sale, for it is their ambition to make this the greatest sale of Angus cattle ever held in the Northwest. The following bulls have been used in these herds: Elgin Eric by Earl Eric of Ballindalloch, dam imported and bred by the king of England; Banner Boy E. by Woodlawn Blackbird Prince, a double-bred Blackbird; Black Eagle C. by Black Woodlawn, and Thickset Idol by Glenfoyl Thickset 2d, a bull that was grand champion at Chicago and a winner at several of the state fairs. By this array of breeding you can see that they have had the very best for several years. Mr. Willford's present bull is Protector E., an outstanding two-year-old bull sired by the champion, Prince Felzer, dam a Pride cow. This was the highest-priced bull in the Escher sale last year. There will be some calves in the sale by this bull and many of the females are safe in calf to him. Mr. Miller's present bull is a three-year-old, Erwin Lad W., sired by Belfast by Black Woodlawn, dam an Erica cow. The young stuff that Mr. Miller has by this bull proves that he is a sire of worth. There will be thirty females in the sale and ten bulls. There will be ten two-year-old heifers with calves at foot or to freshen in a short time, five open heifers and the balance of the females will be young cows with calf or calves at foot. There will be two tried bulls and eight of serviceable age around a year old. Watch next week's issue for an account of some of the outstanding females that go in the sale of the five popular families. Write for the catalog at once. It is full of pictures of the cattle that go in this sale. Please say you saw the advertisement in The Wisconsin Farmer. See page 25.—Adv.

PART OF THE HOLSTEIN HERD OF GEO. H. GIBSON, NASHOTA, WIS., WHOSE ADVERTISEMENT APPEARS ON PAGE 30.

NEXT WEEK'S SALE PROGRAM

Wednesday, November 1st	Guernseys, Waukesha County Guernsey Breeders' Association, Waukesha, Wis.
Thursday, November 2d	Short-horns, Anoka Farms Company, Waukesha, Wis. Guernseys, Waukesha County Guernsey Breeders' Association, Waukesha, Wis.
Friday, November 3d	Short-horns, Herr Bros. & Reynolds, Lodi, Wis.
Saturday, November 4th	Ponies, Heyl Pony Farm, Washington, Ill.

Anoka Farms Short-horn Sale.

THE importance of the annual Short-horn sales at Anoka Farms is so firmly established that the simple announcement of the date on which the sale is to be held is all-sufficient to attract wide-spread attention. For the November 2d sale there has been listed the entire 1915-16 crop of calves, consisting of forty-five head—twenty bulls and twenty-five females, the get of Sultan Stamp, Regal Stamp, Village Denmark, Imp. Rusper's Champion and other noted sires. Included in this list is all the 1916 show stock, among them the first-prize calf herd at the leading shows and the ten head of youngsters that won the 1916 Royal, the coveted trophy given to the Short-horn exhibitor showing the best ten head of Short-horns bred by exhibitor. Some brief mention has already been made regarding some of the outstanding young bulls in this offering. The female portion of the sale measures up in every way with the bull offering, both as regards blood lines and individual merit. There are twenty-five young females in the sale representing all the popular tribes, and so good individually that any particular mention seems unnecessary. Victoria Anoka by Village Denmark, out of a dam by Premier is an outstanding show proposition, while Lavender Anoka 4th by Regal Stamp is a very thick, even, well-lined, mossy-coated heifer of an approved pattern. Calceolaria 7th by Regal Stamp is an extra good heifer from one of the most dependable families at Anoka and Anoka Missie 3d by Village Denmark is a very even, smooth heifer, out of a dam by Whitehall Sultan. Anoka Augusta 4th by Regal Stamp, is a fit representative of the popular August tribe, while a beautiful heifer is listed in Anoka Clipper 4th by Sultan Stamp. Anoka Augusta 3d is a very promising youngster that was imported in dam. Anoka Blossom by Sultan Stamp was first at Iowa, Minnesota and Wisconsin this year, and Anoka Clipper 3d by Regal Stamp was second at the same fairs. These are two of the top things in the offering. Lavender Anoka 3d by Imp. Rusper's Champion is a fine prospect and a heifer of very attractive type is offered in Anoka Broadhooks. These are only a few of the good things listed, but will suffice to give our readers some idea of the high value of the offering. Both Mr. Harding, the president of Anoka Farms and George Sim, the manager may well feel proud of the offering they have prepared for the coming sale. It is the best lot of youngsters that has ever been sent forward at Anoka, and when that statement is made it covers about all that can possibly be said in favor of a sale offering. No better Short-horns are produced anywhere than are to be found at Anoka Farms, and in the coming sale will be listed forty-five animals that will give striking evidence as to the merit of this great Wisconsin establishment as a progressive, constructive breeding farm. Catalog should have wide distribution. Send for it today, mentioning this paper when you write. Address Anoka Farms, Waukesha, Wis. See page 29.—Adv.

Sanitation Avoids Sickness.

FARMERS lose millions of dollars each year from illness. Much of this illness could be avoided if people made every possible effort to live in rooms which get sunlight and fresh air. Good ventilation, clean houses and premises, and the removal of danger of infection from the outhouse will do much toward preventing this illness. The invention of the sanitary chemical indoor closet has done away with the necessity of putting up with insanitary outhouses. During the past year thousands of farmers have torn down their outhouses and installed these chemical closets. The Rowe indoor closet, manufactured by the Rowe Sanitary Mfg. Co., 1026O Rowe Bldg., Detroit, Mich., is one of the most satisfactory of these. Read the description in the advertisement on page 19 and write for information. Tell them you read the advertisement in this paper.—Adv.

Aberdeen Angus Females for Sale.

THERE has been considerable inquiry for Angus cows and heifers, but most of the breeders refuse to price any females. We recently called on E. F. Ganz & Son, Alma, Wis., and found them with more cows and calves than they can conveniently stable, consequently they are offering to sell three four-year-old cows with heifer calves at foot and rebred and three yearling heifers out of the three cows mentioned above. This is certainly a breeding herd. There are twelve breeding cows in the herd, twelve calves at foot and twelve yearlings out of these cows. Nearly all of the calves dropped on this

farm have been heifers. If you want Angus it will pay you to investigate this herd. Alma is located on the river just north of Winona, Minn. Good train service on the C., B. & Q. Write for description and mention The Wisconsin Farmer.—Adv.

Hagemeister Percheron Sale.

LAST week we endeavored to give a general idea of the offering of Percherons in the Hagemeister sale to be held November 15th at Green Bay, Wis. The sale is one that will make Percheron history in Wisconsin, for the horses to be sold represent the best breeding ever owned in the state. It is largely a Baccarat-Historique sale, as a majority of the animals in the sale are rich in the blood of one or both of these two great imported stallions. Baccarat 11326 in his time was one of the most-talked-of stallions of the breed. He was purchased by R. R. Kellogg, of Green Bay, for more money than had ever been paid for a Percheron stallion up to that time. The late Henry F. Hagemeister purchased him at the dispersion of Mr. Kellogg's stud. Baccarat mares have been in great demand by the best breeders in the country and it is easy to understand when you see the type and conformation of their offspring. Historique 71752 was imported by Mr. Hagemeister and his worth as a breeding animal may be judged at this sale. There are five of his sons and nearly twenty of his daughters in this sale. Two of the stallions and six mares are sired by him and out of daughters of Baccarat; one stallion and eight mares are by him and out of imported mares. The stallion now at the head of the herd and the one to which most of the mares are bred is Brilliant 47573. He is an outstanding individual weighing over a ton. He has a beautiful neck and head; a clear, quiet, large eye; good back, rounded hips and strong, heavy limbs; in fact, it is practically impossible to fault him in any point. He will be sold in the sale, as will also the junior stallion, McDougal 94905. Every animal is straight and not a weakness or flaw on a single animal. It is without exception the finest lot of mares we have seen in one herd. The animals are all black in color except one gray stallion, one gray mare and two iron gray fillies. Catalogs giving description and breeding are now ready and will be mailed on request to the Hagemeister Brewing Co., Green Bay, Wis. See page 28.—Adv.

Schmidt's Guernsey Heifers.

A FINE lot of registered Guernsey heifers are advertised for sale on page 30 by Chas. Schmidt, Wrightstown, Wis. They are daughters and granddaughters of the richly bred bull, Goodwill Hero 17072, that comes from an imported son and daughter of Governor of the Chene. These heifers are from imported and richly home-bred cows. They are ten months of age and are well grown, of good type and well marked. Mr. Schmidt reports a brisk demand for registered Guernseys and sends us the following list of sales: Registered bull to W. H. Francis, Polk county, Wisconsin; registered bull to F. Foster, Abrams, Wis.; registered bull to James Turriff, West De Pere, Wis.; registered bull to Geo. Lucia, secretary of the Brown County Guernsey Association, Green Bay, Wis.; two heifers and a bull to T. Franske, Forest Junction, Wis., and four heifers and a bull to Frank Kniskern, Middle Inlet, Wis.—Adv.

Menke's Poland Chinas.

ATTENTION is called to the advertisement of A. Menke & Son, Markesan, Wis., which appears on page 28. They are offering you your choice of seventy-nine big-type Poland China spring pigs farrowed in March. They carry heavy bone; have length and stretch, and are well bred. They are also offering several likely Shorthorn bulls, some of which are ready for service. Write for further particulars.—Adv.

Lefebures' Belgians.

H. LEFEBURE & SONS, Fairfax, Ia., have been importing and breeding Belgian draft horses for nearly a third of a century. Many of the best Belgians in the United States have been imported by the Lefebures. This firm has a decided advantage over the average American when it comes to buying Belgian horses for the reason that they are of Belgian descent, speak the language and have been in closer touch with conditions. While that in a way would cut no figure at the present time, yet the experience thus gained is of a decided advantage to the breeder and developer of high-class Belgian horses in this country. Over fifty Belgian mares are maintained on the Lefebure Farms and a majority of them are raising colts annually. A representative of this journal recently had the pleasure of looking over the Belgians on the many Lefebure Farms and was very much impressed with the uniformity and merit found. The weanling colts are largely sired by the prize-winning stallion, Jule's Remi, an imported stallion that stands at the head of this stud. At the present time this firm has for sale a number of imported stallions that are tried sires and are right in every particular. They also have a fine lot of two year olds that are ready for sale. The Lefebure Belgians have bone, weight and the size demanded by the draft horse admirers of this country. They can please those in the market for a Belgian stallion. See page 28 and write for catalog, kindly mention The Homestead.—Adv.

Durocs at Augusta, Wisconsin.

B. M. ARRIES, Augusta, Wis., has some good Duroc Jerseys and if you want a good boar or a few good gilts you can find them in this herd. When this breeder started in the "game" he bought excellent sows and they have made good for him. The produce will make good for you. Mr. Arries also has a yearling boar that he cannot use to advantage any longer and he is being priced very low, he is one of the best boars of his age that we know of for sale. Write this breeder and tell him what you want. Mention this journal. See page ..—Adv.

Holstein Breeders Take Notice.

EVERY Holstein breeder who is using a herd sire from a dam with a record of twenty-five pounds or less should investigate the bull advertised on page 30 by Dopp Brothers, Oconomowoc, Wis. This young bull is a highly desirable animal both as an individual and in blood lines. His dam is a 23.05-pound daughter of the great bull, Sir Clyde, that has forty-five A. R. O. daughters, four with records from thirty to 33.07 pounds butter in seven days, three others with records over twenty-seven pounds and eighteen others from twenty to 25.70 pounds. More than 50 per cent of his daughters have records ranging from twenty to thirty-three pounds of butter in seven days. The sire of the young bull for sale is a son of the 32.52-pound bull, Beauty Pietertje Prince, whose sisters and daughters are steadily making large records. The dam of this youngster's sire is a 24.29-pound sister of Pietertje Maid Ormsby, a former world's record cow, that made 35.56 pounds of butter in seven days. She is of rich Ormsby breeding on both sides of her pedigree. This is a richly bred young bull, as his extended pedigree will show. Send for it and look it over if in need of a herd header. When writing kindly mention The Wisconsin Farmer.—Adv.

Heyl Pony Farm Sale.

THE Heyl Pony Farm, Washington, Ill., will hold their annual public sale Saturday, November 4th. The offering consists of seventy head of Shetland, Welsh and Hackney ponies. The Welsh ponies are mostly sired by the grand champion stallion, Gwindy Brennin. There are also a number of imported stallions and mares. This is an opportunity for the breeder who wishes to establish a herd or to buy show-ring winners to get the most desirable kind. There are also a large number of well-broken ponies for children's use. Send for a catalog, which gives description and breeding, to the above address. See advertisement on page 27.—Adv.

Chris Kartman Buys Herd Boars.

CHRIS KARTMAN, the popular Poland China breeder living at Cassville, Wis., has one of the best bred herds of big-type Poland Chinas in the state of Wisconsin and he has recently added two herd boars that would be a credit to any herd. One boar is sired by Fessy's Timm, the junior champion of Nebraska last year and he by Big Timm, the grand champion of Nebraska. His dam is by old A Wonder and his grandam, King's Pride is by Long King by Chief Price. It would be hard to write a better pedigree and individually the boar is deserving of this good breeding. This boar is out of the same dam as the two junior yearlings that sold in an Iowa sale for $515 and $500. Mr. Kartman also bought Giant Wonder the best fall boar that was shown at Milwaukee this year. Mr. Kartman will hold a sow sale February 16th and the offering will be bred to these two boars. We have recently seen some of the gilts that will go in this sale and if they continue to do well it will be one of the best offerings of the winter. Mr. Kartman has some spring boars for sale—if you are in need of a boar write him for description. Please mention The Wisconsin Farmer. See page 28.—Adv.

The Smiley Poland Boars.

WM. SMILEY & SON, Albany, Wis., have one of the good Poland China herds of the state and we feel safe in saying that it is one of the oldest established herds in the state. Every breeder of pure-bred swine that does much business has some dissatisfied customers—this goes with the business and these dissatisfied customers tell their troubles to the field man; but we are glad to say that evidently Smiley & Son send out Poland Chinas that give satisfaction, for we have heard very little complaint about boars or sows purchased from this firm. They maintain a large herd and in this way they can cull their herd closely so that only the very best animals are sent out. They do a large mail order business, for they have a reputation for square dealing. They are now offering spring boars that are above the average. They are not overly fat, but the kind that continue to do well for you and make you a satisfied customer. You needn't be afraid to send them a mail order. Tell them about what you want and your order will be well taken care of. Don't forget to mention The Wisconsin Farmer when writing. See page 28.—Adv.

Dineen's Holsteins.

A YEARLING registered Holstein bull is advertised for sale on page 30, by C. F. Dineen, Cedarburg, Wis. Mr. Dineen has a "herd" that will be "heard" from, as he intends to do A. R. O. testing in the near future. Several of the cows in the herd already have very creditable records. One of these Mechtilde Daisy Longfield, has a record of 22.45 pounds of butter in seven days. She also has four A. R. O. daughters, one of which, as a three year old, made 22.39 pounds of butter in seven days. A son of this cow now stands at the head of the herd and is the sire of the yearling bull advertised for sale. Mr. Dineen is also advertising several high-grade cows 30-32 pure. These are bred to his good herd sire. For pedigrees

When you see an article advertised in The Wisconsin Farmer that your local storekeeper should have in stock, ask him to sell it to you. Tell him the name of the article you want. If he cannot supply it, please write and tell us his name and address, and give us the name of the article you tried to buy. Maybe we can help you get it.

A Good Place to Buy Breeding Stock.

WHEN we had finished looking over the Holstein herd of Fred Pabst, Oconomowoc, Wis., and had seen the fine big cows that make up the herd; when we saw the list of records that have been made and saw the preparation that is being made to improve the conditions for doing A. R. O. testing; when we saw the open-air method of raising young stock and every precaution being taken to preserve and protect the health of every animal in the herd we were strongly impressed with the one idea, namely, that here was a good place to buy breeding stock. A limited description such as we are able to give here cannot convey to you the work that Mr. Pabst is doing. An entire acticle could be written on the open-air method of raising calves, or on the breeding of his herd sires, or the records made by the cows in the herd or the new test barn which is now under construction. It is only by a visit or several visits that you will be able to comprehend how carefully Mr. Pabst is conducting this great herd, and the men who buy breeding stock here benefit by the work that has been done and the work that will be done. There are a great many who already have benefited by the continuous official testing that Mr. Pabst is carrying on. Among these are Schley Brothers, who bought a bull whose dam, I believe, made thirty-one pounds and the bull has, therefore, increased more than $1,000 in value. H. F. Parks, Elkhorn, Wis. purchased a bull from a small record cow in the Pabst herd. She later made thirty-one pounds and last year increased her record to over thirty-three pounds. There are many others that have been equally fortunate. You not only buy a good individual from a sire and dam of rich breeding, but you also get the advantage of the future records that the animals will be given the opportunity to make. There were four thirty-pound records made last spring in this herd, and the work has but just begun. A fine new test barn is now being built in which every convenience and comfort will be installed for making large records. We unhesitatingly advise the readers of The Wisconsin Farmer to visit this herd or to send for a list of the young bulls for sale when in the market for a herd sire. See page 30.—Adv.

Kloehn's Percheron Offering.

A FEW days ago we had the pleasure of visiting the farm of John Kloehn, Forest Junction, Wis., and looking over his Percheron horses. His farm is only a mile from the station and is one of the best in the vicinity. His Percheron herd traces largely to the mare, Karel 33640, bred by the Hagemeister Stock Farm. She is a double-bred Baccarat, for whom R. B. Kellogg paid $5,000, being out of a daughter and sired by a grandson of this noted stallion. Mr. Kloehn is offering a yearling stallion and two mares out of Karel and two fine stallions out of her daughter, Diana. This daughter was sired by Phil Sheridan by Achilles and is an excellent individual. Three of the animals for sale were sired by Imp. Haricot, that was imported by Fred Pabst and used by him for several years. He comes of Brilliant breeding on both sides. Our readers who are in the market for a right good yearling or two-year-old stallion or two or three-year-old mares should write to the above address. See page 28.—Adv.

Some Good Scotch Bulls.

WE HAVE had several people ask where they could buy a straight Scotch Short-horn bull and for the benefit of those prospective buyers want to suggest that they visit the Kennedy herd of Short-horns at Janesville and look at the Scotch bulls he has for sale. There are two bulls in the lot, that in our estimation, are great herd bull prospects. They are rich roan in color, having a fine Scotch coat of hair, very thick, heavy bone, deep-bodied fellows and bred along the most popular lines. If you want topped bulls Mr. Kennedy has some that will also suit you. Don't overlook these bulls—remember that Mr. Kennedy is laying the foundation for one of the best herds of Scotch Short-horns in the Northwest. Write for pedigree and detailed description and don't fail to mention The Wisconsin Farmer. See page 29.—Adv.

Chesters, Jerseys and Collies.

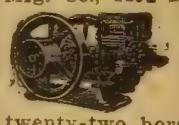
WITH this issue of The Wisconsin Farmer, John Pellett, Viola, Wis., starts his advertisement calling attention to the registered stock he has for sale. We have seen some of the Chesters he has for sale and they are a nice representative lot of this popular breed. They ar well bred and are being priced for quick sale. Mr. Pellett also breeds Jersey cattle and if you are interested in this breed you will be interested in his cattle. Scotch Collies are useful as well as ornamental—Mr. Pellett has some nicely marked pups of this breed for sale. Write for prices and description of any of the above breeds that you are interested in. Don't forget to mention The Wisconsin Farmer. See page 31.—Adv.

Holts' Jerseys.

DO you need a registered Jersey bull? If so, we advise you to investigate those advertised for sale on page 27 by Henry Holt & Son, Oconomowoc, Wisconsin. These were sired by the bull, Inez Rosaries Oxford, and are out of heavy producing dam of good type and conformation. The cows in this herd have particulary good udders, being both large and well quartered. They are large cows themselves and the bulls offered for sale are of good size. For description and further information in regard to breeding write to the above address.—Adv.

Cheaper Farm Power.

IT HAS long been recognized that if kerosene could be used in the so-called gasoline engines for general farm use, that it would greatly reduce the cost of fuel and make farm power much less expensive. Engineers and manufacturers everywhere have been working for some time to perfect an engine for the use of kerosene on the farm instead of gasoline. The Ottawa Mfg. Co., 1191 King St., Ottawa, Kan., are now making the announcement of a complete line of kerosene engines for farm use. This line includes all sizes from one and a half horse power to twenty-two horse power. They claim that their actual horse power, depending upon the size of the engine, is from one-fourth to six horse power greater than they are rated. This line of engines offers the readers of this paper an opportunity to buy actual horse power at a very low cost and also by the use of kerosene to cut down the expense of operating these engines to a minimum. Doubtless many readers of this paper will be interested in the Ottawa engine. Full particulars may be had by addressing Ottawa Mfg. Co., 1191 King St., Ottawa, Kan. See page 2. —Adv.



John Steel's Holsteins.

WISCONSIN may well be proud to be the home of such a herd of Holstein cattle as that of John Steel, Oconomowoc, Wis. Mr. Steel established this herd over twenty years ago. He is a careful, discriminating judge of Holsteins and has selected his breeding stock very carefully. He has selected for type and conformation as well as production. That he has chosen well is shown by the high records which his cows have made during the past two years. The bull at the head of the herd is Contest Colantha Crown De Kol, a 27.96-pound son of Dutchland Colantha Contest Boy, he by Colantha Johanna Lad. At the present time Mr. Steel is offering a very desirable young bull for sale on page 30. He is sired by the above bull and is out of a 23.71-pound daughter of Aaggie Cornucopia Johanna Lad Jr. 6th. Mr. Steel also has several other young bulls out of dams with records above twenty pounds. These bulls are well grown and are well marked. He has an extended pedigree for each animal, which will be sent to prospective buyers.—Adv.

Bruins' Jerseys.

THE ribbons won by the herd of Jersey cattle owned by Ed Bruins, Fairwater, Wisconsin, speaks very highly for the type of animals that make up this herd. Mr. Bruins has been one of the leading importers and breeders of the middle West for many years. His herd now consists of more than fifty head of imported and home bred animals of proven lines of blood. Not only are his Jerseys of the right type to win at the leading state fairs and dairy shows, but they are also proving themselves as producers at the pail. Register of Merit testing is continually being done and a fine lot of records have and are being made. At the present time Mr. Bruins is offering a few registered heifers and young cows for sale. For pedigrees and further information in regard to these animals, write to the above address. See page 27.—Adv.

Hinman's Guernseys.

ONE of the best Guernsey herds in the Fox River Valley is that of A. H. Hinman, Allenville, Wis., whose advertisement appears on page 30. We were looking over this herd a few weeks ago and were highly pleased with the animals we saw there. The cows are large, roomy animals of good, straight type and good dairy conformation. The herd is headed by King Pin of Woodland, a bull whose sire and dam and grandsire and grandam are all in the advance register. At the present time Mr. Hinman is offering some very well-bred young bulls for sale. For pedigrees and description write to the above address.—Adv.

Schoenfeld's Poland Chinas.

IT is just as important when buying Poland China breeding stock that you get the animal that belongs to the pedigree, as it is to get a registered animal, as certificates of registration that are uncertain or false make your boar or sow of no greater value than a grade animal. Practically the only way you have of identifying Poland Chinas is by the ear marks. C. J. Schoenfeld & Son, Fox Lake, Wis., claim to ear mark all breeding stock, so that you may be sure of getting the right animal. They are advertising fall yearling boars sired by Big Bone and Long Wonder, on page 28. —Adv.

THE FARMERS' MARKET brings buyers and sellers together. Read what you can buy. Advertise what you can sell. Six cents a word each insertion.

Want to buy or sell a farm? Make it known by inserting an advertisement in THE FARMERS' MARKET. Six cents a word each insertion.

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. Place your name and address to it, then, to know its cost, count the number of words. The rate is six cents per word, each insertion. For instance, if your advertisement, including the address, has 15 words, one insertion would cost 90 cents, which is one cent for every thousand copies printed. Note the low cost, and read what small advertisements in The Wisconsin Farmer have done for others

One **Wisconsin Farmer** seed corn advertiser says: "We are getting a nice response to our advertising. We will come back with a larger advertisement." Another says: **"The Wisconsin Farmer** has done good work helping me to sell lots of stock." And another writes: "Please discontinue my advertisement in **The Wisconsin Farmer.** I am getting pretty well sold out for the present."

These small advertisements did not have the advantage of the classified headings now available —under which your advertisement would appear.

Any "Wanted," "For Sale," or "To Exchange" advertisement will receive prompt attention and insertion will be made in first issue possible.

THE WISCONSIN FARMER — **MADISON, WISCONSIN**

FARM LANDS.

WILL sell 300 acres at $40 per acre, 5 miles west of Eau Claire, Wisconsin, on main road. 270 acres cultivated. 30 acres pasture and timber. No stumps, no stone, level land, black, sandy loam soil. Seven-room house, chicken house, granary, two stables. Good clover land, is worth $80 per acre with little fixing. Will leave $10,000 in farm at 6%. Wirt Monroe, Mt. Hope, Wisconsin.

140 ACRES in Winnebago county, 3½ miles from Omro; good soil, running water, flowing well. Best of soil, level, some timber, fair building. Only $110 per acre. Have other splendid bargains in improved farms and unimproved lands. The list that can't be matched. W. E. Webster, Hudson, Wis.

CREAMERY.

COMBINED Creamery, Cheese and Ice Cream factory. Good location. Sale cheap. Wittenberg Creamery, Wittenberg, Wis.

LANDS AND HOMES

German or Swiss Grain Farmers

THE Denver and Salt Lake Railroad invites correspondence with those desiring homestead land in Northwestern Colorado, best adapted to grain raising. Individuals and colonies wanted. Address W. H. Paul, General Freight Agent, Denver and Salt Lake Railroad, 814 Ideal Building, Denver, Colorado.

RICH, well-watered, sheltered, cut-over dairy lands; clover abundant; quick responsive soil, offered homeseekers; write for our low prices, easy terms and descriptive circulars. Ellingson Cloverland Co., 311 Worden, Ave., Ladysmith, Wis.

WANT TO TRADE A GOOD quarter of Lyman county, S. D., land for Holstein heifers and cows, want to get into Holsteins and will give a good deal. Write J. A. Robertson, Sr., Draper, S. D.

WANTED! Your address if interested in dairy farms. Will send new list twenty improved all-purpose farms for sale cheap. Stannard, "The Land Man," Springville, Lawrence Co., Indiana.

PROSPERITY IN CANADA

$90,000,000 in new wealth added in 1913. Enormous crops and low taxation make farmers rich. Wheat average, 36.16 bushels per acre in Alberta, 28.75 bushels per acre in Saskatchewan, 38.50 bushels per acre in Manitoba. Taxes average $24 and will not exceed $35 per quarter section, includes all taxes; no taxes on improvements. Free schools and full religious liberty, good climate. Get your farm home from the Canadian Pacific Railway. 20 years to pay. Good land from $11 to $30 per acre; irrigated land from $35, and the government guarantees your land and water titles. Balance, after first payment, extended over nineteen years, with interest at 6%; privileges of paying in full any time. Before final payment becomes due your farm should have paid for itself. We will lend you up to $2,000 in improvements in certain districts, with no security other than the land itself. Particulars on request. Ready-made farms for sale. Special easy terms. Loans for live stock. In defined districts, after one year's occupation, under certain conditions, we advance cattle, sheep and hogs to farmers up to a value of $1,000. We want you if we can afford to help you. We own the land; we want the land cultivated. Our interests are mutual. Buy direct and get your farm home from the CANADIAN PACIFIC RAILWAY. Send for free book. J. S. Dennis, Assistant to the President, Canadian Pacific Railway, 82 Ninth Ave., Calgary, Alberta, Canada.

JUST AS A SAMPLE

Below Is Copy of Signed Statement of a Representative Golden Prairie Farmer

"Hillsdale, Wyoming, Sept. 18, 1914.

"Federal Land Company,
Burns, Wyo.
Dear Sirs:

"I have lived in Wyoming 6 years on E½ Sec. 30-16-64 and have raised good crops each year. This year I had 22 acres of winter wheat that made 19 bushels per acre. I have raised oats that yielded 60 bushels per acre and potatoes have made specially good crops each year. Our garden has always been good.

"I had two cows when I came here and now have 40 head of cattle and have sold 2 head, and have bought only 1, but have traded some steers for heifers. I milked this season 12 cows and my cream check for month of June was $96.00 even.

(Signed) FRANK KESLAR.

If you have not already received our literature describing the Golden Prairie District and the bargains we are offering in our Hillsdale Ranch just now being placed on the market, don't delay longer but drop us a card and we will send you some most interesting literature.

FEDERAL LAND COMPANY
BURNS, WYOMING

ARE YOU GOING TO BUY LAND?

IF so, get a copy of our journal first. It has land and city property and stocks of goods advertised in its columns from nearly every state, so that you can find just what you're looking for in its columns. Established 19 years and reaches 76,20 readers. Send 25c for one year's subscription or $1.00 for five years. Department F, Farm and Real Estate Journal, Traer, Iowa.

FARM FOR SALE in Iron county, Michigan 320 acres, 120 acres clear. Sixty-three head of graded Holstein cattle, 28 bearing milk cows, 5 head horses, machinery, building etc. Fine chance for cattle raising. Sold on reasonable terms. Inquire Geo. Premo, Amasa, Mich.

DAIRYING IN AITKIN COUNTY, MINN. will prove your royal road to fortune. Its soil, grasses, water, location, low prices and our easy terms, all are unequaled anywhere else. Write for literature. ARNOLD, Land Agent, 153 Welv. Bldg., Duluth, Minnesota.

ANNUAL PUBLIC SALE OF **70 HEAD OF SHETLAND, WELSH AND HACKNEY PONIES**

At the Heyl Pony Farm, November 4, 1916

OFFERING consists mostly of ponies sired by or bred to grand champion, King Larigo. Welsh ponies will be sired by grand champion, Gwindy Brennin. There will be imported mares and stallions as well as home-bred ones. We will offer ponies for the show ring, ponies for the breeder to establish a herd and well-broke ponies for children's use. Send for catalog which tells the whole story. **HEYL PONY FARM, Washington, Ill.**

Flaws in October Butter.

Twenty per cent of the butter at the October scoring in Madison scored below 90 per cent. Sixty-six per cent scored between 90 and 93 per cent. A study of the blanks sent in by exhibitors shows 33 per cent pasteurized cream used, while 67 per cent was churned in the raw state. Forty-six per cent of butter scored was made from cream one and two days old. In criticizing this butter, Mr. O. A. Storvick, of Albert Lea, says:

This lot of butter was a little irregular, as to appearance of packages, there being mostly the regulation twenty-pound tubs, but also a number of ten-pound tubs. As a whole, entries in a contest, make a better appearance when the packages are all of one kind and size. As to workmanship it is a pleasure to state that the Wisconsin buttermakers are making fine progress, most of the entries were exceptionally well made. A few tubs contained butter that was a little pasty or gummy in body possibly due to difficulty in securing a perfect granule in the churning process. Thin cream is very difficult to churn exhaustively and yet procure the much desired flaky or irregular granule. The butter made from thin cream, especially from cows well along the period of lactation and in colder weather is apt to come in form of a "shot granule" which is prone to cause a close grained body, and unless the utmost care is taken may be pasty or gummy showing that the moisture is separated into very minute particles. Mottles were practically eliminated; a few entries showed up a little cloudy, others a little patchy in color, but not sufficiently visible to warrant a cut in the score. The salt was well dissolved and I do not remember a single cut on account of gritty salt. This is gratifying, especially now, as the weather is getting a little colder and more difficulty is experienced unless care is taken in having wash water and salt at about the same temperament as the buttermilk.

A number of the entries showed plainly the effects of less frequent deliveries of cream, perhaps also feed conditions had an effect on the flavor. Some of the entries were criticized as having a peculiar moldy or musty flavor perhaps due to improper care of the separators or cream being kept in cellars. A number of entries lacked character, rather flat which no doubt could be overcome by the use of a vigorous, clean flavored starter, but as a whole there were many fine samples of butter and, although not so many real high scores, the buttermakers really are to be complimented on this lot of butter, considering the difficulty at the time of the year in producing the highest scoring butter.

Atwater's Duroc Jersey Sale.

L. F. Atwater, Bangor, Wis., demonstrated the fact that good boars could be sold at public auction in Wisconsin as well as in any other state. Last Wednesday he sold thirty-five head of the best Duroc boars ever sold at auction in the Northwest. The common comment was the great length, good feet and arched backs that were found on the Atwater farm. It was a great offering throughout and those in attendance showed their appreciation of the offering by their spirited bidding. The top of the sale was $105, bought on mail order for R. W. Swartzley, Columbus, Neb. This western breeder saw the Atwater Durocs at Omaha and when he passed up some of the good Iowa sales and bought his boar in this sale it showed that he appreciated the Atwater Durocs. Mr. Writman, of Illinois, bought the next highest boar—$102.50. In our estimation R. C. Church, Elkhorn, Wis., bought the bargain of the sale, paying $85 for Number 11. Brian Rundell made a good buy when he bought Number 1 to put at the head of his Duroc herd at Hammond. Grant county was well represented, McKevitt Bros., of Bloomington, paid $75 for one, Jacob Erwin, of same town also made a good buy at that figure and Elmer C. Napp, Fennimore, followed suit and landed Number 5 at $75. Two-thirds of the offering went to head pure-bred herds. Mr. Atwater expressed himself as being well satisfied with the result of his first boar sale. The thirty-five head averaged $50.05. Col. J. L. McIlrath sold the offering in a very efficient manner. We follow with a list of those selling for $30 or over:

1. B. L. Rundell, Hammond, Wis. $ 85.00
2. Wis. Col. of Agric., Madison, Wis. 50.00
3. Bennett J. Melin, Redwing, Wis. 67.50
4. R. W. Swartzley, Columbus, Neb. 105.00
5. Elmer C. Napp, Fennimore, Wis. 75.00
6. H. J. Willgruk, Chaston, Wis. 35.00
7. McKevitt Bros., Bloomington, Wis. 75.00
10. Webb Bros., Poynette, Wis. 55.00
11. R. C. Church, Elkhorn, Wis. 85.00
13. John McCallum, Clinton, Minn. 42.50
14. Henry Fenske, Rio, Wis. 55.00

31. W. C. Edge, Fennimore, Wis. 47.50
32. L. R. Hoard, Cataract, Wis. 52.50
33. O. A. Fanstad, Owatonna, Minn. 42.50
34. La Crosse Co. Asylum, West Salem, Wis. 35.00
35. Fred S. Sprain, West Salem, Wis. 30.00
36. Jacob Dietyman, Kendall, Wis. 35.00
37. Thos. Jonesfi Cambria, Wis. 30.00

Willsie's Duroc Jersey Sale.

The Duroc Jersey boar sale held at Prosper, Minn., by Geo. H. Willsie, resulted in an average of $34 on thirty-eight head. Some of the boars had not done well and were not sold. A few Chesters were also sold, but not included in this average. Taking all into consideration it was a good sale. The boars were not as well fitted as they might have been and incidentally brought more money, but those in attendance got the benefit of this and the boars they purchased will give satisfaction, we are confident of that. The top of the sale was Number 23, an outstanding son of that good sire, Chief Defender. Mr. Morrison, of Minnesota, secured a bargain when he got this boar for $100. Few better boars have been sold this year. Number one, a linebred King the Col. was one of the snaps of the sale and was purchased by Henry Hansen, Renville, Minn. A McKevitt, Bloomington, Wis., made a good selection in Number 33, buying him at $46. Col. H. S. Allen did good work on the block. We follow with a list of those selling for $30 or over:

1. Henry Hansen, Renville, Minn. $60
2. E. R. Shumway, Caledonia, Minn. 45
3. S. C. Kittsley, Calmar, Ia. 35
4. P. Gallagher, Decorah, Ia. 37
5. C. A. Stortz, Decorah, Ia. 37
6. R. Wicks, Prosper, Minn. 37
7. F. T. Flynn, Preston, Minn. 32
17. N. J. Amble, Peterson, Minn. 32
18. Melvin Kline, Caledonia, Minn. 31
23. R. E. Morrison, Clinton Falls, Minn. 100
25. John Castirson, Mabel, Minn. 33
30. Julius Tosstenson, Canton, Minn. 36
33. McKevitt Bros., Bloomington, Wis. 46
34. Archie Bryant, Mabel, Minn. 52
35. C. W. Hale, Stewartsville, Minn. 33
36. Ben Johnson, Prosper, Minn. 43
37. C. W. Hale 33
38. Link Bros., Joliet, Ill. 35
40. Archie Bryant 40
41. Archie Bryant 40
42. Archie Bryant 40
43. Archie Bryant 40

W. C. Jenkins' Duroc Sale.

The sale of boars and sows held at Bangor, Wis., by W. C. Jenkins resulted in a satisfactory average. There were some boars and a few gilts sold that should not have been listed for a sale, as they cut the average of the sale materially. The top of the sale was $75, that amount being paid for the good Tattletale sow, number one in the catalog. She was a good buy at that figure. Mr. Jenkins' herd boar was driven into the ring and he made a decided hit with the crowd. He is a boar with scale, has a wonderful back, smooth and in fact one of the best boars in the state. He is sired by Col. S. Jr., out of an Orion Chief dam. Many of the buyers that bought sows and gilts in the sale paid Mr. Jenkins a service fee and left them to be bred to this good boar. Fred Leonard & Son and Geo. Brooks, Jr., made good buys. The average was a little under $30. Col. J. L. McIlrath, officiated on the block in a satisfactory manner. We follow with a list of those selling for $30 or over:

SOWS.

1. John Johnson, Viroqua, Wis. $75.00
2. Owen Williams, Bangor, Wis. 60.00
19. Fred Leonard & Sons, Jefferson, Wis. 50.00
20. Geo. Brooks, Jr., Sparta, Wis. 60.00
31. Randall Bros., Coonvalley, Wis. 30.00

BOARS.

3. Roben Hohn, Melvina, Wis. 54.00
4. John Lakel, Tomah, Wis. 35.00
5. Hans Johnson, Portland, Wis. 32.00
6. L. I. Roberts, Bangor, Wis. 30.00
7. J. L. Jones, Rockland, Wis. 30.00
16. Roy Horsfall, Bloomington, Wis. 42.50
38. W. H. Meir, Bangor, Wis. 30.00
49. W. R. Paff, Bangor, Wis. 30.00

TOO LATE TO CLASSIFY.

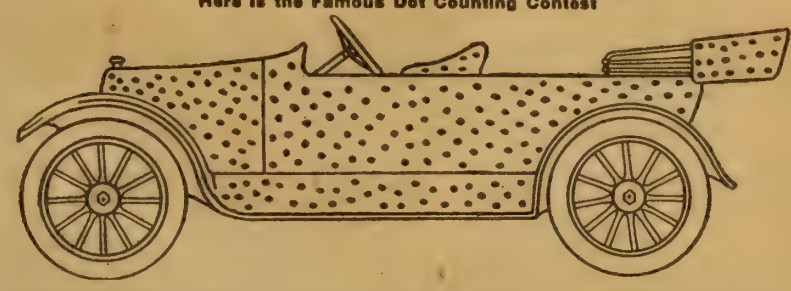
Your Chance—Chester Whites

ALL ages, either sex, boars big enough for service. Fall pigs by **Pay Streak,** 2d junior yearling at Milwaukee, 1916. Everything as represented or money back.

Wm. F. BUTTS **EVANSVILLE, WIS.**

Count the Dots and Win a Prize

Here is the Famous Dot Counting Contest



You see in the picture, an Automobile covered with dots. By being careful and thinking you can count the number of dots on this Auto. If you can do this, we will send you as a prize, *a surprize package of beautiful season and greeting post cards,* lithographed in rich colors and also a certificate of entry in our grand contest for an Saxon Automobile. All you have to do is to enclose a two cent stamp in your letter to pay postage and cost of mailing.

SAXON AUTO GIVEN AWAY

Remember the Saxon will absolutely be given away at the close of the grand contest. In case of a tie a Saxon will be given to each person so tied. Send at once so you can be entered in this great contest. Full particulars by return mail.

THE AUTO MAN, Dept. 300 Des Moines, Iowa

JERSEY CATTLE.

OAK GROVE JERSEY FARM

WE are overcrowded, as we are just rebuilding our barns and have very little calf stable room. We now have 15 calves and 22 cows yet to freshen, so are making **very low prices** on these richly-bred young bulls to move them quickly. Sired by **OAK GROVE NOBLE LAD 122654, a grandson of Eminent and of Noble of Oaklands.**

No. 1—Out of **Volunteer's Sally,** that has a record of 597 pounds butter. She is also a dam of a 594 pound junior 2 year old that holds the state record for her age. **Price $100.**

No. 2—Out of **Koffee of Oak Grove,** now on semi-official test and making a fine record. This young bull won 1st at Elkhorn fair. **Price $75.** Send for extended pedigrees; further description.

ANOKA FARMS'

SHORT-HORN OFFERING

ANOKA MISSIE 3D BY VILLAGE DENMARK.

WAUKESHA, WISCONSIN THURSDAY NOVEMBER 2, 1916

BANDMASTER, ONE OF THE TOP BULLS.

WILL present the opportunity of the year for buyers to secure the very best that is to be found in the Short-horn world. For this sale there has been listed the entire 1915-16 crop of calves, consisting of 45 head, 20 bulls and 25 females, the get of Sultan Stamp, Regal Stamp, Imp. Rusper Champion, Village Denmark, and other celebrated sires. Included in the offering will be the first prize calf herd at the leading 1916 shows as well as the ten head of youngsters that won at the Kansas City Royal Show the trophy for the best ten head of Short-horns bred by exhibitor, the most coveted trophy of the show. This will be the most desirable lot of cattle that has ever been sold from the Anoka herd, and gives the buying public an opportunity to select a herd bull or some attractive young females from a herd that is famous for the results accomplished in its constructive breeding operations. The catalog tells the story, and will be sent upon application. Mention The Wisconsin Farmer and address

F. W. HARDING, PRESIDENT
GEORGE SIM, MANAGER

ANOKA FARMS, WAUKESHA, WISCONSIN

Colonels Jones and Reppert, auctioneers. Fred V. Johnson will represent this paper. Attention is called to the sales of Garden & Weaver and J. W. McDermott, Chicago, October 31st; Carpenter & Ross, Chicago, November 1st, and Herr Bros. & Reynolds, Lodi, Wis., November 3d.

SHORT-HORNS OF MERIT

Will be sold at Lodi, Wis., Nov. 3, 1916, by

HERR BROS. & REYNOLDS

48 Head--13 Bulls and 35 Females--48

AN offering of show and breeding stock that is right in every way. Many of the younger things are the get of Master Ruby, a champion bull, sired by Archer's Hope. Others are by White Rock by Whitehall Sultan; Cumberland's Ideal, a grandson of Cumberland's Last; Royal Kintore, and Golden Sultan. This is a lot of Short-horns that will fulfill everything that can be said for them, and will in no way disappoint the buying public. They are all bred along the most popular Scotch lines and have individual merit of the highest order. Practically all females of breeding age are in calf to Master Ruby. Write for the catalog, mentioning The Wisconsin Farmer, to

HERR BROS. & REYNOLDS **LODI, WISCONSIN**

Colonels Jones and Reppert, auctioneers. Fred V. Johnson will represent this paper. Attention is called to the sale of Weaver & Garden and J. W. McDermott, Chicago, October 31st; Carpenter & Ross, Chicago, November 1st; Anoka Farms, Waukesha, Wis., November 2d.

SHORT-HORN CATTLE.

USE A SHORT-HORN BULL

ARE you raising beef? A Short-horn bull will give you more scale and bone and more pounds of flesh for a given amount of feed than any other breed. Are you a dairyman? A Short-horn bull will not reduce your milk supply and he will get you calves that will be quickly salable at a much higher price than you can get from a dairy bred bull. Are you a farmer? The Short-horn is the ideal for your purpose, because it is adapted to all conditions, of quiet temperament, takes on flesh readily, and yields a liberal flow of milk. The Short-horn always works improvement.

AMERICAN SHORT-HORN BREEDERS' ASS'N

13 Dexter Park Ave. Chicago, Illinois

THE 30.90-LB. SHOW BULL
NORTH STAR VERA SIR BEETS 97406

AS we now have four crops of calves by this sire, we are compelled to offer him for sale. He is a show bull as his picture shows him. He is perfectly gentle and quiet, even with strangers, is a quick, sure server, and we guarantee him to be absolutely right in every way. He was born December 24, 1911. Sire, SIR BEETS CORNUCOPIA NETHERLAND, that was never defeated in the show ring. Dam, HAPPY HOME VERA ORMSBY, A. R. O. record 30.90. First check for $500 gets him.

FRED ALBRECHT **WATERTOWN, WISCONSIN**

A Richly Bred Aaltje Salo Bull

BORN February 28, 1915. Ready for immediate service. His dam, Aaltje Salo Netherland Mechthilde 78488, as a five year old made 23.35 pounds butter in seven days, 38 days after calving. She comes from a long line of heavy-producing ancestors. She not only has inherited this heavy-producing ability, but also transmits it. She has three A. R. O. daughters, one with a record of 28.63 pounds butter as a four year old. Her grandam, Aaltje Salo 5th's Netherland, has eight A. R. O. daughters holding the world's record for five years. The sire of the bull for sale is the 27-pound bull, DAISY JOHANNA 5TH, 1st prize two year old at the Wisconsin State Fair. Address

ARTHUR RUST **WEST ALLIS, WISCONSIN**

KING PONTIAC PORTIA
and
Richland Sir Ormsby Korndyke
(Out of Aaggie Texal Wayne 2d 1,078 pounds)

ARE the sires of the HEIFERS we are offering for sale. All from A. R. O. dams up to 27 pounds. One heifer, half sister to a 36 pound cow. A limited number will be sold. Write for pedigrees and records. Address

C. C. FRIES & SON **RICHLAND CENTER, WIS.**

10 REGISTERED HOLSTEIN COWS FROM 4 TO 10 YEARS OLD

5 SIRED by Sir Johanna Fayne Mooie, a line bred son of Sir Johanna Fayne, whose daughters are making wonderful 7-day and yearly records. 3 sired by Fobes Fayne De Kol, the 30-pound son of Homestead Jr. De Kol. All safe in calf to Johanna Chief De Kol, that is 62% the same blood as Johanna De Kol Van Beers. 2 bulls nearly ready for service. EDWARD O. MUELLER, Appleton, Wis.

2 Richly Bred Holstein Yearling Bulls

BOTH sired by **King Pietertje Hengerveld Ormsby,** a full brother to **Pietertje Maid Ormsby.** Both are out of daughters of **Sir Aaggie Ormsby.** One an A. R. O. cow making 27.50 pounds butter as a three year old. Those bulls are of **Ormsby** breeding on both sides. Send for extended pedigrees and prices. **HUTCHINSON BROTHERS & BURBACH, RANDOLPH, WISCONSIN**

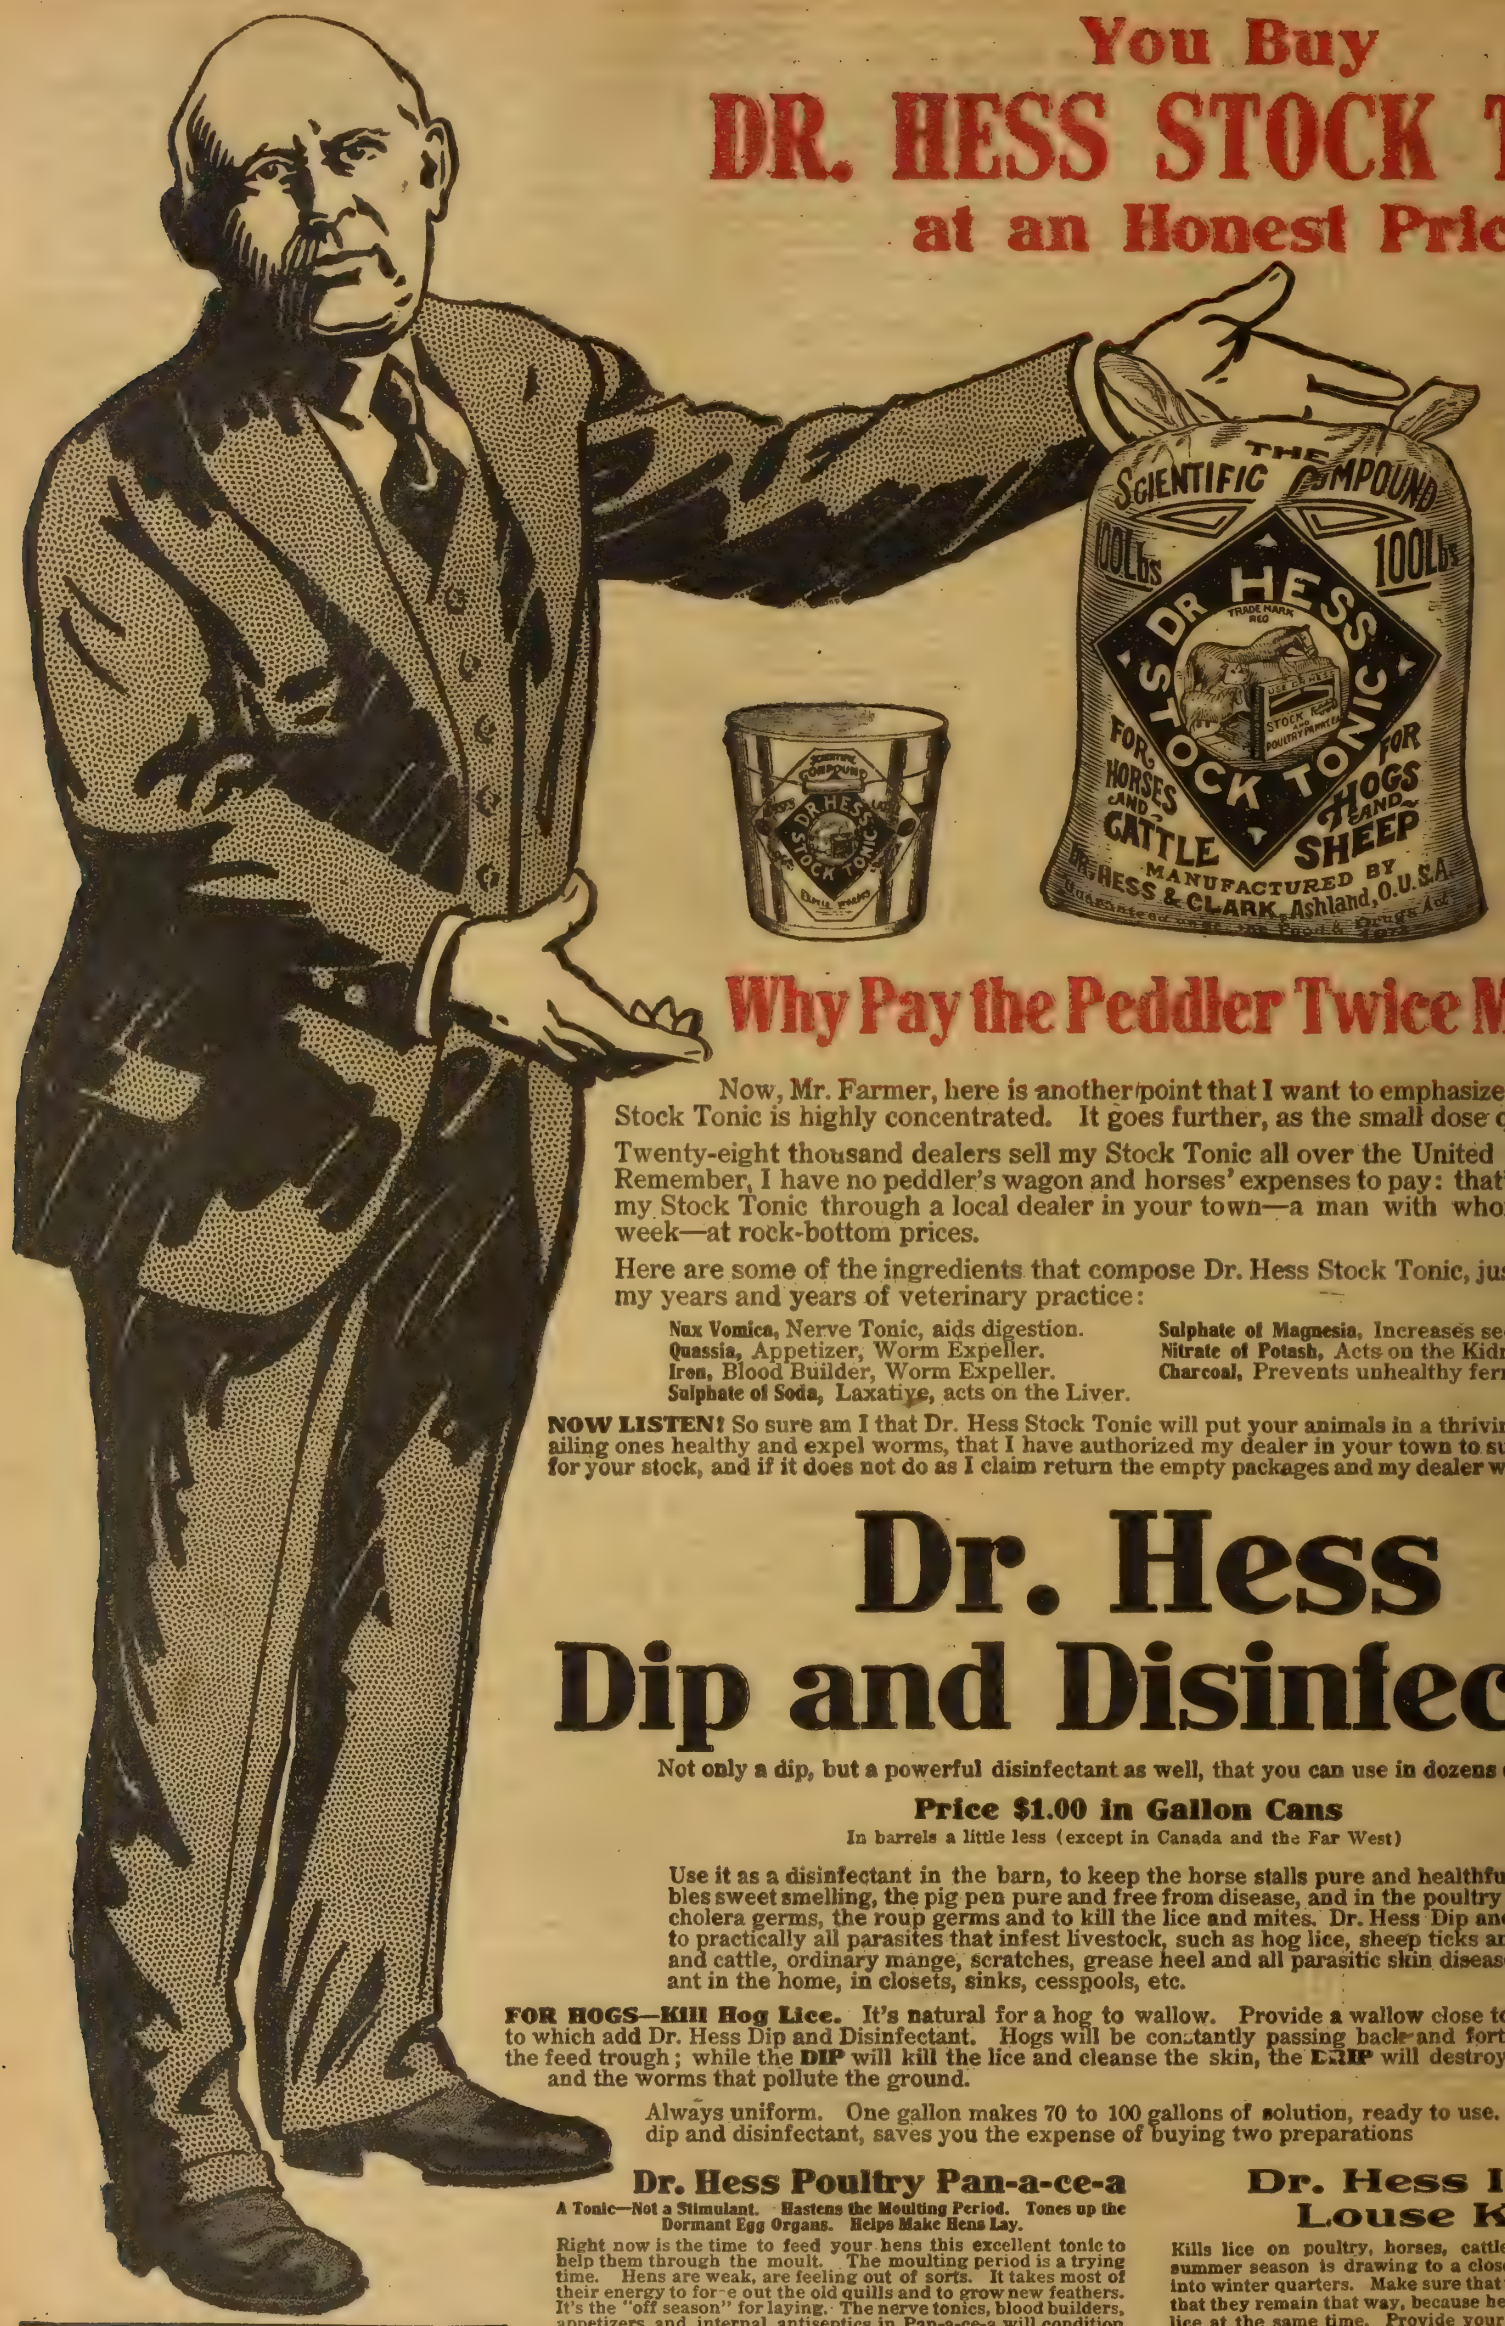
You Buy
DR. HESS STOCK TONIC
at an Honest Price



25-lb. Pail
$2.00

100-lb. Drum
$6.50

Smaller package as low as 50 cen (except in Canad and the far We and the South).

Why Pay the Peddler Twice My Price?

Now, Mr. Farmer, here is another point that I want to emphasize: That is, Dr. Hes Stock Tonic is highly concentrated. It goes further, as the small dose quantity proves.

Twenty-eight thousand dealers sell my Stock Tonic all over the United States and Canad Remember, I have no peddler's wagon and horses' expenses to pay: that's why I can sell yo my Stock Tonic through a local dealer in your town—a man with whom you trade ever week—at rock-bottom prices.

Here are some of the ingredients that compose Dr. Hess Stock Tonic, just as I used them i my years and years of veterinary practice:

Nux Vomica, Nerve Tonic, aids digestion.
Quassia, Appetizer, Worm Expeller.
Iron, Blood Builder, Worm Expeller.
Sulphate of Soda, Laxative, acts on the Liver.
Sulphate of Magnesia, Increases secretion.
Nitrate of Potash, Acts on the Kidneys.
Charcoal, Prevents unhealthy fermentation.

NOW LISTEN! So sure am I that Dr. Hess Stock Tonic will put your animals in a thriving condition, make th ailing ones healthy and expel worms, that I have authorized my dealer in your town to supply you with enoug for your stock, and if it does not do as I claim return the empty packages and my dealer will refund your mone

Dr. Hess Dip and Disinfectant

Not only a dip, but a powerful disinfectant as well, that you can use in dozens of ways.

Price $1.00 in Gallon Cans

In barrels a little less (except in Canada and the Far West)

Use it as a disinfectant in the barn, to keep the horse stalls pure and healthful, to keep the cow st bles sweet smelling, the pig pen pure and free from disease, and in the poultry house to drive out th cholera germs, the roup germs and to kill the lice and mites. Dr. Hess Dip and Disinfectant is deat to practically all parasites that infest livestock, such as hog lice, sheep ticks and scab, lice on horse and cattle, ordinary mange, scratches, grease heel and all parasitic skin diseases. Use as a disinfect ant in the home, in closets, sinks, cesspools, etc.

FOR HOGS—Kill Hog Lice. It's natural for a hog to wallow. Provide a wallow close to the feeding grounds to which add Dr. Hess Dip and Disinfectant. Hogs will be constantly passing back and forth from the wallow t the feed trough; while the **DIP** will kill the lice and cleanse the skin, the **DIP** will destroy the germs of diseas and the worms that pollute the ground.

Always uniform. One gallon makes 70 to 100 gallons of solution, ready to use. My Dip, being both dip and disinfectant, saves you the expense of buying two preparations

Dr. Hess Poultry Pan-a-ce-a

A Tonic—Not a Stimulant. Hastens the Moulting Period. Tones up the Dormant Egg Organs. Helps Make Hens Lay.

Right now is the time to feed your hens this excellent tonic to help them through the moult. The moulting period is a trying time. Hens are weak, are feeling out of sorts. It takes most of their energy to force out the old quills and to grow new feathers. It's the "off season" for laying. The nerve tonics, blood builders, appetizers and internal antiseptics in Pan-a-ce-a will condition and give your hens strength and hurry along the moulting, so they will get promptly back to egg laying. Feed regularly and tone up the sluggish and dormant egg organs, make them active and keep hens laying at their best all winter. Sold everywhere on money-back guarantee. Prices: 1½ lbs. 25c; 5 lbs. 60c; 12 lbs. $1.25; 25-lb. pail, $2.50 (except in Canada and the far West).

Dr. Hess Instant Louse Killer

Kills lice on poultry, horses, cattle, calves and colts. Th summer season is drawing to a close. Your hens will soon g into winter quarters. Make sure that they are free from lice an that they remain that way, because hens can't lay eggs and figh lice at the same time. Provide your fowls with a dust bath, t which add Dr. Hess Instant Louse Killer occasionally and you hens will do the rest. They will dust it into their feather carry it to the nests, roosts, everywhere. Then they will b lice-free and contented, profitable layers throughout the fall an winter. Prices: 1 lb. 25c; 3 lbs. 60c (except in Canada).

I'll Save Your Veterinary Bills

When you have a sick or injured animal, write me, telling symptoms. Enclose 2c stamp for reply and I will send you prescription and letter of advice free of charge.

...tor Back Fires.

...a Model 38 Kissel car. When ...tor is picking up under load with ... spark down, it seems to back fire through the carburetor. What is the trouble and the remedy?

Answer.—Your trouble is probably caused by a leaky inlet valve. It might also be caused by carbon accumulations in the cylinder, causing preignition. Grinding the valves and cleaning out the carbon should stop the trouble.

Preventing Pipes From Freezing.

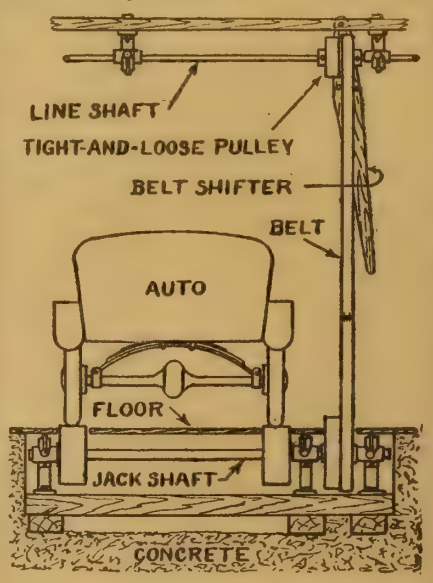
I wish to put a cistern holding about five barrels overhead in my pump house, so as to have running water in the house, which is only about ten feet away. I intend to have some means of opening a valve in the cistern from the house during the winter, so that the pipes that are exposed will not freeze. My cistern is to be a double-walled tank, having a 4-inch dead-air space. I was thinking of packing six inches of hay or straw around the tank. Do you think this would prevent freezing? Would sawdust be better for packing? Could you suggest a way of improving my plans?

Answer.—Six inches of sawdust around the tank and pipes should prevent freezing if the water is not allowed to stand too long. Air space and sawdust packing furnish no heat themselves; they merely help to retain the heat that is already in the water. In cold weather the water would freeze unless some heat is added by occasionally pumping some more water into the tank. Sawdust is a better packing than straw, although straw is good. People in the cities on very cold nights sometimes leave their faucets open enough so that the water slowly trickles out. This prevents their pipes from freezing.

Using Auto For Power.

Can a Ford auto be used successfully for grinding corn on cob, also for shelling corn? If so, how many bushels of corn on the cob may I expect to grind per hour; also how many hole sheller will it pull successfully? Please state how the power may be best applied.

Answer.—The figure shows how any automobile may be used for power with fair success. A jack shaft is mounted under a floor in the garage or barn. Two wide pulleys are mounted on the jack shaft, so that the rear



wheels of the auto run on them. A third pulley on the jack shaft drives a tight and loose pulley on the line shaft. The corn sheller, feed grinder or other machine to be driven is belted to the line shaft. The front axle of the auto must be securely blocked so that the car cannot move forward. There is but little tendency for the wheels of the auto to run off the pulleys sidewise.

You could reasonably expect about as much power from your Ford car as from a 10-horse-power gasoline engine. The Ford engine is rated more than double that amount, bu' it would not be advisable to expect it to pull twenty horse power continually. You should be able to pull a six-hole corn sheller, or any machine requiring about ten horse power.

Motor Hard to Start.

My Ford car which has run about 7,000 miles, of late is very hard to start. I open the carburetor a quarter turn, but this seems to have no effect. What can be the trouble? The fan belt rubs a little on the timer Could it be possible that this would retard the electricity? After the moto' is warm it works to perfection. While removing carbon from the cylinders, I noticed a wire in the water jacket. Have all Ford motors this wire in there; if so, for what purpose? When my car is to be reversed, it makes a loud grinding noise. What causes this?

Answer.—Your trouble is most likely in the "commutator," or timer. It may be that some of the parts are worn, or it may be that all that is wrong is some gummy oil on the roller contact points. A thin oil should be used, as a heavy, gummy oil causes bad contact, making the ignition poor until the motor becomes hot enough to thin the oil.

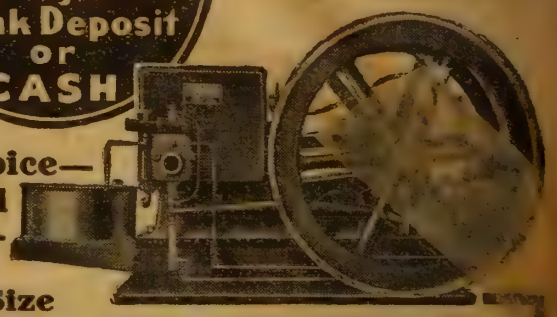
The wire in the water jacket is probably a "core wire." The water space and similar cavities in the cylinder are made by cores placed in the mold in which the cylinder is cast. These cores are made of sand, molasses and flour, or some similar compound of sand and paste. The cores are held in place in the mold by means of wires. These wires are removed after the cylinder is cast, the one remaining in your cylinder having been overlooked by the casting cleaner. As soon as the molten iron is poured into the mold the paste of the core burns out, making the sand easy to remove after the casting cools.

The fan belt rubbing the timer would have no effect on the running of the car unless it rubs hard enough to shift the cover. It will wear a hole through the cover if allowed to rub continually. The loud, grinding noise is due to a worn lining on the reverse drum. The lining should be replaced.

BUY ON YOUR OWN TERMS

I Have Now Made it Possible for Every Worthy, Creditable Man in the United States to Buy a WITTE Engine, on Practically His Own Terms.
—ED. H. WITTE.

NO MONEY DOWN
Easy Payments
Bank Deposit
or
CASH



Take Your Choice—of Payment and Choice of Engines—Gasoline Gas, or Kerosene, Any Size Up to 22 H-P. 90 Days' Trial. 5 Year Guarantee.

ONLY a big, successful engine factory, making thousands of engines yearly and selling direct to users, could offer you the Engine Quality and Engine Terms that I can. If you need an engine, either Kerosene or Gasoline, for any purpose—Pumping—Grinding—Wood Sawing—Spraying—Cream Separating—Silo Filling—or you have shop machinery to operate—**Try a WITTE Engine 90 Days.** Do Your Work—Prove that a WITTE Engine is the biggest engine value on the market, that WITTE prices will save you a lot of money. Your WITTE Engine if taken care of will be just as good ten or twenty years from now as the day you start it. Some are using WITTE Engines built 20, 25 and 30 years ago. I guarantee any WITTE Engine you select for **Five Years From Date of Purchase** and my Guarantee has a Million Dollar Factory Back of it. Don't forget that the low prices I am able to quote are possible only because of the large number I am able to produce and sell. The more engines I can sell, the less it costs to manufacture, the more material I can buy at reduced rates. I make nothing but engines—sell them direct from the factory—and when I tell you that I can save half your engine money, I mean just what I say. You take no more chance in buying from me, than you would to draw money from one bank and deposit it in another.

FREE, Postpaid My New 1916 Book, "How to Judge Engines." Tells you how to properly judge engines, why I use 4-ring pistons where others use three, advantage of cylinder and base separate—no overhang of cylinder, vertical valves—no inside wear, safety spark shift for easy starting, automobile style of ignition, and many other distinctive WITTE features that you cannot get in other engines. Write me today for this Free Book and latest WITTE prices.—ED. H. WITTE, Pres.,

WITTE ENGINE WORKS,

Don't buy any engine until you have read my book. Right now I am giving more engine value, and more liberal terms than ever before.

2719 **Oakland Ave., Kansas City, Mo.**
2719 **Empire Bldg., Pittsburgh, Pa.**

Just Send Me Your Name and address on a post card, or write me a letter stating what kind of work you want an engine for.

Do It Now, while this offer is good. My best offers are going out **Now**—just when you need an engine.

Electric Starters and Lighting Batteries

GOOD MEN WANTED to learn the Auto Business. Any capable, ambitious young man can make a success for himself, and if you will only prepare yourself YOU WILL GET WORK, because POSITIONS ARE OPEN, WAITING for competent men to do Auto and Electric work.

Learn a GOOD BUSINESS. Are you dissatisfied with your present work? Thousands of new men will go into the Auto and Electric Starter business within the coming year. YOU CAN, TOO. Do you want to?

You learn here by practical work in our large shops. We furnish TOOLS.

$900 to $3000 per Year Salary or Business Profits

Automobile and Tractor work, Electric Starter and Farm Light Plants. More calls from garages during 1916 for our graduates than ever before.

The Best Little Grinder You Ever Saw

With a 3 or 5 horse power engine and a Diamond D Belt Mill you can grind from 15 to 25 bushels of feed per hour. This mill is made of iron and steel throughout and has self tramming double cut, sharp burrs, end thrust ball bearings, end shake feed and double spring tension. Shipped complete with pulley and 6-in. burrs. Let us tell you more about it. Write for folder "B" which illustrates and describes "Diamond" Feed Grinders. Also ask for folder "A" which tells all about the famous "Diamond" Wood Sawing Outfits. Both folders mailed free.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

THE DUTY OF EVERY FARMER TO VOTE.

I WANT to urge upon all my readers that, no matter how inclement the weather may be next Tuesday, no matter how much work they may have on hand, they avail themselves of the right of franchise and perform their duty to themselves, to their fellow men and to the government by voting. I want to urge upon the farmers of Wisconsin, Iowa, Missouri, Kansas—every state where my words carry—that they emulate the splendid example set them by their brother farmers in North Dakota at the primaries this summer, when, despite the floods which swept away the bridges and made the rivers and streams well-nigh impassable, they tied their clothes on their backs and swam across, in order that their votes might be counted. Those men deserve to stand alongside the embattled farmers at Lexington who fired the shot that was heard 'round the world.

We Americans possess no birthright greater than the right of suffrage. It is this, fully as much as the sun, the rain, the seed and the careful cultivation, which makes our farms yield productively, which makes of us good farmers and good citizens. Do you think, for an instant, that, no matter how favorable the climate and the soil might be, we would go on, year after year, raising bumper crops if that which we raised were taken from us by the iron hand of oppression? And so long as we have the right of suffrage, can the iron hand of oppression ever be laid upon us without our consent? Is it not lack of the ballot, fully as much as anything else, which keeps affairs so unsettled in Mexico, with revolutions attendant and such a retarding of the progress of civilization as would not be tolerated for an instant if the people, who till the soil, were given a voice and a vote, together with the right to reap the fruits of what they sowed? A people who are ground under the heel of a tyrant whom they cannot overthrow by their votes, who know, by long experience, that the crops which they raise will be seized by the hand of militarism or despotism, are not the people who can be relied upon or expected to make two blades of grass, two ears of corn, grow where but one grew before. Seed, soil, climate and cultivation are not the only factors in our prosperity by any means, important and necessary as they are; a stable government, based upon the consent of the majority of the governed, is an equally great factor in the production of bumper crops and the advancement of our agricultural prosperity.

That is why—if, for no other than a purely selfish reason—I want every one of my farmer readers to vote every time he is entitled to cast a ballot, whether the office at stake is township trustee, governor or president of the United States. The same principle is involved in the election of all these offices: The free choice of a free people. There may be times when we contemplate the task of voting with something of dismay. The weather is inclement; the roads are well-nigh impassable; the team is needed for other and apparently more important work on the farm; one vote more or less will not determine the election. But before a question of whether or not we shall surrender the ballot for all time and content ourselves with the dictation of self-appointed rulers, such petty matters as I have named dwindle into utter insignificance. And a nation composed of individuals who vote only when the weather is fair, the horses idle and a trip to town is a thing of pleasure alone, is a nation which, sooner or later, will voluntarily surrender the ballot and allow itself to be ruled by those who have only their own private and selfish interests to serve.

I am not asking my readers to vote for this man, or not to vote for that man; I am simply urging that they vote. I believe no citizen puts more thought and conscience into the act of marking a ballot than the farmer does. He studies men and measures in a calm, reflective manner, weighing one against the other, determining in his own mind which will more nearly bring about the greatest good to the greatest number. He is unmoved by the prejudices and passions which sweep across great cities; his mind is not inflamed by the frothings of false prophets; his eyes are not blinded by the dust of unimportant issues, thrust into the campaign to becloud the vision of those who take their opinions ready-made from the boss shop. Following the furrow, or working about the feed lot, the farmer finds his brain busy with things far away from him, upon which he looks with an impartial eye. Thus it has come about that the greatest moral and political reforms of our time have originated on the farms of the middle West, that the farmer vote is never wrong. I want to urge upon all my farmer-readers that this splendid record of patriotic citizenship be maintained by the individual, no matter at what personal cost, next Tuesday. The enfranchisement, the prosperity, the peace, the very future of 6,000,000 farmers are at stake today as never before; will the sunset on next Tuesday be a burning glare of shame for that which we failed to do, or a blush of pride for that which we have done so well?

FARM BORROWING MADE EASY.

I WANT to call the attention of my readers to an article which they will find upon another page this week, written expressly for this paper by Mr. Frank R. Wilson, publicity agent of the Federal Farm Loan Board. I asked Mr. Wilson to write an authoritative article, telling just how farmers should proceed in order to avail themselves of the new law, and he promptly complied. In parts, it exactly duplicates the information and advice which I have already set forth on this page, but, inasmuch as it is written by an associate of the men who are to establish the banks and administer the law under which they operate, I think farmers will find it well worth their time to read the article in its entirety, regardless of whether all the facts are new to them or not.

The more I talk this new law over with my farmer friends, and the more I read the letters which they write to me on the subject by the score, the more convinced I am that the board will not have any difficulty loaning money even here in the grain belt, where the banks, insurance companies and private investors have met the need in the past probably better than it has been met any place else in the entire country. The main things which my farmer-correspondents want to know are these: When will the banks be ready to do business, and what will the prevailing rate of interest be? Mr. Wilson assures us that the banks will be ready by February first. Chairman Norris, of the Federal Farm Loan Board, has publicly stated that he hopes the rate will be as low as 4½ per cent. I would be more inclined to predict 5 per cent, to begin with, which will save us quite a fortune and which will put the farmer on the same plane with the merchant and the manufacturer in this important matter of getting the necessary capital at a reasonable rate.

I particularly urge upon my readers that they note the explanation which Mr. Wilson gives of the necessity of each farmer-borrower taking stock to the amount of 5 per cent of his loan. So many correspondents have asked me why this was necessary; if it were not simply red tape, which would eventually be dispensed with. I think they will find the explanation enlightening and convincing.

I hope I will see the new federal land banks so distributed that the grain belt will secure at least three; preferably four. I should be able to make the announcement of their location some time before the last of the year; I hope so, at any rate. In the meantime, let me again suggest that the preparatory work of forming the local associations, drawing up and signing the necessary articles be attended to at once, so that the desired loans can be made in ample time for farming operations next spring. It is not necessary to wait for the actual opening of the banks in order to form local associations and arrange for the appraisement of the farms pledged as security for the loans. Get all this attended to this winter, so the loans can be placed next February and March, in ample time to permit a good year's activity on the farm.

SPENDING MONEY IN THE FARM HOME.

I EXPECTED quite a sheaf of letters as a result of printing the complaint of the Illinois farm woman, whose husband allows her little or no money of her own, but I was not prepared for the avalanche which came. Letters are pouring in upon me from all over the country. Thus far the writers are fairly well divided between support of the Illinois farm woman and criticism. For the present, I am going to maintain strict neutrality, reserving the right to have my say at the last.

This week I am going to print a letter taking the part of the woman, one criticizing her and one which, while it does not actually take sides, gives such good advice as can hardly fail to benefit us all. First, for the letter of approval, from Mr. A T. Remer, of Aulne, Kansas:

I have read the article in your paper of Oct. 19th, regarding the Illinois farmer's wife. I have traveled much, being in the nursery business, and have seen life in many ways. Now I think that a man has no right to be absolute boss. It hurts me to see a good woman from the farm standing around looking and wishing and hating to ask her lord for a little money to get something she prizes and that men know naught of. In plain words it makes me mad. I think there should be one pocketbook and one check book. I want my wife to feel that she has the same right to both as I have. She has helped earn it and it belongs to her by every right. She has as good a right to her half as I have to mine.

Now comes the howl that so many women are careless with money—that they know not the value of it. I do not believe that for one moment. Every woman who helps earn and save knows the worth of money and many of them will make a man ashamed of himself in that line. It is no wonder that many bright women get weary when they compare their married life with the one they had before.

I say, my friend farmer's wife, have a good understanding with hubby and maybe he will see the light and come across just fine and you will both smile and you will not have to walk. Learn to drive the auto and take the kiddies and go. I think a man is a man when he is four square; a woman the same. No four-square man or woman will take what they are not willing to give in life. And, brother Pierce, I hope that you will drum this question into the hearts of your readers until we will know true partnership in life.

Now for the letter severely criticizing the Illinois farm woman. The peculiar part of it is that while a man commends her, a woman condemns her. The writer of the following letter does not wish her identity disclosed, but I quote her verbatim:

I don't believe the Illinois farmer's wife deserves one little bit of sympathy. She gives herself enough pity. I rather think she has forgotten to "count her blessings." Maybe she doesn't know how to spend money. I am sure she has a high enough opinion of herself and it is so very disgusting to hear a woman complain about her husband's shortcomings and parade her own good qualities.

It seems to me if a man provides plenty of good clothes and good food for his family and keeps up the running expense on a farm he has about all the expense he can manage. I know that it takes money to operate a farm. I think farmers should have up-to-date machinery. I am sure we women have plenty. There is so much talk about the poor farmer's wife, and it is absurd, to say the least. No one has more to do with than we have. We have power washers, separators, furnaces, polished floors and vacuum cleaners, refrigerators, bath rooms and water systems in our houses; we have plenty of butter, cream and eggs, vegetables and our own meat; we wear tailor-made clothes and have automobiles. Do you think we need any pity? Of course we work, but who wants to be a "parasite"? Our husbands are not stingy if we use any judgment in the use of money. I always feel free to use my husband's check book, but I always make sure that he has the money to spare before buying anything that isn't a necessity.

Now don't imagine that this comes from a newly-wed who hasn't had any experience, for I have been married for fourteen years.

And last, but by no means least, the letter of advice, from Mr. Henry Falk, of Uniondale, Indiana, who writes a most splendid letter, as follows:

Will you please allow an old sexagenarian to enter your sanctum and interrupt you a little?

We have come to talk of the married lady's troubles you spoke of on October 19th under the title, "A Household Tragedy." The parts of her letter published savor very much of disappointment brought about by a picture overdrawn in her younger days, and which has failed to materialize.

Now this wife of a hard-working farmer we think needs to be given to understand that hard work alone will not insure them a home of their own. With that idea in mind this man, no doubt, exerted himself to the utmost that he might become able to pay for a home of their own, a task which she herself seems to think is almost completed.

Doubtless the auto was bought for service and not for pleasure alone. The thought of becoming the owner of a home may afford him greater pleasure than would driving his auto a distance of seven miles or more to some social gathering while his stock and his crops demand his presence and attention.

Were I called upon to write a motto for that lady's home I could do no better than write, "No success without labor, frugality and love." And then, in case the husband is in the habit of spending the money for drink, tobacco and other unnecessary things, the same words may be arranged to read, "No frugality! Labor and love without success."

If we get nothing more out of this discussion than the good, sound sense contained in the last paragraph of Mr. Falk's letter, it will not have been in vain. I am going to print letters in regard to this matter from week to week, for the discussion is most interesting and valuable. If you will turn back to your paper of October 19th, you will find the original letter which occasioned the controversy. Read it over again, in the light of the rejoinders printed this week, and let me know how you feel on the subject.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

[illegible]g to subscription

[illegible] ASSOCIATION [illegible] OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

First and Best Report of Dairy Show.

NO DOUBT a great many of our readers wonder how The Wisconsin Farmer was able to get a complete report of the National Dairy Show at Springfield, Mass., in advance of any other farm paper of general circulation in this state. As was stated last week, The Wisconsin Farmer was personally represented at the National Dairy Show, and this is the only way in which a farm paper can get an accurate and early report of what happens.

The Wisconsin Farmer, as a publication appealing to the farmer-dairymen of this great dairy state, feels that it must assume the responsibility of giving its readers the facts concerning such important institutions as the Waterloo Dairy Show and the National Dairy Show. As is always the case with The Wisconsin Farmer, our ambition is to give our readers something better than they can get in any other publication. The pick of dairy stock of the middle West, including Wisconsin, was seen at these two great dairy shows. Wisconsin was well represented at each show. However, Wisconsin should have had more exhibits than were shown from this state. It is for the purpose of encouraging such exhibits and giving Wisconsin the place where she belongs, at the head of the dairy states, that The Wisconsin Farmer gives so much attention to institutions like the Waterloo and National Dairy Shows.

We may again be pardoned for calling attention to the fact that no such reports of these great dairy exhibitions have been published in any other Wisconsin farm paper.

Wisconsin's "Swine Week."

EMPHASIS is placed each year during farmers' week at the Wisconsin College of Agriculture on some one branch of farming or breeding. Last year it was on dairying, because of the anniversary of Dr. S. A. Babcock's discovery of the dairy test of that name, and this year it will be on swine breeding, so that the week starting Tuesday, February 6th, has been suitably set aside as "Wisconsin Swine Week."

The arrangements for this event have been practically completed. Prominent men interested in swine breeding have been secured to give addresses and demonstrations, and the slogan will be "More and Better Swine." In this everyone interested in live stock in Wisconsin should join, as it is hoped to bring before the attention of the farmers of the state better than ever before the importance of this branch of live stock farming, and the fact that quality counts in swine as well as in everything else. As speakers, the college of agriculture has arranged for the best that are obtainable, and swine breeding from every angle will be discussed as well as the production of swine for pork in conjunction with the dairy herds of the state.

Swine breeders of Wisconsin have already taken an active part in arranging for "Swine Week," and it will be worth every breeder's time to put his shoulder to the wheel and boost. There will be a banquet on the evening of February 6th for the swine breeders who are in attendance, and it is thought plates will be laid for at least 400 diners. This will be one of the big events, and a complete program of the week will be announced as soon as completed.

Two bred sow sales will also be held at Madison during that week and as a part of "Swine Week." These will be held in the live stock pavilion. The Wisconsin Duroc Jersey Breeders' Association plans to sell fifty head of bred sows, representing the tops of about forty herds. This will be on Wednesday, February 7th. On the evening of that day the sale of Poland Chinas by the Wisconsin Poland China Breeders' Association will take place. This association plans to consign about fifty head, the tops of something like forty prominent herds. Twenty Duroc Jersey breeders and twenty-two Poland China breeders have signified a willingness at this writing to consign sows. The plan is to include in the sale stock from as many different herds as possible, and it behooves the swine breeders to co-operate in making these two sales and "Swine Week" events long to be remembered. Entries may be sent to either Mr. J. D. Gant, Delavan, Wisconsin, secretary of the Duroc Jersey association; Mr. Robert Smiley, Albany, Wisconsin, president of the Poland China association, or Mr. T. P. Shreve, field representative for The Wisconsin Farmer.

Find Good Potatoes For Wisconsin Show.

THE annual convention and show of the Wisconsin Potato Growers' Association, at Eau Claire, November 21st-24th, promises to embrace a broader field of work this year than ever before. The arrangements for the show and convention are nearing completion and Mr. J. G. Milward, state secretary, anticipates this year's show will excel all others, despite the poor potato season. Late advices indicate that, from a quality standpoint, the showing of potatoes will be up to former standards, as the men in charge of assembling the county exhibits report that on investigation they have discovered more good stock than was thought obtainable, considering the unfavorable season.

Special sessions will be devoted to the work of the county agricultural representatives; potato club work among the boys and girls and potato-cooking demonstrations, all in addition to the regular program. Separate sections will be provided for those interested in these special lines of work. Prof. K. L. Hatch will preside at all sessions devoted to county agricultural representative work, and the different representatives doing potato-extension work will report the work under progress. Experts will be present to assist in the discussion of diseases, use of fertilizers, control of insects, stable manures and methods of cultivation, and this section of the convention is expected to prove of inestimable value.

The cooking demonstration will be directed by Miss Elizabeth Kelley, the woman's club of Eau Claire, and the Eau Claire County Training School co-operating. Mr. T. L. Bewick will be in charge of the boys' and girls' potato club work, and a special session in the interest of the young people and their teachers has been arranged. School will be dismissed for the occasion in counties contiguous to Eau Claire, to permit teachers and pupils to attend. There will be a special potato-judging and scoring contest for the boys and girls, and a limited amount of standard seed stock will be given to those who show proficiency in judging. A set of standard Wisconsin potatoes will also be given to teachers, which material will be in shape to be taken home from the convention for use in the schools.

County organizers are now at work selecting their show stock, and much of the success depends upon their efforts. These men are in charge of the county showings, and growers in their respective counties should get in touch with them:

Name	Post office address	County
O. C. Wooward	Weyauwega	Waupaca
D. C. Wayward	Weyauwega	Waupaca
James Gunderson	Wautoma	Waushara
Luman, Darling Co.	Wautoma	Waushara
Ben Hansen	Grand Rapids	Wood
W. E. Morton	Marinette	Marinette
W. D. Juday	Rhinelander	Oneida
F. G. Swoboda	Antigo	Langlade
Oscar Gunderson	Eagle River	Vilas
John Swenehart	Crandon	Forest
H. H. Humphrey	Wausau	Marathon
J. M. Coyner	Amherst Junction	Marathon
A. H. Cole	Merrill	Lincoln
R. Kolb	Medford	Taylor
R. B. Clark	Medford	Taylor
Griffith Richards	Phillips	Price
G. R. Ingalls	Eau Claire	Eau Claire
John Klinka	Balsam Lake	Polk
R. L. Cuff	Barron	Barron
Sam Williams	Earl	Washburn
C. P. West	Hayward	Sawyer
S. J. Uhrenholdt	Hayward	Sawyer
C. B. Post	Ashland	Ashland
A. C. Bouttin	Bayfield	Bayfield
O. B. George	Oconto	Oconto
George Briggs	Grantsburg	Burnette
J. H. Walz	Superior	Douglas
George T. Vorland	Colfax	Dunn

The complete program will soon be ready for announcement. It is enough to say now that the convention promises to be of especial interest to all interested in potato industry, and this is the time to plan to be present.

The Unprofitable Side of Thin Cream.

EVEN though cream is bought by test, there is still a tendency among Wisconsin dairy-farmers to skim a rather thin cream for their creameries. The prevailing opinion seems to be that the larger quantity of cream, the larger the cream check despite the fact that a rich cream is more profitable than a thin cream. If the losses in Wisconsin, in the way of skim milk and useless handling of thin cream were accurately known, we suspect the amount would be almost unbelievable.

During an investigation of creameries recently in a western Wisconsin county, Mr. C. E. Lee, dairy specialist of the food and dairy commission, found two creameries where the average test of cream delivered by the farmers was around 12 per cent. The highest was 17 per cent and some went as low as 9 per cent. This, he points out, is a wanton waste of skim milk, and the expense of handling this cream was prohibitive, considering that the same amount of butter fat, on which basis the farmers are paid, could have been hauled to the two creameries in two-thirds less cans. According to this same authority, if the average test had been 35 per cent instead of 12 per cent, the farmer who delivered nine cans, for instance, would have only needed three cans. Skim milk is certainly worth 40 cents a hundred as feed today on the farm, and it is astonishing that the farmers serving these two particular creameries should haul away so much skim milk when the hogs and calves back on the farm can utilize it. Testing 36 per cent the cream would have contained identically the same amount of fat as it did, testing 12 per cent, and the saving of this skim milk with a high-testing cream is not to be laughed at, nor the lessened cost of handling, both by the farmer and the creameries, to be overlooked. It seems to us that in a case like this the buttermakers should demand a richer cream if the farmers do not wish to furnish it voluntarily, as thick cream has its advantages from the creamery standpoint also. Smaller vats and ripeners are needed; there is a saving in fuel and ice in heating and cooling; less loss in the buttermilk; pasteurization is more satisfactory and a better product can be made.

This is a condition that is state wide, and shown by dairy authorities to be due to negligence on many dairy farms in the operation of the separators. Cream of nearly any richness may be obtained by skimming milk with the separator on the farm, and users have learned that the richness of cream may be changed by adjusting the cream screw. There are other causes for differences in test aside from regulation of the cream screw, one of which is the way in which the machine is run. This cream comes from the separator when the milk is excessively warm; the speed of the bowl is too low; the milk forced through too rapidly and an excessive amount of skim milk or warm water is used to flush out the bowl when through skimming.

Rich cream is obtained by skimming cold milk; increasing the speed of the separator bowl; reducing the flow of milk into the bowl; keeping the bowl flushings out of the cream can, and by increasing the richness of the milk skimmed. By keeping in mind these suggestions, as set forth by Prof. E. H. Harrington, of the Wisconsin Dairy School, in his recent circular on "The Care of Milk and Cream," every dairyman should be able to skim a rich cream, and there is no doubt that such is to his advantage and that of the creamery which takes his product. The aim of every dairy farmer should be to skim a cream testing 35 to 40 per cent.

For Better Wisconsin Farm Homes.

MODERN equipment is one of the big needs of the farm home today. Every mother and daughter is looking forward to the day when they will, in their own homes, enjoy the same conveniences that their city friends and neighbors enjoy.

During a recent investigation by the Wisconsin College of Agriculture, to learn which conveniences the farm woman mostly desires in her home, replies were received to letters sent a large number in which all asked for the modern bathroom and modern lighting. Telephones were numbered among the principal conveniences, but they are to be found on most farms today. The demand for running water and sewage disposal, such as required with bathrooms, was almost unanimous, which brings to mind the thought that, if the women were consulted and the family means were sufficient, that every farm home would be modern in this respect. The old system of filling coal oil lamps and keeping the chimneys clean is burdensome, and with modern gas-light[illegible] system available, the average farm woman is keeping in pretty close touch with this kind of equipment. Electricity is no longer impossible with lighting plants in most of the smaller cities, and even private plants may be installed. Where electricity is obtainable the women were found to lean strongly toward the electric washing machines, which do away with a big part of the drudgery on "blue Monday" and other electric conveniences such as irons, toasters, etc.

The conclusion brought out by the answers to the letters sent to the farm women is that women today are giving the matter of modern home equipment more thought and study than ever before. Every one who has visited a modern farm home has departed with the thought of how convenient and comfortable. It is just as essential that the farmer make his family comfortable as his cows, although we realize that it is mutually agreed in the family circle that, with limited means, the money-makers should be given first consideration. This calls to our mind the recent statement before one of the hearings of the federal farm-loan board by Mr. P. W. Goebel, president of the American Bankers' Association, in discussing the merits of the new federal farm-loan act. After pointing out the value of long-time loans, as provided for under this act, Mr. Goebel said:

The result of these long-time loans will also be that more of the income from the farm can be placed into equipment for the farm; equipment not only to bring larger returns in dollars to the farmer, but that will make the family feel like they want to stay there. To my notion the greatest lure of the city is the fact that these farmers' wives and daughters come into the city to visit friends perhaps who have

modern equipment in their houses. It appeals to them more strongly than anything else, and makes them more dissatisfied with farm life than anything else. Now, with the bugaboo that the mortgage is going to come due in two or three years—"I don't know how I am going to be able to renew it, or I don't know what I have to pay; there may be stagnation in land values"—with that bugaboo removed, why, anyone who has the welfare of the farmer at heart can readily advise him, "Now, put some money into your house and make it modern so you can make your family feel that they have the same chances for comfort and pleasure as the average laborer has in the city."

Mr. Goebel strikes a good point in that modern equipment makes for contentment in the family. Once a person knows no such convenience as a bathroom, he does not feel uncomfortable without it. But in this day and age almost everyone travels to some extent, and in every rural neighborhood there is some family setting the example, so that those in the most distant sections can anticipate the conveniences and comforts that may be added to the farm home.

Country Best Place to Rear Children.

IN MILWAUKEE last week, the American Association for the Study and Prevention of Infant Mortality held its annual meeting. There were numbers of speakers, and care of children was touched upon from all points. Infant mortality prevention in the rural districts was discussed by Miss Elizabeth B. Kelley, extension worker for the department of home economics of the Wisconsin College of Agriculture, and she brought out several interesting and vital facts, saying in part:

The country is the best place to rear children from the standpoint of health is clearly shown by the mortality records, but these same records also show that the death rate among infants from birth to one year is greater in the country than in the city. This high rate of infant mortality in rural districts is due mainly to three causes: lack of nurses, lack of domestic help, and a poor grade of country doctors. At the time of childbirth, the city woman can either remain in her own home and employ a competent physician and a trained nurse, or go to a well-equipped maternity hospital, but the rural mother, with a few exceptions, must rely upon the services of the country physician who is often young and unskilled, and frequently hard to locate at the time of need, or upon a midwife who, oftentimes, has had no training, and who does not understand the simplest rules of sanitation. In some cases the child is delivered only by the help of a neighbor or the woman's husband.

Miss Kelley laid stress on the fact that too often the farm woman did not rest enough, either before the birth of her child, or afterwards, because the burden of the family duties bore so heavily upon her. Machinery, she said, was one solution of the problem. Continuing, she said:

The farm woman can no more remedy the lack of domestic help than the farmer can remedy the lack of "hands" on the farm. Like him, she must turn to power machinery to solve her problems. The husband has the seeder, the planter, the cultivator, the mower, the reaper, all run by power, so the wife must have first, running water in the house, then the bread mixer, the dishwasher, the meat grinder, the washing machine, the vacuum cleaner.

I feel that it is just as necessary, and even more necessary, that a campaign of education on this subject be started among the farm men as well as among farm women. Both must be made to realize that it is their patriotic duty to give to the state a race of boys and girls strong in body and mind, and the quickest, most logical way to do this is to care for the woman during the child-bearing period.

One striking feature of Miss Kelley's address was an idea which she brought out about the conservation of the mother's health during the child-bearing period, in its relation to the future of the farm boys and girls. "To me," she said, "the secret of keeping the boy and girl on the farm lies in the health and contentment of the mother. Boys and girls leave the farm during their adolescent period—that time of their lives when their imaginations are the most lively, their sensibilties are the keenest, their wills are the most selfish, their ideals of life the most exaggerated. If the mother is broken in health, if her nerve force is gone, if the hardships of her early life are upon her, it is impossible for her to guide with a firm, steady, sympathetic mind the turbulent, riotous thoughts of her boys and girls. She is prone to complain of her own trials and wish for her offspring a better life than she had, and to the farm woman this always lies in the path of the city. So, if we are to keep our boys and girls on the farm, we must remedy the evils that attend upon childbirth in the country."

For Better Grades in Wisconsin.

ONCE in a while we find a man who insists that all dairymen should have pure-bred cows. Of course, he doesn't mean it if he stops to think. Even though there might be a distinct advantage in pure-bred cows on all dairy farms, the consummation of this idea is an absolute impossibility. We quote from a communication signed by the Wisconsin Live Stock Breeders' Association:

If all the grade and native cows in the state of Wisconsin were sold and an effort was made to fill their places with registered dairy cows, it would be impossible to find enough pure-bred dairy cows in the whole United States to take the place of those which had been sold. Even if all the pure-bred females were kept for breeders, it would be many years before there would be enough pure-bred dairy cows to establish our dairies on their present basis.

Were the farmers able to go out and buy pure breds, it would still be impossible from a financial standpoint. The dairymen of the state cannot afford to sell their good grades and buy pure breds—expense would be out of all reason.

If the pure breds were available and if the farmers were financially able to get them, it is still questionable whether it would be advisable. Not everyone can be successful with pure-bred cows. Some men have been eminently successful and many others only moderately so, while the great mass of breeders are never heard from because of what they accomplish. Some, indeed, are failures as breeders of registered stock of any kind.

All cannot have pure-bred cows, and if everyone could it would not be advisable, because many would not succeed with them. Because everyone cannot have pure breds does not mean that everyone cannot have better stock than now. Every dairyman should seek to improve the stock he has. If you are keeping only native cattle there is no reason why a good registered sire should not be used to breed up a herd of good grades. If now owning grades, try to get better grades. To do this use a bred-for-production sire, keep careful dairy records and eliminate the "boarders."

"Handsome is as handsome does" in the dairy business. The farmer who is dependent on his cream checks is more interested in what his cows produce than in their appearance. Those of our readers who have followed the work of cow testing in this state have noticed that it is not always the pure-bred herds that head the list of good producers. It is quite frequently the grade herd which has been improved by the use of pure-bred sires. One great advantage of the pure bred is that it provides an opportunity for improving the natives and grades.

Wisconsin Cattle Go to Texas.

FOUR carloads of grade Holsteins were recently shipped from Green county, Wisconsin, to Texas, and six carloads more are soon to follow. A number of Texas citizens recently visited Wisconsin and picked out the cattle. The visitors are backed by the Texas Bankers' Association, which is operating along co-operative lines which were suggesed by the activities of Wisconsin bankers in Upper Wisconsin. Thus our own good plans are working for our own good interests, even if the results do come in from a long distance. There are a number of states which can make profitable use of Wisconsin surplus cattle as well as Upper Wisconsin can make use of them, and bankers in other states can afford to be just as liberal along these lines as Wisconsin bankers have been. There are now about fifteen communities in Texas where good live stock is being bought on the co-operative plan and where the bankers are helping the farmers to get started in the dairy business. As might be expected the cows are paying the entire bill. It is simply a case of the banker advancing ready cash with which to meet the original purchase price.

Free Shows For Wisconsin Fairs.

MR. G. A. BRIGGS, superintendent of privileges at the Sauk county, Wisconsin, fair, writes in a very interesting way in the Baraboo News on the subject of clean shows for county agricultural and live stock exhibits. Mr. Briggs very properly takes up the subject of state aid and calls attention to the law which provides a report from officers of county fairs which receive state aid. This report must, under the terms of the statutes, show that all gambling devices, the sale of intoxicating liquors, and all immoral exhibitions were prohibited. A penalty is attached for any fair officer who makes a false statement in his report.

It might as well be settled fir t as last that the state of Wisconsin cannot be a part to county fairs unless such fairs are properly conducted. When the state gives money for premiums, the state becomes a party to the conduct of the fair, and as such has some rights as to the character of the exhibitions which shall be presented. It is true that the immoral shows have, as a rule, been entirely separated from the agricultural and live stock exhibits. It is also true that these shows have been seen only by special admission, and that no one had to buy a ticket and go in, no matter how much balli-ho work was done on the outside of the tent. Mr. Briggs now shows that there is not much demand for these cheap side-show attractions and that neither the fair management nor the showmen themselves have been making any money out of them. At the 1915 fair in Sauk county there were two shows which might he characterized as the "pike" class, and the total receipts for the week were $45 for both shows, the society netting only $11, and having to pay for two ticket sellers out of that. Although contracts had been made by the Sauk county fair management this year with two carnival attractions, both companies canceled. One stated in letter that the side-show business was no longer profitable and that its talent would be sold for free attractions.

The free attraction is much better for more reasons that one. In the first place the free attraction must be a moral show, because it is out in the open, where everyone, including the women, can see it. In the second place it gives the fair visitors good, wholesome entertainment without extra cost. The manager of the free show does not stoop to whispered suggestions as to the immoral character of his show, because it is no use. He does not exaggerate an act which speaks for itself before all the people. There is no dissatisfaction on the part of the fair visitors, for the free show costs nothing extra. On the contrary, they look upon it as good measure and are correspondingly pleased. The free open-air show is by all means best. It must be a moral show, and in nine cases out of ten it is a better show than one held under cover, where the glitter is all in the spiel of the "come-back" outside the tent.

Fourth Conference on Marketing and Farm Credits.

AN IMPORTANT conference will be held at the Sherman Hotel, Chicago, Illinois, from December 4th to 9th, the same week as the International Live Stock Exposition. This will be the fourth event of this kind, and there has been a tendency each succeeding year to carry through a program of high educational value. More and more it is being realized that the marketing of farm produce is as vitally important as the raising of it, and it is a well-known fact that single handed the producer is helpless to improve conditions.

At the December meeting, considerable attention will be given to the question of marketing milk, and part of the program will be devoted to questions relating to the co-operative marketing of grains. The local, terminal and export markets will all be considered by experts who have made a practical study of the matter. The auction system of disposing of farm produce will be taken up in detail, and instruction will be given regarding the matter of grading produce and preparing it for shipment in suitable containers.

Another part of the program of this meeting will be devoted to phases of live stock marketing problems, and there will be representatives of ranchmen, corn-belt feeders, commission men, farm buyers and co-operative live stock shipping associations—each given an opportunity to present problems that require co-operative effort in their solution.

Provision has been made for the consideration of the federal farm-loan act, and it is expected that those in attendance as well as those who address the convention will present many suggestions looking to the improvement of this act.

The question of transforming the tenant-operated farm into a home ownership proposition will be taken up at this meeting, and in connection with it federal and state relationships will be considered.

We desire to call attention to the fact that these meetings are open to all, and it is not necessary to be an accredited delegate in order to participate in the program, though, of course, only delegates have the privilege of casting votes. We predict that the meeting will be well attended this year, owing to the fact, as before stated, that it comes during the same time as the International Live Stock Exposition, and there is no reason why both meetings cannot be given considerable attention during the week.

The Sensible Feeding of Ensilage.

THOSE who are called upon to feed ensilage for the first time during the coming winter should have their attention called to the fact that mistakes are likely to be made unless certain precautions are taken in the manner of handling the ensilage.

To begin with, it is assumed that the diameter of a silo in any given case is proportionate to the number of animals in the herd. The late Professor King, of the Wisconsin Experiment Station, estimated that a dairy cow would require daily ensilage taken from five square feet. This would mean that a herd of thirty cows would require the use of 150 square feet, or the entire surface of a silo fourteen feet in diameter. A silo sixteen feet in diameter would feed forty cows daily if enough of the ensilage were used to keep the product from spoiling. Of course, by using a greater depth of ensilage each day, a much larger number of cows could be fed, but we are speaking at this time of the minimum that must be used if the ensilage keeps properly.

Generally speaking, two inches of ensilage should be removed every day. Otherwise a more or less spoiled product will be used continuously. If there is not enough live stock to use two inches of ensilage daily from the surface, part of the product must be thrown out in order to keep it from spoiling. This may seem at the time like a tremendous waste, but in the end it will be much more economical than will be any attempt to use all the product in a spoiled condition.

Discouraged too Quick on Corn.

IT IS evident that there was not enough corn acreage in Wisconsin in 1916. In Rock county alone the acreage slumped 5,000 as compared with the year previous. The acreage of corn in Rock county is 88,924. In 1915 the corn crop in Rock county, as in many Wisconsin counties, was almost a failure, according to assessors' figures, being only 359,396 bushels from 94,222 acres. In 1914, with about the same acreage, Rock county produced over 2,750,000 bushels. This year there is a good deal of corn on a decreased acreage and also a good quality of corn. It invariably follows that a poor year will discourage some from trying the same crop the next season, but as a general proposition southern Wisconsin is pretty safe for corn, especially the acclimated varieties. Those who are now wrestling with the feed problem may be sorry that they permitted last year's partial failure to discourage them.

Farm Borrowing Made Easy.

Procedure Under New Law Set Forth by Frank R. Wilson, of the Federal Farm Loan Board, in an Article Written Expressly For This Publication.

NO PIECE of legislation passed by congress in more than a decade has aroused the interest that has been aroused by the adoption of the federal farm loan act. This nation-wide interest is indicated by the fact that within the past three months more than 100,000 inquiries have com[illegible] done[illegible]

[illegible] inquiries [illegible] thorough knowledge of the bill and its requirements and ask for blanks upon which the petition of their national farm loan association may be registered.

It was a common criticism of this measure when it was up for adoption that it would be impracticable to get the farmers to get together into groups of ten or more to form these national farm loan associations for the purpose of borrowing from the federal land banks. The nature of the replies seems to be a complete refutation of that charge. The letters seem to indicate that thousands of farmers are familiar with the principles of co-operation and they see in this measure not a machine to make it easier for them to get into debt but a machine to enable them to transform their debt into an asset that will yield returns.

Under the federal farm loan act a mortgage is not a disgrace but an investment. Under it farmers will be able to get money just as business men have been able to get money at reasonable rates of interest and the payments will be distributed through a period of years so that farmers will be in a position to pay off the mortgage out of the fruits of the investment.

For a measure of such gigantic import the federal farm loan act is going to be put into practice within a remarkably short time. In spite of the fact that the measure did not become a law until July, the board which will administer it has been named and is half through with its preliminary work of dividing the country into twelve federal land bank districts. To gain information to assist it in this work the board has made a tour of the northern states and is now touring the southern states. It expects to fix the district boundaries before the end of this year, establish the banks during January and be doing business by February 1st.

However, there is no occasion for farmers to wait until the banks are actually opened to take the first steps to gain the advantages of this act. They can be organizing their national farm loan associations now and getting all ready to get their charters as soon as the federal land banks are located. Then the loans can be made with no delay.

The great majority of the questions asked by farmers have to do with the steps they are required to go through to take advantage of the act. The process is just as simple as the organization of a literary society or a club. Ten or more farmers who want to borrow must get together in a meeting and draw up articles of association, prepare applications for loans and the affidavits that go with them, elect a president, a vice president and a secretary-treasurer, and a board of not less than five directors, and then send their application for a charter to the federal land bank of that district. The federal land bank will then approve the application and send it on to the federal farm loan board at Washington, which will issue the charter.

To simplify this work of organization the federal farm loan board is now having prepared blank forms of articles of association so that the work of forming local loan associations will be reduced to the mere operation of getting the men together, resolving and signing their names and swearing to the paper. On this application it will be necessary for each borrower to list the amount he desires to borrow, together with the value of his land to be used as security.

The local loan association is required to name a loan committee of three who must pass upon the value of the lands and make a written report to the federal land bank. Their [illegible] is subject to the approval of [illegible] praiser of the bank who inspects [illegible] operty later.

[illegible] become members of this local association a borrower must [illegible] to purchase stock in the association equal to 5 per cent of the amount he is going to borrow. Many farmers stumble over this requirement. They do not see why they should be made to buy something to get a loan. As a matter of fact, they do not buy this stock. It is a temporary investment that stands only while their loan stands. When the borrower pays off his loan he gets his money back and may use it as the last payment on his loan.

The object of requiring this 5 per cent investment is very plain after an inspection of the machinery of this co-operative banking system. The federal land banks start business each with a paid-up capital of $750,000. If private subscription does not take this stock at the end of thirty days the government will take it. When a bank has loaned $50,000 to national farm loan associations it has the right to issue and sell $50,000 of bonds against the $50,000 worth of mortgages taken as security for the first batch of loans. Then this money is again loaned and another batch of mortgages is taken. This process is repeated over and over until the capital of the bank is loaned twenty times. Now it will be seen that unless provision were made for increasing this capital the bank would have to stop doing business when its loans aggregated $15,000,000. But each farmer who borrows $1,000 invests 5 per cent or $50 in his local loan association and the loan association then invests it in federal land bank stock. So when the bank lends $1,000 it increases its capital one-twentieth so it can lend another $1,000. So the increase of the capacity of the bank is automatic and the well never runs dry so long as the bank can sell its bonds.

Farmers invariably want to know what rate of interest they are going to be required to pay under this system. It's impossible for anybody to tell yet except to say that it will not be over 6 per cent and it will probably be considerably less. The rate of interest depends upon the price at which the bonds will sell. The law says the interest rate shall not exceed the bond rate by more than 1 per cent. This margin is to pay the cost of operating the bank. So if the bonds sell for 4 per cent the farmer will get his money back for 5 per cent or less. The bonds ought to sell cheaply, because they are secured by mortgages on real estate worth twice the face of the obligation against them, plus all the assets of the national farm loan associations.

The bonds are free of all form of taxation even including the income tax and the income derived from the bonds is also free of the income and every other form of tax.

All loans under this co-operative system are to be made on the amortization plan, which means that they will be paid off in annual or semiannual installments through a long or short period of years. Mortgages may run from five to forty years at the option of the borrower.

This provision of the bill is plainly of great advantage to the farmer. Digging a fortune out of the land is slow business at the best. The seasons come around only so fast and tragedies in the way of crop losses and herd diseases make frequent visitations. It requires a long time to develop a herd of live stock to the point of yielding returns. The long time amortized loans contemplate that a farmer may use the money to stock up his farm or otherwise put it into condition to pay back the mortgage out of the fruits of the investment.

Borrowers will be able to get loans equal to 50 per cent of the value of the land, plus 20 per cent of the value of the improvements. But it is predicted that a renter of good repute who has not saved the 50 per cent necessary will be able to execute a second mortgage for part of the remaining 50 per cent at such a rate that his total interest and amortization payments on both mortgages will be less than rental under the present system. And he will then have an additional incentive to put his farm into a permanent productive plant.

The interests of the farmer are well safeguarded in the federal loan act. No landlord will be able to borrow on land which is leased. No speculator may borrow. None but actual farmers may borrow and they may borrow only on the land upon which they are working. The size of the loans is limited to $10,000, because unlimited loans would make it possible to use the bill for purposes of land monopoly, whereas, the purpose of the bill is to favor farmers of medium-sized operations and to enable them to till the land more profitably and effectively.

Farmers who join these national farm loan associations are not under unlimited liability for the debts of their associates as some critics of the measure have tried to make out. If one member of this group of ten or more should default and the sale of his farm did not satisfy the mortgage, then the deficit could be made up out of the stock which the members had purchased amounting to 5 per cent of their loans. If the losses were so severe that this 5 per cent would not meet them these members could be assessed another 5 per cent and no more. But when it is realized that the mortgage in the first place represented only half of the appraised value of the land it will be appreciated that the danger of loss from any joint liability is very remote.

The big idea in the federal farm loan act is co-operation and the idea is applied in the formation of these little national farm loan associations. These organizations at first seem like barriers, but it will be seen that they are in reality the guardian of the borrower's interests. They provide the machinery for excluding bad risks, for no member can be admitted without receiving a two-thirds vote of the directors. These local loan associations also provide the machinery through which the farmers govern their own bank, for each association has a vote in the election of the directors of the banks. Even if the private bankers should buy all the stock of the federal land banks they could not vote. The voting is limited to the associations of farmers and the government. The federal farm loan board names three directors for each bank and the farm loan associations name six.

The federal farm loan act simply recognizes the fact that the farm lands of America constitute a mighty, but at present chaotic, mass of value. This measure provides the machinery for assembling this great mass of credit so that it may be used as security to attract timid capital from hiding to the end that this capital may be available to the men who till this land to enable them to till it more advantageously. It ought to drive away the terror of mortgage foreclosure, make an end of disaster as the result of panics, increase the percentage of farm ownership, contribute to more diversified and more intensive farming and have an elevating social effect because of the co-operation and business-like association which it enforces.

Better Milk Prices Are Justified.

Some of the Facts Which Have Been Brought Out in the "Milk Wars" and Other Controversies Regarding Prices.

THE "milk war," as the daily press has termed the negotiations between producers and distributors, has not been confined to Wisconsin, but it has been nation wide in its scope. In every state farmer-dairymen, realizing the greater cost of producing milk, have sought better prices from the users of milk and the recent success of the producers in the New York and Chicago territory, who have been granted substantial increases is still fresh in the minds of many of our readers. It is a situation that is national.

In Wisconsin the fight has centered largely in the territories which supply cities with their daily supply of milk and the condensing plants. The Chicago prices dominate to a large extent the prices paid in the southern tier of counties, where the Chicago Milk Producers' Association are organizing local associations. From these counties considerable milk finds its way to the Chicago market. In the eastern half the Milwaukee prices govern largely. Milwaukee also is affected by the Chicago scale. The condenseries that fall within the territories that supply the cities are, naturally, governed largely by the city prices.

So general has been the demand for higher prices for milk this fall that the consumer has been caused to ask "Why this universal demand from the producers?" No doubt there are many city folk who think the farmers have gone into a mighty trust, but the law of supply and demand applies to the milk trade as well as every other trade. Farmer-dairymen are just beginning to realize what organization means to them in the way of better prices and better marketing conditions. The Chicago "strike" last spring demonstrated this, and when the Chicago producers sought more money for the six months, beginning October 1st, they were granted it without withholding their milk as was necessary last spring.

Cheese and butter prices are at top-notch. There seems to be no other way of arriving at what is actually the market value of 100 pounds of milk. One farmer can produce milk cheaper than his neighbor, so there appears no means of reducing to a mathematical certainly the actual marketable value of a quart of whole milk as it comes from the cow.

One hundred pounds of 3.5 per cent milk will make a trifle over ten pounds of cheese. With the American types bringing 20 cents a pound, this places the market value at close to $2 per hundred. Swiss cheese is worth now an average of 30 cents a pound, and 100 pounds of milk will make a fraction over 10 pounds of cheese, making this milk worth $3 per 100. When turned into butter at present prices, milk is worth close to $2 per hundred when the value of the skim milk as a feed is considered.

The following Chicago quotations on October 20, 1915, and October 20, 1916, are interesting:

	1916 Cents	1915 Cents
CHEESE.		
Twins	20	14¾
Daisies	21	14¾
Young Americas	21½	15
Longhorns	20½	15
Swiss	28-32	18-20
Limburger	19½	14
Brick	23	14¾
BUTTER.		
Extras	34½	27
Extra Firsts	33½-34	18-20
Firsts	32½-33	24-25

It is readily seen, figuring ten pounds of cheese from each hundred pounds of milk, what the increase in the market value of milk should amount to to keep pace with the increase in the price of these milk products. Milk of the farmer who is patronizing the American cheese factories is worth about $2 per hundred; Swiss from $2.80 to $3.20; Limburger about the same as American, and brick $2.30, as compared with American cheese values of $1.50 last year; Swiss $1.80 to $2 and brick and Limburger $1.50. Unfortunately the farmers are not getting these prices from the cheese factories, as the season's supplies were contracted for to a large extent early in the season before the present prices prevailed.

The same holds true of the creameries which are now getting 35 and 36 cents for their best product. Allowing a 20 per cent overrun a hundred pounds of 3.5 per cent milk will make 4.2 pounds of butter, which, at 36 cents, means $1.52 worth of butter from 100 pounds of milk. The skim milk is certainly worth 40 cents per hundred from a feeding standpoint this fall, which, on this basis, brings the market value of milk up to $1.92 per 100 pounds at the October prices, and these will increase as winter progresses.

There are many other conditions entering in which the producer of milk for cities has to contend with that do not confront the cheese factory or creamery patron. One is that of regulation by the health departments of cities, which require certain standards in the barns and herds, all of which is expensive. Another is the larger investment in cans, every city shipper having to have two sets; another is the can losses, failure of dealers to pay, which is not infrequent in many cases where there are a large number of small dealers. There have been some heavy losses in Milwaukee on this account. Where there is no effective organization, such as exists in Milwaukee, the turn-back must be accounted for. This is milk turned back because the market is oversupplied. These are all factors governing prices, and when the food value of milk is taken into consideration there should be little complaint from city consumers when the farmer is receiving only $2 per 100 pounds, or about 4 cents a quart for his product.

Milwaukee shippers, through the Milwaukee Cream and Milk Shippers' Association, have sought a price for the six months, beginning November 1 t, that is about on a par with the Chicago winter prices—$1.50 per eight-gallon can f. o. b. Milwaukee. This is an average of about $2 per hundred for 3.5 milk and represents an increase of 32 cents a can over the average last winter, or 1 cent a quart, which is just about in keeping with the increase in the value as measured by butter and cheese quotations.

Your HUDSON SUPER-SIX Will Advance $175

You who now own a Super-Six will gain in the increase—no change in models

Your Super-Six will be worth more next year. And those who buy then must pay $175 more. When cars under way are completed we must add to the price the added cost of materials. Price advances December 1st.

This is another unexpected attraction in the Hudson Super-Six.

The usual car, the first season, depreciates some 30 per cent. In addition to that, on later models makers often reduced the price. So the one-year drop in value averaged 40 per cent or more.

The Super-Six motor—almost without friction—hardly depreciates at all. And that's the chief part of a car.

The Super-Six price will advance with materials for we never shall lessen our standards. So December 1st, when materials on hand are exhausted, the price will advance $175. And you who own the Super-Six will share that added value.

No Pretensions

That very announcement will reveal the strength of the Hudson position. Most weaker cars, we believe, will not dare to advance. Some way will be found to avoid it.

But the Hudson Company, on its Super-Six, will never make pretensions.

Hudson profits, considering our size and output are very small indeed. They have always been so, and all insiders know it. Our very balance-sheet proves that our margins are minimum.

On December 1st, we start using materials bought under this year's contracts. Prices on all of them have advanced enormously.

On a Hudson-grade car makers can lessen the quality without making the difference apparent at once. But that would be treason to Hudson standards.

So we do—and do frankly—what is obviously necessary. We add the extra cost of materials.

No Advance on Sold Cars

You who have already ordered—either open or enclosed Super-Sixes—will get delivery at the price agreed up to December 1st.

And many Hudson dealers, probably, have some cars yet to sell of our present production. We have 3500 cars under way, all of which will be sold at present prices.

If you can get one, get it. Buying now will save you $175. And the present model will not be changed, unless in some minor refinements.

Another World Record

The Super-Six, as you know, holds a hundred records which no other car ever met. These include all the world's stock touring car records up to 100 miles. They include the 24-hour record of 1819 miles, where we broke the stock car record by 52 per cent.

They include the Pike's Peak hill-climb—the world's greatest event of its kind. The Super-Six won over 20 competitors.

Now we add the ocean-to-ocean record—from San Francisco to New York. The most sought-for record in America. That trip was made by a Super-Six in 5 days, 3 hours and 31 minutes—beating the record by 15 hours.

And that same car turned around at New York and went back to San Francisco in faster time than any other car ever made the ocean-to-ocean trip. It was the first car ever to make a round trip across the continent against time. The time for the round trip was 10 days, 21 hours, 3 minutes. That was only 2½ days longer than the best one-way trip made by a famous eight.

So the Super-Six today stands supreme. And there is no probability that a rival can match it, because we own the patents.

These are all-important facts.

Phaeton, 7-passenger	$1475	Touring Sedan	$2000	Town Car	$2750

HUDSON MOTOR CAR COMPANY, DETROIT, MICHIGAN

TOP PRICES FOR FARM MILK.

George F. Comings, of Eau Claire County, Has Solved the Problem of Earning Larger Revenues For Milk Production on His Splendid Dairy Farm.

THE OLATHE HERD OF HOLSTEINS ON SILVER SPRING FARM, EAU CLAIRE COUNTY, OWNED BY GEORGE F. COMINGS & SONS.

IF EVERY dairyman could dispose of his milk and cream so as to eliminate the middleman and his profits it would seem that an ideal condition had been created. The retailer or distributor, who acts as the middleman between the producer and the city consumer, has, no doubt, been for years the stumbling block in the matter of securing better prices for milk products in the cities and any plan which would enable the producer to avoid this middle profit by selling his product direct from the farm to the consumer is certain to arouse the interest of every farmer-dairyman today with prices of everything entering into the production of milk steadily increasing. Such a plan has been worked out and operated successfully for many years on the farm of Mr. George F. Comings, three miles from the city of Eau Claire, Wisconsin. On this farm an arrangement has been made where the milk produced there is sold direct to consumers in the city of Eau Claire and if there be any profit for a middleman it goes into the pockets of Mr. Comings and not a third party. For twelve years Mr. Comings has operated a city retailing business in connection with his dairy farm in Eau Claire county. He is a great believer in organization among farmers; he has had sufficient experience in producing and retailing milk to know what it costs to produce a hundred pounds; what it costs to distribute it to the consumers, and whether the producer or the retailer is getting the long end of the profit. He has operated under a careful cost system; his cows have been watched; their milk weighed; the cost of their feed computed, and everything about the producing end figured down to a fine basis. The same business methods have been applied to the wagon-end or distributing end of the farm, and after this careful study and a dozen years' experience Mr. Comings is quite firmly convinced that the distributors—the middlemen—are reaping the lion's share of the profit.

Mr. Comings is certain that if milk is charged to the wagon in bulk at 4½ cents a quart and 25 per cent cream at 20 cents a quart and is bottled and delivered to the consumer's doorstep at 7 cents for milk and 30 cents for cream, the distributing end is the one with very much the larger per cent of profit. This being the case, the reader naturally asks the question as to what profit the distributors in Chicago are reaping when they buy their milk delivered in Chicago for approximately 3¾ cents per quart and sell it in quarts for 9 cents. The same question might also be asked of Milwaukee, where the distributors are paying about 3½ cents a quart and selling it for 7 cents.

Mr. Comings also believes that the distributor would have the best end of the milk business if he paid 5 cents per quart for 3½ per cent milk and 20 cents for 25 per cent cream, and this belief is based upon his long experience in both producing and distributing. This has made him a strong believer in organization among dairymen, for it is the only way they can force up the prices unless they can evolve some plan for disposing of their own product directly and to eliminate the distributor. The farmer, he says, ought not to sell good, clean 3½ per cent milk for less than 4 cents per quart in bulk at their doors.

Silver Springs Farm, as Mr. Comings' place is better known, is the home of a Holstein herd of about fifty-five head, of which forty-five are pure breds. Since Mr. Comings took this place, about fourteen years ago, he has always sold the product of his herd from his own wagons to consumers in the city of Eau Claire. He has built up a reputation for good milk and pure dairy products and a glimpse at the picture of his barn herewith shows how Silver Spring Farm and pure dairy products are advertised in big letters thereon to the passers-by.

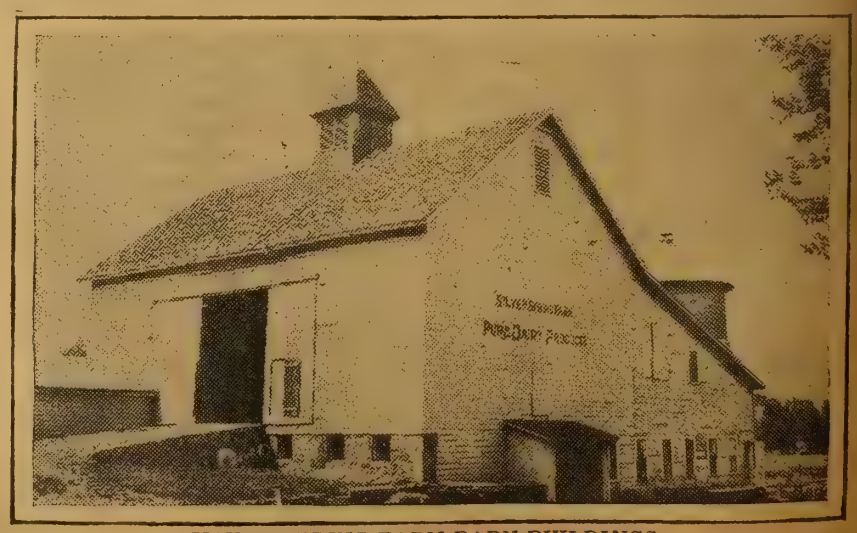
An ideal arrangement in the conduct of the farm and distribution of the dairy products has been worked out by turning the operating end over to his two sons, George H. Comings and Willard S. Comings. Mr. Comings has retired from active management, and, as his son George was more interested in the breeding and producing end, he was given charge of the herd, while Willard, just fresh from college, took charge of the dairy or wagon-end of the business. The business has been incorporated and the producing and distributing of the products is kept as separate as if two different farms. When the division was made it was agreed that the wagon end should pay $1.65 per hundred pounds the year round for the milk, which is a fraction less than 4 cents a quart. This milk is retailed in the city of Eau Claire at 5 cents to large users, 6 cents to a middle class of users and 7 cents in bottles to the ordinary household trade. The daily production is about 250 quarts, and on this basis the distributing and the producing ends are both expected to show a profit. Even at these prices Mr. Comings believes the wagon end will produce the greatest per cent of profit and it is needless to say the investment is not so large In speaking of the investment in a small dairy like this and charging milk at 4½ cents a quart to the wagon, Mr. Comings, in a letter in these columns last spring anent the Chicago strike situation, said: "If one should invest $4,000 to $6,000 in three delivery rigs, milk and bottling house, ice house and all the paraphernalia required to run a retail business in nice shape and had a business of the size, say 800 quarts of milk and fourteen gallons of cream daily, which is proportionate to the business done by our wagon for many years, in a small city like ours, he would make a much better per cent on his investment and earn a much larger salary than any dairy farm can pay in producing these goods at 4½ cents per quart for milk and 20 cents for 25 per cent cream."

The farm is well equipped, has two silos and silage was fed during the hot months of the past summer with good results, taking to some degree the place of the dried pasturage. The average milk production of thirty-five pounds daily during June fell to twenty-eight during July, but it is thought silage and a good grain ration was all that kept it up that well. Careful records are kept on all the stock so that the exact profit from every animal is

OLATHE QUEEN DE KOL, ONE OF THE HIGH PRODUCERS IN THE COMINGS HERD.

SIR BESS ORMSBY MERCEDES COMBINES GOOD BREEDING.

COMFORTABLE AND HOMELIKE IS THE COMINGS HOMESTEAD.



SILVER SPRING FARM BARN BUILDINGS.

always at hand. The silos are eighteen feet across and it required some fast feeding to keep it from spoiling, which leads to the belief that an eighteen-foot silo is too large in diameter for summer feeding. There are 320 acres in the farm, half under cultivation. Considerable attention is also being paid to the breeding end and improving the milk production.

If it were possible for every farmer-dairyman to operate along a similar plan there could be none of the dissension that has existed between producers and distributors as has existed this past summer in the big cities of Chicago and Milwaukee. It takes the distributors entirely out of the business, as the producer is also the distrobutor and places the farmer-producer in the position to realize the profit taken by the city retailer or distributor who pays the farmer one price, charges the consumer another and pockets the difference. Of course, it is impracticable that every dairyman could make such an arrangement, especially in the larger cities, but it is practicable in the smaller cities where the dairyman may organize his own route and retail his milk and cream direct to the consumer. In an arrangement like this the producer realizes he is deriving all the profit from his labor, that he is not being exploited by the big city distributing concerns. although there might still exist, for one reason or other, the thought that the consumer is getting his milk and his cream at a price below its actual value.

Mr. Comings' ambition is to breed a herd of high-producing cows that will test from 3½ to 3¾ per cent fat and is working constantly with this aim.

Since the first of January the Comings. herd of 25 to 30 cows has averaged around 1,000 pounds a day

One of the first herd sires used was Sir Ormsby Pietertje De Kol 39100, a three-fourths brother to Pietertje Maid Ormsby. On the daughters of this bull was used a son of Sir Piebe Aaggie Hengerveld and Dairy Queen De Kol, a cow belonging to Mr. J. Erickson's herd of ten cows, that won first prize in the Wisconsin cow competition, her record being 871.7 pounds of butter in one year. Her milk showed an average test of 3.92 per cent for the year. The cow, Olathe Queen De Kol, illustrates this combination, for her sire is Sir Daisy Queen De Kol and her dam is a daughter of Sir Ormsby Pietertje De Kol. In selecting a bull to use on these heifers Mr. Comings bought of Mr. Erickson the young bull whose picture is shown here. He combines the breeding of both former herd sires, being a son of Daisy Queen De Kol and Sir Pietertje Ormsby Mercedes 37th, a grandson of Pietertje Maid Ormsby.

Our Legal Department.

Law Questions.

Beaver Dam—Damages.

A Subscriber, Gordon, Wis.—Beavers built a dam across a creek on my land, which caused the water to overflow on my hay land and damaged the hay. Can I collect damages from the state of Wisconsin? Please let me know right away.

Answer.—Oh, no! Not in a thousand years.

No Widow's Pension.

A Subscriber, Iron Mountain, Mich.—I have a sister in Florence, Wis., who is a widow and has four little children, and she has a hard time to make a living. Is there a law in the state of Wisconsin granting pensions to widows with children and if so how much are they allowed?

Answer.—There is no law in Wisconsin granting pensions to widows with children.

Land Sale—Foreclosure—Redemption.

A Subscriber, Balsam Lake, Wis.—I bought a farm in this part of Wisconsin from a real estate man. The land is frozen nearly every month in the year. This year there was freezing weather in June and July, and it is impossible for me to raise anything on the land. When I bought the farm, I paid part cash and gave a mortgage on the farm to secure the balance of the purchase price. (1) Can I get back the money I paid on the farm? (2) If the holder of the mortgage should foreclose it, how long can I stay on the place after foreclosure?

Answer.—(1) You cannot get back by law the money you paid on the farm. (2) After the foreclosure sale, you have one year in which to redeem the land from the foreclosure sale, and you can hold possession of the land during said year.

No Light on Buggies Required.

A Subscriber, Oostburg, Wis.—Does the law of Wisconsin require a man traveling on the public road in a buggy to carry lights on it in the evening? (2) If there be no lights carried must the driver give the whole track when meeting another vehicle?

Answer.—(1) The state law does not require lights on a buggy, but in towns there may be ordinances to that effect. (2) He is not required to give the whole track.

Scrub Bull With Heifers—Damages.

A Subscriber, Rice Lake, Wis.—A farmer who rents out pasture, took in some well-bred heifers to pasture, for a certain party. He then took in a scrub bull to pasture for another party and turned the bull in the same pasture with the heifers. Had he a right to do so and if not, what remedy has the owner of the heifers?

Answer.—He had no right to do so and the owner of the heifers can sue him for damages and recover judgment against him.

Conditional Sale of Cow.

A Subscriber, Brookfield, Wis.—I bought a cow from a man and paid cash for her. The cow was sold to me on one week's trial. She was very poor and thin when I drove her home, but the seller said that was because she had been kept in a poor pasture and that she would be all right in a couple of weeks, but she was sick and on the sixth day after I got her, I notified the man to take her and get me another cow, but he failed to do so, and on the sixteenth day she died of tuberculosis. Can I get my money back from the seller?

Answer.—As you bought the cow on trial it was a conditional sale and your notice to the seller rescinded the bargain, so you can sue the seller and get a judgment against him for the price you paid.

Suit for Slander—Sick Witness.

A South Dakota Subscriber.—(1) What is the law in South Dakota in relation to slander? (2) If a person is sick in bed and lives thirty miles from the county seat, can he be compelled to go there and testify as a witness in court?

Answer.—(1) A person who is slandered in South Dakota may bring suit against the slanderer and recover a judgment for damages, amount to be fixed by a jury. If the judgment is for less than $50 he cannot recover costs of suit. (2) Under such circumstances the person should have his doctor give a certificate of his condition and have same presented to the court.

Note Attachment—Exemptions.

A South Dakota Subscriber.—(1) Can the holder of a promissory note in South Dakota, which will become due in the fall of 1917, prevent the maker of the note from shipping goods or stock to another state, without paying the note? (2) What amount of property does the law allow a person to hold exempt from his debts in South Dakota?

Answer.—(1)) If the holder of such a note can show that the maker of it is about to ship his goods and stock to another state for the purpose of cheating or defrauding his creditors or to delay or hinder them in the collection of their debts he can bring a suit and have the goods and stock attached and held for payment of the note, even though the note is not due. (2) The law allows exempt to every person wearing apparel, family pictures, bible, school books and other books to the value of $200, pew in church and burial lot, and provisions and fuel for one year. To the head of a family it allows a homestead of 160 acres in the country or one acre in town, with improvements thereon not exceeding $5,000 in value, and also personal property to the value of $750 and to a single person personal property to the value of $300.

Father and Children—Will.

A Subscriber, Friendship, Wis.—Two years ago I moved from Iowa to Wisconsin, and last fall my wife died. I have four pieces of furniture, viz., a davenport, side-board, dresser and a kitchen cabinet which my wife bought with money she saved from eggs and poultry sold from the farm since we moved to Wisconsin. My children are all grown and have left me and they want to take said furniture away from me. (1) Can they do so by law? (2) If I should make a will what amount must I give to each child to make the will good?

Answer.—(1) We think your children cannot take the pieces of furniture away from you by law. (2) You can make a will and disinherit every child if you wish. You are not required by law to give them anything.

Buys Machine on Trial.

A Subscriber, Endeavor, Wis.—Some time ago two agents came to my place to sell an ensilage cutter to me. They came several times, and I finally agreed to take a machine. They wanted me to sign a written order, but I refused to do so, and agreed to take a machine on trial and to pay for it if it proved satisfactory to me. After trying the machine four or five days, it smashed up in bad shape. It was represented to be from four to six horse power, and with my five-horse-power engine, it ran hard. Can I be compelled to pay for repairs on the machine, or to pay the price for it?

Answer.—According to the contract as stated, you cannot be compelled to pay for the machine, or for repairs on it, unless the injury to the machine was caused by your negligence or carelessness in operating it.

Suggestions for Better Rural Schools.

To the Editor:—There has been much discussion over our public school system, and indeed it needs it. All sorts of remedies, consolidated schools, training schools for teachers, etc., have been pointed out, but we have gotten nowhere for the simple reason that we talk about it, then feeling our duty is done, turn to the more important matters of hogs, cattle, etc. Visiting the schools does help, unless the teacher happens to be one of the sort who makes you feel she regards you as a spy meddling with what is none of your business, or one of the superior sort who read or heard somewhere that school-teaching methods have improved so that a teacher of a few years ago would not know how to conduct a modern school, which information she passes on to you freely, making you feel little and behind the times. This superior young person, fresh from a small training school, goes on making the children memorize what they ought to reason out, mispronouncing words, using poor English, and otherwise making you feel that paying wages to such teachers ought to be classified as misappropriation of public funds. I do not speak from hearsay when I tell of a teacher (training school graduate) who handed back a written language lesson with the remark: "I don't take no unneat papers." Another from the same school says cheerily: "Joe, spell git." "G-e-t—git," says Joe." "Right," and the lesson went merrily on. Another finished product alternately coaxed and scolded through a lesson period trying to teach a "stupid" pupil, "that the skeleton is a bony structure," instead of taking a few sticks and showing her the difference between a structure and a pile of material. I am not complaining about what my children get in school, for what they do not get in school they get at home, and—well—they can guess at what is not told them. But many pupils need to be shown, and very carefully. Now, the teachers are not wholly at fault. Our advanced schools seem to pay so much attention to the social side of life, and when a training school or high school student has to devote two or three days previous, and two or three days following the bi-weekly dances, to the discussion of what she is going to wear and do, and what she did wear and do, she should not be expected to do so very much in mental work. And furthermore, the parents who want their children educated further than the country school course, are between the "upper and nether millstones." Let them go unfinished, or put them in the midst of—to say the least—distracting surroundings. I am facing this problem now. My thirteen-year-old son has finished the course; my twelve-year-old daughter has two years more. I am alone with them, need to stay on the farm to supply the money, and not a high school anywhere in this county, that I know of, but has its dances as regularly as tearing off last month's calendar leaf. And this added to private, public, charitable and social hops by wholesale, insomuch that a county daily asked what had become of the high school student who used to burn the midnight oil over his studies, and answered its question by saying, "Down at the opera house decorating for the class dance, you will find him." Small wonder our teachers never stay in the community to attend divine services, but must hasten home to the dance, or can stay for one out at her school.

Now, I believe we can solve our school problems when we farmer folks want to. Consolidated schools here are out of the question. Our boys and girls are obliged to help night and morning at the farm work. But how is this for a rough plan. Eleven or twelve months' school. Three in winter for advanced pupils, eighth to twelfth grades. Two acres school grounds. Two-room schoolhouse, one room for manual training and domestic science. A sixth teacher for every five schools who will teach one day in five in each school, using the second room for her classes in music, manual training, domestic science, experimental work in agriculture (soils, seeds etc.) and high school work. The two acres to be used for crops, same to be exhibited and sold to help defray expenses. The expenses: Nothing compared to expense of sending six to twelve of our most ambitious boys and girls to town school, besides losing them from the community perhaps forever.

When school boards squabble over a seven or eight months' term, only having eight because of the state aid, and get the cheapest teacher they can, we cannot expect so very much.

Subscriber.

How Farmers Can Help the Butter Maker.

To the Editor:—Volga creamery butter has been awarded the following scores so far this season:

Wisconsin Buttermakers' Ass'n, Eau Claire, score	93
Polk County Buttermakers' annual meeting, March 30th, Osceola, first prize, score	96
Wisconsin Scoring Contest, Madison, May	94
Wisconsin Scoring Contest, Madison, June	92.83
Wisconsin State Fair, Milwaukee	95
Polk County Fair, St. Croix Falls	91.50
Northern Wisconsin State Fair, Chippewa Falls	94
Polk County Buttermakers' Meeting, October 19th, Osceola, first prize, score	96
Average score for eight times exhibited	94.04

This is all hand separator cream delivered to this creamery and I want to say that much credit is due the patrons for delivering the cream in good condition. Without good cream no buttermaker can make high-scoring butter. The farmer can help to make high-scoring butter by the following:

First, having the milking done in a cleanly manner, separate milk at once in a separator which has been washed and scalded thoroughly each time it is used.

Second, by cooling the cream well in cold water before mixing with cream from previous separation.

Third, by making more frequent deliveries of this clean, sweet and cold cream through his creamery. I would suggest deliveries not less than four times a week and three times a week in winter.

Albert Erickson,
Buttermaker, Co-operative Creamery Association, Amery, Wis.

Drinking Cups Increase Dairy Profits.

To the Editor:—There is a good deal of discussion among our people concerning barn equipment and the different makes which are, of course, largely a matter of personal choice, although some outfits are more convenient than others. All dairymen with whom I have talked claim a large increase in profits by having drinking cups for the cows, so the cows can drink whatever they want to. Dairymen who have water for their cows claim an increase for the season of from $6 to $12 per cow.

William R. Burhopp.

UPPER WISCONSIN

Practical Experience on Wisconsin Farm.

To the Editor:—In 1911 I purchased eighty acres of cut-over land about two and one-half miles from the village in which I live (Colby, Wisconsin) paying $1,600 therefor. The land was really the worst looking piece of land in the neighborhood, quite low and covered with a heavy growth of poplar and willow brush in addition to a great many pine and hemlock stumps.

I had no idea of making a farm of it, but immediately l t a contract for brushing twenty acres at $6 per acre, for the purpose of opening up the land in order to sell at a profit.

After the land had been brushed I let a contract to log and burn the same tract at $6 per acre. I dynamited most of the stumps myself after banking hours and on holidays, using 60 per cent dynamite until this last season, when I used what is called 30 per cent stumping powder.

After the land had been cleared and stumped I had intended to let it rest until I found a purchaser, but owing to the fact that my clearing had been done late in the fall and during the winter, the brush sprouted and grew several feet the next season, and I was compelled to do the work over again.

My experience has shown that, on land cleared during the months of June, July and August, the brush will not sprout again to any great extent, but when cleared later they will make rapid growth the next season.

Now in order to keep the brush down, it was necessary to plow and seed, to have a barn in which to harvest the crop, to have a man on the farm to do the harvesting, and a house in which the man might live while doing it.

I first built by barn 38x60, of balloon frame construction, such as you have often shown in The Wisconsin Farmer, cement floors throughout. I thought that there would be ample room in this barn for many years as my adjoining neighbors on the north, south, east and west assured me that, while their land was all right in every respect, the Lord had made a poor job of his earth building as far as my land was concerned, and that it would not grow crops of any kind.

Four years after the barn was comp ted, I had it full from loor to peak, —about forty-five tons of hay besides considerable grain— and had the satisfaction of selling some of those neighbors pedigreed seed rye grown on the land.

For an eighty-acre farm in this section I would not advise building a barn less than 36x80, and larger if the pocket book would permit.

Last season I built a comfortable farm home on the land; also a tile-block silo, 12x32. I wish that I might say something to impress upon the mind of every farmer reading this article the necessity of a silo.

My own experience has proven it, and the checks presented for payment at our counter shows who has the silo and who has not.

When I had done my first harvesting, I did not consider it good farming to sell the hay and grain; consequently I purchased four cows. I now have fourteen and some young stock. I have lately purchased a registered Holstein sire and one registered cow as a foundation for the herd which I expect to have later on.

I have tried to show my evolution as a farmer, and I wish I might truthfully say that my farming experience has raised me from penury to affluence, but the fact is that, until this last season, my farm has not paid expenses and I have not thus far had any dividends, but I am satisfied that, with the natural increase in land values, and the additional increase in value by reason of the improvements which I have paid for out of my salary, I have made an investment which will in time yield a better rate than loaning money at the current rate.

Did I say that I have had no dividends? That is wrong; I get them every day, in the five-mile walk to and from the farm, a trip I make nearly every nice day, and arrive home tired, hungry, dirty, but a happy man, in blowing the stumps and burning the brush, noting the changing landscape, in the newly turned furrow, which must be plowed true to line, in the smell of the fresh earth, my earth mind you, in the field of waving grain, growing where naught but brush grew before, in creating something good to look upon out of what had previously been an eyesore.

In my business I find ingratitude, unkindness, and those who betray the confidence I have shown in them. When I look into the eyes of the dumb beasts on my farm, I see there no unkindness, no ingratitude; each one is faithfully doing the work they are there to do.

And then I am able to meet my farmer-customer on his own ground, shake his calloused hand with one equally as hard, sympathize with his misfortunes, for in my farm experience I have them as well as he, rejoice in his prosperity, for if his crops are good, mine are equally good; if perchance he cusses by reason of a wet spell in haying time or an early frost, I am able to cuss understandingly and as fluently, by the aid of my farm papers, and with my farming experience I am able to discuss with him breeds and types, seeds and results; thereforce, I hope that in due time and in his estimation, if not my own, I shall have graduated from the ranks of the would-be to the full-fledged farmer.

Colby, Wis. M. C. K. Andrews.

Buy Up-State Farms.

Two members of the staff of the college of agriculture of the University of Arizona will soon be Marinette county farmers. Prof. J. F. Nicholson, agronomist and superintendent of the experiment station farms, has purchased 160 acres of land and Prof. S. B. Johnson, horticulturist, has purchased eighty acres. The two tracts of land adjoin one another and will be developed jointly. The lands lie a short distance west of Wausaukee.

Professor Nicholson was born in southern Wisconsin and is a graduate of the Wisconsin College of Agriculture. He has always been greatly interested in dairy farming and it is that form of farming to which he will devote his efforts on his Marinette county land.

A Yellow Pine Stave Silo.

To the Editor:—I erected a silo in 1915. This silo is of stave construction, 12x24, two-piece yellow pine. I have a pit five feet deep, making a total of 12x29, which I figure holds about 160 tons. It took seven and one-half acres of corn to fill it this year.

We will feed this winter thirteen cows, seven yearlings and a bull.

When gravel can be obtained at a reasonable cost, I would prefer the concrete silo, but here we have to pay $1.90 per yard for gravel f. o. b. station, which makes the cost of concrete silo almost prohibitive.

P. A. Peterson, Prop.,
Douglas Co., Wis. Riverside Farm.

Dairymen Find Special Equipment Profitable.

To the Editor:—I think that modern barn equipment adds greatly to the comfort of the cows, the sanitary conditions of the barn, and to the convenience in doing the work, but it is impossible to determine exactly how much the production would be increased by installing modern equipment, because there are always some other conditions that enter into such trials, such as the weather, the quality of feeds, and care, which are apt to vary the production one way or the other.

The man in my association whom I would consider the most profitable dairymen has a special equipment, the second has the equipment of another make, and the third one has still another system installed.

F. W. Drake,
Walworth Co., Wis. Official Tester, Geneva Cow-Testing Assn.

Ginseng root has been selling at $5 a pound. In the vicinity of Antigo, Wisconsin, several growers have made a good haul this year. One grower dug 3,000 pounds of green root. There is a ready market at this time for all ginseng.

Another Letter from the President of Fairbanks, Morse & Co., to every Farmer in the United States

Office of the Fairbanks, Morse & Co. Chicago

Subject: 1,000-lb Scale $14.85 500-lb Scale - 12.50

Here's another big surprise for you - as big, if not bigger, than was the "Z" Engine. Every farmer knows about that.

It's almost sensational - a genuine FAIRBANKS Scale at the remarkably low price of $14.85 for the 1,000-lb capacity, and $12.50 for the 500-lb.

If this scale were not a FAIRBANKS, backed by all the years of FAIRBANKS reputation, a thinking man would hardly believe that it was a good scale because of the low price. But you know that Fairbanks, Morse & Co. have built their business on QUALITY products.

Every Bureau of Weights and Measures passes FAIRBANKS scales as "Correct". It is truthfully said - "If it's weighed on a FAIRBANKS there's no argument" - because it has Steel to Steel Bearings and Arrow-tip Beam. Yes - and a lot of other exclusive quality points. This scale has wide wheels and an extra large platform.

I am writing this because I personally am proud of this latest achievement of our organization. Go see it at your dealer's. You will be amazed. You'll hardly go through another day without adding this sturdy, reliable, "watch dog of weights" to your farm equipment.

Cordially yours,
C. H. Morse Jr. President.
FAIRBANKS, MORSE & CO.

"If it's weighed on a FAIRBANKS there's no argument."

GO TO YOUR LOCAL DEALER

see the scale and you'll buy it. A reputable dealer selling a reputable scale certainly is a strong combination.

If you don't know the local Fairbanks-Morse dealer, write us.

Fairbanks, Morse & Co.
CHICAGO

Hemlock Round Barn at the State Fair Grounds at Marshfield, Wis., just completed by the Central Wisconsin State Fair Association. It is 160 feet in diameter and has stalls for 250 head of cattle, and a judging space in the center with seats for 1,000 people. That's *some barn!* It is said to be the largest barn in the world and we certainly don't know of one any larger. Outside of the 198,000 White Cedar Shingles (best there is) every stick in it is "Old Faithful" HEMLOCK.

"Now, I wonder why the Central Wisconsin State Fair people built 'the largest barn in the world' of

'Old Faithful' HEMLOCK Lumber"

There's nothing to wonder at in that, brother. "Old Faithful" HEMLOCK has been the farmers' standby for more than two hundred years, since long before the Revolution. It's mighty economical wood to build with. If kept away from the soil and from moist corners, it doesn't rot in a century. It takes and holds paint and stain in fine shape and holds nails like a vise. It is light and clean to handle and contains no pitch. Besides, you can get it always **from your own local lumber dealer,** where you can deal with a man you know and can see what you're getting.

You can be sure that when the Central State Fair people invested in 110,000 feet of lumber to build 'the biggest barn in the world', they investigated pretty carefully and knew what they were doing when they planked their money down.

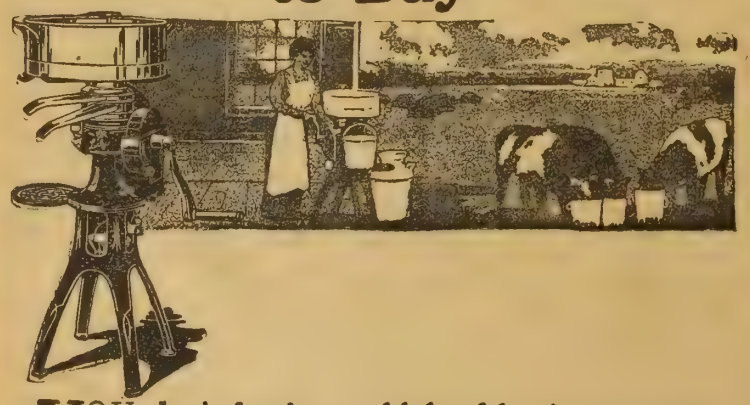
The Cream Separator to Buy



YOU don't begin to think of buying a cream separator until you are convinced that a separator will pay. When you come to buy, though, you want the one that pays best. How are you going to judge? Will these suggestions help you?

First, buy from a responsible, reputable concern. That still leaves you a number of separators to choose from.

Second, buy a separator that has proved itself a close, clean skimmer. This narrows your choice down still further. Let us send you a letter from the president of the Iowa Federation of Cow Testing Associations on this point.

Third, buy an easy running separator that requires but one adjustment, and that one you can make yourself. By this time your choice has narrowed down to two separators—a **Primrose** or a **Lily.** Either one of these, by any test you choose to put it to, will prove itself the separator to buy.

The local dealers who handle these machines can give you conclusive proof of the superiority in close skimming, handiness, cleanliness and length of service of **Primrose** and **Lily** cream separators. A letter to the address below will make it easy for you to investigate these separators as much as you please.

Experiments in Alfalfa Fields.

Interesting Facts Learned by Pupils in Agricultural Classes at Warren Union High School, Roberts, Wisconsin.

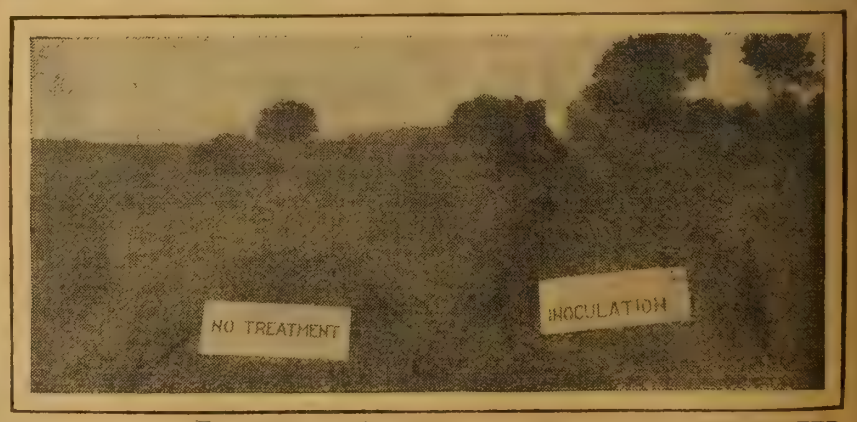
THE accompanying illustrations are self-explanatory and show the results of some very interesting experiments which have been carried on near Roberts, St. Croix county, Wisconsin. As our readers know, there has been some very interesting work accomplished through the Warren Union High School, at Roberts, and under the direction of Prof. Jno. M. Hammer and others. The Warren Union High School has ground devoted to agricultural experiment work. During the past season they have been experimenting in the effect of lime and inoculation on the yield of alfalfa. Nothing could more approximately illustrate the results and the yields under different treatment of the soils as shown by the photographs. These experiments emphasize the same conclusions which have been reached by the workers of the Wisconsin Experiment Station, at Madison, and others who have been conducting experiments with alfalfa under the direction of the various county orders. In this particular case the original state of the soil used for the experiments was exactly the same, so that the effect of liming and inoculation is strongly emphasized.

NO TREATMENT OF SOIL AS COMPARED TO SOIL TREATED WITH LIME. NOTE DIFFERENCE IN THE YIELDS.

It is just such experiments as these which have been conducted at a number of the county farms of the state under the dir tion of workers in the Wisconsin Experiment Association and the Wisconsin Alfalfa Order. It is apparent that we still have a great deal to learn about the successful growing of alfalfa in Wisconsin, esp cially on some of the heavier soils.

CULTURE INOCULATION AT LEFT AND SOIL INOCULATION AT THE RIGHT. THE SOIL INOCULATION RESULTED IN LARGEST YIELD.

SHOWING DIFFERENCE OF YIELD OF ALFALFA ON UNTREATED SOIL AND SOIL LIMED AND INOCULATED.



ALFALFA YIELDS IN SOIL, THE YIELD AT LEFT BEING IN UNTREATED SOIL AND AT RIGHT IN SOIL INOCULATED BUT NOT LIMED.

Over 3,000 butter and cheesemakers of this and other states have been enrolled in the Wisconsin Dairy School, established in 1890.

Farmer's Interest in His Creamery

Pointers on Relationship of Buttermaker and Patron, by C. E. Lee, of Madison, Before Waterloo Dairy Congress.

THE managers and officers of the leading co-operative creameries are beginning to ask the question, "Are we doing our duty to the farmers of the community who entrust us to handle twenty to thirty million dollars a year?" During the past summer two Wisconsin factories with a combined output of over 1,000,000 pounds of butter realized that the quality of their product and method of marketing was causing a loss of 1 to 2 cents per pound. An individually owned creamery located less than 100 miles from these two plants for the month of March last sold two-thirds of its output at nearly 3 cents net per pound higher price.

Last May a patron of a Wisconsin creamery that had not had the advantage of a regularly organized cow-testing association remarked that the average production of his herd for last year in butter fat sold to the creamery alone was $140. One cow produced over 600 pounds of butter fat. These and other illustrations could be given to prove that the farmers as a class have advanced by making a study of their problems. Not only do they study the cows but they are beginning to know the soil, its management and productive value.

They are becoming familiar with modern methods of managing the co-operative creameries. On many sections the farmers are not satisfied with the creamery building that formerly answered the purpose. They do not hesitate to erect the best structure that can be put up in order that efficiency may not be hampered. They have even said: "A few years ago a man in charge of the creamery who had the capacity of earning $75 to $85 per month answered our needs; not so today. One hundred and fifty dollars per month may not mark the limit." This is a plain warning to the buttermakers or creamery manager that they must be better trained.

This higher standard is demanded in order that the factory industry may be placed upon a higher plane and the men behind the work when making certain requests may receive a hearing. The industry is of such magnitude as to attract men with special training, age and experience. It has no place for those who think that to be a creamery operator and a skillful maker requires but a few months' training. A few weeks ago a new creamery was dedicated. About 2,000 people gathered for the occasion because it was one of the institutions of the county that had helped to make the homes, the farms, the banks and the business houses. The president of the company told the people that the success of the enterprise was largely due to the man who for eight years had been the buttermaker and the manager.

It is not out of place to mention the fact that butter made in the bulk of the creameries will in the future have a more difficult battle to fight than it has ever had. The competing forces are each year perfecting their organization. We must hold our own.

The buttermaker should be able to assist the farmer not only in outlining for him a method that will result in a higher grade of cream being produced but to gain his confidence and thus be placed in a position to advise him on other subjects and to inform him of better methods in other farm activities.

In the creamery it is not only the problem of starter making, cream pasteurization and cream ripening and churning, but the making of one churning of butter that is a counterpart of a thousand churnings. In other words, uniformity. This does not refer to the flavor alone, but to the texture or body control, the color and the salt.

During the past few years a number of problems have been studied by the men called upon to further the cause of factory operation. The makers have taken hold of these same questions and together some definite solutions have been reached. In other lines, to the outsider it may appear that we have simply marked time. The factory managers are still working on the problem of the quality of the raw material. They feel that good butter is not the result of what can be done to improve the deteriorated product, but rather how to prevent contamination. They say the farm is the place to begin methods and frequently is next in order. Unfair competition still exists in some places.

In Wisconsin, as well as in other states, certain counties or sections can be referred to as examples of progress along these lines. Men employed by the state or the county as inspectors or instructors can in co-operation with the local men accomplish a great deal more than the factorymen can do working alone. These local men can open the field and take the lead. As an example, in a certain community, the creamery had once closed because of lack of quality and co-operation. It was reopened and for a year or two the task seemed hopeless. The state department was called upon and a careful study was made of the situation. Two different meetings were held, where all of the cream producers were asked to be present. In short, the result was marvelous. The words of the owner of the creamery were: "I have 109 wide-awake patrons and they have awakened to the fact that by producing good cream they get the benefit in price paid for butter fat. This creamery always paid Chicago butter quotation for butter fat, but now we are able to pay ½ to 2½ cents above Chicago." In a certain county the creamerymen formed a county unit, where all of these problems could be discussed and all cards placed on the table face up. The first meeting that they held was the beginning of many lines of activity that will result in much good. In Wisconsin the factory licensing law has already accomplished a great deal to improve factory conditions in general. Operators have made many improvements, thus making it possible for the makers to have a better place in which to do their work. The makers must comply to certain rules and regulations. This all counts for efficiency and is but a step for still greater progress.

Let Us Help You Plan Your Barn

We maintain a large, well equipped Architectural Department for the service of barn owners everywhere. We can help you get a good barn at a moderate cost. Preliminary sketches and suggestions are free.

Write us about your plans.

Pasture Comfort for Your Cows—Bigger Profits for You

Cows are a lot like humans in the way they respond to kind treatment and comfortable surroundings.

The difference in a year's returns from contented and from discontented cows will pay for Louden Sanitary Steel Stalls and Stanchions.

Try them out in your barn and watch the milk yield jump. They cost but little more than wood; they last ten times as long. They protect the cows from injury and keep them clean.

You won't have to build in order to use them; you can install them in the old barn.

Our Big Illustrated Catalog shows:

Stalls and Stanchions — Hay Tools
Steel Pens — Barn Door Hangers
Litter and Feed Carriers — Horse Barn Equipment

A New Way to Grade Furs

We have created a new system for grading furs. One that will protect you. No one man can grade furs rightly at all times. So we have established a commission of three fur experts who have done nothing but judge furs for years. They will grade all furs you send us and price them according to the highest market reports.

We are the largest firm in our line in America. We have large markets to supply. We have to protect your interests if we are to get a good, steady supply of pelts. That is why we established this commission. To protect you. To protect the fur business. It was simply good business. For we make more in the end by paying *you* more. We want high-grade pelts, and we are helping trappers to get them by our free premium system—equip all trappers who trade with us.

FREE TO HUNTERS AND TRAPPERS—AUTOMATIC REVOLVERS, GUNS, TRAPS, etc.—who join our co-operative plan. So don't be tempted to sell furs elsewhere until you read the particulars of this plan. We believe it will make a big year for you if you take advantage of it. Write for our Fur Club News, Fur Market Reports, Premium List, and List of Prices. All of these will be mailed to you free, upon request. (25)

In and Around Wisconsin

COMING EVENTS.

Wisconsin Potato Growers' Association and State Potato Show, Eau Claire, Wis., November 21st to 24th.

Winter Course Wisconsin Dairy School, Madison, Wis., November 8th to February 1st.

International Live Stock Exposition, Chicago, Ill., December 2d to 9th.

Wisconsin Dairymen's Convention, Waupaca, Wis., December 5th to 7th.

Wisconsin Buttermakers' Association, Sparta, Wis., December 5th to 7th.

Farmers' Week (Swine Program), Madison, Wis. Beginning February 6, 1917.

Madison is to have 8 cent milk as a result of the high price of feeds, the poor pastures and the consequent advance of milk sold from the farmer to the dairy. Milk which the dairies had been buying at $1.60 is now costing $2. The same condition prevails in most Wisconsin cities.

C. T. Williams, of Farmer City, Illinois, has a freak ear of corn which counts twenty-one rows around. It is said that one may count a million ears and never find any that are not an even number of rows. The freak ear will be exhibited at the Bloomington Corn Show and other shows.

Neil McLean, a Walworth county farmer and breeder, recently shipped twenty-three head of grade Holsteins to J. N. Davis, Miltonville, Kansas. This is but a sample of sales made in Wisconsin to Kansas and the Southwest. Kansas City is trying to get the National Dairy Show next year and it is expected that such a move would greatly stimulate interest in dairying in that section.

A physician at Jackson, Wisconsin, has a Plymouth Rock pullet which is accused of having an ear for music. The doctor recently drove from his farm to Milwaukee, twenty miles, to a theater. After the show he found the pullet at roost on the running board. Miss Plymouth Rock had ridden all the way to town and waited until after the show. Whether she had a ticket for the opera or merely took in a movie the doctor doesn't know, but she was taken inside the car and given a nice warm ride home.

Quite a large number of purchasers of milk in quantities from farmers have conceded to the $2 average winter milk price, the same scale which was demanded some weeks ago by the Illinois Milk Producers' Association. The Borden plants at Monroe, Monticello and other points announced the new scale of prices several days ago. October milk has been selling at these plants at $1.90, November deliveries will bring $2.10, December the same, January $2.05, February $2 and March $1.85. In the main, those who are affected by the new scale of prices have previously been selling their milk at $1.60 per hundredweight.

Producers of milk must reckon with the ice cream demand of these later years. It is said that the factories in Milwaukee sent out more ice cream in one day during the hot spell last year than they did in a week during the previous summer. Smaller factories sent out around 25,000 gallons of ice cream a day and the larger ones as high as 150,000 gallons a day. Not only is there a strong demand for ice cream in hot weather but there is a steady and regular demand throughout the whole year. The lad who had ice cream once a year on the Fourth of July is an unknown in these days when "sundaes" are almost a daily occurrance and when the Sunday dinner usually is topped off with the favorite family dish, ice cream. The American people have been educated to eat ice cream and the demand will increase rather than diminish.

American shippers exported $283,101,181 worth of breadstuffs during the eight months ending August 31st, according to an analysis of August trade issued recently by the department of commerce. That was a decrease of $89,327,613 from the same period a year ago, but August exports of $34,687,007 represented an increase of more than $5,000,000 over August of 1915. Meat and dairy products exported in August showed an increase of $2,000,000 over the previous August.

Farmers Hold Many Open Country Institutes.

F. L. Luther, superintendent of farmers' institutes, is receiving many well-filled applications for one and two-day meetings from communities located out in the "open country."

And, although it will mean much cross-country traveling, the institute workers expect to accept the invitations of many of the cross-road and rural committees. For a large part, these meetings will be held this year in two important sections of the state. The first will include the central area of the state having light soil and marsh-land problems to solve, while the second region will take in the northeastern counties, where much of the country is in an undeveloped condition.

Conductors and speakers at these institutes will be men having wide experience and close sympathy with the particular needs of the regions visited. They will lead conferences on soil fertility, drainage and live stock management in the central areas of the state, while land clearing, field-crop culture, and development questions in general will be emphasized in the northeastern sections.

About 130 regular two-day farmers' institutes will be held this season, and at more than fifty places women's conferences will be held in connection.

A number of state agricultural organizations have been asked to cooperate in the farmers' institute work during the winter of 1916-17. These will include the Wisconsin Agricultural Experiment Association, the State Horticultural Society, the State Drainage Association, the Wisconsin Live Stock Breeders' Association, and the Wisconsin Potato Growers' Association.

Something New For Tobacco Growers.

To the Editor:—I have some interesting information for tobacco growers, and it is based on actual experience, too. Am located in the heart of the bright tobacco belt in North Carolina.

The tobacco plant is one of the tenderest and quickest to feel drouth. The roots do not penetrate deeply, and because of the large spread of the leaves and the close growth, it is one that requires an immense amount of moisture to carry it through its growing season and give it good quality and heavy yield.

The year 1913 was very dry. Of course, we didn't anticipate that it would be, but it just happened that we selected the spring of that year to try out the new subsoiling with dynamite theory; at least it was new to us at that time.

Other land planted to tobacco didn't do well here that year. The subsoiled land had a good crop being in the best of growing condition all season.

The theory is, I believe, that deep breaking of the soil by blasting puts it into a condition to conserve moisture against dry spells that are almost sure to occur some time during every growing season; also to allow excess rainfall to drain down into the soil beyond the reach of the roots. In other words, prevent a water-logged soil.

I have had a great deal of experience raising this crop and find it always does best on land that has been deeply broken. And it did particularly well in the blasted field—so well that it commanded a price above the market. Based on our experiment, I really believe the farmers in the bright belt could add $50 to the yield of every acre if they would break up the subsoil by blasting, and the work wouldn't cost half that and wouldn't have to be repeated for several years. In the dark belts of Ohio, Kentucky and Virginia they should be able to greatly increase the quality and quantity of their crops by this method.

I would like to see every tobacco farmer try this for himself on a small plot. But there is a right and wrong way of doing it and the soil must be dry when the blasting is done, so I would advise writing for instruction book and reading up on it before going ahead.

I have tried the subsoiling on corn and on tree holes, too, but haven't had as good success on them as on tobacco.

James R. Brown.

When you buy Prince Albert *you are getting quality!*

Quick as that P. A. flavor strikes-in, you'll realize you've received all you paid for in *tobacco quality*—not coupons or premiums! State or national restrictions on coupons or premiums can in no way affect Prince Albert's sale. Quality has been the only inducement Prince Albert has ever offered smokers!

You've heard many an earful about the Prince Albert patented process that *cuts out* bite and parch and lets you smoke your fill without a comeback! *It proves out every hour of the day!*

PRINCE ALBERT
the national joy smoke

will open the doors wide for you to come in on a good time with a jimmy pipe or makin's cigarettes. You'll think the smoke-lid is off for fair, firing up as the smoke-spirit strikes you—*without a regret!*

All that delight can be yours soon as you lay in a stock of P. A. and jam that friendly old pipe brimful or roll some cigarettes—*and strike fire!* This tip is worth a lot in happiness and contentment to every man who knows what *can* be gotten out of a chummy pipe or a cigarette with P. A. for "packing."

Self-Feeder For Pigs.

The value of the self-feeder method of fattening pigs was demonstrated in an experiment recently carried out at the experimental farm of the bureau of animal husbandry at Beltsville, Maryland. The object was to determine the value of this system as compared with the ordinary method of hand feeding.

The pigs used in the experiment were grade Berkshires farrowed in the fall of 1915. They averaged ninety-three pounds per head when the experiment started. They were fairly uniform in size and age, but were not the best pigs in the fall farrow.

The hand-fed lot were fed three times daily, the amount being governed by the appetites. The ration given the hand-fed hogs was composed of five parts corn meal, four parts middlings and one part tankage. The corn meal and supplements were mixed dry. Just before feeding the amount to be fed was weighed and then mixed into a thick slop, enough water being used to make the slop pour out of the bucket without sticking. The feeding was done at 7 and 11:30 o'clock in the forenoon and 4:30 o'clock in the afternoon.

The self-fed lot had free access at all times to corn meal, middlings and tankage in separate compartments of a self-feeder. Close watch was kept on the feeder and a supply of each feed maintained.

Both lots of pigs were kept in dry lots a quarter of an acre in size. The pigs were given ample room for exercise and sufficient shelter. The pigs in both lots had access to a mineral mixture composed of—

Charcoal	1 bu.
Hardwood ashes	1 bu.
Salt	8 lbs.
Air-slaked lime	8 lbs.
Sulphur	4 lbs.
Pulverized copperas	2 lbs.

SUMMARY OF RESULTS.

Feeding period, Feb. 22 to May 2, 1916—70 days.

	Hand-fed lot.†	Self-feeder lot.§
Number of pigs	9	9
Average initial weight, pounds	94.00	92.00
Average final weight, pounds	167.50	205.00
Average gain per pig, pounds	73.50	113.00
Average daily gain, pounds	1.04	1.61
Feed eaten daily per pig:		
Corn meal, pounds	2.13	5.46
Middlings, pounds	1.70	.81
Tankage, pounds	.42	.28
Average daily ration, pounds	4.25	6.55
Pounds of feed per 100 pound gain	410.00	405.00
Cost of 100 pounds gain	$6.24	$5.67

† Ration: 6 parts corn meal, 4 parts middlings, 1 part tankage.

§ Ration: Corn meal, middlings, tankage.

The cost per ton of feed used in the experiments was as follows: Corn meal, $27; middlings, $30; tankage, $50.

All the pigs in the self-feeder lot maintained keen appetites during the seventy days of feeding. The hand-fed pigs averaged ninety-four pounds per head and the self-fed pigs ninety-two pounds per head at the beginning of the test. At the end of seventy days the hand-fed pigs averaged 167.5 pounds and the self-fed pigs 205 pounds, 37.5 pounds more than the hand-fed pigs. The self-fed pigs consumed a greater quantity of feed per head during the test than the hand-fed pigs, but it took only 405 pounds of feed to produce 100 pounds of gain in the case of the self-fed pigs at a cost of $5.67, while the hand-fed pigs produced 100 pounds of gain at a cost of $6.24.

The self-fed pigs made a better showing, surpassing the hand-fed lot in both rate and economy of gains. The results of the experiment clearly show that for quick fattening the self-feeder is very practicable.

Rider AGENTS Wanted

1917 Model

in each town to ride and show a new 1917 model "RANGER" bicycle. Write for our *special offer* on a sample to introduce. DELIVERED FREE on approval and 20 days' trial. DAIRY

Illustrating Cow Testing Work.

Exhibit at Waupaca Fair—By George L. Moss, of Waupaca and Butternut Ridge Association.

I AM enclosing some pictures of an exhibit which I had at the Waupaca County Fair. It consists of eleven tubs of butter, being the production for a year of the best cow in our Waupaca and Butternut Ridge Cow-Testing Association. Five tubs represent our association average. Three and a half tubs represent the average for the state. Two tubs were the average production of the poorest cows in our association. The picture of the poorest cow in the association was on exhibition and the picture of the best cow was shown on the tubs of butter. The ration which the best cow was fed was shown in glass jars, and it included ground oats, ground corn, oil meal, and R. K. D. feed. A Babcock tester, milk scales, milk sheet, record boo , milk strainer, charts and posters completed the exhibit. It was as attractive as we knew how to make it, and I was very much pleased at the interest which our fair visitors took in the exhibit. Many valuable lessons were learned from this exhibit. The exhibit was taken by a leading hardware merchant, of Weyauwega, and placed on display in their windows for ten days. Another picture sent herewith shows our members unloading dried brewers' grains bought co-operatively. As tester for the association, I have been instrumental in purchasing and distributing forty tons of this feed the past month at Waupaca and Weyauwega.

We are thinking about the meeting of the Wisconsin Dairymen's Association, to be held at Waupaca, December 5th, 6th and 7th; and we want to try to make it the best and most profitable meeting ever held in the history of this organization. Our business men are enthusiastic concerning this meeting, and I believe they will back us up in any reasonable efforts to entertain and instruct those who come.

DE LAVAL SEPARATORS

Make Fall and Winter Dairying More Profitable

THERE are special advantages in using the best cream separator during the fall and winter months. The milk from cows long in milk is hardest to cream, and likewise hardest to separate with an inferior separator.

Moreover, cream and butter prices are highest, so that the waste of gravity setting or a poor separator counts for most at this season.

Then there's the sweet, warm skim-milk for stock feeding, alone worth the cost of a separator in cold weather.

There is surely no reason to delay the purchase of a separator or to continue the use of an inferior one.

You can't afford to wait until next spring. Let the De Laval start saving cream for you right now and it will earn its cost by spring. See the nearest De Laval agent at once, or if you do not know him, write us direct for any desired information.

The De Laval Separator Co. 165 Broadway, New York 29 E. Madison St., Chicago

The AMERICAN MESSENGER

IS THE BEST Illustrated Religious Monthly Published In This Country at the Low Subscription Price of Only 50 Cents a Year.

AMONG its editorial contributors may be mentioned such popular religious writers as Rev. David James Burrell, D. D. LL. D., Pastor of the Marble Collegiate Church of New York City; Rev. Charles Carroll Albertson, D. D., Pastor of the Lafayette Avenue Presbyterian Church of Brooklyn, N. Y.; Rev. J. Wilbur Chapman, D. D., the famous evangelist; Rev. Edgar Whitaker Work, D. D., Pastor of the Fourth Presbyterian Church of New York City, and Rev. George Ernest Merriam.

It is especially valuable to Christian Endeavor and other Young People's Societies. Each issue contains stories of fascinating interest, suitable for home reading and other articles relating to the family life. The American Messenger endeavors to present a comprehensive view of the progress of the Kingdom, both at home and abroad; to tell of the forward movements that are being initiated for the uplift of humanity and the betterment of mankind; to call attention to those phases of Christian work and thought that are of unusual interest; to record the manifold activities of the Christian Church; and to spread abroad the cardinal teachings of Jesus Christ, as revealed in the Gospel which He proclaimed as the message of God.

The paper is interdenominational and admirably suited for every home. All those who subscribe now to the American Messenger for 1917 at fifty cents will receive the paper until January 1, 1918. New subscribers will thus receive the issues for October, November, and December, 1916, free of cost, if they subscribe at once. If you do not know the paper, send for a free sample copy.

Address, AMERICAN MESSENGER, Dept. 5, Park Ave. and 40th St., New York City, N.Y.

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Fall Care of Rose Bushes.

Lovers of roses still have some work to do in their gardens before the winter sets in if they are to expect the best results next year. Some methods of combating diseases of these plants cannot be followed during the growing season and advantage should be taken of the fall months.

In general, whatever the disease, the affected portions of the plants should be cut out in the fall and the bushes sprayed.

It is assumed, however, that spraying will not have been delayed until fall, but will have been carried on as a control measure at frequent intervals since spring. The diseased wood removed in the fall, together with the old leaves and debris under bushes, should be burned. In case of attacks by rusts, canker and leaf spots the diseased wood or leaves should be removed and burned even during the growing season.

For powdery mildew the control sprayings for the summer spores should be with lime-sulphur or potassium sulphide. After cutting back in the fall the plants should be sprayed with lime-sulphur or strong Bordeaux mixture. The control spraying for rusts should be ammoniacal copper carbonate. The fall spraying should be with a strong Bordeaux mixture. For leaf spot, leaf blight and anthracnose the control sprays may be either Bordeaux mixture or ammoniacal copper carbonate and the fall spraying should be with the former.

Leaf blotch, also known as black spot, is a common and very injurious disease. The first symptoms are the appearance of irregularly shaped blackish spots on the upper surface of nearly full-grown leaves. In this stage the trouble may be controlled by several sprayings with ammoniacal copper carbonate or Bordeaux mixture, but if these precautions are not taken another stage of the fungus develops in the same spots. The fungus in this later stage lives over the winter on fallen leaves and sets up a new infection in the spring which can only be prevented by raking up and burning the fallen leaves and spraying the dormant bushes with strong Bordeaux mixture.

Another disease to which roses are subject is canker, which starts with the appearance of small reddish patches on the green parts, generally of one-year-old growth. Such infected areas may increase until the entire stem is surrounded and may extend for several inches along the branch. The only advice to be given is to cut away rigorously all diseased branches, and it may be necessary to cut back entire brushes if badly infected. Cover the exposed surfaces made by this cutting with paint or tar. This diseased material must be burned and the dormant bushes sprayed with strong Bordeaux mixture in both the autumn and early spring.

Potato Bread and Rolls.

Excellent bread can be made by using three pounds of boiled and mashed potato and two and one-fourth pounds of good bread flour, according to the baking specialists of the United States Department of Agriculture. The bread so compounded has a rich brown crust and tender and elastic crumb. It has an appetizing odor and a very agreeable taste, which is preferred by many to that of bread made wholly from flour. When made according to the directions given below, potato bread contains more mineral matter, fiber and moisture, but otherwise, in composition and nutritive value, is practically the same as ordinary bread. Its higher moisture content helps to keep it fresh several days longer than ordinary bread. In localities where there is a surplus of potatoes or where they are very cheap, potato bread costs less to make than all-flour bread. This would prove an excellent way in which to utilize cull potatoes. Even, however, where the relative market price of potatoes and flour are such that there is no economy in substituting potato for flour, the individual flavor and keeping quality of potato bread make it desirable as a variant in the family diet.

Potato bread as known abroad is made generally with potato flour, about ten parts of this commonly being used with ninety parts of wheat flour or a mixture of rye and wheat flours. As potato flour and dried potato flakes are not accessible to the American housewife the specialists conducted a series of successful experiments in using boiled potatoes with flour.

It was found that a mixture of boiled potatoes and wheat flour in the proportions given in the accompanying recipes, gave a very desirable loaf, a trifle smaller than that made from all flour, but wholesome and nutritious. Figured to a basis of equal moisture content the boiled potato would represent 25 per cent and the flour 75 per cent of the mixture.

The following methods for making potato bread, worked out in the baking laboratory, are recommended:

For the straight dough method, for four one-pound loaves, the following ingredients are required: Three pounds of boiled and peeled potatoes, two and one-fourth pounds of good bread flour, three level tablespoonfuls of sugar, one and one-half level tablespoonfuls of salt; two cakes of compressed yeast, four tablespoonfuls of lukewarm water.

Wash thoroughly and boil in their skins about twelve potatoes of medium size. Cook them until they are very tender. Drain, peel and mash them while hot, being careful to leave no lumps. Allow the mashed potato to cool until lukewarm. To three pounds (five solidly packed one-half-pint cupfuls) of the mashed potato add the yeast, which has been rubbed smooth in a cup with three tablespoonfuls of lukewarm water. To get all the yeast, rinse the cup with the remaining tablespoonful of water and add this also to the potato. Next add the salt, the sugar and about four ounces of the flour (one scant half-pint of sifted flour). Mix thoroughly with the hand, but do not add any more water at this stage.

Cover the mixing bowl to avoid the formation of a crust on top and place out of the way of drafts to rise, where the temperature cannot fall below 80 degrees Fahrenheit or be much higher than 88 degrees Fahrenheit. Where the housewife has no thermometer she should see that the dough in all the risings is kept moderately warm, but not up to blood heat. Any water used in mixing the dough should be moderately warm, but by no means hot. This sponge, if kept at the proper temperature, should, after two hours, become quite light.

To this well-risen sponge, which now will be found to be quite soft, add the remainder of the flour, kneading thoroughly until a smooth and elastic dough has been formed. The dough must be very stiff, since the boiled potato contains a large amount of water which causes the dough to soften as it rises. Do not add water to the dough unless it is absolutely necessary to work in the flour. Set the dough back to rise again, temperature at about 86 degrees Fahrenheit, until it has trebled in volume, which will require another hour or two. Then divide the dough into four approximately equal parts, reserving a tiny lump weighing two or three ounces for an "indicator." Shape the sample into a ball and press it into the bottom of a small tumbler with straight sides. The glass should be slightly warmed. Note the volume of the ball of dough in the tumbler and mark the glass at twice this volume.

Mold the four portions into loaves and place in greased pans which have been slightly warmed. Place the glass containing the "indicator" beside the pans and let all rise, under proper temperature, until the "indicator" shows that it has doubled in volume. Then place the loaves in the oven and bake in a good, steady heat for 45 minutes.

Where no oven thermometer is at hand a convenient test for the oven will be to put a teaspoonful of flour in an earthen dish in the oven. If this flour becomes light brown evenly throughout in five minutes' time the oven is right for bread baking. If the flour scorches in that time the oven is too hot.

Potato bread by the sponge method requires for four one-pound loaves: Three pounds of boiled and peeled potatoes, two and one-fourth pounds of good bread flour, three level tablespoonfuls of sugar, one and one-half level tablespoonfuls of salt, one cake of compressed yeast, four tablespoonfuls of water.

Boil, peel and mash the potatoes as directed in the straight dough method. In the evening take one and one-half pounds, or two and one-half pounds solidly packed half-pint cupfuls, of the cool mashed potato, add to it the salt, four ounces of flour (one scant half-pint cupful) and the yeast rubbed smooth with the water, reserving one spoonful to rinse the cup.

In the morning add the remainder of the potato, the sugar and the rest of the flour. Knead thoroughly until a smooth and very stiff dough is formed. After working the dough set it to rise according to the directions given for the second rising under the straight dough method. Thereafter handle the dough exactly in the same way as is given under the straight dough method.

Very good rolls can be made from a similar mixture of boiled potatoes and flour by adding shortening and sugar. The following proportions will yield one dozen small rolls: Eight ounces of boiled and peeled potatoes, six ounces of sifted flour, one-third cake of compressed yeast, three-fourths level teaspoonful of salt, two tablespoonfuls of sugar, two tablespoonfuls of butter.

Two tablespoonfuls of powdered milk added to the dough will greatly improve the quality of the rolls. Although milk itself or cream may be used, it must be borne in mind that they will increase the liquid content.

Boil, peel and mash the potatoes as directed for bread making. Add in order to this the salt, the powdered milk (if used), the yeast rubbed smooth and mixed with the water, and lastly two tablespoonfuls of flour. Let this mixture stand at a temperature of about 86 degrees Fahrenheit until the dough begins to collapse. Add to this sponge the butter, the sugar and the remainder of the flour and, if necessary, enough more flour to make a very stiff dough. Knead thoroughly until a smooth dough which is no longer sticky has been formed. Set back to rise again and when the dough has trebled in volume knead lightly, form into small balls and place, not too close together in greased pans. Allow to rise until double in volume, as shown by the "indicator," and bake twenty minutes in a moderately hot oven.

To Make Geraniums Bloom.

To the Editor:—One of the readers wanted to know what she should do to make her geraniums bloom. Perhaps she has her plants in too large pots. The smaller the pots are the more the plants will bloom. Or it might be that the ground she used was too old. At any rate, I would advise her to try the smaller pots. I have beautiful geraniums and they bloom the year around and I hope this lady will have success in making hers bloom like mine. Miss D. S.

Spending-Money For the Farm Girl.

When the children are old enough to ask for money to spend they should be given the opportunity to earn it. Money that comes at the cost of time and effort will be more wisely spent than that which costs nothing. Usually that which costs little is lightly valued.

There are new ways coming up all the time by which girls may earn a little money besides the usual methods of caring for the young animals, fowls and bees, and without the discouraging prospect of seeing it go into father's pocket without a word to the caretaker. It is so easy to forget the rights of a child.

Now that the supply of foreign preserves and jams is cut off, it is possible for the farm girl to establish quite a market for delicious home-prepared jellies, jams, marmalades and pickles. City people are usually glad to pay good prices for such home delicacies.

Chow chow made from green tomatoes, watermelon pickles, sweet spiced pickles made from green muskmelons that didn't ripen, and many other kinds may be put up in small attractive glasses, bottles or jars and neatly labeled with the name of the maker. Such attractive table necessities could not fail to find a market.

The South Carolina woman who makes the famous pin-money pickles started with just this idea. She put up her products in attractive jars labeled with her name and picture. Now her pin-money pickles may be bought in all sections of the United States.

Nuts from the farm woodlot put into small sacks, baskets of home-grown fruits arranged to please the eye, and vegetables of various kinds in small peach baskets will find a ready market. Two carrots, a beet, a bunch of celery and three turnips arranged in a basket will sell faster and bring a higher price than those marketed in the usual way. A person living near a town, where many people are doing light housekeeping, will find an especially good market for such baskets.

Sage, marjoram, thyme and parsley are all easily grown and so generally used that the demand for them is quite large.

A few flower pots holding a plant or two of parsley would be welcome in many homes for garnishing foods. Parsley will grow in a kitchen window and keep green all winter.

A unique way of marketing sausage is to shape it like an ear of corn and place it in a husk. When this is smoked the sausage has a most delicious flavor and is a market novelty that few people will pass by. The husk should be saved when husking corn and well dried. The sausage is tied at the top with a strip of husk.

There is also a great demand for fancy yokes, chocheted lace, initials and monograms if they are well made.

It is not too late to use the following pickle recipes for making pickles to sell:

Green Tomato Pickles.—Select a peck of firm, green tomatoes; slice, add six medium-sized onions, also sliced; use a cupful of salt and put the mixture in layers; let stand overnight. In the morning drain and cook in two quarts of good cider vinegar, two pounds of brown sugar, an ounce of cloves, and two ounces of cinnamon (stick). Cook until the tomatoes are tender, but not mushy. When cold, stir in a cupful of grated horseradish and two tablespoonfuls of mustard.

Ripe Cucumber Relish.—Select twelve large cucumbers, and three onions; grate them fine; press the pulp dry, then add red pepper or chopped red pepper; salt to taste and add enough vinegar to make the mixture the consistency of prepared horseradish. Seal. —[Nellie Maxwell.

Recipes.

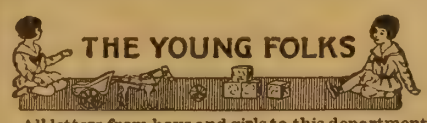
Jellied Prunes.—One pound of prunes, cooked, one package of gelatine, one cupful of cold water, one cupful of sugar, one-half cupful of orange marmalade or juice of one lemon. Wash the prunes, soak in cold water to cover overnight, and cook until tender. Cut each prune in three or four pieces, discarding the stone (there should be about five cupfuls of prunes and liquid). Dissolve the gelatine, softened in the cold water, in the hot prune juice, add the sugar and marmalade, or the lemon juice, stir until beginning to thicken, then turn into a mold. Set aside in a cool place. When cold serve with sugar and cream.

Bran Muffins.—Two cupfuls of bran, one cupful of whole wheat flour, three teaspoonfuls of baking powder, one-half tablespoonful of salt, three tablespoonfuls of shortening, two tablespoonfuls of molasses, and one-half cupfuls of thick sour milk, one-half teaspoonful of soda. Sift together the flour, baking powder, salt and soda; add the bran, melted shortening, molasses and milk and mix thoroughly. Bake in hot, well-buttered muffin pans about half an hour.

Deviled Ham.—Cut cold boiled or baked ham in slices of uniform thickness. Mix together two tablespoonfuls of flour, one tablespoonful of mustard, half a teaspoonful, each of salt and paprika, then add Worcestershire sauce to stir to a paste. Spread a little of this paste on both sides of the ham and broil about two minutes on each side. Serve hot for breakfast, luncheon or supper.

Lima Bean Salad.—Cook one cupful of fresh or dried Lima beans until tender and the liquid is evaporated. Let chill; mix half a large, mild onion to a smooth pulp; add a tablespoonful of finely-chopped parsley, a tablespoonful of finely-chopped capers, two tablespoonfuls each, of finely-chopped green pepper and olives, half a teaspoonful or more of salt, half a teaspoonful of paprika, one-third of a cupful of olive oil and one-fourth of a cupful of vinegar and pour over the chilled beans. Mix all thoroughly and turn into a chilled serving dish. Garnish with slices of pickled beet and sprigs of parsley.

Scotch Gingerbread.—Sift together two cupfuls of flour, half a cupful of granulated sugar, half a teaspoonful of soda, one teaspoonful of baking powder, three-fourths of a teaspoonful of cinnamon, half a teaspoonful of mace or grated nutmeg and one-fourth of a teaspoonful of salt. Add half a cupful of small, seeded raisins, half a cupful of sliced stem-ginger (crystallized or preserved) and one-fourth of a cupful of blanched almonds, chopped very fine. Heat half a cupful, each, of molasses and butter to the boiling point and stir into the dry ingredients. Lastly, beat in two eggs beaten light without separating. Bake in a loaf one hour or in a sheet half an hour. The oven should be of moderate heat.



All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Letter From the Border.

Dear Young Folks:—Will you allow a far-away Texas girl who lives on the United States border to join your happy circle?

I live near the town of Mission, which is situated on the border. A person looking across the Rio Grande river can see Mexico. You can see the thatched Mexican huts and see the Mexicans plowing their fields and herding their goats. Many farmers in the Lower Rio Grande valley hire the Mexicans to work for them on account of their cheap labor.

I live on a sixty-eight-acre farm and like country life best. We moved here from Madison, Wisconsin, four years ago, coming here for mother's health. The climate is wonderful here and many homeseekers will come this month to make this their winter home.

We have a car and every Sunday afternoon we take a long ride. Sometimes we go across the country to see Wm. J. Bryan's winter home. Next summer we are planning to go back to Madison in the car. —Grace.

A Visit to the Country.

Dear Young Folks:—My mother takes the paper and I enjoy it very much. I go to town school. I am twelve years old and in the seventh grade.

I am going to tell you about a trip to the country. A girl friend and myself went to visit another girl friend. When we got to the place where she was to meet us she was not there. It was raining, but we started out to walk. It was four and a half miles and we had never been there before. We stopped at about every house to get a drink.

When we finally got to her house she was not there. Her grandma was there and she was sure glad to see us. She said Florence, our friend, had gone to milk the cows. Pretty soon we saw her coming and ran out to meet her. She was surprised to see us, but she was glad, too.

The next day we went out horseback riding. Florence put us both on a horse named Queen. The horse started to run and we were afraid, but the next day when we went riding we were not afraid at all and pretty soon we ran races. Now we can ride as fast as the horse will go.

We are going to visit Florence again some time. The reason she didn't come to meet us was that it was raining so hard she thought we would not come. She said she would sure come the next time whether it was raining or not. —Iantha.

Answer to Carl's Riddle.

Dear Young Folks:—I have been reading the letters you have written and I think they are very nice. I go to school every day. I am ten years old and am in the fifth grade. I like my teacher very much. It is two miles from our house to school, but I enjoy walking. I have a brother who goes, too, so it isn't so lonesome.

In the summer when we have vacation I help my sisters and brothers with the work. I also have lots of fun playing house with my doll. I have two pet kittens.

I think the answer to Carl's riddle --twelve pears are hanging high, twelve men came riding by, each took a pear and left eleven hanging there—is that one man named "Each" took the pear. —Ruth.

How to Press Flowers.

Dear Young Folks:—I am a little girl eleven years old and I am very much interested in your letters.

I am going to tell you how to press flowers. Someone asked in one of the letters how to do it. Take a shoe box and fill it about half full of dry sand. Then put in a layer of flowers and fill the box full of dry sand. Put the box where it will not get wet and leave it for about three weeks. After the three weeks are up take the flowers out and they will be the same color and same shape as when you put them in.

—Dorothy.

Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

Catalog of Fall and Winter Fashions

Send 10c in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses', and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wis.

1482—A new shirt waist model. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 2½ yards of 36-inch material for a 36-inch size.

1880—Boys' suit. The pattern is cut in 5 sizes: 6, 8, 10, 12 and 14 years. It requires 2⅛ yards of 36-inch material for the blouse, and 1 yard of 44-inch material for the trousers for the 8-year size.

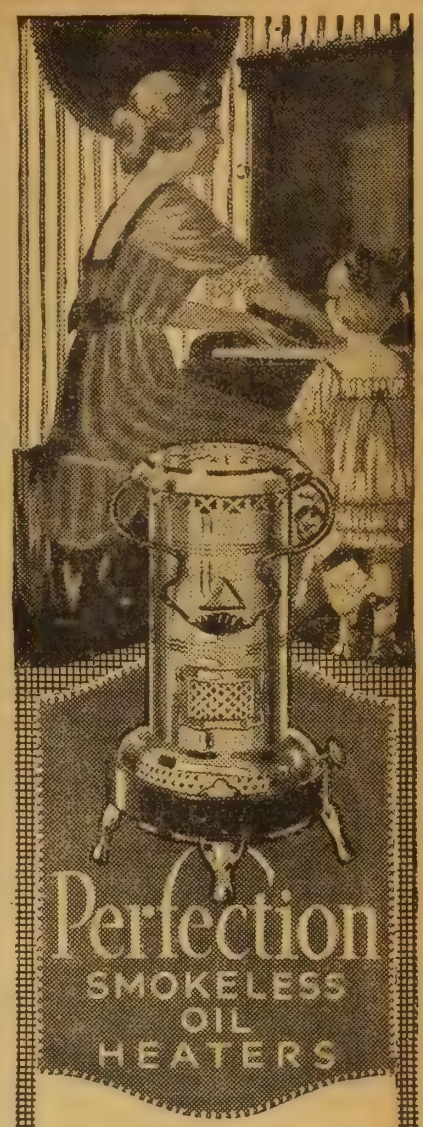
1884—Ladies' house dress, with or without pockets and with sleeve in either of two lengths. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6¼ yards of 44-inch material for a 36-inch size.

1890—A smart coat and cap for the little miss. The pattern is cut in 5 sizes; 4, 6, 8, 10 and 12 years. It requires 3 yards of 36-inch material for an 8-year size, and ¾ yard of 24-inch material for the cap.

1581—Costume for misses and small women, with sleeve in either of 2 lengths. The pattern is cut in 3 sizes: 16, 18 and 20 years. Size 16 will require 6⅜ yards of 36-inch material.

1886-1825—A new fall model. Waist 1886 cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. Skirt 1825 cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 6⅛ yards of 44-inch material for the entire dress in a medium size. The skirt measures 3¼ yards at the foot. Two separate patterns, 10 cents for each pattern.

1888—Girls' yoke dress in Moyanage style. The pattern requires 3½ yards of 44-inch material for a 12-year size.



NEVER smoke—a patented lock flame-spreader automatically prevents the flame from creeping up.

There is no odor—the drum of this heater acts the same as the "Long Blue Chimney"—no dust, no ashes.

Regulator on top of drum sends heat straight up or outward into the room as desired.

Window in front makes it easy to see and regulate flame—no easy-to-break mica in window but substantial fine brass gauze.

The Perfection Smokeless Oil Heater is simple to rewick; besides a wick with reasonable care lasts a season.

Holds one gallon of kerosene. Indicator shows how much is in the reservoir.

Any good kerosene will give satisfaction, but for best results use Perfection Oil.

Perfection Smokeless Heater is 25 inches high and 12 inches in diameter, finished in polished steel or blue enamel, with trimmings of black Japan or nickel.

Price varies from $4.00 to $7.25, according to finish. Look for the triangle trade mark.

Sold by all reliable dealers.

Rayo Lamps give that soft, mellow light which enables you to read without eye strain. Get one.

International Sunday School Lesson.

Lesson for November 5, 1916.
(By E. O. SELLERS, Acting Director of Sunday School Course.)

Shipwrecked at Melita (Malta).

LESSON TEXT—Acts 27:38—28:10.

GOLDEN TEXT—Jehovah redeemeth the soul of his servants; and none of them that take refuge in him shall be condemned.—Ps. 34:22.

Paul was at Malta three months, from the last of November to the last of February, A. D. 59. A bay on the north shore is still called St. Paul's bay. Much help on this lesson can be secured by reading Mr. James Smith's book on the "Voyage and Shipwreck of St. Paul," Sir William Ramsey's, "St. Paul, the Traveler," and "Everyday Men," by Robert Elliott Thompson.

I. Paul safely ashore (27:38-44). As the day dawned the ship was lightened for a third time to enable them to approach nearer to the shore. This time the main cargo of wheat was thrown out, heretofore having been saved as long as possible. The sailors were familiar with Malta, but not with this part where the ship now lay. Discovering a small creek, they perceived a certain bay with a beach upon which they might run the ship, and hold it without its going to pieces before they could land. It would have been impossible to escape if they ran upon the rocks in a heavy sea. The words "taken up anchor" (v. 40) indicates that the sailors had cast them overboard, but attached to the ship. Now they cut the cables and permitted themselves not to be anchored, but to blow with the storm that they might land upon the beach. Approaching the inlet, where the waters of the bay met that of the sea, "where the two seas met," the vessel would not answer to its helm. The ship probably drew about eighteen feet of water, and the bottom stuck in the clinging mud and clay, and the forepart began to break away from the rear, due to the violence of the waves. Here Paul had his most narrow escape (v. 42). Not alone was he on the point of losing his life by the sea, but the sword hung over his head, not that of a lawful executioner, but of a selfish murderer.

Before it was danger from the sailors; now it is the soldiers, but the centurion proved true, and all of the prisoners were saved for Paul's sake. It would be interesting speculation as to how many of those saved realized that they were not saved for Paul's sake, but for the sake of his Savior, and how many of them were duly grateful. On this second stage of the journey, after having left Caesarea with the larger ship, there were probably 276 persons, by God's guaranty was "there shall be no loss of any man's life," and his word is sure.

II. Paul's continued service (28:1-10). This island is today and has been since 1800 under British rule. It was then governed by the Romans. (1) Comfort (vv. 1, 2). The term "barbarian" does not indicate rudeness or uncivilized people, but merely those of non-Greek birth. These people kindled a fire because of the cold and of the rain. They received everyone, prisoners and soldiers like brothers, and, in the persons of Paul and Luke, they certainly entertained angels unawares. (Heb. 13:2). (2) Co-operation (v. 3): The fire would need continual replenishing. Again Paul's energy is conspicuous. Though the greatest of men then living, he was ready to do the humblest duty. Whether counseling about a difficulty or comforting under dangers, he was ready to relieve distress at all times, and thus held up the banner of the cross and proved his Christian spirit.

As Paul gathered the roots and put them upon the fire there came out a viper, probably benumbed by the cold, which fastened itself upon his hand. There are now no venomous serpents in Malta, but this is no reason to believe that in the earlier days, when sparsely inhabited, this common European serpent, known as the viper, or possibly the Egyptian asp, may not have been here. It was natural for superstitious nations to expect that this was the vengeance of a god brought upon Paul because no doubt he was a murderer. Having scaped from the wreck, Paul could not escape from the sword of divine justice, and the goddess of justice, Nemesis, the avenger, suffered him not to live. With perfect composure, doubtless arising from God's promises that Christ had made to his servants (Mark 16: 18; Luke 10:19), and also the promises that he should preach the gospel in Rome, Paul shook the viper from his wrist. They then changed their minds, thinking that he must be a god (see Act 14:8-19).

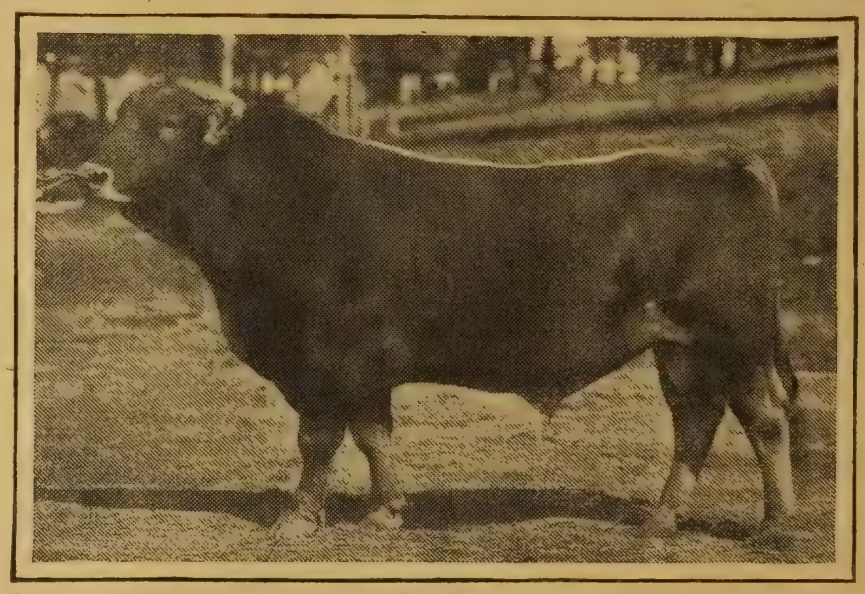
No reference is made to Paul's preaching, though, of course, that is taken for granted.

His words and deeds went along with his preaching.

They honored him with many honors, and loaded them with such things as were necessary, such as clothing and provisions, not of necessity, but out of kindness and love.

Service is one of the ways by which we can show to the world our life of faith.

Note also how these soldiers and sailors also profited by the life of service which Paul rendered.



GRAND CHAMPION BROWN SWISS BULL AT NATIONAL DAIRY SHOW, MERNEY'S 2D SON, OWNED BY H. W. AYERS, HONEY CREEK, WIS.

Navy beans are selling at $5.50 to $6 a bushel wholesale on the Milwaukee market and this is the highest price ever recorded. At some grocery stores navy beans have sold as high as 15 cents a pound. Three years ago beans of the same quality sold at 3 cents a pound, or about three pounds for a dime for the best quality.

$12.00

A new KODAK in a new size

The 2C Autographic Jr.

Just as surely as the 3A (post card size) picture displaced the 4 x 5, this 2C, for pictures 2⅞ x 4⅞ inches, will displace the 3¼ x 4¼. The elongated shape, used horizontally is better for landscapes—it doesn't waste film on sky and foreground. It is better for portraits when used vertically for it gives the high, narrow picture. It *gives more picture for the area* than is usually possible in a square—and the shape of the picture is far more pleasing.

And this elongated shape in the picture makes possible a slim, thin, easily pocketed camera. The 2C Autographic Kodak Junior has a capacity of ten exposures without reloading, it has the Kodak Ball Bearing shutter with cable release, working at speeds of 1-25, 1-50 and 1-100 of a second and of course the usual "bulb" and time actions. The camera has brilliant reversible finder, two tripod sockets, black leather bellows, is covered with fine grain leather, is well made and beautifully finished.

No. 2C Autographic Kodak Jr., menisscus achromatic lens, - - - - $12.00
Ditto, with Rapid Rectilinear lens, - 14.00

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Diseased Pigs.

I would like to know what is the matter with my pigs. They are Chester Whites and are five months old. Ever since I weaned them there has been ar ailment with a few of them. There seems to be a weakness in the back or hind legs. I don't know which. Their hind ankles turn forward sometimes when they walk and often they will walk a few steps then drag their hind legs. They eat and drink well and seem healthy every other way. I fed old corn all summer and fed shorts and oil meal in slop with some milk.

It would be hard to say what is the exact cause of the trouble in your pigs. The feed may be to blame in that it is too fattening and does not give the required strength. It might pay you to gradually change the feed either in part or the whole.

Pigs Have Cracked Noses.

We have a bunch of spring pigs, several of which have cracked noses. These pigs seem to be doing well and it does not seem to bother them, except when they sneeze. These pigs are fed ground corn and wheat made into a slop, and also tankage mixed with salt is kept before them. Is this food all right for growing pigs?

Your pigs are probably troubled with necrotic rhinitis. This condition is usually associated with necrosis of the snout and frequently also of the lips and is of rather common occurrence in small pigs. It is one of the conditions that constitutes the disease called sniffles. It is not possible to efficiently treat these cases because of the difficulty of applying medicaments to the lesion and further because of the destructive changes in the bones of the nose and face. The feed you are using seems all right to us.

Abscess Formation From Inflammation.

Please prescribe for my cow. In July she stuck her teat with a barb from the wire. It is swollen and caked and nothing but matter comes. Her bag has broken, but it doesn't get any better. What can I do for her? Will the milk ever come back in that teat? She is a good cow and I hate to lose her.

This should have been attended to at the time of injury. This quarter should be opened freely with the knife and this should be done be a veterinarian, as there is danger of getting considerable blood from a wound made in this region. After perfect drainage is established the wound should have some good antiseptic wash applied. This should be attended to, as gangrene may be next in order and cause much trouble. There is not much chance of this teat being serviceable again.

Necrobacillosis.

Can you tell me what is the matter with my pigs' eyes and how to treat them? They are pigs from three to five weeks old, well-bred Duroc Jerseys. If the days were cold they were farrowed in a sanitary pen in a good hog house. If the weather was good the sows nested in the rape patch or around the straw stack and ranged for pasture and rape, run in the lot after fattening cattle, had some corn, slop and good water. The pigs' eyelids become inflamed, slightly swollen and moist looking, then swell shut, and by the time they open again the pig is blind, and, of course, starves to death, as well as getting knocked about by its mates. No discharge appears to come from the eye. These are all the symptoms I could see. I had the same trouble with my spring pigs, together with sores around the head which would make holes until I wondered at the pigs living as long as they did. I lost half of my spring crop, so would like very much to have your advice.

This trouble is known as Necrobacillosis and is often found in small pigs. It is found in different forms, such as you find in your herd. It is hard to treat such troubles effectively because of the concentration of disinfectants which would be required to kill the germ. The strength required would be injurious to the pigs in other ways. About all that can be done is to clean and disinfect quarters and play a watchful, waiting game.

The Farmer's Friend

Formaldehyde has been rightly dubbed "The Farmer's Friend" because it serves the scientific farmer in a thousand ways.

FORMALDEHYDE
The Farmer's Friend

is the best and cheapest disinfectant—officially endorsed as *the* standard treatment for seed grains. It rids seed grains of smuts and fungus growth, also flax wilt and scab and black-leg diseases of potatoes, insuring healthy grain, clean potatoes, onions, cucumbers, etc. One pint bottle costing 35 cents treats 40 bushels of seed. Big book free. Write to-day.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Green Cut Bone For Poultry.

No place with a large number of hens on it is complete in its equipment without a bone mill, and the owner of a bone cutter that does not make use of it daily during the season for high-priced eggs is making a mistake. Yet one finds many of these machines standing idle.

Green cut bone, with a reasonable amount of fresh, lean meat on it, is undoubtedly the very best kind of animal food that can be had for the winter layers. It is a live, animal food and the nearest of any of the meat foods to the natural, wild products that the hen picks up in the shape of bugs and worms while wandering about the field in summertime.

A hen has to find the material to form an egg from the food she gets, and a chemical analysis of green bone shows that it contains every element contained in the white, the yolk and the shell of the egg. This accounts for the avidity with which green bone is devoured by the hen. Instinct in all animals, a taste and a desire for foods that are suitable for them, causes the hen to leave any other food at any time for a mess of green bone.

In warm weather, when the hens have free range, insects supply this craving for animal food and this is one reason why hens lay better in summer than in winter. During the fall and winter, or when confined, bugs and worms cannot be obtained and the hen has to wait days and sometimes weeks to accumulate from the insufficient food supplied her—insufficient not in quantity but in egg making elements—enough material to make the egg.

But when given a regular allowance, say one-half to one ounce to a fowl once a day or every other day, of this egg-making material, rich in every constituent of the egg, the hen no longer has to wait, each organ receives its necessary nourishment, the egg is formed quickly and the hen lays it.

Be sure that the bone and meat is fresh—stale pieces will not answer, and, if the flock is not accustomed to eating it, feed lightly on the start, for overfeeding will cause trouble.

A dollar a day profit on 100 hens during the late fall and winter means no grocery bills to pay. It is not done by all, nor is it easily done, but it is done right along, which means that anyone can do it by securing a bone cutter.

There is plenty of work in the Upper Wisconsin woods this year, according to reports. This will be a great help to the settlers who are trying hard to get a start.

In the Chicago yards on Wednesday, October 18th, one carload of cattle sold at $11.65, which at that time was the record price for beef cattle in this country.

Tell what you have for sale in a little advertisement in THE FARMERS' MARKET. Does not cost much and may be worth a lot to you. Six cents a word each insertion.

Whenever there is sickness among your farm animals—when they are off-feed, dull-eyed, rough of coat, and don't gain as they should, **look out for worms** and indigestion, the cause of 90 per cent of all live stock losses. Keep your farm animals free from worms; your stock will thrive better on no more feed; there'll be less sickness, fewer losses and bigger profits.

PART III. "Prince Charlie"

CHAPTER V—Continued.

"Yes," answered Genesee; for Rachel, with a martyr-like manner, said nothing, and waited her lecture; "she thought it was your man Andrews."

"Yes, and she would have gone just as quickly if it had been Indians—or—or—anybody. She keeps me nervous half the time with her erratic ways."

"I rather think she's finding fault with me for giving you that coffee and letting you sleep on the lounge," said Rachel; and through Tillie's quick disclaimed her own shortcomings were forgotten, at least for the time. The little matron's caution, that always lagged woefully behind her impulse, obtruded itself on her memory several times before the breakfast was over; and thinking of the reasons why a man of such character should not be received as a friend by ladies, especially girls, she was rather glad when she heard him say he was to push on into the hills as soon as possible.

"I only stopped last night because I had to; Mowitza and I were both used up. I was trying to make MacDougall's, but when I crossed the trail to your place, I reckoned we would fasten to it—working through the snow was telling on her; but she is all right this morning."

Rachel told him of her visit to the old man, and his care of the cabin on the Tamahnous ground; of rumors picked up from the Kootenai tribe as to the chance of trouble with the Blackfeet, and many notes that were of interest to this hunter of feeling on the Indian question. He commented on her Chinook, of which she had gained considerable knowledge in the past year, and looked rather pleased when told it had been gained from Kalitan.

"You may see him again if I have to send for troops up here, and it looks that way now," he remarked, much to the terror and satisfaction of Aunty Luce, who was a house divided against itself in her terror of Indian trouble and her desire to prove herself a prophetess.

Jim was all anticipation. After a circus or a variety show, nothing had for him the charm that was exerted by the prospect of a fight; but his hopes in that direction were cooled by the scout's statement that the troops were not coming with the expectation of war, but simply to show the northern tribes its futility, and that the government was strengthening its guard for protection all along the line.

"Then yer only ringin' in a bluff on the hostiles!" ventured the sanguinary hopeful disgustedly. "I counted on business if the 'yaller' turned out," meaning by the "yaller" the cavalry, upon whose accoutrements the yellow glints show.

"Never mind, sonny," said Genesee; "if we make a bluff, it won't be on an empty hand. But I must take the trail again, and make up for time lost in sleep here."

"When may we look for you back?"

It was Hardy who spoke, but something had taken the free-heartiness out of his tones; he looked just a trifle uncomfortable. Evidently, Tillie had been giving him a hint of second thoughts, and while trying to adopt them, they fitted his nature too clumsily not to be apparent.

His guest, however, had self-possession enough for both.

"Don't look for me," he advised, taking in the group with a comprehensive glance; "that is, don't hurt the sight of your eyes in the business; the times are uncertain, and I reckon I'm more uncertain than the times. I'm obliged to you for the sleep last night, and the cover for Mowitza. If I can ever do you as good a turn, just sing out."

Hardy held out his hand impulsively. "You did a heap more for us a year ago, for which we never had a chance to make return," he said in his natural, hearty manner.

"Oh, yes, you have had," contradicted Rachel's cool tones from the porch; "you have the chance now."

Genesee darted one quick glance at her face. Something in it was evidently a compensation, and blotted out the bitterness that had crept into his last speech, for with a freer manner he took the proffered hand.

"That's all right," he said easily. "I was right glad of the trip myself, so it wasn't any work; but at the present speaking the days are not picnic days, and I must 'git.' Goodby, Mrs. Hardy, goodby; boys."

Then he turned in his saddle and looked at Rachel. "Klahowya—tillikum," he said, lifting his hat in a final farewell to all.

But in the glance toward her she felt he had said "thank you" as plainly as he had in the Indian language called her "friend."

"Oh, dear!" said Tillie, turning into the house as he rode away. "I wish the man had staid away, or else that we had known more about him when we first met him. It is very awkward to change one's manner to him, and—and yet it seems the only thing to do."

"Certainly," agreed Rachel, with an altogether unnecessary degree of contempt, "it is the only thing for you to do."

Tillie sat down miserably under this stroke, the emphasis denoting very plainly the temper of the speaker.

"Oh, don't be ugly, Rache," she begged. "I really feel wretched about it. I thought at first all the freedom of social laws out here was so nice, but it isn't. It has a terrible side to it, when the greatest scamp is of as much account as the finest gentleman, and expects to be received on the same footing. He—he had no right to come imposing on us at the first;" and with this addition to her defense, Tillie tried to ensconce herself behind the barricade of injured faith, but feeling that her protests were only weakening her argument.

"To the best of my recollection," said the girl, with a good deal of the supercilious in her manner, "he neither came near us nor advanced any desire for friendship on his own account. We hunted him up, and insisted on talking natural history and singing songs with him, and pressing on him many invitations to visit us, invitations which he avoided accepting. He was treated, not as an equal of the other gentlemen but as a superior; and I believe it is the only time we ever did him justice.

"Yes, he did seem very nice in those days; but you see, it was all false pretense. Think of the life that he had come from, and that he went back to! It's no use talking, Rachel—there is only a right way and a wrong way in this world. He has shown his choice, and self-respecting people can only keep rid of him as much as possible. I don't like to hurt his feelings, but it makes it very awkward for us that we have accepted any favors from him."

"The obligation rests rather lightly on your shoulders to cause you much fretting," said the girl bitterly; "and he thought so much of you, too—so much."

Her voice, that began so calmly, ended a little uncertainly, and she walked out of the door.

Hardy, coming in a moment later, found Tillie divided between penitence and pettishness, and fighting her way to comfort through tears.

"I know I'm right, Hen, about the whole question," she whispered, when safely perched on the stronghold of his knee, "and that is what makes it so aggravating."

"To know you're right?"

"No; but to have Rachel, who

A Twelve-Time Christmas Gift

Can you think of a more acceptable Christmas gift than a year's subscription to Pictorial Review? Frankly, we can't. Month after month, as this welcome visitor arrives at the home of a friend, it will be a constant reminder of your thoughtfulness.

Pictorial Review coming to a home every thirty days is like a beautifully-dressed, well-informed, entertaining friend who brings the latest news from the big world of Fashion, Literature and Art, as well as providing up-to-date, authoritative information on every subject dear to the heart of a woman.

Save all the fuss and worry of Christmas shopping. Send us your list of friends with $1.50 for each subscription and we will enclose an appropriate and beautifully printed Christmas card in five colors, with your name on it together with our Christmas issue timed to arrive on Christmas morning. In its lovely soft colors, this card is an exquisite piece of art work well worthy to accompany your gift.

Every friend you send Pictorial Review to will thank you for your gift. Why not sit right down now and mail us your list with $1.50 for *each* yearly subscription?

Do it today while you are thinking of it!

SOMETHING FOR NOTHING

BUT YOU MUST BE PROMPT

A COMPLETE MANUAL OF CROCHET AND TATTING

By Anna Valeire

This book on crochet and tatting craft is most timely, as these arts in all their forms are very popular at the present time. It contains over sixty designs and combines new and original patterns of rare beauty combined with dainty simplicity and elegant taste. The abbreviations used to designate the different stitches in tatting and crocheting are given and their meaning explained in full. Instructions are given in detail for every design displayed in the book. Therefore, the novice in this art will have no trouble whatever in working the simple, though seemingly complicated, designs which have been compiled for her special benefit and in very little time will find that she may easily attempt the more complicated patterns intended for more advanced and experienced needleworkers. The lovely array of insertions, edgings and medallions suggest numerous ways in which they may be used to beautify both personal and household articles. The dainty tattings immediately bring to mind handkerchiefs of cob-web fineness. The simpler crochet insertions and edges suggest pretty bath-room sets and bed linen. There are no end of designs which may be used on dresses and lingerie; two yoke patterns which appear in the book make it particularly desirable. Designs for luncheon sets, scarfs, curtain edges and panels, and the new round pillow tops, and many more things which will suggest themselves to the worker are all contained in the wonderfully complete book on this fascinating art needlework.

This wonderful book of working size designs and explicit instructions will be sent Free and postpaid if you will send your order for any of the following combinations of magazines before November 10, 1916.

THE REASON FOR THE INCREASED COST OF MAGAZINES

The price of paper has increased over 100 per cent and the cost of inks and other materials entering into the manufacture of magazines has caused some publishers to increase their subscription price. The magazines offered below will accept orders from The Library Reading Club until November 10th at the prices which have prevailed for the past year. As an extra inducement for promptness, we will give a copy of Crochet and Tatting by Anna Valeire, to all who send us orders before November 10, 1916.

knows she is in the wrong, take that high-handed way about the affair, and end up by making me feel ashamed. Yes, she did, Hen—just that. I felt so ashamed I cried, and yet I knew I was right all the time—now what are you laughing at?"

CHAPTER VI.

Neighbors of the North Park.

Reveille! Boots and saddles! Taps! About the Hardy ranch the changes were rung on all those notes of camp, from early morn till dewy eve, by the melodious imitations of Jim.

Stories of grizzlies and black bear had grown passé; even the more rare accounts of wild horses spotted in some secluded valley failed to stir his old-time interest. All else had drifted into nothingness to him, for the "yaller" had come.

It had been stationed in the North Park for ten days—days of wild commotion at the ranch, for North Park was only two miles away, following the little branch of Missoula Creek that flowed north to the Kootenai river. The necessary errands to and fro between the two points of residence were multitudinous, for Jim could remember but one thing at a time of late; and the retraced steps he took would have tired out

Our readers frequently write and ask where they can buy some product that they need. If your local dealer or merchant cannot supply you, tell us his name and address—maybe we can be helpful to you and to him. We are here to serve both of you.

THE WISCONSIN FARMER
MADISON WISCONSIN

anyone less curious. He was disappointed, at first, to find that only one company had been sent up to guard the gate into the Kootenai country. It did not look as if they feared any outbreak or active service, and if it had not been in the most miserable seasons, they would have had much the appearance of a pleasure party; but the rains were in the valleys and the snows were on the hills, and camp life under those circumstances is a breeder of rayless monotony.

"And your ranch up here has proved the oasis in our desert," declared Fred Dreyer in a burst of gratitude to Rachel, just as if the locating of the sheep farm in that particular part of the world was due to the sagacity and farsightedness of Miss Hardy; "and when Mr. Stuart told us at the Fort that we should have so charming a neighbor, I wanted to throw up my plate and give three cheers. We were at mess—at dinner, I mean. But I restrained my enthusiasm, because my leave to come along was only provisional at that time, and depended on my good behavior, but once here, my first impulse was to give you a big hug instead of the conventional hand shake, for there are no girls at the Fort, and I was hungry for the sight of one."

It was not, as one may suppose, one of the uniformed warriors of the camp who expressed himself with this enthusiasm, though several looked as if they would like to, but it was the most petite little creature in petticoats—to her own disgust; and to mitigate the femininity of them as much as possible, they were of regular army blue, their only trimming belt and bands of the "yaller," an adornment Jim openly envied her, and considered senseless when wasted on a girl. She was Miss Frederick Dreyer, the daughter of Major Dreyer, of the Fort, and the sweetheart of most of the men in it, from the veterans down.

"They all think they own me," she confided plaintively to Rachel, "just because I'm little. It's only a year and a half since they quit calling me 'Baby Fred'—think of that! When you're owned by a whole regiment, it's so hard to gather up any dignity, or keep it if you do get hold of it; don't you think so?"

"I have had no experience in that line," answered Rachel. "You see I have never been owned by a regiment, nor by anybody else."

"How delightfully independent you are!" and Miss Fred, encircled by comrades, seemed really to envy the other her loneliness in the world. "No orderly forever on duty at your heels, and—"

"And no lieutenant," put in Rachel; and then they both laughed, and the younger told the elder she was ridiculous, for the lieutenants were not a bit worse than the rest.

"Worse? Not at all. I could even imagine circumstances under which they might b preferable, and I'm not gifted with much imagination, either."

"I know someone who thinks you are, and an enviable imagination at that," laughed Miss Fred.

Rachel opened her eyes a little in questioning, but did not speak.

Bunker's Polled Durhams.

WHY not use a Short-horn without horns in your herd F. S. Bunker, Kilbourn, Wis., has one of the best Polled Durham herds in the state. The price is second consideration when Bunker goes out to buy a herd bull or a female for his breeding herd—this breeder has the goods, and if you want good cattle of this breed communicate with him. He doesn't raise the kind you can buy for $60 or $75 and if you want that kind, save your stamp or railroad fare, but if you appreciate breeding and individuality you'll appreciate the Bunker cattle. In writing please mention The Wisconsin Farmer.—Adv.

Jake Erwin's Durocs.

ONE of the breeders that made a good buy in the Atwater sale was Jake Erwin, Bloomington, Wis. He bought a boar that has great stretch, good feet and bone and of the very best breeding. Mr. Erwin has some good sows in his herd and the results from this cross should prove beneficial. If you are in need of anything in the line of Duroc Jerseys write Mr. Erwin and have him describe what he has for sale—he will treat you right. He is one of those good fellows that are in the swine game in Grant County.—Adv.

Results of Spraying.

Final spraying on experimental orchards was completed under the direction of the Wisconsin College of Agriculture last month. Fruit spraying meetings were held on the following farms: Thos. Roach, Fond du Lac; J. J. Schelling, Racine; W. A. Toole, Baraboo; T. D. Allegar, Wyocena. In order to keep down expenses lime sulphur has been used this year by the demonstrators. This is made possible to cut the cost to about 1¼ cents per gallon for the spray used. The lime sulphur mixed at the rate of one gallon to forty gallons of water has been found satisfactory except on extremely hot days when it has had a tendency to burn the foliage and fruit.

Data has been obtained this year which shows that the average cost for spraying varies from 4 to 15 cents a bushel of fruit, depending upon the yield. An increased value is noted at once in the quality of the fruit produced where trees have received the spray, the difference being from almost worthless fruit to that which brings 75 cents or $1 a bushel.

At Baraboo about fifty fruit trees have been under special test. The cost here has been found to run at about 1¼ cents for each year in the life of the trees, which are all between ten and twenty years old.

Investigations at Wyocena seem to indicate a cost of about 15 cents a tree, straight through the experiments. Some trees of larger size, bearing an estimated crop this year of three barrels, will cost about 20 cents each for "insurance."

The oldest trees in the demonstrations are near Racine, some of them being nearly forty years of age, in good bearing vigor and costing an average of 30 cents apiece for spraying.

With Our Advertisers.

Must Give It to Grant County.

THAT the breeders in Grant county are progressive was demonstrated at the Duroc Jersey boar sales of W. C. Jenkins and L. F. Atwater. Seven registered Duroc Jersey boars went to Grant county from these two sales. Three men gave $75 each for boars and the other four bought boars averaging around $40. The swine breeders of this county—both breeds—are without a doubt the livest bunch in the state, they do not tolerate "scrub" boars in that county. If the breeders of beef cattle in that county had the "pep" that the swine breeders have they too could help Grant county gain that recognition which it rightfully deserves. —Adv.

Here's Your Opportunity.

FOR the first time in five years, Williams Bros., Bangor, Wis., are offering some of their good young Shorthorn cows for sale. In that length of time they have sold many outstanding heifers and bulls and if they had barn room for these cows that are going to freshen they would not be offered now. Among the lot is three roan cows that would look fine in any herd. They are choice individuals and are safe in calf to a good roan bull. The cows are all young—from four to seven years old and they are being priced for quick sale. If you are interested get on the train and take a look at these cattle. Bangor is the second station east of La Crosse on the Northwestern and Milwaukee railroads.—Adv.

Marinette County Farm Holsteins and Polands.

ATTENTION is called to the advertisement of the Marinette County Farm, Peshtigo, Wis., which appears on page 29. They maintain a fine herd of Holstein cattle and big-type Poland China swine. The two Holstein bulls in service are University Johanna Excell and King De Kol Lyons, two excellent individuals of choice breeding. At the present time they are offering a few registered Holstein females for sale at very reasonable prices as well as a few choice young bulls. In Poland Chinas they are offering spring boars and open gilts. Send to them for pedigrees and prices.—Adv.

The Martin Brown Swiss.

MR. ANDREW MARTIN, West Salem, Wis., is one of the pioneer Brown Swiss cattle breeders of the state. Practically his entire herd has been bred and raised on his farm, the herd bulls being the only addition he has made to his herd for several years. His Brown Swiss cows are producers, many of them have advanced registry records. He is a breeder and raises cattle to sell and if you are interested in this breed it will pay you to correspond with the owner. He has one of the good herds of the state. When writing for prices will you kindly mention The Wisconsin Farmer.—Adv.

Martiny's Big Boar Bargains.

L. P. MARTINY, Chippewa Falls, Wis., increases his space and calls attention to the boar bargains that he has. He is offering spring and fall boars sired by two excellent herd boars—namely Chief Price, the boar that was good enough to win first in the senior yearling class at Milwaukee this year and Select Major, the boar that headed the junior yearling class at the same show. Mr. Martiny's Poland China herd is too well known to Wisconsin Farmer readers to need much comment. He has an excellent reputation as a breeder and if you order from Mr. Martiny you can rest assured that the boar you get will be right in every way. Get his prices at once and in writing please mention The Wisconsin Farmer. See page 30.—Adv.

Dairying Pays in Montana

BUTTER-FAT prices are considerably higher than in Eastern states—markets are nearer, climate is better, water is purer, and the rich virgin soil produces more and better fodder. Thousands of acres of ideal pasture land at small cost. The local demand for dairy products is greater than the supply.

The ***"St. Paul Road"*** recently has in a most convincing manner, demonstrated its faith in the future of Montana, expending over $12,000,000 in Electrifying its main line across the state. This mighty achievement will prove a most important factor in the future development of the resources and opportunities of this vast commonwealth—opening new industries, creating larger markets, and generally improving living conditions. Electrification has also greatly increased the pleasure of travel—elimininating smoke, cinders and other annoyances unavoidable with steam traction.

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. Place your name and address to it, then, to know its cost, count the number of words. The rate is six cents per word, each insertion. For instance, if your advertisement, including the address, has 15 words, one insertion would cost 90 cents, which is one cent for every thousand copies printed. Note the low cost, and read what small advertisements in The Wisconsin Farmer have done for others

One **Wisconsin Farmer** seed corn advertiser says: "We are getting a nice response to our advertising. We will come back with a larger advertisement." Another says: **"The Wisconsin Farmer** has done good work helping me to sell lots of stock." And another writes: "Please discontinue my advertisement in **The Wisconsin Farmer.** I am getting pretty well sold out for the present."

These small advertisements did not have the advantage of the classified headings now available—under which your advertisement would appear.

Any "Wanted," "For Sale," or "To Exchange" advertisement will receive prompt attention and insertion will be made in first issue possible.

THE WISCONSIN FARMER **MADISON, WISCONSIN**

FARM LANDS.

80 ACRE DAIRY FARM in Marinette county, all under the plow. 80 rods to cheese factory, 2 miles to village, macadam roads, splendid soil, fair buildings, good well, telephone, mail route, 7 good cows, team horses, all kinds machinery. $6,500. M. H. Maxwell, Marinette, Wisconsin.

SPLENDID CORN FARMS in southwestern Minnesota famous corn belt. Near Iowa. Owner, Calvin Young, Mapleton, Minn.

CREAM WANTED.

FARMERS, attention. We want separator cream at 3c above Elgin, also whey cream at 1c above Elgin, butter market, for butter fat, delivered in good condition. Payments twice a month. Write us. Dorschel Produce Co., Green Bay, Wisconsin.

HONEY.

HONEY. Pure, extracted, white clover, from my apiaries. Guaranteed first-class. 2 60-lb. cans, $12.60; 1 60-lb. can, $6.60; 6 10-lb. pails, $7.20; 6 5-lb. pails, $3.75. Write M. E. Eggers, Station G, R. 1, Eau Claire, Wisconsin.

When writing to advertisers kindly The Wisconsin Farmer.

INVESTMENTS.

ATTENTION, investors. A new brick business block, rented for $1,400 a year, for sale. Price, only $13,500. Mortgage $5,000. Harding & Ryan, Waukesha, Wisconsin.

JACKS FOR SALE.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Don't Overlook This Sale of Angus Cattle.

THIS is the last chance we will have to call attention to those high-class Aberdeen Angus cattle to be sold at Canton, Minn., November 9th, by M. C. Willford and R. M. Miller. We believe this is the best offering of this breed ever put up for public appraisement in the Northwest. Forty-five head will be sold, thirty-three females and twelve bulls. In our last issue we mentioned the herd bulls that have been used in this herd. They were the best money could buy. Note some of the females that will be sold. One double-bred Trojan Erica, safe in calf sired by the noted Earl Eric of Ballindalloch. A show cow in every respect. One granddaughter of the above bull bred to Protector E., May 22d. She is an outstanding Pride. One Pride cow with calf at foot by Protector E. and rebred. One Erica cow with heifer calf at foot and rebred to Erin Lad W. One Blackbird granddaughter of Prince Ito, safe in calf to Erin Lad W. One six-year-old Pride cow, safe in calf since February. A show cow in every respect. If you want a show heifer, one of the Blackbirds will appeal to you. She will sell open. Space won't permit the mentioning of all the good ones. Among others, there will be eleven Prides, six Queenmothers, four Heatherblooms, three Trojan Ericas, and three Blackbirds. If you admire the "doddies" you can't afford to miss this sale. There will be nine or ten cows with calves at foot, ten bred two-year-old heifers and a few open heifers. Ten bulls of serviceable age, some of them suitable to head pure-bred herds and two tried sires. Remember that the tops of two of the best herds in the state have been selected for this sale and no inferior animals have been cataloged. Canton is located about fifty miles west of La Crosse—you can get to and from the sale the same day. The catalog contains illustrations of many of the animals in the sale, by all means get one of these and make arrangements to attend this good sale. When writing for catalog please say you saw the advertisement in The Wisconsin Farmer. See advertisement on page 27 and don't forget the date and place.—Adv.

Get Animals Ready For Winter.

WITH the approach of winter the farmer is naturally seeing to it that his stock is in best possible condition. One of the first things he wants to be assured of is that his animals are free from worms. Then follow closely such matters as appetite and digestion. He wants his animals to eat well and digest well; to get the benefit of all or at least of the greatest possible amount of the feed they consume. Along this line readers will always be interested in the series of advertisements of Dr. Hess & Clark, now running in these columns. It is not doubted that a good stock tonic has a very proper place in animal feeding. And Dr. Hess stock tonic lays claim to being one of the very best preparations of this kind on the market. As a worm expeller it is admittedly of high value. Don't take it for granted that your stock do not have worms. Many a man who supposes his horses, for example, to be entirely free from worms is greatly surprised at the worms that will pass when he starts in to feed Dr. Hess stock tonic. With the purging of worms, the other good effects follow naturally—such as toning up the animal system, aiding the digestion and putting the animal in good condition generally. To put it briefly, Dr. Hess stock tonic expels worms and makes all animals healthy. There will be no trouble in finding this tonic in your town, as there are now some 28,000 Hess & Clark dealers in the United States and Canada.—Adv.

Buys Herd Boar Prospect.

FOR the past month Burlie Dobson, of the firm of Dobson & Eastman, Lancaster, Wis., has been trying to find a boar that would do to place at the head of their herd. Burlie is very particular about what he uses and the boar must be right in every way before he can do service in their herd. He wants them big, but he does not want them big at the expense of quality. We have just had a letter from this firm advising that they purchased a fall boar in Illinois sired by Big Ben out of a daughter of Big Jumbo Jr. In the first place this breeding is of the very biggest. Smooth Price, the sire of Big Ben, is also the sire of Big Joe, Oakland's Equal and other noted boars. Those that have seen Big Ben say that he is one of the smoothest big boars doing service today. The dam of the boar purchased is sired by Big Jumbo Jr. by Big Jumbo out of a daughter of Chief Price. This is some new breeding for Wisconsin—it has made good in the central West and it should do equally well for the Wisconsin breeders. See page 30.—Adv.

McDonald Claims February 8th for Sow Sale.

THOSE that are interested in good Poland Chinas will be pleased to learn that J. D. McDonald will sell bred sows at West Salem, Wis., February 8th. Mr. McDonald has without any doubt one of the best herds in the Northwest and it has been some time since he has held a sale of bred sows, but he surely has the goods this year and when sale day comes you can expect to find one of the greatest offerings of Poland China sows that will be sold this winter. Most of his show herd will be included. This sale will follow the association sale at Madison and it will be one of the feature sales of the winter season. See page 30.—Adv.

F. A. Morehouse Buys Herd Boar.

READERS of The Wisconsin Farmer might as well get familiar with the name Morehouse, for he has a herd of Poland Chinas in Grant county that will make a reputation for him. He has just purchased a spring boar sired by that good Illinois boar, Big Ben, and out of Great Lady C. Again. Big Ben is by Smooth Price out of Mollie Jones 5th by Longfellow. Great Lady C. Again is by Pawnee Nelson 2d by Pawnee Nelson out of Great Lady C. by Great Wonder. Those that are posted on Poland China history will remember that Great Lady C. was considered the greatest sow ever bred by Mouw. The Morehouse boar comes from a great line of breeding and inasmuch as he is a good caretaker we feel confident he has a boar that we will hear from in the future. For those that are in need of a spring boar we want to suggest that you write Mr. Morehouse about the boars he has for sale. We think he has twenty spring boars as good as we have seen on one breeder's farm. Get his prices and description. Address F. A. Morehouse, Lancaster, Wis., and please mention The Wisconsin Farmer.—Adv.

Underwood Buys New Herd Bull.

B. C. UNDERWOOD, the popular breeder of Red Polls at Avoca, Wis., has strengthened his herd of Red Polls by placing a son of J. D. Diana 2d Proctor 23929 at the head. The dam of J. D. Diana 2d Proctor is Diana 2d that was the world's champion Red Poll cow for four consecutive yearly official tests, the sire is Proctor Knott. The dam of the Underwood bull is Liza 26494 and she was the world's champion Red Poll cow two years in succession. She was sired by Nailor, that won eighteen championships. Diana 2d has a record of 546 pounds of butter fat and Liza 515 pounds butter fat, so one will see that Mr. Underwood has a herd bull that should do him a great deal of good. A few young bulls are being offered for sale and this would be a good place to place your order. Don't forget to mention The Wisconsin Farmer. See page 28.—Adv.

P. W. Young's Big Joe Boar.

WITH all due rspects to the other good Poland China boars in the country, P. W. Young, Prosper, Minn., has the best we have ever seen of his age. Those that follow the Poland China breed will remember reading about that sensational Big Joe litter that sold in an Iowa sale last fall. Mr. Young recently purchased the best boar of that litter. As above stated he is sired by Big Joe and his dam, Bessie Price, is by Good Luck. It is almost impossible to describe this good boar on paper. He was a year old last February and weighs now 850 pounds. Notwithstanding his immense size, he has quality from end to end. He would even suit the medium type men, for he is good all over. He has plenty of stretch, great depth, excellent spring of rib, an ideal head with prominent eyes, and a rainbow back, he is right on his toes, extra heavy bone, in fact here is a boar that is hard to fault. If this boar proves to be a good breeder Percy will have three boars the like of which cannot be found in another herd in the country. This boar will be bred to a limited number of Master's Giant and Orange Wonder sows for his sow sale February 6th. Keep this boar in mind. See page 30.—Adv.

THE NOTED AYRSHIRE HERD SIRE THAT STANDS AT THE HEAD OF THE HERD OF STEPHEN BULL, RACINE, WIS. SEE PAGE 26.

Breeding of the Pellett Chesters.

THE foundation stock for the John Pellett Chester White herd, Viola, Wis., came from some of the noted breeders. Those that are posted, will appreciate the following boars that are the sires of the Pellett offering. Perfecto 49395 was by Mc's Model, a prize winner and a good individual. S. M. Wonder is the sire of some of the stuff, he is the Derenthal herd boar. Sunny Side King 38187 is by Minnesota Chief 25641. Mr. Pellett has a fine litter of fall pigs out of Pellett's Pearl she by Combination C. by Combination 2d and a granddaughter of that great show and breeding sow, Sister 1st. Besides the Chester White boars and gilts that are being offered for sale Mr. Pellett is also offering some choice Jersey bulls and heifers. If you need anything in the above breeds write the owner for details. Mention this publication. See page 31.—Adv.

A Sale of Quality.

ONE hundred and fifty head of select registered Holsteins consigned by breeders who have made Dodge and Jefferson counties famous as Holstein centers, breeders whose reputations are unquestionably good. That you may be convinced of their fairness they have merited the department of agriculture's approval on the sale by allowing the state veterinarian full sway in the matter of tuberculin testing. They also offer the sixty-day retest guarantee. J. W. Goldthorpe, Milton Junction, offers a 31.82-pound grandson of King Segis Pontiac Polkadot, a fifteen-pound two year old and several choice young cows. O. E. Sette, E. G. Bennet, Dolon Brothers, all of Juneau, send splendid animals, several with creditable A. R. O. records; daughters of Fobes Tritomia Mutual De Kol; granddaughters of Homestead Jr. De Kol. O. E. Mullen, Henry Wieman, John Bergin, F. G. Lehman, Watertown, will have cows and heifers of the Homestead Jr. De Kol and Johanna McKinley Segis strains that are bound to interest prospective buyers. Wm. Goodrich, Ft. Atkinson, will consign a choice lot of cows and heifers from his well-known herd of black and whites. Fred Albrecht, Watertown, includes a daughter of a twenty-pound junior two year old and a thirty-pound son of Sir Beets Cornucopia Netherland. Edwin D. Gibbs, Fox Lake, offers some very choice animals, one a winner at the fall fairs. His females are bred to his handsome thirty-three pound son of Sir Colantha Aaggie. E. C. Brill, Steevartville, N. J., out of courtesy to some of his friends at Watertown, has consigned a perfect individual yearling, thirty-pound son of King Segis Champion. Mr. Brill is the owner of Mabel Segis Korndyke, the eighty-pound world's champion four-year old, a thirty-six-pound cow and several thirty-pound cows. This young bull is a prize. Aug. Seefeldt, Theresa, includes a daughter of Homestead Junior De Kol; heifers similarly bred and a twenty-nine-pound son of King Korndyke Sadie Vale. James Mullen, Watertown, offers a show bull, son of Aaggie Cornucopia Johanna Lad, also a twenty-two-pound cow of conformity breeding. All animals are guaranteed to be breeders. All animals are for sale without reserve; all animals are just as represented. If not your money back. Tomkins Wright, Waupun, consigns eighty head including a twenty-six-pound daughter of Sir Johanna Korndyke; young cows and heifers; daughters of Johanna Bonheur 2d Segis and Sir Piebe A. Aggie Hengerveld, a son of an eighteen-pound junior two year old. Wm. Rhoda, Watertown, consigns ten head including splendidly bred young cows and heifers, one a twenty-two-pound cow. These animals are in calf to his well-known sire, Pabst Maplecrest King. Edwin M. Schultz consigns among others a twenty-pound three year old, a twenty-one-pound full age, a son of King Korndyke Veeman from a twenty-five-pound three year old. The females are in calf to King Korndyke Veeman, a thirty-three-pound son of King Korndyke Sadie Vale, the noted forty-pound bull. In view of the foregoing we believe we have coupled quality with integrity. For catalogs write Intercounty Holstein Association, Francis Darcey, Secretary, Watertown, Wis. Auctioneers, Hoeger, Hock and Hellen, S. T. Wood in the box. Catalog compiler, L. S. & P. Co. See page 28.—Adv.

Jones' National School of Auctioneering.

OF ALL the schools in the country devoted to special lines of instruction, none stands higher than Jones' National School of Auctioneering, Chicago, Ill. For over a decade it has been recognized as the leading auctioneering school, the one where complete courses in every branch of auctioneering is taught. Every instructor is a practical and experienced man in his line and the students receive the benefit of first-hand information. In this age of specialization, it is the thoroughly equipped man who wins, and any person contemplating entering the auctioneering profession will consult his best interest by taking a course at the Jones school. A very complete catalog will be sent to any address upon application. Write Jones' National School of Auctioneering, 40 North Sacramento boulevard, Chicago, Ill. See page 26.—Adv.

Here They Are.

THE particular buyer of Poland Chinas can find three spring boars at Dobson & Eastman's, Lancaster, Wis., that will give satisfaction. On October 22d these boars weighed 303, 309 and 290 pounds respectively and you all know the D. & E. standard of quality. We saw these boars a short time ago and consider them three of the best herd-boar prospects in the state. The real good ones are scarce this year so if you want a Poland China boar to make a noice about write for one of these. They also have a few that will weigh around 260 pounds that come a little cheaper, and for a short time they will offer for sale a limited number of fall pigs. Write your wants,

The Wisconsin Farmer Brought More Inquiries and Buyers Than Any Other Paper.

WHEN L. F. Atwater, Bangor, Wisconsin, planned his sale of Duroc Jersey swine, he placed his advertisement in The Wisconsin Farmer, which goes into more than 90,000 farm homes each week. The farmers were interested. They came to his sale and bought his pigs. Now he writes to thank The Wisconsin Farmer:

I had a good sale, and The Wisconsin Farmer brought more inquiries and buyers than any other paper. I thank you for the excellent service.

In those 90,000 farm homes where The Wisconsin Farmer circulates each week, are many breeders who would be interested in your sale. Let next week's Wisconsin Farmer tell them what you have for sale. Write today.

THE WISCONSIN FARMER MADISON, WIS.

Guaranteed Weekly Circulation 90,000. Over 72,000 in Wisconsin

your order will be honorably handled. We will appreciate it if you will mention The Wisconsin Farmer when writing to advertisers. See page 30.—Adv.

Oak Grove Jersey Herd.

THERE are a few men interested in every breed of cattle, who seem to be naturally adapted to the business, as we say "born cattle men." They know good producing cattle almost instinctively; they know how to feed and care for cattle and enjoy the work of tending. One such man is William Knight, Eagle, Wis., proprietor of The Oak Grove Jersey Farm. On this farm is one of the best herds in Wisconsin, if we can judge a herd by its production ability. They are equally good in type and made a very creditable showing at the 1915 Wisconsin State Fair. His herd won first on aged bull; bull under a year; first on two-year-old heifer; second on senior heifer calf and several third prizes. Every animal shown was in the money. At the Elkhorn Fair this year there were more Jerseys shown than of any other breed, yet his herd won all the firsts in both male and female classes, except in one class. He won fifteen ribbons on fifteen head. At the Janesville Fair his herd won one champion; five firsts, four seconds and two third prizes. Mr. Knight intends to show at all the state fairs in the middle West next fall and will, we believe, make a name for his herd. As for production his herd ranks with any in the state. Although he has been doing register of merit testing but two years he has some fifteen that have qualified or are now on test. Among the records made is that of Sally of Oak Grove. She made 594.10 pounds butter in a year as a junior two year old, which makes her the highest record Jersey heifer of her age in Wisconsin. She is also a show animal and won first in her class at the state fair. Her dam is also in Mr. Knight's herd and made 597 pounds butter in a year. High production and good type can only be secured by good blood lines, and we find this truth demonstrated again in this herd. Mr. Knight is a student of pedigrees and has been very particular in buying proven blood lines. His present herd sire is Oak Grove Noble Lad 122654, an outstanding individual that won first at the Wisconsin State Fair. He is by a son of Noble of Oaklands, that sold for $15,000 and out of a register of merit daughter of Eminent, that sold for $10,000. His dam when fifteen years old made 429 pounds butter in 249 days. Her sire, Eminent, has eigthy-eight register of merit daughters. Mr. Knight has been remodeling his barn and when completed it will be a model for sanitation and convenience. He has forty stanchions and next spring will build a new and larger barn for his calves and young stock. At the present time he is making some very low prices on young bulls to move them quickly as he has twenty-three cows due to freshen during the next three months and is already crowded in his calf barn. We advise our readers to buy a herd sire now and save money. You will not only buy a right good animal, but one that will grow into money every day, as Mr. Knight intends to put all cows on test as fast as they freshen. Write for pedigrees and prices. See advertisement on page 30.—Adv.

It's Up to You, Duroc Breeders.

ALL preliminaries for the Duroc Jersey Breeders' Association sale to be held during "Swine Week" at Madison, has been completed, so now it is up to you, Mr. Duroc Breeder to make this sale a success. It has been decided to sell fifty head of bred Duroc Jersey sows, these will be sold in the live stock pavilion at the College of Agriculture, the afternoon of February 7th. At the present time we have entries from twenty breeders throughout the state and we want that many more. Every man that claims to be a breeder of Duroc Jersey swine should be represented in this sale. It will not be a money-making proposition, but is being held with the idea of boosting the Duroc Jersey breed. Plain or inferior animals are not wanted for this sale, those kind do not boost any breed, but each breeder should send the best sow that he has on his farm—the good ones will advertise your herd, the poor ones will do likewise. It is impossible to see all the Duroc Jersey breeders in person, but we need your co-operation just the same. If you haven't made an entry for this sale do so at once. Write J. D. Gant, Secretary, Delavan, Wis., or T. P. Shreve, care The Wisconsin Farmer, Madison, Wis. Write whether you can consign or not and let us know that we have your co-operation, there might be something you could do in your locality to boost the game. We would suggest that the good sows for this sale be bred so as to freshen the fore part of March, for those that will buy at this sale want early litters. It's up to you, now get busy.—Adv.

Spring Boars Weighing From 230 to 270 Pounds.

WE HAVE just had a letter from Dennis Shea, Melvina, Wis., advising that he has just weighed many of his Duroc Jersey boars of spring farrow and they weigh from 230 to 270 pounds. We don't doubt this in the least, for when we were on his farm about a month ago he had at that time as good a lot of boars as any breeder in the state. With all due respects to the other Duroc breeders of the state, we will say that Mr. Shea has a herd that is second to none. We doubt if there is another breeder in the state that has a better bunch of brood sows. By using a son of King the Col. and Cherry Chief this breeder has had the most popular blood lines known to the breed. If you want good spring boars of this breed Shea has them and they are priced from $25 to $45 each. He has two that will make junior show boars that he is holding at $60. Melvina is the first station south of Sparta on the Sparta-Viroqua branch of the Milwaukee, the railroad facilities are the very best. You'll make no mistake if you buy from Shea. The gilts are reserved for this bred sow sale, January 30th. We will appreciate it if you will mention this paper when you place your order. See page 31.—Adv.

Home With His Jersey Cattle.

E. E. WYATT, proprietor of the Wyatt Dairy Farm, Tomah, Wis., who is advertising his pure-bred Duroc Jerseys on page 31 writes as follows: "I have returned home from my extended tour of the fairs with my cattle and hogs and everything is in fine condition. While at the Mondovi Fair I succeeded in capturing the first prize in the dairy cow competition contest. In this contest there were ten cows entered and all completed the test. The four-year-old cow, Euphemia's Pauline 319894, landed the $25 prize for largest butter fat production in forty-eight hours. She won by a margin of five points over her nearest competitor which was a grade Jersey. Euphemia's Pauline was sired by St. Lambert's Ridgewood King 73247, sire of three in the register of merit class, including King's Miss Kenna 248228, the champion economical producer of the Wisconsin University Dairy Herd. Her dam, L.'s Euphemia 202404, is also an officially tested cow with a record of 312 pounds of fat as a three year old. In the show at this place there were more than eight Jerseys and our herd bull, Maiden's Varsity King, was first and grand champion bull. In the cow class, Bumble's Leda Stella 354227, won first and later was made grand champion female. Rissa's Pretty Pedro 209364 won second prize and Daisy Bumble's Gem was third, all from my herd. In the two-year-old class, first and second were captured by Nemo's Molly Marguerite 344462 and Bumble Lambert's Lady 354229 respectively all bred and owned in the same herd. The latter two were sired by the present herd bull, Maiden's Varsity King 102974. A little later I will write you giving a summary of our entire showing at the nine fairs attended this year including the Central Wisconsin State Fair, the Northern Wisconsin State Fair and the Interstate Fairs."—Adv.

The Higgins Durocs.

WITHIN the next few weeks many farmers are going to buy boars and for those that want information relative to Duroc Jerseys we wish to call attention to the J. W. Higgins herd at

CONSIGNED by Tompkins Wright, Waupun, Wis., to the Intercounty Holstein sale November 15th, at Watertown, Wis. See page 28.

Gotham, Wis. He has sorted eighteen spring boars for the trade and every one of them is a good one. Mr. Higgins is a good feeder and these boars are in excellent shape for service. They have good bone, stand on the best of feet, good cherry colors and will weigh from 225 to 260 pounds. We do not hesitate to recommend this herd of Durocs. Get his prices, the boars will please you. Gotham is on the Milwaukee between Lone Rock and Richland Center. See page 31.—Adv.

Olaf Olson, Strum, Wisconsin.

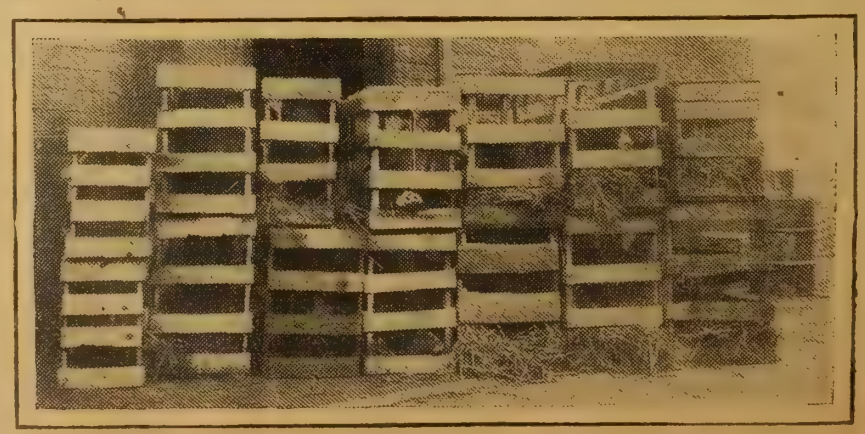
THE above breeder is fortunate in having the get of the grand champion boar, Mac's Chief, and the spring boars and gilts sired by this good boar are for sale. They are big, stretchy, well-grown fellows and they will suit you. Mr. Olson had expected to hold a bred sow sale this winter, but we have just been advised that he has decided to sell the gilts at private treaty, so here is your chance. Get busy and buy a son or a daughter of a grand champion. Mr. Olson also breeds Short-horns and at this time he has some young bulls for sale. They are of the milking strain and the price quoted is very reasonable. Notice his advertisement in this issue and write at once for details. We will appreciate it if you will mention The Wisconsin Farmer when writing. See page 30.—Adv.

Take Notice Poland China Breeders.

WE are glad to report that the Poland China breeders of the state are taking hold of the sale proposition in a loyal manner. For the benefit of those that are not posted we wish to say that on February 7th during "Swine Week"—the Poland China Breeders' Association will hold a sale of bred sows, same to be sold in the live stock pavilion at the College of Agriculture, Madison, Wis. It is the desire of the committee to have fifty bred sows from fifty Poland China herds in the state of Wisconsin and if all Poland China breeders will co-operate this is not an impossibility. At the present time twenty-two breeders of the state have expressed their willingness to consign to this sale and we need that many more. There are many breeders throughout the state that have not

THE twenty-nine-pound son of King Korndyke Sadie Vale, which will be sold at the Intercounty Holstein Breeders' Sale at Watertown, November 15th.

been seen in person and cannot be and these men should send their entries direct to Robert Smiley, president of Poland China Breeders' Association, or to T. P. Shreve, of The Wisconsin Farmer. The outcome of this sale will depend on the co-operation of the Poland China breeders of the state. Only the best should be consigned to this sale. If you will all put your shoulder to the wheel and boost your favorite breed you can make this sale the feature of "Swine Week." Send in your entries at once.—Adv.



A SHIPMENT OF POLAND CHINA BOARS FROM THE GRANT CO. BOAR SALE GOING TO MINNESOTA, IOWA ILLINOIS AND WISCONSIN.

Pease Pays the Express.

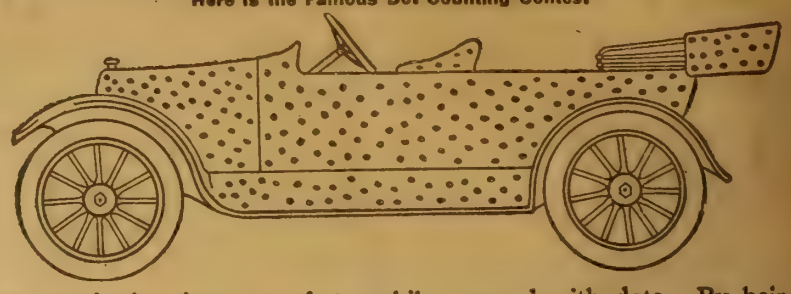
LOOK up the Poland China advertisement of L. E. Pease in this issue for it contains information that is valuable. He has sold his farm and his good Poland Chinas must be sold by December 1st. Besides selling you the best bargain prices he will pay the express charges to your station. There are some good buys for someone and "first come first served." Here's an opportunity. His address is Millville, Wis, but his shipping point is Bridgeport, on the Milwaukee railroad. Mention this paper. See page 27.—Adv.

Schley's Holsteins.

A SON of the thirty-pound bull, Pal King Pontiac Lad, is offered for sale on page 29 by Schley Brothers, Waukesha, Wis. The bull advertised for sale is a year old and ready for immediate service, although his dam has not as yet been tested, but is capable of producing a creditable record, when put on test. They are offering a young

Count the Dots and Win a Prize

Here is the Famous Dot Counting Contest



You see in the picture, an Automobile covered with dots. By being careful and thinking you can count the number of dots on this Auto. If you can do this, we will send you as a prize, *a surprize package of beautiful season and greeting post cards*, lithographed in rich colors and also a certificate of entry in our grand contest for an Saxon Automobile. All you have to do is to enclose a two cent stamp in your letter to pay postage and cost of mailing.

SAXON AUTO GIVEN AWAY

Remember the Saxon will absolutely be given away at the close of the grand contest. In case of a tie a Saxon will be given to each person so tied. Send at once so you can be entered in this great contest. Full particulars by return mail.

AYRSHIRE CATTLE.

ALDEBARAN FARMS A. R. AYRSHIRES

YEARLING AYRSHIRE BULL ready for service. ¾ white, well grown, good, straight type. Dam has an Advanced Registry record of over 500 pounds of butter in a year. This youngster is backed by rich Advance Registry breeding. His dam, both grandams and both grandsires being Advance Registry animals. Send for pedigree and price. Address

STEPHEN BULL RACINE, WISCONSIN

AYRSHIRE — THE PERFECT COW

Mr. Lott Hall, of Gouverneur, N. Y., says that Bell's Perfection bore her first calf when she was two. Has had 10 calves—always been healthy—milked nearly 11 months each period, giving from 40 to 50 lbs. when fresh. That's a typical AYRSHIRE record—duplicated time and time again. Better investigate this long-lived, prolific, productive, PROFITABLE breed.

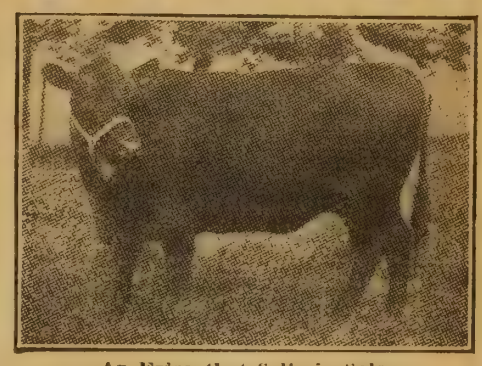
ABERDEEN ANGUS CATTLE

CANTON, MINNESOTA, THURSDAY, NOV. 9, '16

(50 MILES WEST LA CROSSE, WISCONSIN)

45 HEAD, 33 VERY CHOICE FEMALES, 12 OUTSTANDING BULLS

Two Pride Cows that Sell in Sale.



An Erica that Sells in Sale.

The best offering of this breed ever put up in the Northwest. Show cows and breeding cows, calves at foot, bred and open heifers. Bulls for herd headers. Notice the families represented: Eleven **Prides**, six **Queen Mothers**, four **Heatherblooms**, three **Trojan Ericas**, three Blackbirds. The females are bred to or have calves at foot by **Protector E.**, a Pride, by the champion, Prince Felzer, or **Erin Lad W.**, an Erica by Belfast. These cattle will improve your herds. Col. H. O. Tellier, auctioneer. T. P. Shreve, field man for The Wisconsin Farmer. Write for the illustrated catalog. Address

M. C. WILLFORD, CANTON, MINN. or **R. M. MILLER, PROSPER, MINN.**

bull from a twenty-pound dam. He is well marked, being more white than black. Send for an extended pedigree. Prices are very low, quality considered. When writing kindly mention that you saw their advertisement in The Wisconsin Farmer.—Adv.

Constance's Durocs and Jerseys.

WHEN visiting the farm of F. R. Constance, Waupaca, Wis., last week, we saw as fine a lot of fall boars as we have seen. They are well grown, with strong, heavy bone, and with good backs and hams. They are entitled to be good, for they are well bred on both sides. They were sired by Lee's Defender, Corrector and Model Lady's Trade Mark. Lee's Defender, it will be remembered, was grand champion at the 1914 Wisconsin State Fair and Corrector was first-prize yearling. These full boars are out of daughters of Crimson Lad by Marion's Wonder, a Wisconsin grand champion boar; Lee's Defender and Challenger. Mr. Constance is also offering fall pigs to be delivered at weaning time. These are sired by Victoria's Corrector by Corrector. The herd of Jersey cattle is one worthy of merit. Although official testing has not as yet been done, records of every animal are kept under the direction of the Waupaca Cow-Testing Association. They are offering a choice yearling bull for sale and several high-grade cows and yearling heifers. For further particulars in regard to breeding and prices write to the above address. See page 31.—Adv.

Kirst's Chester Whites.

HAVE you purchased that Chester White yet, if not get the prices and description of the Wm. Kirst Chester Whites at Tomah, Wis. Mr. Kirst is a good caretaker and, while he hasn't as large a herd as some breeders, he has good hogs and is enjoying a nice business. He will not ship out a poor pig and if you want a boar and a few gilts he can supply you to your satisfaction. Write him at once and mention this journal. See page 31.—Adv.

ALDEBARAN FARMS, located at Racine, Wis., and owned by Stephen Bull, assistant secretary of the J. I. Case Threshing Machine Co., were very fortunate in being able to secure such an outstanding Ayrshire bull, as they did in Aldebaran Findlayson 16292. He is sired by the famous Findlayston 8882, and out of Thoughtless Beauty of Hobsland 27976, an imported cow making her advance registry records as a two year old and that was recently sold in the East at $1,000. Mr. Bull took great pains and spent many weeks in picking this young animal and he very impressively showed his class in being placed first in the two year old class at the Wisconsin State Fair this year and at the Elkhorn County Fair, the only two fairs at which the Aldebaran herd were exhibited. He has sired some very fine young stock, well marked and nicely bodied. A young bull is advertised for sale on page —. This bull was born September 30, 1915, is well grown and ready for immediate service. He is very well marked being three-fourths white. He is also richly bred being backed by several generations of advance registry blood. His dam, both grandsires, both grandams, two great grandsires and one great grandam all being advance registry animals. Ayrshire breeders will appreciate what this means. His own dam, Laurie Lorain, has a record of close to 600 pounds of butter in a year. Her sire, dam and grandsire are A. R. animals. This young bull was sired by Aldebaran Findlayston. Send for an extended pedigree and prices of this bull. When writing kindly mention that you saw their advertisement and this write-up in The Wisconsin Farmer. See page 26.—Adv.

IN A LETTER from W. G. Bartholf, Burlington, Wis., to The Wisconsin Farmer he writes: "Enclosed find copy of advertisement which please run on my three months' contract then discontinue and I will run the balance of the advertisement in January and February on bred sows. Yours truly, W. G. Bartholf. P. S. These boars are sired by Valley G. Model Wonder and Hickory Grove Peter. Three of as good sires as I ever owned. We showed at Beloit, Madison, Watertown, state fair, Elkhorn and Beaver Dam and won forty-two firsts, twenty-nine seconds, eleven thirds, one fifth, one seventh and five champions two champions being over all breeds. The boars I am offering are all good boned and good length and good backs." We might add to this that we have seen Mr. Bartholf's pigs both at home and one the show circuit and can conscientiously recommend them to our readers. See his Duroc Jersey advertisement on page 31.—Adv.

J. B. Sanderson - Cambria, Wisconsin

FOR HIGH-GRADE OR REGISTERED HOLSTEINS

Yearling Holstein Bulls

READY for service and younger, sired by the richly bred bull **Wisconsin Star Champion 110275,** whose dam made 28.70 pounds butter as a five year old. These bulls are from good producing cows and are well developed and well marked. Prices right.
Andrew Frank - Fox Lake, Wisconsin

Registered Holsteins

BULLS from A. R. O. dams, of the right type to improve your herd. Prices reasonable.
W. W. Bird - - Cambria, Wisconsin

TWO SONS OF THE 27.56-POUND BULL

Sir Johanna De Colantha De Kol

THESE bulls are good individuals, well marked, more white than black, well grown. They are both from A. R. O. daughters of the bull, Oakhurst Milk and Butter King. Price reasonable. Send for extended pedigrees. Address
B. F. Winckler & Sons Medina, Wis.

Registered Holstein Heifers

HEIFER calves and young cows for sale. Ten daughters of the 24.12-pound bull, Sir Korndyke Zoldusky De Kol, that has 10 A. R. O. daughters. He is a grandson of Hengerveld De Kol, that has 116 A. R. O. daughters. These heifers are bred to the 40-pound bull, Johanna King Segis, a son of the 40-pound cow, Johanna De Kol Van Beers. Yearling bulls and younger from A. R. O. dams with records from 14 to 30 pounds. High-grade springers and young cows. Write us your wants.
U. F. McNutt Oxford, Wisconsin

OLATHE-HOLSTEINS

STAND FOR BEAUTY-PRODUCTION

OUR HERD is composed of 45 registered females, of Ormsby and Piebe blood. Herd sire: Sir Bess Ormsby Mercedes, son of Sir Pietertje Ormsby Mercedes 37th and Daisy Queen DeKol, A. R. S. O. 871.7 lbs. butter in one year, average per cent fat 3.92. She was one of the "ten best cows" in Wisconsin Cow Competition. We are breeders exclusively, and offer **for sale** surplus stock of our own raising.
SILVER SPRINGS FARMS CO. - EAU CLAIRE, WISC.

Yearling Son

READY for service, of the **30 pound bull, Pabst King Pontiac Lad 129298,** whose three nearest dams average over 30 pounds. Price $75.00. **20 pound bull born March 17, 1916,** sired by above bull. Both are well marked, more white than black. Price $125.00. Send for pedigrees.
Schley Brothers - Waukesha, Wis.

LA BELLE VIEW FARM HOLSTEINS

WE offer for sale two fine Ormsby-bred bulls 6 months old, sired by Hillvale Champion, that is own cousin to Dutche's Skylark Ormsby, the dairy queen of the world; if you want Ormsby blood speak soon, for bull calves never stay on this farm till they are a year old; our prices are reasonable. E. E. Rosenkrans, Oconomowoc, Wis.

30-POUND YEARLING HOLSTEIN BULL

READY for service for sale; also a yearling bull from a 23-pound dam. Younger bulls from dams with records up to 30 pounds. Prices from $35 up, depending on breeding and age. When you want a herd header write
W. H. S. Rhoda Watertown, Wis.

REG. HOLSTEIN BULLS

SIRED by Cedarlawn Champion 3d, whose two nearest dams average almost 24 pounds butter in 7 days with first calf. One bull out of a granddaughter of Sir Johanna De Kol, sire of the 40-pound cow, Johanna De Kol Van Beers. Address
Fred Kohlwey Grafton, Wisconsin

HIGH-GRADE HOLSTEIN HEIFERS

HAVE on hand 60 head of choice, high-grade Holstein heifers for sale. They are nicely marked, good size and in fine condition. Some of them are springing. Can load you up a load of fine heifers. Give me a call. J. L. Turner, Darien, Wis.

HOLSTEIN

BULL calves, sired by Johanna Bonhuer Pieter 113138, whose 14 nearest dams average over 27 pounds butter in 7 days, out of dams with 7 day and yearly records. O. Tochterman Jr., Monroe, Wisconsin.

McClurg Bros. - - - - - - - - - Viroqua, Wisconsin

Big-Boned Boars. The Best Is None Too Good

950-POUND COOK'S DEFENDER

OUR Durocs have size and quality. They are guaranteed in every respect. Will sell boars and gilts. Your letters promptly answered. Write, mentioning The Wisconsin Farmer.
EMMETT COOK & SON - RICHLAND CENTER, WIS.

BURN BRAE DUROCS---The Good Kind

WE have 50 spring pigs for immediate sale sired by Burn Brae Golden Model and Burn Brae Orion. They have size and quality. Every pig guaranteed. Write or wire.
BURN BRAE FARM - - - ROSENDALE, WISCONSIN

DUROCS

SPRING boars by **five noted sires.** Well grown and bred in the purple. For sale at "let live" prices. **Grand Model 21st,** son of the many times champion, **Grand Model,** heads our herd. Also two fall boars for sale. We sell "boars that please." Write

Geo. D. Sprain & Sons
West Salem, Wisconsin

--PARKHURST-- DUROCS

LET us ship you a boar pig. They are well grown, of the most popular blood lines and we guarantee every boar. We welcome visitors and answer inquiries promptly. Try us.
E. H. PARKER & SON
Janesville Wisconsin

DUROC JERSEY BOARS

OF March farrow with size and quality, heavy bone and long, deep bodies, of the best of breeding. Write for prices. Address
W. G. BARTHOLF BURLINGTON, WIS.

SEPTEMBER DUROC PIGS

at your own price—Just make an offer

THESE are by a Cherry Chief boar that weighed close to 500 pounds at 16 months and Long Model Wonder, another big one that has only a few equals. Also a fine bunch of spring boars of champion blood lines at attractive prices. Address
E. R. Perkins Manitowish, Wis.

FOUR OAKS STOCK FARM

OFFERS registered Duroc spring pigs (April farrow) either sex for sale. These were sired by Defender Major 2d 70335 and are out of large, prolific sows. Price $20 to $30. Address
W. W. Goodrich Ft. Atkinson, Wisconsin

GEO. H. WILLSIE
Breeder of Big Durocs

Can supply your wants. Write.
Prosper - - - Minnesota

WE SHIP on APPROVAL
Duroc Jersey BOARS and GILTS

HAVE a large number to select from out of large matured sows sired by **Fisher's Volunteer** tracing to the noted Champion Volunteer. Have some excellent March pigs that will please you. If our pigs were not good we wouldn't offer to ship on approval. Write your wants.
Riley Martiny & Son, Baraboo, Wisconsin
Breeders of Guernsey Cattle

DUROC BARGAINS

HAVE picked 15 of the best DUROC JERSEY BOARS for the mail order trade. Will not ship the poorer ones. If you order of me you'll get a good boar or none at all. Also breed Shorthorns. Address
Ed Patterson, Jr.. Bloomington, Wis.

CEYLON COURT FARM DUROCS

BOARS and gilts of March and April farrow of **Professor, Defender, Proud Advance** and **Cherry Chief** breeding. The most and richest popular lines of blood represented in our herd. Prices reasonable. Send for pedigrees.
Ceylon Court Farm - Lake Geneva, Wis.

Atwater's Duroc Boars

SOME just as good as sold in my sale—these were held for private sale. Write.
L. F. Atwater - Bangor, Wis.
"Home of Big Durocs"

Model Durocs

READY to fill your orders for spring boars. Order now and save express. Address
J. W. Higgins Gotham, Wisconsin

VICTORIA SWINE.

Registered Victoria Swine

EXPERIENCE has proven that they are the best cross that can be used for economical pork production. Fall boars, gilts and spring pigs out of prize-winning sires and dams. Address
H. P. WEST RIPON, WISCONSIN

YORKSHIRE SWINE.

FOR sale—Thoroughbred young Yorkshire hogs and Oxford sheep. Write Ingvoldstad Lumber Co., 707 Central Ave., N. E. Minneapolis, Minn.

DUROC JERSEY SWINE.

DUROCS THAT PLEASE

IF you want a spring boar or gilt, I can suit you. March pigs of the very best breeding with size and quality. Price is right. Write at once.
B. M. ARRIES AUGUSTA, WISCONSIN

King Defender

GRAND champion Wisconsin State Fair, heads my herd of Duroc Jerseys. Am offering fall and spring boars of the most fashionable breeding for sale. Sows bred to King Defender will be offered later. Write your wants. Address
JOHN L. FISHER JANESVILLE, WIS.

CHESTER WHITE SWINE.

Derenthal Chester Whites
Home of Champions

MOST Chester herds need more size and better backs. I am breeding that kind. Let me ship you a boar. Guaranteed. Write for sale list.
H. A. Derenthal - Wykoff, Minnesota

DOERR Chester Whites

HERD established 20 years. I know the type you want and can supply you. PEACEMAKER and STELMO blood. You get value received if you buy from me. Give us a trial. Address
J. A. DOERR VIROQUA, WIS.

CHESTERS

For sale that will please

SPRING and FALL boars by IDEAL COMBINATION and IOWA BOY. Excellent individuals. IOWA BOY by Iowa 1st for sale. Write your wants. Address
L. J. McBAIN BLOOM CITY, WIS.
(Shipping point Viola)

CHESTER WHITE SPRING

BOARS and gilts sired by **Elmo D** and out of daughters of the 800-lb. boar, **Monroe.** Pigs well grown and good heavy bone. Send for prices.
O. P. Coates - Elkhorn, Wisconsin

CHESTER WHITE PIGS FOR SALE

AUGUST pigs at let-live prices—from matured stock. Singles, pairs and trios. No runts shipped. Feed scarce and must sell. Two winter boars of best breeding. Pedigrees furnished.
Jos. Eglehof Edmund, Wisconsin

Your Chance--Chester Whites

ALL ages, either sex, boars big enough for service. Fall pigs by **Pay Streak,** 2d junior yearling at Milwaukee, 1916. Everything as represented or money back.
Wm. F. BUTTS EVANSVILLE, WIS.

SUNNY SIDE CHESTERS

CHOICE March and April pigs of both sexes—best blood lines. Choice Jersey cattle and Scotch Collie pups. All stock registered. Write for prices. Address
John Pellett R. 2, Viola, Wisconsin

CHESTERS

EITHER sex, that have size and breeding. Satisfaction or no pay. Address
ADOLPH NUTTLEMAN, WEST SALEM, WIS.

Chester Whites

HAVE some great March pigs of championship breeding. I won't ship a poor pig. Try me.
W. F. Miller West Salem, Wis.

CHESTER WHITES

A CHOICE lot of March pigs. The lengthy and heavy-boned type at farmers' prices. Address
L. A. Schultz R. 1, Poynette, Wis.

PADDY by SCHOOLMASTER

CHESTER WHITES
C. EVANS by COMBINATION 2d

SPRING boars and gilts for sale by above boars. Only the tops shipped. Order early and get the pick. A.L. Gray, Mt. Hope, Grant Co., Wis.

CHESTER WHITES

A FEW choice March and April boars for sale. Sired by W. B.'s Wonder and Modeler's Best.
Wm. F. Belda - De Forest, Wisconsin

CHESTERS

LET me ship you a Chester White spring pig that will please. Bred, fed and priced right. Write. **Wm. C. Kirst, Tomah, Wisconsin**

CHESTER WHITES

CHOICE spring pigs of March and April farrow for sale. Big bone, well bred and growthy. Correspondence solicited. Write
Art. G. Hoskins Dodgeville, Wisconsin
(Also breeder of Milk Strain Short-horns)

The "War" Catch-phrase and the Falsity of It —The Real Issue

The Democratic campaign has been framed on the catch phrase "Wilson kept us out of war."

It is not true, and is absolutely at variance with facts.

Under our constitution, the only power that can declare war is Congress. The President cannot declare war.

But the President can, by his policy, place our country in a position where war is inevitable if the opposing country accepts the challenge.

Did Wilson keep us out of war with Mexico?

We invaded Mexico, bombarded and captured Vera Cruz and would have been in war if the Mexican Government had fought back.

We sent an army into Mexico and it is still there. **If the Mexican Government dared to pit its army against ours there would be war now. It is not Mr. Wilson's fault that we are not at war.**

And yet these invasions of another country have produced no results to make us proud.

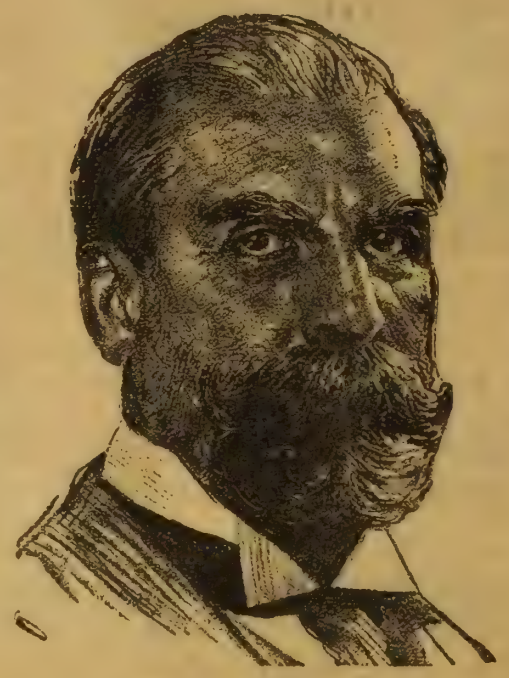
More American lives have been lost—lives of private citizens, soldiers and marines—in this Mexican "peace" than were lost during the Spanish-American war. We have submitted to humiliating conditions and awful outrages without resenting them, and yet we have paid the price of a war.

We could have prevented every outrage and saved thousands of lives if we had had a firm Mexican policy.

Did Wilson keep us out of war with any European nation?

Not at all.

No European nation would fight us. The same condition kept us out of war that kept Holland out of war and Switzerland, and Spain, and Norway, and Denmark. None of them wanted to get into war and neither did the United States. No nation involved in the European



struggle wished to add us to its list of enemies.

Our foreign policy has been weak and humiliating to us, in contrast to that of small countries like Switzerland, Holland, Norway and Sweden.

A Four Billion Dollar Congress

The last Democratic Congress has passed appropriation bills at a rate which will give it the name of a "Four Billion Dollar Congress," and this in direct opposition to the Democratic platform of 1912 which denounced Republican appropriations and demanded a return to economy and a reduction in the number of public offices.

Over thirty thousand additional offices have been created during President Wilson's administration.

Mr. Hughes stands for the constructive policy of a budget system against "Pork Barrel" methods; he is in favor of a reduction in expense, and economy in government.

Aside from the great issues that are temporary at this time, there is no greater question involved than that of making our government careful in appropriations and clean in expenditures.

The Farmer Pays the Adamson Bill

The Democratic party expects to gain votes through the Adamson Bill, which is merely a measure to postpone trouble, passed without consideration or investigation. It will place a burden of millions of dollars in future years upon the farmers of the country, who in the end must "pay the freight." The plea is made for Mr. Wilson that he raises wages.

It is fair to add that he also raises expenses, increases taxes and **places the burden on the people for a proposition which is purely political.**

The threatened strike could have been avoided by an arbitration law just as easily as by the Adamson Bill.

The Real Issue

When the European war is ended and the readjustment of conditions comes, America will need a line of defense which will be no less important than the army and navy. It will be the defense of our producers against the competition of other countries where prices are low and the standards of living are not up to those of America.

There is only one party that proposes to enact this preparedness into law, and that is the Republican party, which stands always for the protection of American farmers and American trade.

Many of the other issues of this campaign will be settled in a few months, but the consequence of no protection of our producers and our workmen would lead to disaster that would never be overcome.

On this question the Republican party deserves the support of every man who produces and who labors.

GOOD MEN WANTED TO LEARN THE AUTO BUSINESS

Any ambitious, capable young man can make a success for himself, and if you will only prepare yourself, you will get work, because positions are open, waiting for competent men to do Auto and Electrical work. The American Auto College develops your talent for a splendid, big paying trade. Our course has been enlarged with lots of new work—principles of Knight Motors, 8 and 12-cylinder Engines of new models, Tractors, new Starting systems, Magnetos, Wiring, Coils, Welding, Brazing, Lathe work, Milling and Drill work, Tool making, Overhauling and Repairing, and all the newest, up-to-date Auto equipment. **$900 TO $3,000 SALARY OR BUSINESS PROFITS PER YEAR**

LIFETIME OPPORTUNITY—It's up to you to be either a common, hard-working laborer or else learn a good business. Thousands of men will go into the Auto business within the next year. Be one of them. We want you to. Get started right away. Learn here where the opportunities are greatest and best, by our system of actual work in our large shops. No books used; we furnish tools. You do the work yourself. Our men learn easily and quickly because practical work is the best. Big Electric Starter and Tractor course FREE with the regular Auto course. Write for our big FREE Catalog now.

Questions and Answers.

Making an Electric Magnet.

Please give me some information as to how I can make an electric magnet to be operated by dry cells.

Answer.—An electro-magnet is made by wrapping insulated copper wire around a soft iron core. The core becomes a magnet when a current of electricity flows in the wire. The strength of the magnet depends upon the number of turns of wire around the core, the amount of current, the size of the core, the size of the wire, and the shape of the magnet. For use with dry cells, single cotton covered or enameled wire may be used. For city current, use double cotton covered wire. The finer the wire, the greater the number of turns for a given space, and the stronger the magnetism for a given amount of current. The core is usually bent U shape, half the wire being wound right hand on one leg of the U, and the remainder of the wire wound left hand on the other leg.

Oscillating Magneto.

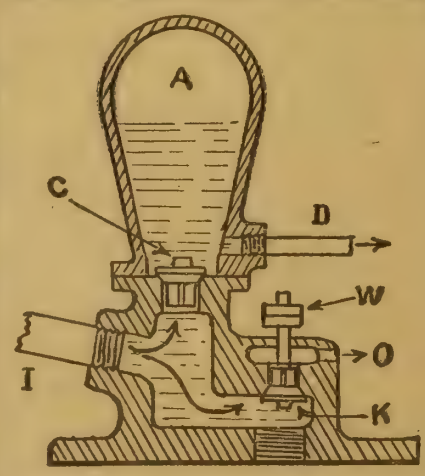
Can a stationary engine having jump spark ignition be successfully operated with an oscillating magneto? If not, why not? Does an oscillating magneto have any parts that have to be renewed every few months? What is the horse power of a gasoline engine having a four-inch bore and five-inch stroke, running at 500 R. P. M.? It has two flywheels, each weighing seventy pounds.

Answer.—The oscillating magneto will work all right on a jump spark engine, but some special parts are usually necessary to adapt it to the engine. The same applies to any high-tension magneto, the only magneto easily applied being the low-tension, belt-driven type. If you are considering an oscillating magneto, you better write to the manufacturers, giving the size, type and make of your engine, and obtain their advice as to the best method of installing the magneto. An oscillating is as durable as a magneto of any other type. Your engine should develop three horse power. Within reasonable limits, the weight of the flywheel does not affect the horse power.

How a Water Ram Works.

Please publish a diagram and explain how a water ram works. How does a gyro-motor, that is, a motor with a flywheel that runs so fast that it can't fall over, work?

Answer.—The accompanying diagram shows a sectional view of a water ram. The water enters through the inlet pipe I, flows down, and out of the ram past check valve K, which is held down by the weights, W. The water escapes at several openings, O, above valve K. When the flow of water becomes quite strong, it raises check valve K, and the momentum of the flowing water causes pressure enough to raise check



valve C, and the water flows into the air receiver A. As soon as the pressure above and below C is equalized, valve C closes, K opens, and the operation is repeated. A comparatively steady flow is maintained in the discharge pipe D by the air pressure in A. Water rams are generally used to force water from a small stream up to a house or barn several feet above the water level. The water is piped to I from some distance up stream, so as to get considerable fall.

The gyro-motor maintains its position for the same reason that a moving bicycle remains upright. The mathematical principal is difficult to explain.

Master Vibrator.

What is a master vibrator on a Ford car, and what is the use of it?

Answer.—A master vibrator is an attachment to take the place of all four vibrators, the attachment being wired so that the vibrator of the master vibrator operates all the coils. The contact screws on all the coil vibrators are screwed down so as to make continuous contact. The advantage claimed is that there is only one set of vibrator points to adjust for the whole engine, and that more even ignition is secured. Master vibrators are not furnished regularly with Ford cars.

Uses Too Much Gasoline.

My Ford car uses too much gasoline. What causes this? How can the carburetor be adjusted? How does the Ford timer regulate to spark at the right time? How can you test the spark plugs and the battery? Can a Ford car be started on high gear? What is the easiest way to start a Ford car, with the engine running?

Answer.—Too rich a mixture is the usual cause of an excessive use of gasoline. It may also be caused by running with the spark too much retarded, or by poor compression. Good compression is necessary to get the power out of the fuel. Keep the mixture as lean as possible without interfering with the running of the motor. Too lean a mixture causes misfiring and backfiring in the carburetor; too rich a mixture causes waste of fuel, carbon trouble, misfiring, and overheating. For a lean mixture, turn the dash-adjusting button to the right. To adjust a Ford carburetor, start the motor, advance the throttle to the sixth notch, and retard the spark to the fourth notch. Turn the dash adjustment to the right until the engine begins to misfire. Then, very slowly, turn it to the left until the best running position is found. Black smoke from the exhaust indicates too rich a mixture. If you fail to cut down your gasoline consumption by adjusting the carburetor, it may be that the carburetor needs a new float valve. Considerable gasoline may be saved by running with the throttle closed when going down hill.

The Ford timer consists of a small, round metal box, in which a small roller turns around. The roller is mounted on a swinging arm attached to the end of the cam shaft. Around the rim of the box are four insulated contact points; when the roller touches one of these points, it closes the electrical circuit between the magneto and the coil to which the wire runs from that point, and a spark occurs in the cylinder connected to that coil. The rim of the box may be rotated backward and forward a short distance. In this way the spark is advanced or retarded. The spark plugs may be tested by taking them out, laying them on top of the cylinders, and turning the motor over rapidly by hand. The spark may then be seen at the points. The part of the plug above the porcelain must not touch the cylinder. The Ford car as regularly equipped carries no battery. If the spark is all right, the magneto is all right.

It is not advisable to start any car on high gear. Too sudden a strain is put upon the parts, which will show up as increased wear if the practice is continued. To start the car with the engine running, speed up the engine, press on the clutch pedal, and throw the hand lever forward, the clutch pedal being in neutral position. Then press the clutch pedal as far forward as it will go. This starts the car on low. After the car gains speed, allow the clutch pedal to drop entirely back, which puts the car on high speed. Then slightly close the throttle.

The Wisconsin Farmer

FAMILY CIRCLE TALKS
BY THE PUBLISHER

SOME WRONG IDEAS OF THE FARM LOAN LAW.

I WANT to correct three erroneous impressions which I find prevail in some minds in regard to the new federal farm loan law and my explanation of its workings.

In the first place, I am not organizing national farm loan associations, nor have I any interest whatever in the law except so far as I can assist deserving farmers to take advantage of it, if they find, after careful investigation, that it enables them to borrow money on better terms than they are able to secure it from other sources. The law plainly states that "ten or more natural persons who are the owners, or about to become the owners, of farm land qualified as security for a mortgage loan may unite to form a national farm loan association." Nobody is authorized to form associations unless they are eligible under this classification; in fact, the Federal Farm Loan Board has issued a warning against men who are seeking to form associations unless they intend to borrow money themselves on their own farm land. Much as I might like to help men whom I know to be deserving, I could not organize an association, under the new law, unless I wished to borrow on my own farm land, which is not the case at present. Notwithstanding the fact that the law is plain on this point, I am in receipt of a number of letters similar to this one from a Wisconsin representative of one of the large insurance companies:

> I had a farmer in today and he wanted me to write to you in regard to a loan on his farm of $2,500. He saw in the paper that you had formed a farmers' loan association. His farm is all right and he is O. K. We both hope to hear from you soon.

The thing for that Wisconsin farmer (and all others who wish to borrow under the new law) to do is to write to the Federal Farm Loan Board, at Washington, for association blanks, circulars and other general information and then find nine other farmers in the vicinity who will join in organizing a local association. There is no expense connected with any of this preparatory work. But above all things; do not be taken in by any designing and unscrupulous "promoter" who claims to be able to help you out, upon payment of some sort of commission or bonus.

In the second place, the law is designed to help individuals, no matter whether a local association of ten farmers can be formed in their neighborhood or not. It is not designed altogether to help farmers who can find neighbors or friends who wish to go into an association with them. Let me quote a portion of the law:

> That whenever, after this act shall have been in effect one year, it shall appear to the Federal Farm Loan Board that national farm loan associations have not been formed, and are not likely to be formed, in any locality, because of peculiar local conditions, said board may, in its discretion, authorize federal land banks to make loans on farm lands through agents approved by said board. Such loans shall be subject to the same conditions and restrictions as if the same were made through national farm loan associations.

The law went into effect on July 17, 1916. Therefore, any time after July 17, 1917, an individual may borrow just the same as though there were a local association, provided none has been formed and the Federal Farm Loan Board is convinced there is no possibility of one being formed in the near future. If the co-operative plan fails to work out, the individual farmer is not shut off from the advantages of the law, as all too many farmers now think is the situation.

In the third place, the law will eventually aid the worthy tenant who has not the necessary money to buy a farm of his own. While it plainly specifies that the loan can be for no more than 50 per cent of the appraised value of the land and 20 per cent of the value of the improvements thereon, I believe that Mr. P. W. Goebel, president of the American Bankers' Association, is right when he says that second mortgages on farms bought by worthy tenants will be considered first-class investments for trust companies, investment banks, insurance companies and individuals. Let me quote Mr. Goebel's opinions somewhat at length:

> I have heard several gentlemen say, "But how are you going to advance the interests of the tenant farmer that has not got the 50 per cent saved up to buy his land?" Why, if the tenant is the right kind of man there will be no trouble whatever. And here the personal equation comes in. The government must require absolutely the same maximum requirements from everybody that does business with these banks, and the local banker will take into consideration the personal equation of a man wanting to buy the land; and, as a banker, I would not hesitate to say that I would loan freely on second mortgages. I would not in a commercial bank; but in a trust company or investment bank I would lend freely on second mortgages so long as I could see that the interest and the amortized payment on the first mortgage and the interest on the second mortgage and taxes and upkeep of the land would still be less than the rental value of the land.
>
> We will say a young man who has worked for a farmer for a number of years, or a man of middle age whom I have known for years who has rented a place, comes to me and he says, "I have $1,000 and I have two span of horses and some cows and some sows—enough reasonably to stock eighty acres of land. I have got to pay $50 an acre for the land. I can get a loan through the National Farm Loan Association, of Staunton township, for $2,000. Will you loan me the other $1,000?"
>
> Now it is a very easy proposition to figure it out. I will figure that on the first mortgage of $2,000 he will pay $120 interest at 6 per cent. I am figuring now on the maximum. He will pay $20 on the amortization fund. Now, I loan him the $1,000 at 7 per cent, if you please. He will pay me $70, and I will figure that his taxes cost him $50, which makes a total of $290.
>
> Now that eighty acres of land, if he rented it, would cost him anywhere from $325 to $400 a year rental. It goes without saying that he will take more interest in that piece of land as an owner than as a renter. He will take better care of it and improve it. It will be improved rather than deteriorated. It does not take a great stretch of imagination to see that this man with the $1,000 I loaned him can pay on an average of $100 a year on the principal. In other words, he can retire the $1,000 I am loaning him in ten years. Then, he will simply have a proposition that with any intelligent work at all he will absolutely make a living, and the small sum he pays yearly to retire his loan finally will hardly be taken into consideration.

The law is not perfect; I can see many flaws in it, but let us give it a fair trial and adapt it to all needs, if possible. By limiting the amount of individual loans to $10,000 it prevents the absent landlord from using Uncle Sam as a convenient banker for large sums borrowed on immense tracts of land. If its actual workings shall include the worthy tenant, with only a portion of the purchase price saved up, it will have gone far toward solving a very vexatious problem and toward improving agricultural conditions all over the country. Let us hope and work for the best.

I might add, by way of postscript, that a representative of the Federal Farm Loan Board has been kind enough to compliment me on the soundness of my advice on this subject, writing me as follows:

> I think you are doing some of the most effective work that is being done by farm paper editors in behalf of the farm loan act. Every one of your editorials indicates that you have a thorough grasp of the farm loan act.

I have put in a great deal of time studying this law and its probable workings and effects. I have talked with members of the Federal Farm Loan Board, with bankers, insurance agents and borrowing farmers, and I have come to the conclusion that the new law, while not perfect, bids fair to give us financial relief and to place the farmer on the same business plane as the merchant and manufacturer.

PARTNERSHIP IN THE FARM HOME.

I COULD easily fill this page of mine, and many others, with interesting letters which come to me in regard to the complaint of the Illinois farmer's wife that she is never allowed any spending money of her own and has no voice in the financial affairs of their farm home. I have just spent an hour reading over a few of the many letters received within the last few days, picking out first one and then another to share with you here this week. I would lay one down and say to myself, "That one must go sure;" then I would pick up another and it seemed so much more interesting and sensible I would say, "Well, I'll run this one this week and leave the others until next week." The more of the letters I read, the more undecided I am as to which is the best or which would do the most good. I am going to leave the matter to Fate and pick out a couple, at random, without looking.

Well, here's the first one I picked up; it's from a man well along in years, although even at that he's fifteen years my junior. He makes his wife his full partner in everything and shares the joys of his children as though he were one of them. I believe I'll print his letter practically in full; it is so good:

> I do love to read your page and note how earnestly and conscientiously you write each and every word in explanation of first this and that question presented to you. My heart (and I am fifty-two) goes out to the Illinois farmer's wife. I am going to give you a little description of my family and how we work and get along. As I said, I am fifty-two and my wife is forty-eight. We have three daughters and two boys, two girls and two boys grown and one daughter married.
>
> Well, when there is any business to be transacted on this farm mamma and I talk it over. If it is selling corn, wheat, hogs, cattle or anything else, we get together; and improvement to be made, we get together again and talk it over; anything needed for the children, we get together again; and so on down the line. We have but one pocketbook on this place and if either of us or the children need anything it is open and we help ourselves. Well, I have always taught my children not to be wasteful or extravagant and have talked these things over with my wife. To make a long story short, she is my life partner in every sense. The result is that we have no quarrels nor differences, because by getting together and reasoning things out we see what each likes. If we didn't do this we might do something that neither of us would like.
>
> Now if that Illinois farmer will just walk over and put his arm around that good wife's shoulder and say, "Wife, let's talk it over," and make her see and know she is respected as being capable and appreciated, that wife will have no cause to write any more letters. If he is too narrow to see where he is drifting, God help him, for I can't. After supper (especially at this time of year) we generally all get around the organ (daddy is the organist) and play and sing a whole bunch of good old-time songs. Then in a moment you will probably hear a wagon or two coming up the hill. "Well," someone will say, "where are you boys and girls going?" "We are going over to Daddy Scott's to play and sing." What happy thoughts for a man in his old days. I would not give up the love of all those young people for any wealth. Then at Sabbath school you can see it in their eyes and hear it as they sing.

I leave it to each and all of you, isn't that a splendid letter; isn't that an ideal household partnership? It makes a man feel as though his work were not in vain when something he writes brings such a letter as that.

Here is the second one, picked at random; it's from a young woman, whose advice shows she has a remarkably sound head on her shoulders. She does me the honor to say that she and her husband like my paper better than any other they take and that she reads it as thoroughly and as carefully as her "liege lord." If the world were full of as logical thinkers and cheery comrades as this young farm woman discloses herself to be, by her letter, it would be a fine place, indeed, and you and I would have few, if any, problems to discuss between ourselves here. I will just print part of her letter, it is rather long:

> Today I have been very tired and my work has not been of the nature to make me feel that I am an "empress," but instead of feeling resentful and complaining of my surroundings I am satisfied and happy. The secret of it all is that my husband and I are partners. Before I married, six years ago, I held a very responsible position and averaged from $100 to $150 a month and I do not resent the loss of that, for every carload of cattle, every sow and pigs and every team of mules that is bought and sold on our farm I discuss with my husband. I know how much is gained or lost on everything and my husband and his brother talk to me about crops and stock and politics. I do not mean that I advise them what to do, for nothing is further from my mind than to appear egotistical, especially as my husband has been farming twenty years and I have been interested for six.
>
> I have the conveniences that we can afford and I go to town to parties and come home refreshed and talk about what has happened and whom I saw—and I do not walk to town either. My spending money is not handed out to me as though I was some dependent relative. My husband sees that I have a bank account and he knows me well enough to feel sure I will not be extravagant. What prompted me to write this letter was the letter in the paper that arrived today (the October 19th number) from an Illinois farmer's wife telling you about everything she possessed but freedom. I have always felt that men in this part of the country were more considerate of their wives in every way than men in the East and West and the more I read about the lack of companionship in those parts of the country the more I am certain that there is something very wrong with the men, or the women are to blame. In the first place, had I been the Illinois farmer's wife I would have begun ten years ago to assert myself as an equal to my husband. Probably she did, but from her letter she has not succeeded very well.

When I started this discussion I reserved the right to express my personal convictions later. I fear there will be no good ideas left for me, if the letters continue. The more I look over my correspondence the more firmly I become convinced that this page of mine is the best on the weeks when I turn it over the most to my farmer correspondents. About all the usefulness I can see for myself, just now, is to introduce the various speakers and then retire as gracefully as I can to the background.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Ave. Des Moines, Ia. | 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscription or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION
MEMBER AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

National Dairy Show For Wisconsin.

THE Wisconsin Farmer is advised that the National Dairy Show, held last month in Springfield, Massachusetts, will be held either in the West or South next year. Kansas City, Missouri, has put in a bid for the show, and Atlanta, Georgia, would like to have it.

It seems to The Wisconsin Farmer that Milwaukee would be the logical place for this show in 1917. Our only thought has been that such a plan might interfere with the Wisconsin State Fair, which would be held only a month previous to the dairy show. The National Dairy Show is the biggest dairy exhibition in the country, and the cream of dairy pure-bred stock is exhibited at this show. Wisconsin breeders take a prominent part in the show, regardless of where it is held, and they won championships in two of the breeds at Springfield. There are a good many thousand farmers and breeders in Wisconsin, Illinois, Minnesota, Iowa and Michigan, who would be directly benefited if the National Dairy Show could be held in this territory, and there is no better place in this territory to hold the show than Milwaukee. Milwaukee could easily accommodate the crowds. Such a show was once held at Milwaukee, but it was not a tremendous success as we understand. The show has grown each year and is a much larger institution than when it was held in Wisconsin years ago.

A decision as to the next meeting of the National Dairy Show will be made by January 1, 1917. If Wisconsin interests care to make a bid for the show it is time to get busy.

The Wisconsin Farmer would be glad to hear from any of its readers on this subject. If the breeders of the state will go after this show, they can probably land it. An objection to Kansas City getting the show is the fact that the American Royal, a beef show, is held about the same time. Other cities which might entertain the National Dairy Show have fall fairs or exhibitions which would interfere. The Wisconsin Farmer merely recites the fact that this show might be secured if sufficient interest is manifested by Wisconsin people, and if it develops that there is a united sentiment favorable to the show, we would be glad to do all in our power to help land it for Wisconsin.

Would Copy Wisconsin Cow-Testing Plans.

OUR interest which has been aroused by the splendid work being done by the co-operative creameries of La Crosse county, Wisconsin, in co-operating with their patrons to secure a better raw product is further increased by the general tendency among cream buyers and others to aid farmers to weed out the unprofitable cows from their herds. This spirit is manifest in the following letter from a subscriber, Mr. Gust Johnson, of Kensington, Minnesota:

> Could you give me some advice how to start a cow-testing association. There are too many poor cows in this neighborhood that the farmers think are O. K. I am buying cream while our local creamery is closed. If I could get the farmers to start testing I would go out myself next summer and test the cows for them, but I do not know how to start.

Mr. Johnson is on the right tract. There are too many cows, not only in Minnesota, but also in Wisconsin, that the farmers consider O. K. The theory though, we believe, that this cow or that cow is a profitable cow, just because she looks handsome or is a pet, is losing support among farmers who are discovering that it is as impossible to judge a cow's milk-pail record by looking at her as it is to judge the speed of a horse by the eye. Minnesota, like Wisconsin, is doing much association testing, although Wisconsin leads in organizations. It might be well for Mr. Johnson to first work up interest in testing among those who haul cream to him, and then call upon the Minnesota College of Agriculture for some assistance in starting an organization. Mr. W. A. McKerrow, University Farm, St. Paul, is directing this work and will be pleased to co-operate in any locality in organizing testing work.

Every community must have a leader and Mr. Johnson shows the right spirit when he offers to do the testing himself if the farmers will join with him.

Is the Farmer Getting His Share?

MANY significant things are being brought out by the high prices that now prevail for butter and cheese. This is especially true in cheese factories, which are paying for fat on the basis of Elgin butter quotations, and we suspect there is now more pondering over factory statements by Wisconsin farmer-dairymen than has been done in many a month, to figure out just who is really profiting most from the high price of these products.

One of our subscribers, Mr. K. H. Spangrud, of Jackson county, has submitted two factory statements for June and August. These statements appear correct from the records thereon, but Mr. Spangrud is given to wonderment why his check is not a trifle larger with cheese prices so high.

The August statement shows an average price for cheese of 16 cents at the factory, which paid in that month 35 cents for fat. Mr. Spangrud's 6,230 pounds of 3.6 per cent milk should make about 623 pounds of cheese, which, at 16 cents, is worth $129.68. For this milk he received a check for $78.47—a difference of $51.28 between what the cheese was worth, according to the statement, and what he received. Of course, out of this comes the assessment per pound for caking, which is not given, but it should not be more than 2 cents per pound. This would allow $12.70 for making and there is still a difference of $38.70.

It is difficult to offer an opinion, but it appears that the patron in this instance is not getting a price for his milk commensurate with the value of the cheese. It may be, however, that it is agreed that the factory shall pay the Elgin butter quotations for fat, plus a certain amount per pound, in which case the patron is without cause for complaint and the factory is the richer.

Where cheese factories are paying for fat on the butter basis, they are certainly ahead of the game with cheese at the prevailing prices. We assume that this is the case in the factory whose statement is mentioned above, and it is up to the farmers in such instances to insist on butter fat prices commensurate with the value of the cheese made.

Throughout Wisconsin, as elsewhere, interest is especially keen now in milk prices. But we fear the farmer, in looking at the price he receives, is overlooking the serious question of cost of production. Quality is an important factor, but it is as necessary to watch the cost of producing 100 pounds of milk as it is to watch the rise in the selling price. The consumer, up to this time, has had to pay the increase, but when the demand decreases because the consumer can't pay the price, the farmer-dairymen will be face to face again with the factor of cost production.

Wisconsin Baby Beef Contest.

ARRANGEMENTS have been made for the round-up of the Wisconsin First Boys' Baby Beef Contest, at Madison, on November 22d and 23d. This contest was started last spring under the auspices of the Wisconsin Live Stock Breeders' Association. The purpose is to interest young folks in Wisconsin in profitable beef production. About seventy boys will bring to Madison their baby beeves, grown and fed under the rules of the contest, and prizes ranging from $50 for the best beef to $4 for the winner of fifteenth place will be awarded. In addition, the transportation charges are guaranteed to the boys who do not win a cash prize, and some splendid animals are expected to be shown, as interest has been very keen in the contest.

The animals will be judged from a beef standpoint—what they are worth to the butcher. One of the three judges will be an experienced butcher and meat judge and will have charge of the carcass demonstration after the judging on foot. This demonstration will be a part of the program arranged for the contestants, and it will be worth while for every farmer interested in beef production to arrange to attend this roundup.

The winners in the baby beef contests at seven fairs will show their animals together with individual entries made from other parts of the state. The fairs at Mineral Point, Baraboo, Elkhorn, Janesville, Lodi, Richland Center and Lancaster each awarded $150 at the fall shows to the winners in the county contests and the winners of the first three places at each fair are entered at Madison, which, it is expected, will bring the number of animals shown up to about seventy. Many animals have improved considerably since fair time and will improve more, so that they will figure largely in the placings at the roundup whether or not they won at the county fairs. Calves entered must have been dropped since September 1st, a year ago, and the awards will be made on the basis of the boy with the best calf. Records have not been required like those in the dairy calf contests, the theory being that the boy who fed the best will have an animal worth the most money when it is ready for market.

Each boy must grow, groom, break and show his one entry. The calves may be of any breed—pure bred, cross bred, grade, steer or heifer—and the boy must be under twenty-one years of age. He does not have to own the animal shown and no restrictions are placed upon the kind or amount of feed or methods of feeding, although a brief feeding record must be kept.

Baby beef production is growing to be an extensive branch of the cattle business and many feeders and packers predict that profitable beef production is narrowing down to baby beef. It is, undoubtedly, a special line yet, and the showings of Wisconsin boys should be interesting from the standpoint of what can be accomplished. Thus far the contest has proven so successful that one of much greater scope is planned for next year.

Milwaukee Milk Increase.

FARMER-DAIRYMEN who ship their cream and milk to the Milwaukee city market have signed contracts with the Milwaukee dealers and distributors, converting the winter supply which will net these producers the best prices they have ever received for milk and cream for city consumption. The new price scale averages $1.50 per eight-gallon can of milk f. o. b. Milwaukee, for the six months, November 1st to April 30th, and for cream, 9 cents over the Chicago butter quotations for butter fat. The new prices became effective November 1st and will probably be followed by a slight increase in the retail price of milk and cream in Milwaukee.

This is an increase of approximately 1 cent per quart for milk over the prices paid the producers last winter. This means in the aggregate an increase of $1,600 daily to the farmers in the Milwaukee territory over last year. This is at the rate of $584,000 a year for the same quantity of milk when compared with last winter's average prices, as Milwaukee uses about 5,000 cans daily. The average for the coming six months is 15 cents a can, or about ½ cent a quart raise over the October, 1916, prices.

The average last winter for the six months covered by the new scale was 1.18 1-3 cents per can, f. o. b. Milwaukee, which netted the producers about $1.03. The freight per can is estimated at 15 cents, which leaves the producers under the new scale a net price of $1.35, a fraction over 4 cents per quart for milk testing 3.5 per cent with a 3-cent increase for each point above that standard. The October, 1916 price was $1.35 per can f. o. b., or $1.20 net. Milwaukee shippers are pleased with the outcome of their negotiations which extended during the entire month of October. The increase was granted without any strikes and because the shippers, through the Milwaukee Milk and Cream Shippers' Association, had placed themselves in position to ask and receive a price for their milk considerate with the marketable value of milk when turned into butter and cheese. The association controls about 2,200 of the 5,000 cans used daily by the city of Milwaukee and is increasing its membership rapidly. The negotiations were pleasant throughout; the dealers showed a greater tendency than in the former years to deal fairly, and the best of feeling is said to prevail between producers and distributors.

The new Milwaukee prices are about on a par with the winter Chicago prices. Reduced to pounds, the Milwaukee average is practically $2 per 100 for 3.5 per cent milk, or $1.50 per can f. o. b. against $1.60 per can in Chicago, f. o. b. As the shipments into Chicago average longer, the freight is a trifle higher and the can losses considerably greater, which about equalizes the two scales. This is the first time the Milwaukee shippers have been able to sign up on a six months' basis, the dealers in former negotiations always demanding that prices be agreed on monthly.

It is pleasing to The Wisconsin Farmer to note that the farmers in the Milwaukee district are no longer required to act as philanthropists to the residents of that city in providing them with milk at a price below its cost of production. Milwaukee enjoyed 6-cent milk too long. It was raised to 7 cents during the summer and the new scale may force it a little higher. As the Milwaukee and Chicago prices act as the standard for the Wisconsin dairying sections supplying cities and condensing plants, it is probable that the new scales will do much toward lifting prices in other communities.

Mr. Jackson's Work in La Crosse County.

MR. E. M. JACKSON has just completed the first year of field work among the farmers of La Crosse county in the interest of eight co-operative creameries. When these creameries organized and employed Mr. Jackson, it was the first move of its kind made in Wisconsin, but after a year's trial, we are informed the experiment has met with unqualified success; that it will be continued in La Crosse county and doubtless will spread to other counties when they learn of what Mr. Jackson has accomplished.

Cream is always good when it comes from the cow. Poor cream is, therefore, due to careless handling, indifference, or poor surroundings, and no patron need furnish any creamery with poor cream except by choice. This La Crosse creameries appreciated, and Mr. Jackson was employed at a salary of $1,800 per year to impress these facts upon the patrons with the additional facts that better cream meant

better butter, better prices, and lessened expense in handling. Mr. Jackson's report tells of splendid work and co-operation by the farmers. Many new milk houses have been built; special tanks for cooling. Many farmers were shown the value of better feeding from their own standpoint. Where separators were in the barns, Mr. Jackson sought their removal. His entire work was to follow out the lines which mean better cream production, that the creameries he represented might produce a better product, pay their patrons a better price, and have left for themselves a better profit. This same plan was worked out some years ago by the government at Algona, Iowa, and the work there accomplished wonders.

The La Crosse county creameries entered into this arrangement of their own accord. They had to seek the co-operation of the patrons; they could not compel it. All Mr. Jackson could do was to ask the farmers to follow the best methods. He could not force them. So that the work accomplished has been carried on under handicap, and if this much could be done without police powers, we are led to wonder what could have been accomplished had Mr. Jackson been given the police powers of a dairy and food inspector to use where necessary.

Some Remarkable Wisconsin Sales.

THOSE of our readers who are engaged in breeding pure-bred live stock as well as those who believe in the policy of improving grades by the use of pure-bred sires will be especially interested in the report of some public sales, held in Wisconsin last week, and reported in this issue of The Wisconsin Farmer. Some splendid averages were made in beef as well as in dairy cattle and the spirited character of the bidding indicated that there is a great revival among breeders in the interest taken in improved animals.

The Walworth county combination sale resulted in disposing of ninety-two animals for the total sum of $14,370. In the main the animals in this offering were young, and the returns meant the realization of a satisfactory profit to the breeders in every case.

A splendid record was made by the sale of the Waukesha County Guernsey Breeders' Association which resulted in disposing of seventy-one head for the grand total of $18,880. This organization is working up an enviable reputation for superior Guernseys, and those who make purchases from the Waukesha County Guernsey Breeders' Association have the assurance that they are receiving in every animal sold exactly what is described and guaranteed in the catalog.

Turning now to the record of beef cattle sales, we find that on November 3d Herr Bros. & Reynolds disposed of forty-four animals for a grand total of $16,620. The cattle in this offering were young and they were in prime condition, practically all of them having been bred from Herr & Reynold's foundation stock. It takes no mathematician to determine for himself that the returns from this sale represent a handsome profit, and that is not all, because the animals sold will give a good account of themselves wherever they go. If they are rightly handled, they will make their new owners money in every case.

But the most notable record of all was made by the Anoka Farms, at Waukesha, where forty-three head of cattle sold for $43,700, or an average of more than $1,000 per head. It is doubtful if any herd of Short-horn cattle in the United State is better known than the one owned by Mr. Frank W. Harding. An examination of the sale list in this issue of The Wisconsin Farmer will show that nearly all the animals sold were young—mere calves, in reality. The splendid price realized is but a fitting tribute to the honesty and integrity of the owner of this herd. The list of sires that have been used on the Anoka Farms generation after generation is a most notable one, so that there is coursing through the veins of all the animals in this sale the best Short-horn blood in the world—signal proof that good blood will tell.

Such events as these are making important agricultural history for Wisconsin, and every man who believes that live stock is the cornerstone of sound agricultural practice should rejoice in these splendid records made by breeders of dairy and beef cattle.

House the Implements.

TAKE care of the farm machinery is now time-worn advice, but nevertheless, good advice. Prices are likely to be higher when the spring buying season begins, as the raw product used in many implements has already advanced, and if there were no other incentive to house the implements over winter and thus reduce their depreciation than the prospect of higher prices it would be a profitable move for every farmer.

Co-operation for the purpose of securing an equitable price for farm products is one way of making the farm pay. But, since the difference between the selling price and the cost of production represents the profits an equally efficient method of securing the desired end is to reduce the cost of production. So it remains that this cost can be reduced, as statistics show, by the proper care of the implements on the farm, the life of which, if only increased a single year, would mean a tremendous saving in the aggregate to the farmers of Wisconsin.

The government estimates that something like $175,000,000 is invested in farming machinery annually in the United States, and other investigations have estimated the depreciation at from 5 to 8 per cent annually. So it is readily evident that an item that concerns so large a percentage of the cost of production is well worth serious consideration. With prospect of higher prices because materials, such as steel, used in cultivators, drills, harrows, has advanced, it certainly is the duty of every implement owner to reduce his costs by prolonging the life of every implement as long as possible.

Millions of dollars of farm machines stand uncared for in Wisconsin, exposed to the elements of the seasons. Every traveler is familiar with the many barnyards that are littered with cultivators, spreaders, drills, plows, etc., standing out in the rain and snow, the metal parts rusting and the wooden parts decaying. A touch of comedy is added to the spectacle of a corn grower who has cultivated the corn for the last time, leaving his cultivator at the end of the row, to be discovered during harvest. There it stands until the binder finds it in its way. Rusty and forlorn it is pulled aside and left there until spring, as no one needs a cultivator in October. Many farmers, we agree, prevent this depreciation through proper care, but not all, although Wisconsin may be said to be ahead of her sister states in this respect.

It has been figured that 75 per cent of the depreciation on farm machinery comes from exposure to the weather. The life of machinery is not only shortened, but its efficiency is lessened and the quality of work it will do is lowered. A building costing around $200 will house most of the machinery on the average farm, and we do not recall a Wisconsin farmer who has gone to this expense who will not say that it has been a paying investment. Then it means something to the careful farmer to have his implements all together, where he can go over them during the winter, make the necessary repairs, order the new parts that are needed before the spring rush begins and have them ready for work when the frost disappears.

Various estimates have been made as to the average life of important farm machines. Whatever the correct figures may be, it remains that a casual investigation will disclose the fact that the average life is shorter than it should be, due more to careless handling than wear and tear. The greater part of the average machine is not subject to wear, and if not broken should last indefinitely. Wooden parts are affected more by exposure than metal, but both are materially injured.

Care of machinery may be divided into three divisions—repairing, housing and painting. Winter is the time to get the needed repairs, not after the machine has been pulled from storage, or from some fence corner in the spring. Work is less pressing in the winter, and it can be done then to better advantage. Painting prolongs the life and improves the looks, and lead and linseed oil is affected as little by weather as anything that can be used.

Splendid Prospects For International Live Stock Exposition.

FOOT-AND-MOUTH disease prevented the holding of the International Live Stock Exposition in Chicago during the last two years, but this year, as the country is free from all such forms of contagious diseases, the exposition will be held at the Union Stockyards, Chicago, from December 2d to 9th, and it promises to be bigger and better than ever. The purpose which this exposition serves is outlined by Dean Davenport, director of the Illinois Experiment Station, who, in a recent communication sent to B. H. Heide, general superintendent of the International Exposition, says:

The International Live Stock Exposition, held annually at the Union Stockyards in Chicago, has one advantage over all other live stock shows on the face of the earth namely: It is held on the very grounds where thousands of animals are handled in a commercial way every day of the year. This gives an atmosphere to the exposition such as cannot be created upon any grounds in connection with the ordinary fair or national exposition. When a great collection of pure-bred live stock is brought together at any other point it makes its own atmosphere which is inevitably that of the show ring and of the breeding pen. The purpose for which all of these high-class animals are bred and owned is often lost sight of, especially by the masses of the people who are not themselves experts. Indeed, some of our foremost breeders have, in times past, themselves mistaken the means for the end and animals have been bred primarily for show purposes.

It is different at the International in Chicago. One has only to look about him to see the purpose for which all this breeding is done, namely, the commercial supply of meat and labor. This gives a healthy atmosphere to the exposition, such as in the end will be felt throughout the length and breadth of the cattle and horse producing interests of this great country. At no other point have the breeding and butchering interests been so intimately associated. Nowhere else has the production of high-class animals and the final disposition of the consumer been brought so close together. This is why it is that the influence of the exposition is wholly healthy to the live stock interests, whether represented by the breeder or by the consumer. This is why it is that no one, who has the slightest interest in live stock or its production can afford to miss seeing with his own eyes the truly wonderful display that is brought together annually on the grounds of the exposition. Such quarters have never before been provided in this country; such facilities have never before been offered for seeing the animals, either by the casual observer or the one who has given them careful study. This is because the management has been more than liberal, realizing, as few managements do, the real need of a live stock exposition.

We have frequently referred to the fact that the International Exposition affords the best possible opportunity that is presented during the whole year to study the effect of using good blood in the herds and flocks. Not only are pure breds entered in large numbers, but there is an enormous number of grades, and these grades have been produced and brought up to the high points of excellence, which they represent by using pure-bred sires on grade foundation stock generation after generation. Young men who expect to make stock production their life work can hardly afford to lose the opportunity that the International affords of studying the outcome of successful breeding methods, and if we mistake not the attendance this year at the International will eclipse all former records.

Letters From Wisconsin Farmers.

ON PAGE 8 of this issue will be found a number of letters from farmers in this state who own automobiles. These letters give practical experiences and will be of interest to every reader, regardless of whether he drives a car or not. This is the third page of letters which have appeared in The Wisconsin Farmer in the past few weeks. The two previous topics were milking machines and barn equipment. The Wisconsin Farmer desires to extend its sincerest thanks to those who have written letters for these special articles and to add that the columns of this paper are always open to readers who have any interesting practical experiences.

Our Farm Forum will be maintained a regular department the same as it was all last year, and in this department a variety of topics will be discussed by our readers. We hope not only to reiterate through the Farm Forum columns the old-time truths which make farming pleasant and profitable, but also to give to the readers many new and practical ideas.

Men Who Are Making America.

WE ARE in receipt of so many inquiries from subscribers asking the name of the national weekly which is publishing the series of articles on "Men Who Are Making America," of which commendatory mention was made by Mr. Pierce in his "Family Circle Talks," in The Wisconsin Farmer of September 28th, we take this occasion to state that the magazine mentioned was Leslie's Weekly. The series is still in progress and is proving to be one of the biggest and best magazine features now being published.

Some Good Dairy Rations.

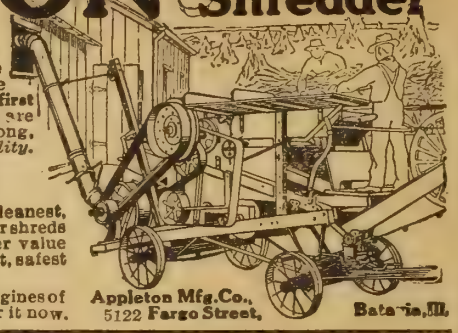
ONE of our subscribers, Mr. M. S. Elam, asks for information in regard to the feeding of a dairy herd made up of Jerseys. He has a supply of alfalfa and clover hay on hand, corn is selling at from 80 to 85 cents a bushel, oats 45 cents a bushel. Oil meal is worth $41.50 a hundred and cottonseed meal $41 a hundred. Bran is selling for $26 a ton and standard middlings for $29 a ton. The question with Mr. Elam is to bring his dairy herd to the point of highest production and at the same time he desires to reduce the cost of production to the lowest possible point.

This problem was submitted to Mr. L. S. Gillette, of the dairy husbandry department of the Iowa Agricultural College, who points out that the first prerequisite to economical feeding of the dairy herd is a liberal use of such roughages as clover and alfalfa. One may safely feed all the ensilage and hay that the dairy herd will clean up. One must bear in mind, according to Mr. Gillette, that the right interpretation must be placed upon the matter of economy when it comes to handling dairy cows. If a Jersey cow capable of giving thirty pounds of milk a day is fed only enough for twenty pounds in order to cut down the feed bill, the carrying out of this policy will be false economy. The cows should be fed enough to produce a maximum flow of milk, and the cow that is milking heavily should not be allowed to gain perceptibly in weight. This gain or loss in weight will be affected by the amount of grain fed, and it is, therefore, important to adjust it properly.

Coming now to the foods mentioned. Mr. Gillette points out that corn can be used to give the cow energy, and it is the cheapest source of energy of any of the foods. Cottonseed meal is preferred rather than oil meal, particularly so when there is a supply of ensilage, alfalfa and clover hay at hand. Bran is cheaper than oats and more desirable than middlings for dairy cows. A very good ration would be one made up of two parts of corn-and-cob meal by weight, one part cottonseed meal and one part bran. Feed one pound of this mixture for every two and one-half or three pounds of milk that the cow produces. This grades the ration in accordance with the capacity of the cow.

Another good mixture would be one composed of four parts of corn-and-cob meal, three parts each of ground oats and bran, and one part cottonseed meal. This mixture is more bulky than the first, a little cheaper from the energy standpoint, and less liable to throw the cow off feed. Five pounds of the first mixture mentioned would be equal to seven of the second in nutritive value. It should be remembered that five pounds of alfalfa is more than equal to four pounds of bran in feeding value, and some dairymen have succeeded in cheapening their ration by cutting the alfalfa hay into small lengths and mixing it with the grain ration. Where a cutting outfit is at hand, it is advisable to follow this plan.

APPLETON Husker and Shredder



Every year hundreds more farmers buy huskers, as they find the most economical, efficient way to save all the *value* of a corn crop is to husk the ears and make fodder of leaves and stalks. Appleton was the first successful husker. Appletons made years ago are giving good service today. Few parts, extra strong, mean long life, few repairs and sure *dependability*.

GUARANTEED TO DO MORE WORK WITH LESS POWER

than any husker of equal size. Appleton husks cleanest, shells least; has most efficient corn saver. Cuts or shreds leaves and stalks while husking ears. Fodder value saved from small acreage pays its cost. Easiest, safest to operate. Works in all conditions of corn.

Free Husker Book: describes 4 sizes for engines of 4 h.p. and up. Write for it now.

Appleton Mfg. Co., 5122 Fargo Street, Batavia, Ill.

HIDES AND FURS.

Certify Your Furs Before You Sell Them

Here is a new plan that protects you. Insures you full prices on your furs. We have created a commission of three men, experts who have spent years grading furs, to pass on every pelt you send us. This will eliminate dispute. *You* will be protected. You don't rely on just one man's judgment.

This may sound unusual. But, we are the largest firm in our line in America. We have to protect you if we are to get a good supply of pelts. That is why we established this commission. It is good business. We make more this way in the end by paying *you* more.

We want high grade pelts, and we are helping trappers to get them by our free premium system—equip all trappers who trade with us.

FREE to Hunters and Trappers—Automatic Revolvers, Guns, Traps, etc.—who join our co-operative plan. So don't be tempted to sell furs elsewhere until you read the particulars of our plan. We believe it will make a big year for you if you take advantage of it. Write for our Fur Club News, Fur Market Reports, Premium List, and List of Prices. All of these will be mailed to you free, upon request.

With Wisconsin County Agents.

Facts of Interest Fresh From the Fields of This State—Illustrating the Work of County Agricultural Agents.

THE following reports from the counties named give some interesting facts in connection with the county agricultural representatives' work in Wisconsin. These men are familiarly spoken of as the "county agents." The term is rather misleading, but it has been used extensively by the federal department of agriculture in its literature and it is difficult to get away from the name. In Wisconsin official life these men are spoken of as "county agricultural representatives."

Ashland County.—Representative Post aided the farmers of the county in assembling and presenting at the state and county fairs, exhibits which indicated the variety and excellence of the county's crops. At the state fair he was able to interest a considerable number in the farming opportunities of his county. Ashland, is, as yet quite new agriculturally. New settlers are coming in and need just such assistance as the agricultural representative can give. At the county fair he served as superintendent of the live stock department.

Barron County.—The county representative has been urging the farmers of this county to grow better potatoes by proper selection of seed and by furnishing proper field conditions for growth. He reports that last year the potato exhibits of the county were of very medium quality. This year at the Northern State Fair at Chippewa Falls, Barron got first on their county booth; first, second and third on Rural New Yorker exhibits; first and third on Green Mountains and first on Burbanks. As a result of this exhibition many inquiries were made for seed potatoes.

Burnett County.—Since his appointment in June Representative Briggs has devoted considerable time to the improvement of farm crops and the raising of better live stock. He has already helped to organize several farmers' clubs. During the past month he has been working with his farmers in selecting field potato hills that show good, rigorous growth, have good, sound tubers, and many of them in a hill. The hills were marked and before the whole field of potatoes was dug, those selected were first and will be used for planting next year.

Douglas County.—The representative acted as general superintendent of the newly established county fair. There were exhibited at least twice as much stock and at least three times the amount of agricultural exhibits ever shown in the county. He has aided ten farmers in building silos.

Eau Claire County.—G. R. Ingalls spends more time teaching, perhaps, than any other Wisconsin agricultural representative. He teaches agriculture to students of the county teachers' training school the first three days of the week. It is thought that these young men and women who go out as teachers into the rural schools of the county can do much in the way of co-operating with the county representative in all things of an agricultural nature and from reports, this co-operation has been mutually helpful and profitable. The last three days of the week during the month Mr. Ingalls spent among the farmers inspecting potatoes, giving information about handling soy beans and other farm crops.

Forest County.—Swenehart has probably done more work than any other county representative in the state in helping to organize village, city and business people into commercial and development clubs. The purpose in doing this is to stimulate greater interest and to create a more hearty co-operative spirit between the farmer and the business man. The result of the summer's work ended in a large gathering of farmers and city people at a fall harvest festival. Farmers exhibited products of the shop and store at the same time and place. Speakers were secured, exhibits judged and prizes awarded. Taking it all in all, a wholesome spirit prevailed and much good for the entire community has resulted.

Langlade County.—Through the efforts of the agricultural representative, 436 cows were tested, ninety-four producing sufficiently well to be placed on the honor list.

Lincoln County.—More than thirty different alfalfa field plots are grown in this county under the direction of the representative. Of these practically 90 per cent are successful.

Oneida County.—Recently a party of University Regents accompanied by President C. R. Van Hise and Dean H. L. Russell, visited this county to acquaint themselves with the nature of the county representative work. They visited the farms of several men with whom the county representative has co-operated and learned of his real usefulness to the farmers. They were surprised to hear them talking about rhizoctonia, potash and bordeaux mixture, and to hear them say that by the improvement of their potato crop, they had sold their last year's product for seed at an increase of fifty cents a bushel over the market quotations. They also saw many pure-bred animals selected for the farmers by the county representative.

Polk County.—More than two hundred varieties of agricultural products were shown and about fifty farms represented in the county exhibit assembled and shown at the state fair under the direction of the agricultural representative. Agricultural representative Klinka has, during the past year, made the following trips with groups of young men and farmers to different places of interest: 100 men to stockyards at South St. Paul; seventy-five men to Spooner Experiment Station; and twenty men to Short-horn and Guernsey herds in St. Croix county. During the past month, Mr. Klinka judged twenty-six school gardens, helped to plan several barn-ventilating systems, surveyed a marsh for drainage and aided farmers in the selection of seed corn.

Portage County.—The Portage County Calf Club, encouraged by Mr. Coyner, was a great success. There were thirteen contestants, one of whom was a girl. Their ages ranged from ten to eighteen years old. Each contestant cared for his or her own animal and kept careful records concerning it. There was not an inferior calf in the entire lot.

Price County.—It often falls to the county representative's lot to see to it that the local county fair be made a success from the standpoint of numbers and variety of farm exhibits. By virtue of his position and his work, the agricultural representative is able to suggest and to advise farmers how to put up and locate such exhibits. The county fair, the stump-pulling demonstration and the harvest festival were signal successes due largely to the efforts of the county representative working co-operatively with local committees.

Rusk County.—Among the leading lines of work carried on by the representative during the past month may be mentioned testing sixteen head of cattle for tuberculosis, judging exhibits at the local county fair and assisting in buying a carload of high-grade Guernsey heifers. Perhaps no one thing has helped the representative work in Rusk county as much as the potato booth at the county fair. It was the talk of the fair, and a big boost for better potatoes in the county. The members of the Boys' and Girls' Club sent in splendid exhibits and the county has around 1,500 bushels of pure seed for sale.

Sawyer County.—The representative co-operated in holding a large land-clearing demonstration. The business men supported the demonstration and did all in their power to make it a success. Among some of the other things the county representative did last month may be mentioned the following: Tested milk, cauterized calves horns, selected seed corn for farmers of the county, judged exhibits at the Indian fair on the reservation and worked with the Boys' and Girls' Clubs of the county.

Taylor County.—More than ever before the representative is being called upon to aid in making the local county fair an educational and financial success. He also helped to hold the county's Third Annual Plowing Contest. Relative to the benefit one farmer derived from similar contest last year, the representative reports "Mr. ————, who won the Tamworth boar at the Plowing Contest last year, has developed it into a splendid animal. He had one litter of pigs which proved to be so popular that he could have sold dozens of them if he had them. Among some of the other leading lines of effort this month were the soliciting of farmers to pledge almost 400 cows toward the formation of a cow-testing association, assisting in selecting seed corn, and aiding in carrying on poultry projects.

Vilas County.—With the advent of more new silos each succeeding year, this county is rapidly developing into a dairy section. The county representative was especially busy last month assisting four different farmers in the building of stone and concrete silos. Among some of his other leading lines of work may be mentioned, working among farmers in assisting them to secure exhibits for the Vilas county state fair booth, acting as one of the judges at the Taylor county fair and assisting in picking corn.

Walworth County.—While in charge of the county exhibit at the state fair, the representative distributed over 1,000 booklets including the names of the county's foremost live stock breeders and growers of pure-bred grains.

The Farmers' Open Forum

WITH CONTRIBUTIONS FROM READERS OF THE WISCONSIN FARMER

Hominy in War Days.

To the Editor:—I read with interest what you had to say about "hominy" and "samp." Those words take me back to '54, or about that time, when as a boy I lived in Wayne county, New York. Long about a couple of weeks or so after the corn was cut and "stooked" mother would say, "Boys, you go and husk a basket of corn, pick out the best ears, and shell it and take it to the mill and have it ground half samp and the other half corn meal." When we would get it home mother would spread a sheet upstairs near where the stove pipe came through the floor and spread the samp and meal out to allow the air to come in contact with it so it would not get "het." We boys could hardly wait for mother to "hatch up" a Johnny cake made out of that yellow corn meal. My, but it was good! Then the next day she would cook a kettle of samp which we would eat in milk, not milkman's milk but cow's milk.

The corn was ground in an old-fashioned "grist mill" which ran two burr of stone (I guess that is the proper way of describing it). As a rule, we would find "Uncle West," the miller (a veteran of the war of 1812), sprawled out on two or three half-filled sacks "pecking" the working side of a burr.

A few years ago my wife bought a package of hominy. It had a commercial taste, as though the goodness was all worked out of it. It was made of white corn. I wrote the manufacturer and suggested that they use yellow corn, as that was the kind the old-fashioned Yankees were used to. I don't recall to mind what their reply was, but it was to the effect that it would not do to use yellow corn. The white hominy reminded me of the face of a corpse about as much as anything.

Those old-fashioned custom grist mills of "befor de wah" days take a grist of wheat, corn and oats, buckwheat or anything. It would be put in the hopper, then the miller would take a measure that held a tenth of a bushel and take his "toll," a measure for each bushel, and the customer take home the rest. Then mother used to make hulled corn. She knew just how much good beech and maple ashes to use to make a lie to remove the hulls. I tell you, those yellow corn products used to lay up alongside a fellow's ribs in great shape. During those early days, owing to the war between the allied powers and Russia, wheat went up to $2.50 a bushel and the ordinary people had to live on corn meal. I acquired a fondness for corn bread at that time that has always stayed with me, and when in the army, if I could get hold of a little corn meal, hard-tack lost all its charms for me.

S. E. Chandler.

Hennepin Co., Minnesota.

Mechanical Milker a Labor Saver.

To the Editor:—I have noticed some comment in your paper regarding milking machines. I have used a mechanical milker for three years and I find it one of the greatest labor-saving devices for the modern dairyman. Any man with ordinary intelligence can operate it and the cleaning of it is the easiest part. Furthermore, I consider the milking much cleaner than with hand milking. Orie Steele.

Rock Co., Wisconsin.

Mr. H. E. Krueger, of Beaver Dam, sustained his reputation as a grain grower and seed breeder at the recent international wheat show, held in Wichita, Kansas. He won first on hard red spring wheat; first on durum wheat; first on soft wheat; first on two-rowed barley; first on hulless barley; first on six-rowed barley, and sweepstakes on six-rowed barley.

In and Around Wisconsin

COMING EVENTS.

Wisconsin Potato Growers' Association and State Potato Show, Eau Claire, Wis., November 21st to 24th.

Winter Course Wisconsin Dairy School, Madison, Wis., November 8th to February 1st.

International Live Stock Exposition, Chicago, Ill., December 2d to 9th.

Wisconsin Dairymen's Convention, Waupaca, Wis., December 5th to 7th.

Wisconsin Buttermakers' Association, Sparta, Wis., December 5th to 7th.

Farmers' Week (Swine Program), Madison, Wis. Beginning February 6, 1917.

The Wisconsin Live Stock Breeders' Association issues the following:

To prevent the introduction of hog cholera, it is wise to quarantine all animals and persons coming from a suspected farm; to pasture hogs at some distance from highways, railways and contaminated streams; to feed a laxative diet, avoiding much new corn. When cholera appears in the community, have an experienced person vaccinate all healthy hogs with hog-cholera serum. Disinfect often all troughs, pens and yards with quicklime. Serum will not give good results if worms, indigestion or other diseases are present. Keep the hogs healthy.

Mr. V. E. Brubaker has been recommended for the appointment of agricultural representative for Bayfield county, Wisconsin. Mr. Brubaker was born and raised on a large farm in southwestern Ohio. He is a graduate of the College of Agriculture of the Iowa State University, having specialized in horticulture and animal husbandry. For some time he has been associated with the growers' service department of the H. J. Heinze Company, with headquarters at Grand Rapids, Michigan.

J. L. Tormey, secretary of the Wisconsin Short-horn Breeders' Association, recently received a telegra from a leading buyer in California, asking whether a carload of Wisconsin registered "milking" Short-horns could be secured for early delivery. The purchasers desire young stock from dams having a record of 300 or more pounds of butter fat in a year. Such telegrams are considerable encouragement to the milking Short-horn breeders. The Short-horn interests of the state are planning to hold a special sale and exhibition in Madison this winter. The American Short-horn B eeders' Association has offered $250 in prizes for this exhibit.

The junior sire, King Segis Johanna, out of the thirty-one-pound three year old owned by the Pabst Stock Farm, of Oconomowoc, was consigned to the Watertown sale, which took place on the 25th and 26th of October. We are much pleased to report that three prominent breeders of Wisconsin, Messrs. Mucklestone, Howell and Schwartz, were enterprising and far-sighted enough to pool their interests and purchase this splendid young bull for their combined use. The bidding was rather brisk, but the purchase price of $1,625 was low considering the splendid breeding and conformation of this young animal.

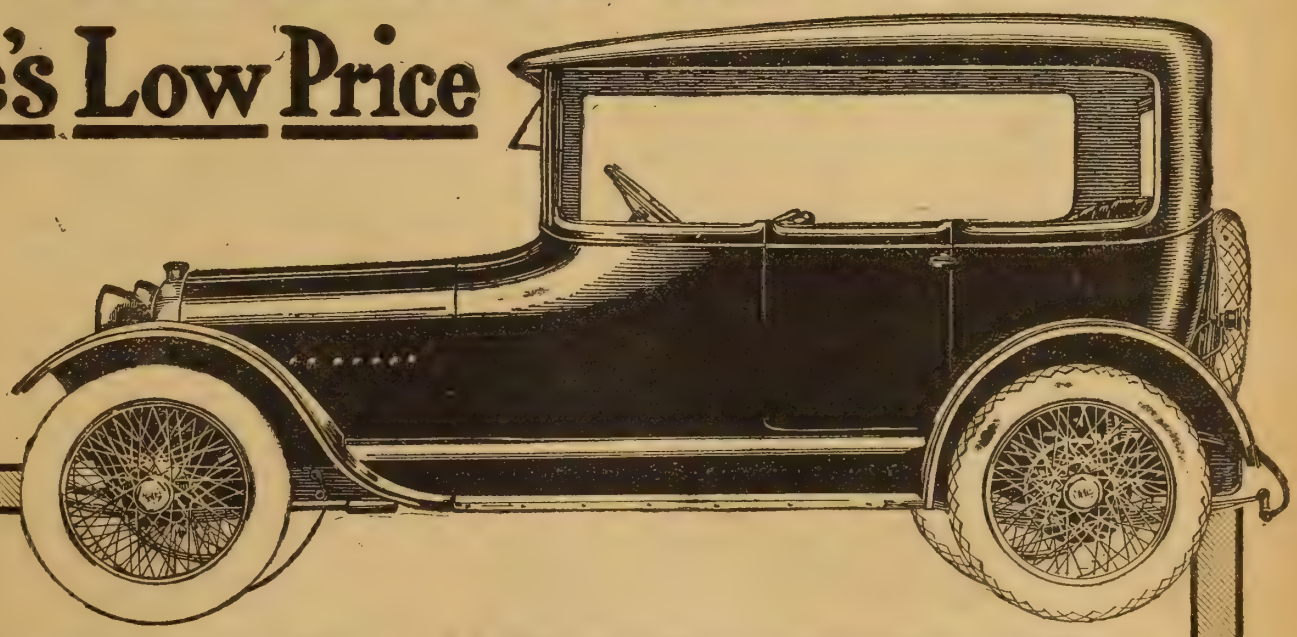
It must be considered that the sire's dam has a record of thirty-eight pounds and the sire's dam a record of over forty pounds, and the dam of the calf a record of thirty-one pounds as a three year old and the third dam a record of over thirty-three pounds, which makes an exceptionally good average. It must be further considered that the pedigree is strong in Pontiac Korndyke breeding combined with that of Hengerveld De Kol and De Kol 2d's Butter Boy 3d, and it is easily seen that this combination should result in high production and breeding of an exceptionally superior type.

This co-operation between neighboring farmers is certainly worthy of emulation, as the offspring from this bull will be decidedly more valuable than if each man had purchased a bull at $500 or around that sum.

NOW-You Can Have An All-Season Car At The Velie's Low Price

New 1917 Velie Six Touring Sedan Complete —Substantial Limousine Top with Removable Glass Sides.

$1685



CAR *Comfort*—Car *Luxury*—for the stormiest, coldest weather. An open car for mild weather. Here at last is an all-year car that *satisfies at a price that satisfies.* It is the new 1917 Velie Biltwel Six with the famous Springfield Type Sedan body. Another high-priced feature of the low-priced Velie.

It is a closed car and open car all in one—instantly adaptable for winter or summer—rain or shine—an *exclusive* car that you will be proud of in any company.

WITH the Velie's fine genuine leather upholstery, it is a body that well befits the powerful Velie Continental motor equal to any road and grade—Timken Axles front and rear—multiple disc clutch—long, easy-riding underslung springs. And with it goes all the accessories and equipment of the complete car—push button starting—double bulb headlights—automatic ignition—vacuum feed—rear gasoline tank.

See this remarkable car at your nearest Velie dealer's. There are eight new Velie body styles. Touring Car, $1085. 7-passenger Six, $1550. Ask for Catalog.

VELIE MOTOR VEHICLE CO., 118 Velie Place, Moline, Illinois

$1085-Velie Biltwel Six Touring Car

Uses of Automobile on the Farm.

Letters to The Wisconsin Farmer Show That Our Readers Regard the Automobile as Having a Most Important Place in Connection With Rural Life.

At Sixty-Nine Years Drives His Own Car.

To the Editor:—Being an old man past sixty-nine years of age, I do not drive my auto for pleasure as much as a younger man would, and have made no long trips—the longest being one of about 100 miles for pleasure through Clark and Wood counties earlier in the season, but I use the car for business whenever occasion requires and the roads are in decent shape.

Up to last spring I used a small car and used the original set of tires for three seasons, making about 7,000 miles with them, and they were in fair shape when I took them off and might have made a thousand or two more miles with proper care, as the hind tires were relined, but didn't want to be caught in trouble on the road and put on a new set of tires. I never exposed the tires to much mud, or extreme heat or sun, if avoidable, generally leaving car in garage when in towns on business and at home always kept car on plank floor and kept tires properly inflated, it being my conviction that a car is like all other farm machinery and will suffer more from rough usage and exposure to mud and rain and the sun's heat than from actual and intelligent use, which includes the avoidance of striking sharp stones, nails, tacks and glass while driving.

As to the mileage per gallon of "gas," there is a great variation, as in heavy roads or cold weather the car uses more gasoline than in warm weather, my small car in warm weather and good roads averaging around twenty miles to the gallon. On one memorable occasion in July, 1913, I filled up the gas tank at a garage about 11 o'clock a. m., drove seventy-seven miles, according to the speedometer, which I figured was about correct, did business in three widely separated places as an insurance adjuster, and arriving home about 6 o'clock p. m., measured contents of gas tank and found only a little over two gallons used, but the roads were fine and only two of us in the car. I have a new heavier car now and as near as I can judge it makes about fifteen miles per gallon of gasoline, and I use my car principally in attending to business, being interested as an officer in two mutual companies (fire and windstorms) and a member of four different banks, in board of education work and other places. I do not use car much in winter and rough weather, preferring then to travel on railroad when possible, and also keeping always a good driving team.

P. N. Christensen.

Marshfield, Wisconsin.

Use Car to Deliver Vegetables.

To the Editor:—I must say that myself and family get untold pleasure out of my car. We live a mile from town and go in almost any kind of weather. The car is in the shed and any one of us that can run it has the privilege to do so. I let the children, who are able to run it, run it whenever they wish if it is in good working condition. In this way we get a great deal of pleasure from it.

We go on many fishing trips and picnics which we would not have enjoyed if it were not for the car.

The largest number of miles we have traveled without having the tire off the wheel is about 4,000 miles. We notice the tires last much longer if we keep them pumped up well.

Besides pleasure driving our car has been valuable to us in fair time. We have a truck garden and raise small quantities of many different articles. We also raise many different kinds of fruit and some grains. This year I went to five different fairs and took an auto load of things. I took as high as thirty-five articles, including fruit and grains, which I could not have sent any other way, and had them arrive in good condition. My children also peddle vegetables and fruits to people around town with the car. In this way our customers receive good, fresh edibles right out of the garden.

We also drive our car in winter. Indeed the side curtains are on it is comfortable riding. We have had the car five years and it is still running well, in spite of the hard driving. We know it would be impossible to get along without it now.

J. E. Schroeder.

Grant Co., Wisconsin.

Auto Cheaper Than Another Team Would Be.

To the Editor:—We have a car out of which we get a great deal of pleasure, because it takes us places where we want to go so much quicker than horses could. For instance, we can go to Dodgeville, the county seat, a distance of eight miles, after the chores are done in the evening, and whatever is going on there, whether it is a band concert or church service, we can enjoy it just as well as those who live only half the distance away. It brings us closer to the city.

We have not taken any long tours or not further than to be able to return the same day. We have taken several such trips and enjoyed them, when without the automobile we would not have gone at all. It brings us closer to our friends and helps to make new acquaintances.

I get from sixteen to twenty miles from a gallon of gasoline. I think a person can save gasoline by using good judgment in the use of the feed and ignition levers and in the general care of the engine.

I have worn out the first set of tires, which went from 3,500 miles to 4,000 miles. I think tires wear more in mud where there is flint and on rough, frozen roads. Also care in slowing down for corners will save considerable, but straight going on smooth roads does not wear tires but very little, in my opinion.

My wife gives music lessons and uses the car in getting from place to place. I have hauled calves and sheep to market and potatoes home from town, which has saved me time. I have had the automobile two seasons now and have run over 5,000 miles. It has cost for gasoline and all other expenses about 3 cents a mile. I have no doubt some drivers have driven on less, but it saves me from keeping another team of horses, which would cost more than that and would not get us where we are now able to go.

Roy Farwell.

Iowa Co., Wisconsin.

Carries Cream to Station.

To the Editor:—I have driven an automobile for eleven years and have had no accident worse than running over an occasional chicken. The speed limit with me has always been and is now eighteen miles per hour. We have taken no long trips except to go to the tractor demonstration at Madison this fall. I have made as high as 9,000 miles on one tire. I find that if the tires are kept well inflated they will last longer than if they are permitted to run soft. My car hauls everything we have to haul about the farm, weighing up to 1,000 pounds. I take the cream to the station every morning in the car. Have driven in the wintertime whenever it was possible.

Math Michaels.

Fond du Lac Co., Wisconsin.

Don't "Monkey" Too Much With the Car.

To the Editor:—When we bought our car six years ago, the first consideration we had in mind was business and pleasure as a second thought. While we have not taken any extended trips, yet we have spent many a pleasant day, as it enables us to get out together, there being my wife and five small children. The first two years I ran the car I kept close track of running costs with all kinds of loads and all kinds of roads. For two years my mileage was twenty-one and one-half miles to the gallon of gasoline. As for tires I did not have any trouble running six years on two sets of tires. I have two or three tires now running with 10,000 miles to their credit. Don't run tires with low air pressure, but keep it up to the pressure suggested by the makers of the tires. Our car is used about every day, winter and summer. The cost of repairs on our car in six years has been very little. I do not run too fast—take it slow—keep the proper amount of oil on hand and don't court trouble by trying to change things from the way they were the day you bought the car.

H. A. Martin,

Richland Co., Wis. Breeder of Red Polled Cattle and Berkshire hogs.

Drives Car Nearly All Winter.

To the Editor:—We have a great deal of pleasure out of our automobiles. It gives us an opportunity to go to entertainments, parties, picnics, on pleasure rides and also hunting and fishing and out on Sundays. We have taken one trip through eastern and northern Wisconsin and have found the automobile a very great help when we have had to get the doctor in a hurry.

I have been averaging about twenty miles to a gallon of gasoline and to get the best wear out of the tires I have been changing them around, namely, reverse the order of running. I always keep the tires fully inflated and repair small injuries to the casing with rubber gum. We have been getting about 4,000 miles out of our tires. I seldom use a team on the road any more, but use the car for business trips except when I have to haul heavy loads. I have been driving nearly all winter unless the snow gets too deep. It is always warmer riding in an auto than with a team and buggy.

O. J. Leu,

Proprietor Linden Farm, Wood county, Wis.

Where His Car Came in Handy.

To the Editor:—I bought my car the 16th of August, three years ago, and the right front casing was never off until last Saturday. It had been driven 5,500 miles. That casing is good for 500 more miles. The tire is over three years of age. The others were driven from 4,000 to 5,000 miles. Have just put new ones on this summer. So you see my tire expense is very small. I always know for sure that they have the right amount of air pressure. I carry a tire tester in my car at all times. I have only had one blowout and three punctures on all of my trips. Keep a tester and use it. We use our car for our trips to town, for business and theater in the evening. I had two breakdowns in harvest with machinery and then is when the car came into play for real profits. The team went ahead mowing and I drove away for repairs. I broke the axle in my hay loader one evening just at quitting time. I did the milking, went four miles with the car, drove out into a farmer's field where stood an old hay loader like mine, drove up in front of it so that the lights of the car shone well in the old loader, took out the axle in the night and tied it on the fenders and got home at 10:30 o'clock, fixed up while the dew was on the next morning and was ready for haying again. I drive in the wintertime lots.

I cannot tell you just how much pleasure we get from our machine, that is hard to answer. We make so many trips of pleasure, such as picnics, field days and fairs away from our own town, that if we did not have a car we could not attend at all. It is too many hard trips for our team when they are working hard.

In regard to long trips, we went to the "Dells" of the Wisconsin river last Saturday and Sunday. We drove that trip, 148 miles, on seven and one-half gallons of gasoline, or twenty miles to the gallon. Last summer we went to visit the cyclone country on "Boma Ridge." We made eighteen and one-half miles to the gallon of gasoline. We climbed five big hills on that road; you know Crawford county is rough. I have had the car over three years. When it was new I kept track of gas on a 150-mile trip. I made that on ten gallons.

Our car has had good care, has been kept clean and polished with a preparation we buy. It shines like a new car. Have never had a breakdown of any kind. Have always come home with its own power. Have pulled in one car with it and pulled a forty-horse-power machine that was broken down in sand, out of the road backwards.

Don't hit stony places in the road hard with your tires. Drive carefully for safety and tire expense. My experience has been not to use a high level of cylinder oil. It makes dirty spark plugs and a logy engine.

Richland Co., Wis. R. A. Robbins.

A 12,000-Mile Tire Record.

To the Editor:—A year ago we took a 1,000-mile trip through Iowa in our car and we certainly had a fine time. We had no bother to speak of and made an average of eighteen and one-half miles to the gallon of gasoline.

We get a great deal of pleasure out of our car, but it is difficult to estimate how much, as sometimes the roads are bad and we cannot take the car out and have to take a horse and buggy instead. I ran one tire between 12,000 and 15,000 miles. My experience is that you must keep the air at the right pressure. My tires are 34x4 and they should have seventy-five to eighty pounds' pressure at all times. You ask a good many men how much pressure of air they have in their tires and they will tell you seventy or seventy-five pounds. Then if you will put the tester on and get the truth of the matter you will find they only have thirty-five or forty pounds.

We use our car for hauling anything which we can get into the car and it certainly saves the horses many a hard trip. I predict that it will not be very long before you will find an automobile truck on every farm.

Al Beaumont.

Lafayette Co., Wisconsin.

Auto a Good Paying Farm Investment.

To the Editor:—We get a great deal of pleasure from our car. We have taken some trips, not long, but one-day trips. Have gone to Dixon, Illinois, a distance of sixty-five miles; have gone to Delavan, about the same distance. Gone to Platteville, same distance; Madison, forty-five miles; Milwaukee, 105 miles; Watertown, seventy miles.

We get around thirteen miles to fourteen miles to a gallon of gasoline. I find that coasting on down grades helps in mileage. We average about 4,500 miles on one tire, keeping tires well inflated. Tires below what the makers recommend rim cut, loosen the fabric and cause to blow out in short time.

I find that the farmer needs an auto as much as he needs a team of horses, at times for repair work when a machine is broken, when horses are tired and many other times. The auto will pay for itself as much as any machine when used with judgment.

Green Co., Wis. L. G. Legler.

Flinty Roads Hard on Tires.

To the Editor:—My family and I get a great deal of pleasure out of our automobile and we use it also a great deal for business. We live about five miles from town and we find the car is certainly a very handy thing to make a quick trip in the busy time.

With our car we have been able to get on the average of from eighteen to twenty miles on a gallon of "gas." I have not discovered any methods of driving or caring for the car which will make a much better record than this. I have gotten about 4,000 miles out of one of my tires. This is not such a very good mileage, but the roads in this locality are very hard on tires owing to the flinty hills.

I took one trip to Randolph, Nebraska, with my car a year ago. It was a little over 500 miles. It was certainly a very enjoyable trip. We made it in a little better than two days.

I think that the automobile is by far the best means of communication between town and the country.

J. M. Blotz,

Garrison Grove Stock Farm, Breeder of Short-horn cattle, Iowa county, Wis.

Fruits and Garden

Keeping Celery.

J. R. Hepler, of the horticulture department of the Wisconsin College of Agriculture, gives the following advice for methods of storing celery:

Keep the roots moist and the tops dry. Take up the celery, roots and all, trim off a few of the outside leaves and plant it in the cellar or a hotbed pit. If the ground drys out moisten the roots, but take care not to let any water touch the tops, otherwise the celery will rot.

The crate-storage method is to use half-blanched celery and pack it in bundles of ten or a dozen stalks; the bundles are placed in crates. If kept at a temperature of about 32 degrees celery may be preserved three or four months by this method.

For Christmas use the green variety is preferable to the half-blanched variety and may be kept planted in the cellar at a temperature ranging from 40 degrees to 45 degrees. A slight freeze will not hurt it, but a severe one will.

For protecting celery out in the field nail two boards together V-shaped, invert them over the row and turn a furrow of dirt over it for covering. Celery protected in this manner should be used before the ground freezes solid.

Score in Potato Judging.

The score card has been arranged for boys' and girls' potato clubs' judging contest to be held at the annual Wisconsin Potato Show at Eau Claire, November 21st to 24th. These judging classes are open to all boys and girls between the ages of twelve and eighteen years. The first prize is $5 and one-half bushel of standard seed. The second prize is $4, the third prize is $3 and the fourth and fifth prizes $2 and $1 respectively. In each instance standard seed is also given as a prize.

The perfect score in the judging is represented by 100 points. Fifty-five points are allowed for conformity to correct type. The points allowed for a perfect score in this division are: Uniformity, 12; shape, 15; size, 8; surface, 10; eyes, 10. Forty-five points are allowed for quality and condition divided as follows: Skin, 15; flesh, 12; disease, 15; neatness in arrangement, 3. All exhibits must be true to variety and no sample unworthy of merit will receive a premium, regardless of competition. A range of one ounce below or above the suggested limit of size is considered reasonable. The suggested sizes for varieties are as follows: Rural New Yorker and Green Mountain, ten ounces; Early Ohio and Early Rose, eight ounces; Triumph and Irish Cobbler, seven to eight ounces. Any general infestation of disease disqualifies exhibit and severe cutting on such sample is recommended.

A Wisconsin Orchard Which Pays.

To the Editor:—It was my privilege to visit M. F. Foley's orchard just outside Baraboo, situated on an eastern and northern slope, nice clay soil, a heavy crop of clover on the ground. This orchard was planted ten years ago with four-year-old trees and has borne for the last five years—the last three years so heavy that the trees have had to be propped up to prevent breaking.

Wealthy, McIntosh and 156 Northwestern Greening are annually producing from ten to thirty-five bushels per tree of perfect, large-sized fruit. My visit October 5th found the Wealthy all sold at $3.10 per barrel—the Greenings held at $3.50 and soon after picked and shipped to South Dakota in three carload lots. This orchard is in clover and cultivated one year and reseeded. Mr. Foley usually sprays three times. First, when the blossom shows pink; second, when the petals are falling—then ten days after. This year he did not spray the third time, yet his fruit was perfect. When Mr. Foley saw the big promise of a crop at the time of the great heat and drouth he drew on nearly 1,000 barrels of water and that is one cause of the bountiful crop. It is the man behind the orchard that makes this great success.

Mr. Foley is preparing forty acres about three miles east on the south side of the river to plant next spring to Wealthy, McIntosh, Jonathan, Northwestern Greening, Salome and some Delicious. These are to be set 32x32 feet. The old orchard is 28x28 feet, which was too close. Mr. Foley furnished 137 bushels to help make the show at the Wisconsin State Fair this year. Wisconsin, but for a few localities, would have had very little or no free fruit this year.

There are tens of thousands of acres of just as good orchard grounds as Mr. Foley's. All it wants are men with brains and muscle to select, prepare, plant, prune, spray and harvest.

Polk Co., Wis. Geo. J. Kellogg.

Electrical Stump Blasting.

To the Editor:—Electrical blasting has many advantages over the old style cap and fuse method. It is much safer and cuts down the cost of stump blasting from one-third to one-half on large stumps. It is almost impossible to remove these by placing the entire load in one hole, resulting in only a portion of the stump being blown out.

By the use of a small inexpensive blasting machine and the employment of electrical firing one may place from two to four different charges, according to the size of the stump, equally spaced. Usually I allow one extra pole for each foot in diameter across top of stump up to five feet. These should be drilled with a one and one-half inch auger, slanting underneath to about the center of stump.

All the holes should be drilled before any are loaded. If one should be loaded before all are drilled there is danger of drilling into the cap of the loaded charge and causing an explosion, with serious results.

With the several charges so distributed under each side of the stump properly connected, loaded and spaced, Mr. Stump is bound to come out no matter how big and tough he may be.

Stumps on high uplands are more easily blasted than those on low, wet lands, especially the green, tough ones. Where stumps on low lands have been filled in around it is many times necessary to drill two or three holes about even with the top of the ground or a few inches below, slanting downward about half way the distance through the stump, and fire these charges electrically simultaneously. This cuts the entire top off below the surface out of the way of plowing and cultivating.

My several years' experience in stump blasting has enabled me to compile the following table which may be of assistance to the amateur blaster for the blasting of green or freshly cut stumps:

Diameter of stump in feet	2	3	4	5	6
Number of holes per stump	2	3	4	4	5
Number of pounds 40 per cent dynamite per stump	3	4½	6	8	10

Use from one-third to one-half less for decayed or partly decayed stumps.

A. H. Harris.

A Few High Cows for September.

Reports Compiled From Leading Cow Associations of the State Show Records Which Are Being Made.

A Wisconsin dairy institution

The growth of a live Wisconsin dairy institution is illustrated by the success of the Twin Town Cheese Factory in Barron county. This factory started July 1st and there were twenty-two patrons that month. In October the number had increased to fifty-three, more than doubled.

BURTON

Picture in circle shows how "hard-pan" or "plow-sole" prevents roots from reaching the necessary amount of plant-food. Larger picture shows how this is overcome by dynamite and the resultant improvement of tree-growth.

For Tree Planting

BURTON

"Good Luck" Dynamite

Not the spade, but dynamite is the modern means of tree-planting. And Burton "Good Luck" Dynamite in particular. With dynamite your trees grow faster and yield better at maturity, because dynamite breaks up the "hard-pan," thus enabling the roots to take firmer hold and reach the vital, life-giving plant food in the earth beneath. **A Spade Cannot Bring This Result—Dynamite Can!**

Burton "Good Luck" Dynamite is the cheapest for the purpose, most effective, most uniform and easier and more economical to use.

Ask your dealer, or write us at once. And don't forget "Good Luck" can be used equally successfully for other farm purposes, such as ditching, and draining and stump-blasting.

Our distributing facilities assure quick deliveries.

International Exposition Judges.

Names of Those Who Will Be Judges in the Various Classes at the Coming Show Held in Chicago from December 2d to 9th.

THE executive committee of the International Live Stock Exposition has taken special pains this year to obtain the services of men for the work of judging who have special qualifications for passing upon the various breeds and upon the classes within the breeds. It will be noted that the list of judges include two from South America, namely, Pedro T. Pages, who will judge in the breeding Short-horns, and Carlos M. Duggan, who will judge the grade and cross-bred steers and determine the championship in the steer classes. Following is a complete list of the judges:

CATTLE.

Short-horn (Breeding)——Pedro T. Pages, Buenos Aires, Argentina; (milking) H. Barton, Macdonald College, Montreal, Que.; (fat) James Tomson, Carbondale, Kan.

Aberdeen Angus (Breeding and fat classes)—John D. Evans, Sugar Grove, Ill.; H. J. Hess, Waterloo, Iowa; A. A. Armstrong, Camargo, Ill.

Hereford (Breeding and fat classes)—Frank W. VanNatta, Fowler, Indiana.

Red Polled (Breeding and fat classes)—Adolph P. Arp, Eldridge.

Galloway (Breeding and fat classes)—E. A. Trowbridge, Columbia, Missouri.

Polled Durhams (Breeding classes)—J. P. Rusk, Urbana, Illinois.

GRADE AND CROSS-BRED AND CHAMPION.

Steers—Carlos M. Duggan, Buenos Aires, Argentina.

Carload Fat Classes (Two and three years old)—Eugene Tamblyn, Union Stockyards, Chicago, Ill.

Carload Fat Classes (Yearlings)—Thos. Cross, Union Stockyards, Chicago, Illinois.

Short Fed Specials — Thos. Cross, Union Stockyards, Chicago, Ill.; Eugene Tamblyn, Union Stockyards, Chicago, Illinois.

Carload Feeder Cattle—Harry Schirding, Petersburg, Illinois.

Carload Cattle—Championships—Thos. Cross, Union Stockyards, Chicago, Ill.; Eugene Tamblyn, Union Stockyards, Chicago, Ill.; Jas. Brown, (Referee), Union Stockyards, Chicago, Ill.

Steers Entered for Slaughter—John Gosling, Kansas City, Mo.

Carcass Cattle—Samuel T. White, Chicago, Ill.

SHEEP.

Shropshire—H. Noel Gibson, Dundee, Ill.; J. C. Duncan, (Alternate), Lewiston, N. Y.

Hampshire (Breeding and fat classes)—Wm. H. Renk, Sun Prairie, Wis.

Southdown (Breeding and fat classes)—H. L. Compton, Monroe, Ohio.

Lincoln (Breeding and fat classes)—John T. Lethbridge, Glencoe, Ontario.

Cotswold (Breeding and fat classes)—J. D. Brien, Ridgetown, Ontario.

Dorset (Breeding and fat classes)—Walter C. Coffey, University of Illinois, Urbana, Ill.

Oxford Down (Breeding and fat classes)—J C. Williamson, Xenia, Ohio.

Cheviot—F. E. Dawley, Fayetteville, N. Y.

Leicester (Breeding and fat classes)—G. B. Armstrong, Teeswater, Ontario.

Romney—Walter C. Coffey, Urbana, Illinois.

Exmoor Horn—David McKay, Fort Wayne, Indiana.

Rambouillet—W. H. Cole, Spring Grove, Ill.; E. L. Davis, Flint, Mich.; John E. Webb, Southport, Ind.

Grade and Cross-bred Champion—David McKay, Fort Wayne, Ind.

Carload Sheep—Geo. Myers, Union Stockyards, Chicago, Ill.

Carcass Sheep—H. A. Phillips, Union Stockyards, Chicago, Ill.

SWINE.

Berkshire (Breeding and fat classes)—W. E. Spicer, Bushnell, Ill.

Poland China (Breeding and fat classes)—J. M. Kemp, Kenny, Ill.

Duroc Jersey (Breeding and fat classes)—R. C. Watt, Cedarville, Ohio.

Hampshire—Chas. Marker (Breeding classes), Auburn, Ill.; Harry Booth (Fat classes), Union Stockyards, Chicago, Ill.

Chester White — I. T. Cummins (Breeding classes), Xenia, Ohio; Harry Booth (Barrow classes), Union Stockyards, Chicago, Ill.

Yorkshire (Breeding and fat classes)—D. A. Gaumnitz, South St. Paul, Minn.

Tamworth (Breeding and fat classes)—C. C. Roup, Iowa City, Iowa.

Grade and Cross-bred—Felix Gehrman, Union Stockyards, Chicago, Ill.

Champions—C. A. Marker, Auburn, Ill.; Felix Gehrman, Union Stockyards, Chicago, Ill.

Carload Swine—E. R. Gentry, Union Stockyards, Chicago, Ill.

Carcass Swine—D. A. Gaumnitz, South St. Paul, Minn.

HORSES.

Clydesdale—Andrew McFarlane, Palo, Iowa; George Hutton, Madison, Wis.; W. L. Carlyle, Stillwater, Okla.

Percheron—John DeLancey, Northfield, Minn.; Robert Graham, Toronto, Ontario; A. L. Robison, Jr., Pekin, Ill.

Shire—William Bell, Wooster, Ohio; Alex Galbraith, Edmonton, Alta.; C. F. Curtiss, Ames, Iowa.

Belgian—Harry McNair, Union Stockyards, Chicago, Ill.; Robert Graham, Toronto, Ontario; Prof. W. H. Pew, Ames, Iowa.

Suffolk Punch — Richard Stericker, Aurora, Ill.

Drafters — William Bell, Wooster, [illegible]

Harry McNair, Union Stockyards, Chicago, Ill.; Andrew McFarlane, Palo, Iowa.

Sixes—C. F. Curtiss, Ames, Iowa.

JUDGES FOR COLLEGE CLASSES.

Most Instructive Carcass—D. A. Gaumnitz, South St. Paul, Minn.

Block Demonstration—D. A. Gaumnitz, South St. Paul, Minn.

Sheep Breeding Experimental Classes—E. L. Shaw, Washington, D. C.

Committee on Judges—R. B. Ogilvie, Union Stockyards, Chicago, Ill.; C. F. Curtiss, Ames, Iowa; Thomas Clark, Beecher, Ill.; Dr. G. Howard Davison, Milbrook, New York.

Potato Show Program.

The fifth annual meeting of the Wisconsin Potato Growers' Association and potato show will be held at Eau Claire, November 21st-24th. The regular sessions will be held at Fournier's Pavilion and the potato exhibits will be housed in the same building. The annual business session will be held Tuesday afternoon, November 21st. The same evening a public meeting will be held, presided over by C. P. Norgord, Wisconsin commissioner of agriculture. There will be addresses by J. W. Barron, of Eau Claire, the mayor; J. W. Hicks, of Prentice, president of the state association, and Dr. H. E. Horton, of Chicago. On Wednesday morning the topic will be potato extension work and K. L. Hatch will preside. Speakers announced for the meeting are C. P. Norgord, J. M. Coyner, of Stevens Point; George Briggs, of Grantsburg; R. L. Cuff, of Barron; G. M. Householder, of Ladysmith; Miss Elizabeth Kelley, of Madison, and E. L. Luther, superintendent of farmers' institutes. Wednesday afternoon addresses will be by J. W. Henceroth, of Chicago (illustrated); Dr. H. J. Wheeler, of Boston, and W. R. McClellan, of Greeley, Colorado. In the evening Lou D. Sweet, of Denver, president of the National Potato Growers' Association, will give an illustrated lecture. The speakers for Thursday morning are L. R. Jones, R. E. Vaughn and J. W. Brann, of the Wisconsin College of Agriculture, and a letter from E. J. Wortley, director of the Bermuda experiment station, will be read. The afternoon session will be devoted to addresses by W. A. Hayes, of Milwaukee, representing the Soo Line; H. P. Henry, of the federal department of agriculture, at Washington, and O. H. Benson, in charge of boys' and girls' potato club work in the United States. The Thursday evening program will be in charge of the citizens' committee of Eau Claire. A special business session will be held Friday forenoon, November 24th, at which committees will report and remarks will be made by C. L. Fitch, of Ames, Iowa, and E. P. Miller, of Chicago. The final session, Friday afternoon, November 24th, will be devoted exclusively to boys' and girls' potato club work. The framers of this program feel that they have prepared for one of the best potato meetings ever held in the state or nation.

UPPER WISCONSIN.

Learning to Pack Apples.

Practical lessons in improved methods of packing apples for market were given to a special class of interested people at Bayfield recently under the joint auspices of the Bayfield Fruit Association and the college of agriculture, University of Wisconsin.

Association employes and students in agricultural courses at the local high school were given practical instructions in packing a large consignment of Wealthy apples by R. H. Roberts, horticultural extension worker of the college of agriculture.

Growers in the vicinity of Bayfield who saw the packing demonstrations, as well as others who favor improved methods, are of the opinion that what is known as the "tier" system of box packing will be largely used hereafter for the first grade fruit. Barrels will probably be used for second grade product. Bayfield apple growers have been using the box pack during the past few years in preference to barrels. However, as many of them did not use close discrimination in the grading and packing, results were not always satisfactory. The "jumble" method of box packing, followed here for a time, has many of the same features which make barrel packing undesirable for the first grade apples.

Among the faults common to "jumble" packing are: Non-uniformity in size, insufficient grading for blemishes, too much variation in color, poor appearance in retail trade and lower keeping qualities.

Growers find it difficult to pack apples tightly by the "jumble" system, and hence when shrinkage occurs fruit becomes injured from shifting about in the boxes.

There seems to be a strong sentiment for the marketing of first grade fruit in standard boxes under the supervision of local associations. Providing the Bayfield district adopts this method of marketing it is certain that it will have more effect than any other one item in standardizing the output from year to year.

Get Big Cream Checks.

Fifty farmers in Barron county received $100 or more from the Barron creamery during the month of October. The list of patrons of this creamery for the month included 859 persons. The largest check was $172.52 given to Tvedt Brothers.

DAIRY

Nearing the Pound-a-Day Class.

To the Editor:—More members join for the new year. The Columbus Cow-Testing Association has just finished its year's work and is now starting on the fifth year, bigger and better than ever.

Last year there were only 318 cows in the association, but the dairymen of Columbus county are appreciating the value of this work and already 491 cows are entered for the new year.

Mr. W. L. Fritz was elected president and Mr. C. F. Wehrwein retained as tester for the coming year.

Mr. A. L. Leffingwell owns the banner cow of the association that made the most fat and the most profit. She is a grade Jersey and produced 450.3 pounds of fat, making $101.87 profit over feed. She lacked a few pounds only of being able to enter the cow-testing exhibit at the state fair, which was composed of the ten highest-producing cows from the fifty-three associations of the state.

Mr. H. H. Huggett has the highest milk producer. She is a pure-bred Holstein making 11,345 pounds of milk.

Mr. A. L. Leffingwell also had the herd that produced the most fat and had the highest profit. His herd made an average of 324.9 pounds of fat and a profit of $60.83 per cow. Following are the ten highest butter fat producing cows in the association:

Owner	Breed	Age	Milk	Test	Fat	Feed Cost	Profit
A. L. Leffingwell	Gr. Jer.	5	8,431	5.34	450.3	$48.89	$101.87
Henry Westphal	Gr. Hol.	4	10,418	4.09	425.9	46.79	88.20
A. L. Leffingwell	Gr. Jer.	6	10,527	3.82	403	48.89	81.22
H. H. Huggett	P-b. Hol.	5	11,345	3.51	398.3	51.64	76.60
A. L. Leffingwell	Gr. Jer.	6	6,453	5.87	379	39.64	79.73
H. H. Huggett	Gr. Hol.	7	10,899	3.37	367.8	51.64	67.34
A. L. Leffingwell	Gr. Jer.	6	6,075	6.04	367.4	36.29	79.09
Henry Westphal	Gr. Hol.	5	10,963	3.35	366.9	46.79	70.75
Jones Bros.	P-b. Hol.	8	9,457	3.80	359.5	44.58	72.98
Henry Westphal	Gr. Hol.	5	11,010	3.19	350.8	42.47	69.76

Following are the ten herds having the highest average fat production:

Owner	Av. Milk	Av. Fat	Av. Feed Cost	Av. Profit
A. L. Leffingwell	6,351.9	324.9	$42.92	$60.83
Henry Westphal	8,920.7	304	43.28	53.77
H. H. Huggett	8,173.8	291.9	44.71	48.44
W. H. Breyer	6,339.1	277.3	46.21	43.66
John R. Jones	7,632.7	274.6	36.03	50.83
Wm. Bartel	7,371.9	271.7	54.96	30.14
L. L. Fritz	7,212.7	265.1	40.17	41.81
Jones Bros.	6,514.2	250.8	35.36	43.51
L. A. Wright	5,129.8	233.5	43.60	32.24
Jay Waterworth	6.584.5	232.4		

Ten herds had the following number of cows that produced over 300 pounds of fat for the year:

H. H. Huggett, five; A. L. Leffingwell, six; W. L. Fritz, one; Henry Westphal, six; C. J. Steinbach, three; W. H. Breyer, three; Wm. Bartel, one; Jones Bros., three; Jay Waterworth, three.

C. F. Wehrwein, Tester.
Columbus, Wisconsin.

Straining Milk.

The strainer is one of the most difficult articles about the dairy to keep in a sweet-smelling condition, yet if properly cared for it is very sanitary and effective. We still have in mind a strainer we used to see when a child, that always seemed to possess a sickish odor. Milk strained through this was very unhealthful.

It is not the chief aim of the strainer to rid the milk of all dirt. The strainer is only supposed to take out the hair, straw or any large object, but fails to remove all the dirt. The only safe plan is to prevent dirt getting in the milk when it is being drawn. The strainer is limited in its efficiency as well as other things.

A few years ago the strainer attached to the pail was all the rage, but it did not prove satisfactory. Most of the strainers were made of wire and wire strainers absolutely will not exclude the dust. The device soon got in such shape that it could be used for neither strainer nor pail and is now used but very little.

There is nothing that will keep out the dirt as well as cloth. The cloths must be carefully washed, scalded and sunned, and the same cloth should not be used more than once without being boiled. It is best to rinse them in cold water before putting them in the hot, soapy water. If they are put in the hot water first all the albumen in the milk is cooked and it is almost an impossibility to get them clean by merely washing. Common baking soda is better to use in washing the strainers, and, owing to its cheapness, one need not stint themselves. At least two layers of the cloth should be used in straining and three is better. This will be sure to capture all the dirt particles that happen to be in the milk. The ordinary twenty-four-pound flour sacks make excellent strainer cloths. It is essential that they be boiled frequently and hung in the sun as much as possible to keep them smelling sweet and clean.

If the milk is separated the strainer cloths may be fastened over the top of the bowl and the milk strained while pouring it in.

The milk should be strained as soon as possible after being drawn. It is impossible to keep out all the dirt, no matter where the milk is drawn, and it should never be left to stand for any length of time before being strained.

Fine Interest in Dairy Stock.

To the Editor:—Through an accident, I fell from a scaffold on a building we were shingling and hurt one of my hips. To see if any bones were out of place, I went to an osteopath, and while he was fixing me up he told me about his "farm" of a few acres a little ways out of the city, and especially about his Holstein cattle.

If I was interested in the story, and I certainly was, the doctor was a great deal more so. With a fine flush of pride, he told me that he had some heifers out of the old Rag Apple Thorndyke stock of Pennsylvania, some of which hold very high records. One bull of that line, if I mistake not, cost his owner $2,500. The doctor got out his herd book and showed me the picture of the father and the grandfather of his choicest heifer. Out at his "farm" the doctor spends his spare time and here he is working, not only for his own interests, but surely for the betterment of the dairy system of this country. It did me good to listen and I am sure it was a rest from an exacting life for him to talk to me about it.

More men than we know are working along similar lines to this for the upbuilding of a better dairy stock. One man in Connecticut has a herd of Guernseys of good strain. He could sell his calves at fine figures, but he prefers to let them go to his neighbors at a very low figure, so that the dairy life of the community may be advanced. This man is a business man of New York. Dairying is not a side issue with him, however. He takes a real interest in the farm and its stock.

It is not only the very rich and the professional men, however, who are doing work like this for the purpose of enhancing the worth of the dairy cattle of the United States. I know of a number of practical farmers who are putting every surplus dollar they have into better stock. This is their way of investing their farm earnings. Instead of putting it into the bank to draw interest, they choose to buy fine-blooded bulls, calves and cows.

Every one of us may add his mite to the great upward drift for thoroughbred stock. We need not leave it to the wealthy or the bankers and doctors to put better stock on the pastures of the country. By choosing our best cows for breeding purposes and crossing them with sires of known worth in a little while, we may revolutionize not only our own stock holdings, but so inspire those who live around us that the general stock population of the country around us will be improved in a most striking way.

E. L. V.

One application of crude oil kills both lice and nits on hogs. The most convenient method of applying the oil is by means of a hog oiler, of which there are several good types. They are always ready and require little attention. The best oiler allows the pig to rub the oil on any part of the body. The oil can also be applied with a sprinkler, spray pump, broom or brush. If there is any indication of skin disease the parts may be scrubbed with a broom or brush so as to get the oil well into the skin. When crude oil is used the appearance of skin and hair is greatly improved.—[From bulletin of Nebraska Agricultural College.

Danger for the Great Milker

Queen Schillaard No. 93154. Owned by Dr. Roberts Year's Butter Record 764.71 lbs. Seven-day Record 27.18 lbs.

FRESHENING time is the most critical period in the life of a cow or heifer. No injury or sickness has such disastrous results as failure to properly clean. Many cows, especially heifers, retain the afterbirth. If allowed to remain, disease and blood poisoning may follow. If you forcibly remove it, some parts of the afterbirth will remain. These parts decompose and are absorbed by the animal, causing a rapid wasting of flesh and loss of milk. Avoid all danger by using

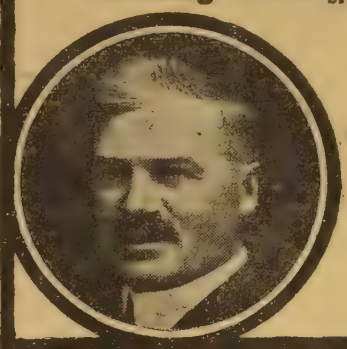
DR. DAVID ROBERTS'
COW CLEANER and ANTISEPTO

Cow Cleaner stimulates the circulation in the blood vessels of the genital organs, causing the afterbirth to ripen and come away of its own weight, leaving the organs in a healthy condition. Cleanse the genital organs with Antisepto—it is cooling, soothing and healing, all of which are essential to health. Keep your cows in a healthy breeding condition. Give them the help they need at this trying time.

Cow Tonic. Aids digestion, increases appetite, tones and keeps animals in condition.

Calf Cholera Remedy. Prevents scours and calf cholera. Avoids stunting. Keeps calves growing.

Breeding Tonic. Acts on the genital organs and puts in condition for breeding. Makes getting with calf more certain.



There is a Roberts' medicine for every animal ailment. Over 500,000 copies of his great book (184 pages), "Practical Home Veterinarian," are already in the hands of live-stock owners. Send $1.00 for your copy today.

Go to your druggist. Buy Dr Roberts' animal medicines and tonics. Nearly 4000 drug stores carry them. Look for and insist on getting the package that bears Dr. Roberts' picture. If your druggist hasn't Roberts' goods, write us direct. Give us his name. We will see you are promptly supplied.

Mix Agriculture With 3 "Rs"

"READIN' "RITIN' AND "RITHMETIC ONLY A PART OF REGULAR COURSE AT SUN PRAIRIE WISCONSIN SCHOOL

FRED J. HOLT - PRINCIPAL

Upper left group—Members of the Sun Prairie, Wis., High School, who took part in the Wisconsin State Fair agricultural contests. These young people attended the fair. Upper right group—Sun Prairie girls who took part in baking, canning and sewing contests at the State Fair. Lower view at left is a picture of the Sun Prairie High School, seat of strenuous agricultural activities. Lower right group—Sun Prairie judging team who won honors at the fair. From left to right these boys are, Warren Bull, Walter Renk, Hartford Drunasky, Elmer Virchow, Elmer Graff and Clayton Bull.

WHAT has a high school to do with agriculture? Many a father in Wisconsin, on laying aside his daily paper, directed this question to others about him after the state fair at Milwaukee recently when the Sun Prairie high school, for the second successive year, won the honor of champion agricultural school of Wisconsin. In the old days high schools had nothing to do with agriculture. Less than a hundred of them in Wisconsin today give it any attention, but the success of Sun Prairie in the boys' and girls' agricultural contest work at the state fair this fall focused attention on what a rural high school may do along these lines.

The agricultural prominence of the Sun Prairie school may be said to have begun when Mr. Holt swung from a train at Sun Prairie in August, 1915, to become principal. Prior to that time agriculture had been a part of the school work, but it remained for Mr. Holt to inject personal enthusiasm and practical ideas. The support given this department of the high school, formerly lukewarm, is now of the most fervid sort. The agricultural department of the school is the pride of Sun Prairie. The attention of 25,000 boys and girls engaged in the young people's work in Wisconsin is riveted on the splendid showing made at Milwaukee by Sun Prairie. The school won between $600 and $700 worth of premiums, including the $125 pure-bred Holstein bull calf given by Fred Pabst; it boasts of the champion boy, Frank Wilmarth; the champion pig club; champion corn club and the champion poultry club. Individual winnings in grains, horticulture, garden, live stock and corn were almost too numerous to mention.

The honor of champion school stands as a tribute to the work of the agricultural department. Until Mr. Holt began his work among the boys and girls nothing of this kind was done. This is the sixth year of agriculture at Sun Prairie. The first year Mr. Holt took hold twenty-one boys were taking it; this year there are thirty-nine and every new boy is a farm boy. In the high school there are now sixty girls; last year fifty. Last year six pupils took part in the exhibit at Milwaukee, compared with thirty-three this year, and most of Sun Prairie went to the fair to see their accomplishments.

That the work is very practical is indicated by the work of the champion boy, Frank Wilmarth, whose success serves as an encouragement to all. Frank had entries in practically every department at the state fair and with Richard Ryan, who won the Dane county championship, he plans to have a carload of stock and exhibits of his own breeding next year. This is how he is taking advantage of the agricultural course, as outlined to the writer.

All of his winnings he will put into stock and pure-bred grains. He plans to buy a pure-bred Holstein heifer and, with the Pabst bull calf won at Milwaukee, this will give him his start with a dairy herd. Next he plans to buy two pure-bred Chester White sows to which he can breed the Chester White boar of his own raising which won first prize at the fair over all breeds. This young boar he bought when a pig and these two sows will give him two litters next spring that will be eligible to compete next fall. Richard Ryan also has a Chester White sow and he will work with Frank along this plan. Next Frank plans to buy a baby beef calf to be finished for the fair.

This boy owes much to the Sun Prairie agricultural school. The work he is carrying out on his father's farm, but at school he has been able to study breeds, how to judge and the knowledge secured there he has put to practical use at home. What the school is doing for Frank Wilmarth it is doing for other boys and girls, as indicated by their winnings.

There is little of the pedagogue about Mr. Holt. He believes that agricultural high school work to be of value must be practical—the lessons learned in school must be carried home. This is the theory on which he has succeeded. He is opposed to the school farm. It is expensive; the work can only be carried on there during school days; there is too much opportunity to forget. If carried to the home farm the boys are interested 365 days in the year; the parents take more interest and likewise derive much benefit from the application of improved methods, and this plan aids in interesting neighbor boys in the school.

Mr. Holt is a strong believer in extension work. When he hears of a farm boy that should be in school he jumps into his automobile and goes to see him and keeps going until he enrolls him or the boy refuses. After school hours he takes his automobile and visits the farms where the students are carrying out their work.

During the first year the study of plant life and the scientific way of going at things occupies the attention of the agricultural pupil. The second year he continues his plant life study, but begins animal husbandry and the study of breeds with judging. Through the third year animal husbandry is continued and during the fourth year farm engineering, farm management and surveying are taken up. With one year of manual training for every agricultural boy this comprises the agricultural work in addition to mathematics, science, English and history.

Animal husbandry work has been especially interesting and practical. The textbook is used very little and many practical ideas have been followed by Mr. Holt. In horse judging the judging class is taken down to the town hitchrack and a team is picked out at random to be judged. There is a twofold reason for this. First, give the boys practical, everyday judging; second, interest the owner of those horses in better horses and many farmers whose teams have been judged have been known to sell and buy new teams later. The class is also taken to all near-by live stock sales and this year to the Waukesha sales.

Mr. Holt is working out a new project this year to judge cattle and horses. The boys will be taken to a near-by farm; the owner will set his value on his animals; the boys will hold a mock sale and their decisions in bidding will be used as the basis for credits in their judging work.

Mr. Holt has organized the high school pupils into nine clubs—corn, potato, garden, calf, poultry, pig, baking, canning and sewing. For the girls in the home economics department the school is well equipped and most of the girls take first-year agriculture, while six are now taking animal husbandry.

NEWS OF THE SALE RING

Waukesha County Holstein Breeders' Sale.

The fourth sale of the Waukesha Holstein Breeders was held Monday, October 23d. It was unfortunate to hold it on Monday, as it is practically impossible to get a crowd of buyers at any sale on Monday. It was true in this case, and the home county buyers got the benefit. Nearly all of the cattle stayed right in the county. H. E. Anderson, Whitewater, was a heavy buyer, as was also W. J. Wright, Waukesha, and Geo. Eising, of Waukesha, and J. M. Bischel, Waukesha. Patrick Cudahy, of the Cudahy Packing Company was present and purchased a number, while Mr. Southcot took home many of the best ones for Gustav Pabst. Although prices were not high they represent the actual prices paid. Had side bidding been permitted or indulged in prices would easily have averaged $25 to $50 per head more. The Waukesha Holstein breeders, however, are to be congratulated on the honorable manner in which they conduct their sales and will eventually win out by these methods. Breeders will learn to avoid the sales where they get "stuck" and if the sales are to continue as a success they will have to be conducted along more honorable lines than have some in the past. New York state breeders are now reaping the reward for the unscrupulous methods practiced by some of her breeders and we are glad to see that the Wauke sha breeders are building on a permanent basis.

Waukesha County Guernsey Breeders' Sale.

The ninth semiannual sale of the Waukesha County Guernsey Breeders' Association was one of the most successful they have ever held. In spite of the high price of feed which prevails, there were a large number of buyers present and bidding was brisk. Although prices did not range as high perhaps as in former years, considering the quality of the animals offered, yet it was by far the best sale of dairy cattle held in Wisconsin this fall. The Waukesha Guernsey breeders have demonstrated that honorable sale methods are the ones that hold the business. The confidence which the buyers have shown in this association has made their sales record breakers in "boom times" and in slack times has made their sales profitable. Geo. W. Brown, state agent for the Overland automobile, purchased several of the best things in the sale, paying $975 for Mapeline Alice, an A. R. cow of excellent type. Gustav Pabst purchased two fine cows at good prices. Among the out-of-state buyers were those from Connecticut, Maryland, Texas, Minnesota and Illinois, while nearly every section of Wisconsin was represented among the buyers. Following is a list of the sales:

Imp. Beauty of Somerset II, Mar. 22, 1913; W. R. Young, Wichita Falls, Texas $225
Geraldine of Phantom Lake, May 3, 1915; G. M. Chapman, Waukesha, Wis. 200

How many of our readers will see this and then write and tell us how many different kinds of food products they now buy in packages which they used to buy in bulk, or did not buy at all?

We would like to know. If you will take the time to write, it would please us.

THE WISCONSIN FARMER
MADISON, WISCONSIN

YOU naturally take to the broad minded merchant who has your interest at heart. Many of them have taken up W-B CUT Chewing themselves and are glad to show you why you should use the *little* chew. The common sense of *rich* tobacco chuck full of *satisfaction* —shredded and lightly salted, so you *get at* the *tobacco satisfaction*—is making friends all around.

Made by WEYMAN-BRUTON COMPANY, 50 Union Square, New York City

Pull Big Stumps by hand

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable.

Works by leverage—same principle as a jack. 100 pounds pull on the lever gives a 48-ton pull on the stump. Made of Krupp steel—guaranteed against breakage. Endorsed by U. S. Government experts.

Shewing easy lever operation

Walworth County Combination Sale of Dairy Cattle.

The first semiannual combination sale of dairy cattle of Walworth county was held October 30th and 31st at Delavan, Wis. Everything considered it was a success. Although prices did not range high, the consignors feel that they have made a successful beginning and that they have demonstrated to the buyers their interest to hold a square sale. A detailed list of all animals selling over $100 is given below:

Anoka Farms' Short-horn Sale.

The most remarkable sale of Short-horn cattle ever held in this country occurred at Anoka Farms, Waukesha, Wis., November 2d, when forty-three head of cattle, twenty-four females and nineteen bulls all under two years of age and many of them spring calves, sold for $43,700, an average of $1,016 per head. It was a fitting tribute to the constructive breeding operations at Anoka Farms, and emphasized the standing of this institution as one of the great breeding establishments of the world. The attendance was large and representative, the bidding spirited and the result of the sale should be an inspiration to Short-horn lovers everywhere. The majority of the offering was the get of Sultan Stamp, the great son of Whitehall Sultan, and his son, Royal Stamp, a bull that has proven his worth to follow in the footsteps of his illustrious sire and grandsire. Others were by Imp. Rusper Champion, Village Denmark by Imp. Villager, Princely Sultan by Whitehall Sultan, Imp. Right Sort. At the opening of the sale an exhibit was made of the ten calves that won the trophy at the Kansas City Royal for the best ten head of Short-horns bred and shown by exhibitor. In the sale these ten head sold for a total of $19,050. The top of the sale was $5,200, paid by Mr. Kirkwood, of Sni-a-Bar Farm, Kansas City, Mo., for the yearling bull, Good Stamp by Sultan Stamp, the contending bidder being A. J. Ryden, Abingdon, Ill. Mr. Kirkwood also paid $2,050 for Augusta Sultan, a January calf by Sultan Stamp, and $1,200 for Kilblean Champion, a January calf by Imp. Rusper Champion. At $1,850 C. D. Smith, Memphis, Tenn., secured Lavender Stamp, an October yearling by Sultan Stamp and Carr W. Pritchett, Steamboat Springs, Colo., paid $2,500 for the January calf, Loyal Stamp by Sultan Stamp. Bandmaster Junior, an outstanding February calf by Imp. Right Sort, went to A. J. Ryden, Abingdon, Ill., at $1,950 and at $1,675 Regal Sultan, a yearling son of Regal Stamp, sold to E. E. Moore & Son, West Liberty, Iowa. The top for females was $1,850 paid by Carpenter & Carpenter, Baraboo, Wis., for Anoka Clipper 3d, a yearling daughter of Regal Stamp. McMillan & McMillan, Lodi, Wis., paid $1,600 for the ten months Augusta Anoka 3d and Sni-a-Bar Farm took Lovely Anoka 3d, a January calf at $1,300. McMillan & McMillan also secured Anoka Clipper 4th an October yearling by Sultan Stamp, at $1,650, and F. A. Gillespie, Tulsa, Okla., paid $1,250 for Anoka Blossom 2d, a September year-

You can farm 365 days in the year in California

You can work outdoors every day in the year

Think of that, you who now live where winter shuts you in five or six months.

In sunny, summery California —
Stock don't eat their heads off.
Furnaces don't burn up tons of coal.
Heavy clothing is not needed.
No snow blocked roads.
Fingers, ears and toes don't freeze.

Go and see for yourself what California is doing while there's "nothing doing" at home. Go this winter. Take advantage of the low all-year excursion fares, with nine months' limit. Go with one of the Santa Fe personally-conducted tourist-car parties, leaving three times a week. See Grand Canyon of Arizona on the way. San Diego Exposition, too, if you reach California during 1916.

Plenty of time to enjoy yourself. And ample opportunity to see rural California as it really is. At your leisure pick out the farm you want to own some day. Maybe it is in Southern California in the San Joaquin Valley — California's heart. Irrigated lands on reasonable terms for raising alfalfa, oranges, vegetables, grapes, etc. Grazing lands for dairy cattle and sheep. Poultry, hogs and bees do well.

Our San Joaquin Valley books have the details. Just drop a postal to-day and say "Send California books." Tell us what kind of farm you want and we will gladly get you the fullest possible information through our agricultural agents who help to locate settlers in productive sections and assist them in selecting the right crops to insure permanent success after they are located. The Santa Fe's interest in you continues and the service is free.

C. L. Seagraves, Industrial Commissioner
Atchison, Topeka & Santa Fe Ry.
2228 Railway Exchange, Chicago

HAVE YOU AN OLD NEIGHBOUR FARMING IN MANITOBA

Perhaps you will find a letter from him in the attractive little book, "FARMING IN MANITOBA," published by the Provincial Government of Manitoba. Or, even if you have no old neighbour who is making good in the Banner Province of the Canadian West, you will find that booklet of vast, practical interest to you. IT HAS A MESSAGE FOR YOU in a collection of plain, unvarnished letters from successful farmers in Manitoba, who came from the States and different parts of the world to the country where land is cheap as well as good. Grain Growing, Stock Raising, Mixed Farming—they all yield a bigger profit in Manitoba than where you now reside.

SEND FOR THIS FREE BOOKLET

It has a message also for your wife. Manitoba has MORE to offer you than any other part of the world. We are not selling lands—but distributing information only.

ADDRESS YOUR ENQUIRIES TO

WINNIPEG, MANITOBA

Canadian Wheat to Feed the World

160 ACRE FARMS IN WESTERN CANADA FREE

The war's fearful devastation of European crops has caused an unusual demand for grain from the American Continent. The people of the world must be fed and there is an unusual demand for Canadian wheat. Canada's invitation to every industrious American is therefore especially attractive. She wants farmers to make money and happy, prosperous homes for themselves while helping her to raise immense wheat crops.

You can get a Homestead of 160 acres FREE and

Other lands can be bought at remarkably low prices. Think of the money you can make with wheat at its present high prices, where for some time it is liable to continue. During many years Canadian wheat fields have averaged 20 bushels to the acre—many yields as high as 45 bushels to the acre. Wonderful crops also of **Oats, Barley and Flax.**

Mixed farming is fully as profitable an industry as grain raising. The excellent grasses full of nutritions are the only food required either for beef or dairy purposes. Good schools, markets convenient, climate excellent.

Military service is not compulsory in Canada, but there is an extra demand for farm labor to replace the many young men who have volunteered for the war. The Government this year is urging farmers to put extra acreage into grain. Write for literature and particulars as to reduced railway rates to Superintendent Immigration, Ottawa, Canada, or

GEORGE A. HALL,
123 Second St., Milwaukee, Wis.
Canadian Government Agent.

ing by Sultan Stamp. Carpenter & Ross, Mansfield, Ohio, secured Anoka Broadhooks 3d, a yearling by Imp. Russ- ier Champion, at $1,000, and a like mount was paid by Heart's Delight Farm, Chazy, N. Y., for Victoria Anoka, n October yearling by Village Den- mark. Fifteen head sold for $1,000 or etter. The cattle were presented fit o the minute and were a high credit o the work of the master hand of Manager George Sims and his assis- ants. Short talks were made by F. . Tomson, of the Short-horn Asso- iation, and Peter G. Ross. The high- lass methods so characteristic of all ransactions at Anoka Farms prevailed hroughout the sale. Col. Carey M. ones presided on the block and did ne of the greatest day's work in his areer. He was ably assisted by Col. 'red Reppert. The result of the sale vas a fitting commendation of the ontinuous progressive work in the in- erest of the Short-horns by Frank V. Harding. No one man has done or s doing more for the breed than Mr. Harding, and this sale but serves to mphasize the fact that he is the peer f any Short-horn breeder on either ide of the ocean. The following de- ailed report tells the story of one of he greatest Short-horn sales ever held:

FEMALES.

Herr Bros. & Reynolds Short-horn Sale.

A successful sale of Short-horn cattle was made at Lodi, Wis., November 3d by Herr Bros. & Reynolds. The sale came the day following that of the sensational event at Anoka Farms, Waukesha, Wis., and was the closing sale in a four days' circuit. As a consequence the buying, especially of bulls was not up to the standard of the preceding days, but the average of $382 on the forty-four head sold was a satisfactory one, representing not only a profit to Herr Bros. & Reynolds, who raised practically all of the cattle in the sale, but also leaving plenty of opportunity for the buyer to find his investments profitable ones. The cattle were presented in good condition and were a credit to the men making the sale. Herr Bros. & Reynolds are among the most reliable breeders of Short-horns in the country, and they added to their already wide circle of friends by the high-class manner in which they conducted the sale, as well as by the excellent lot of cattle that they presented. The top of the sale was $800, paid by Robert Failon, Neponset, Ill., for the two-year-old Wimple heifer, Bonnie Girl, sired by White Rock by Whitehall Sultan. E. Ogden & Son, Maryville, Mo., gave $725 for Roan Wimple, a yearling heifer by Cumberland Ideal, and the cow, American Beauty, with a bull calf at foot by Master Ruby, the good bull in use at Lodi, went to Ray Harney, Ponca, Neb., at $555. The bull demand was not as keen as the quality of the offering warranted, but they brought remunerative prices. The top of the sale on bulls was $505, reached twice. Robert R. Hawkey, Belvidere, Ill., paid that figure for the yearling Missie's Ruby by Master Ruby, out of a dam by Choice Master, and at the price he is a decidedly good investment. Henry Kopp, Galesville, Wis., paid $505 for Future Sultan, an outstanding good bull by White Rock, out of a Broadhooks Sultan dam, and he also purchased Master Gloster, a Duchess of Gloster son of Master Ruby at $405. The attendance at the sale was good, and the bidding prompt. There was much interest manifested in the get of Master Ruby, the outstanding son of Archer's Hope that is the premier bull at the Lodi establishment. He was shown in the ring at the opening of the sale, and it was the consensus of opinion of all the good judges present that he is entitled to rank with the good bulls of the country. Col. Carey M. Jones sold the cattle in his usual efficient manner and was assisted by Colonel Martin. The detailed list of sales follows:

FEMALES.

American Beauty, calved 1909; Ray Harney, Ponca, Neb.	$555
Lady Holly, calved 1914; McMillan & McMillan, Lodi, Wis.	500
Roan Wimple, calved 1914; E. Ogden & Son, Maryville, Mo.	725
Village Lady, calved 1914; J. E. Kennedy, Janesville, Wis.	400
Belle Cecilia 4th, calved 1914; J. E. Kennedy	350

Our readers frequently write and ask where they can buy some product that they need. If your local dealer or merchant cannot supply you, tell us his name and address —maybe we can be helpful to you and to him. We are here to serve both of you.

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. Place your name and address to it, then, to know its cost, count the number of words. The rate is six cents per word, each insertion. For instance, if your advertisement, including the address, has 15 words, one insertion would cost 90 cents, which is one cent for every thousand copies printed. Note the low cost, and read what small advertisements in The Wisconsin Farmer have done for others

One **Wisconsin Farmer** seed corn advertiser says: "We are getting a nice response to our advertising. We will come back with a larger advertisement." Another says: "**The Wisconsin Farmer** has done good work helping me to sell lots of stock." And another writes: "Please discontinue my advertisement in **The Wisconsin Farmer.** I am getting pretty well sold out for the present."

These small advertisements did not have the advantage of the classified headings now available—under which your advertisement would appear.

Any "Wanted," "For Sale," or "To Exchange" advertisement will receive prompt attention and insertion will be made in first issue possible.

THE WISCONSIN FARMER — **MADISON, WISCONSIN**

FARM LANDS.

HERE'S WHERE THE COWS roll out the milk heavy with cream. The dairyman's country, Aitkin county. It's our Company's land. We can sell it for a few dollars per acre. Investigate. Send for literature. Arnold, Land Agent, Rock Island Railway, 153 Wolvin Bldg., Duluth, Minnesota.

640 ACRES, all tillable, 12 miles from Rapid City, 4 miles to station, 5-room house, cattle sheds, fenced and cross-fenced, good water, wells 10 feet deep, good roads, $12.50 acre, half cash, balance to suit at 6 per cent. W. P. Casey. Rapid City, S. D.

WISCONSIN farm consisting of 287 acres, having good buildings, situated seven miles from good market. For information, write to Morris Johnson, Osseo, Wisconsin.

FORTY or eighty acres with fair buildings, good clay soil, no waste land, close to town, $25 per acre; $100 cash, balance long time. Frank M. Doyle, Ladysmith, Wisconsin.

FOR sale—111-acre well improved farm, 3 miles northeast of Weyauwega, Wisconsin. Richard Kuehn, Weyauwega, Wisconsin.

TELEGRAPHY.

LEARN TELEGRAPHY. Short hours. Positions guaranteed. Write Signal Dept., Northwestern Telegraph School, Eau Claire, Wis.

CALVES—BOTH SEXES.

HOLSTEIN, Short-horn and Guernsey calves, either sex. A few exceptionally fine ones. $12.50 to $35, shipped by express at little cost. For information, write Ed Howey Co., South St. Paul, Minn.

POSITION WANTED.

POSITION wanted — by experienced buttermaker. Married. Cooperative creamery preferred. Furnish reference. Address, Frank Peroutky, Forestville, Wis.

POLAND CHINA SWINE.

BIG Polands. Good, growthy spring boars at reasonable prices. Harold Schmeider, Oregon, Wisconsin. Phone 9616.

PLYMOUTH ROCKS.

FEW fine, pure-bred Buff Rock cockerels $1.50. Clinton Berry, Kilbourn, Wis.

LEGHORNS.

FOR sale, full-blooded white, Single-comb Leghorn cockerels. C. Magnuson, Spirit Lake, Ia.

GUERNSEY CATTLE.

TWELVE Guernsey grade heifers, cheap for quick sale. G. D. Fellows, Algoma, Wis.

Famous Four Burr Mills

GRIND ALL of your ear or shelled corn at **15 to 20 bushels per hour.** Other grain in proportion. These mills will earn their cost in **one week's grinding** at the present **high price** of feed. **Send for free catalog.**

Bovee Furnace Works
104 W. 8th St. Waterloo, Iowa

FARM IN FLORIDA!

THIRTY acres, houses, barns, stock, machinery. The land, the climate, the bargain! Are you the buyer? Fishing, hunting, oranges, health —yours at a sacrifice. A M. Chase, Marshfield, Wisconsin.

BIG POULTRY PROFITS THIS WINTER

Raise Chicks in the Winter with a
MODEL COAL-BURNING HOVER
52-IN. CANOPY $15.00

Only hover at $15 with genuine magazine. Costs but 2c a day to run. Will burn hard or soft coal, or wood. Guaranteed.
FREE—Big poultry book. Tells how to raise more chicks, make bigger profits. Write now.
Model Incubator Co 60 Henry St., Buffalo, N.Y. 89 Barclay St., N.Y. City

BIG 4 **POULTRY JOURNAL**
Practical, Snappy, Instructive—YOUR PAPER. For the breeders of Mich., Ind., Ill., Wis., only. You should read it. 50c a year, 3 mo. 10c. Agents wanted. Big 4 Poultry Journal, Desk 28, Chicago, Illinois.

POOR MAN'S CHANCE—$5.00 down, $5.00 monthly, buys 40 acres productive land; some timber, near town, price $200.00. $10.00 monthly buys 80 acres. Box 425-H, Carthage, Mo.

POULTRY AND PET STOCK.

S. C. R. I. REDS

FOR SALE—Hatching eggs from prize pens, half price for balance of season. Won 9 ribbons on 15 birds at Wisconsin State Fair, 1915; 4th pullet and 3d young pen at Chicago Coliseum, 1915. Winnebago Poultry Yards, R. 23, Omro, Wis.

HOUNDS: Coon, Fox, Wolf, Deer, and Rabbit Hounds; pedigreed and eligible to reg. Young and old stock for sale. Sent on ten days' trial. Money back guar. Otis Slater & Son, Oconee, Ill., Succes'rs to R. F. Johnson, Assumption, Ill.

HATCHING EGGS: prize-winning S.C. Reds, White Wyandottes, Buff Orpingtons, S. C. White and Brown Leghorns, $1.50 per 15. Ledge View Poultry Farms, Box W.F., Fond du Lac, Wis.

TURKEYS WE BUY 'EM. Write us what you have. **THE R. E. COBB CO.** 26 E. 3d St., St. Paul, Minn.

HATCHING EGGS; S. C. Reds, prize-winners all leading shows. Eggs $1.50, 15; $8, 100. Order from this ad. Address C. L. Pre-Fontaine, Box 600, Fond du Lac, Wisconsin.

SINGLE COMB BUFF AND WHITE Leghorn cock'els. Charles Schmit, Hortonville, Wis.

WHITE and Barred Rocks from prize-winning stock. Yearling hens and males. Early pullets and cock'ls. Mrs. J. F. Bloom, R. 1, Stillwater, Minn.

EGGS for hatching from Barred Rocks, E. B. Thompson's Ringlets, $1.25 per 15, prepaid. D. S. Thorosen, Shell Lake, Wisconsin.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

The Dust Bath.

So much has been said about the hen's need of a dust bath that few poultry raisers do not provide some sort of a box for this purpose.

While it cannot be denied that the dust bath is very necessary to the health of the hens—for it is their only way of cleansing themselves—it is questionable whether some have the right idea concerning the advantages of the bath. It has been the theory that hens desired and needed something exceedingly dry and dusty, the idea being that the dust would suffocate the lice when the hens used it. Working on this theory many poultry keepers provide boxes of dry road dust or finely sifted ashes, often adding a quantity of dusting powder.

It must be admitted that this material will finish the lice if the hens use it, but they do use it only because they have no chance to select their own. Hens having nothing else will often be found trying to dust in the floor litter. But let the hens make their own selection between the dry dust box and the earth and none of them will be found in the dust box. They will invariably select a spot where the earth is powdered as fine as dust, but with some moisture in it. This moist, powdered earth removes all scurf and dirt from the skin and the bases of the feathers, acting somewhat like damp sawdust sprinkled over a floor and then swept.

Scurf and dirt on the skin and at the base of the feathers make a harbor for lice, but when the hens are allowed to clean themselves in the right way few lice remain. Lice on most animals come from lack of cleaning or lack of the means to clean themselves in their own natural way. If hens are allowed to keep their bodies clean and the poultry keeper will keep the house clean little trouble will be had with lice.

Want to buy or sell a farm? Make it known by inserting an advertisement in THE FARMERS' MARKET. Six cents a word each insertion.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Let Us Play.

It would be almost wicked to let these beautiful days slip by without enjoying every minute possible. Almost the middle of November—and as we write the sky is as blue as summer, not a cloud to be seen, the warmth of the sun and the bite of the frost combined to just the most enjoyable degree. Such days cannot last long, so let us crowd as much out-of-doors enjoyment into them as is possible.

There may be things yet to do in the garden—things that would be called work were it not for the glorious sunshine, the faint breeze, the friendly advances of Mr. Squirrel, who stops the important business of storing away his winter's supply of nuts and acorns to chatter and scold from the branches of the old oak, and the feeling as we put the garden in order for its long rest that we are putting the finishing touches to a task well done and nature smiles graciously upon all workers alike.

Or it may be that you are one of those who have finished such out-of-door tasks, in which case forget about the lunch dishes, hide the mending basket securely away and go for a walk through the woods or across the pastures. We can mend today while the sun shines, to be sure, but we can't visit the fields tomorrow if it rains. Surely such days were meant to add to the joy of the joyous and ease the hurt of the sorrowing, and nature has for us pleasures innumerable in field and wood if we but go and find them.

Don't forget the boys and girls. How they do love a bonfire and good things to eat in the woods! How they will hurry their Saturday's chores if a picnic is in sight for the afternoon! Let us have one more happy romp with the kiddies before the cold and snows forbid.

Store Fruits and Vegetables.

Be prepared to meet the high cost of living by storing fruits and vegetables now, is the advice of M. F. Ahearn, professor of landscape gardening in the Kansas State Agricultural College.

Do not pay winter prices for fruits and vegetables, says Professor Ahearn, when by a simple reorganization of the cellar or some digging in the garden, storage room can be provided for the preservation of large quantities of this class of food.

If the fruit shrivels or becomes spongy and decays the fault in most cases can be traced to the storage room and may be corrected wholly or in part. The cellar must be well ventilated if fruit is to be kept successfully for any length of time. Temperature and humidity are factors quite as important as ventilation. The best temperature for fruit is 33 degrees or a little above.

It is not well to allow much fluctuation in the temperature. In the farm cellar uniformity of temperature is maintained by means of ventilation, which should be watched closely. While the weather remains warm in the fall the windows are closed by day and opened by night.

Apples may be packed either in barrels or in boxes. The preference is usually given to the boxes. In the case of apples that are to be kept for a considerable time it is a good plan to wrap each one separately in a piece of paper.

Favorable conditions of moisture and temperature are obtained by burying the fruit in pits, points out Professor Ahearn. To prevent apples tasting of the earth they should be placed in boxes, barrels or other containers which keep them from direct contact with the soil, or the pit may be lined with boards.

Storage requirements for vegetables differ widely. The sweet potato and the squash are kept successfully only when the temperature is high and constant and the humidity is low. Root crops and cabbage can best be stored in pits. For storing cabbage in this manner the heads are pulled with the roots and leaves attached, and placed upside down. Earth is placed on the pile until the plants, including the roots, are entirely covered.

Fall Propagation of Roses.

Climbing roses are propagated mostly by hardwood cuttings made in the fall. Many cut-flower roses may be propagated in the same way.

Hardwood cuttings are taken from the dormant wood of winter, while softwood, or greenwood, cuttings are taken when the plants are in active growth. To make a hardwood cutting, good, strong, well-ripened shoots of the past summer's growth should be selected. These are better if cut between the time the leaves fall and freezing weather. If left until after cold weather there is danger of injury from freezing. They should be cut into pieces of five or six inches, with the upper cut just above a bud, and should be tied in bundles with raffia or with string that does not rot easily if exposed to dampness. After labeling plainly they should be buried in moist sand, tops down, and placed in a cool cellar or buried in the open ground below danger of frost. They should be planted in the open ground in the spring about or a little before corn-planting time, so that one or two eyes, or not over one inch of the cutting, is above the ground, which will leave four or five inches in the ground. Care must be taken not to injure the calluses that have formed while the cuttings were buried. Sometimes better results are obtained by planting in partial shade.

Frequently cuttings made in winter or early spring do nearly as well as those made in the fall, but in the North there is always danger of the wood being injured during the winter.

How to Sew Braided Rugs.

To the Editor:—A reader of the Home page in a recent issue requested someone to tell her how to sew braided rugs. As I enjoy the helps given in this department I will tell her how I sew them.

Let the edges of your braid meet. Take a large needle, fill it with No. 20 thread, two ply, and proceed to sew the edges together with what is called a shoemaker's stitch, which is made in the following manner: Under through braid, back under through braid, hiding your stitches in the folds of your cloth.

I find this the best way to sew my rugs. Some overcast the edges together, but the threads wear off and let your braids loose.

—Mrs. S. E. S.

Winter Care of Geraniums.

To the Editor:—Mrs. G. asks help to make her geraniums bloom. If they grow and look thrifty without blooming she probably has them in too large pots. They should pretty well fill the pot with roots in order to bloom well. Otherwise, they make a mass of leaves and branches with very scant bloom. Some kinds of geraniums are better bloomers than others, while certain varieties bloom well in the open ground, but not in the window, and vice versa.

Give them all the sunshine possible in winter, keep the foliage clean by frequent shower baths of tepid water, and if you have varieties suited to indoor blooming there should be no such thing as failure, as the geranium is considered one of the best of house or bedding plants.

This is how I manage to have a large bed of geraniums in summer without much trouble: Before frosts come I take small slips and plant thickly in shallow boxes of soil about four inches deep and as wide and as long as is convenient for the window sill. Two boxes to a window are easier to handle. By spring they will be nice little plants ready to grow and bloom all summer. It does not matter if they crowd a little in the boxes. By cutting off the lower leaves to admit the sun and an occasional turning of the boxes to keep them growing straight, they need not be shifted till planting time comes.

I hope Mrs. G. will succeed as well as I have by this method.

Can anyone who has had experience with drying green peas tell me how it is done, whether in sun or shade or oven? Also, how do you cook them after they are dry? I would very much appreciate this information. L. S.

The Hot Cake Season Again.

To the Editor:—Could some of the readers of the Home department tell me how to make good hot cakes, or pancakes, as some people call them? My hot cakes are inclined to get soggy. Someone told me to add a little corn meal, which would do away with that trouble, but it makes them tough. Will not some of the good cooks send in their tried recipes?

Would like to tell the readers how I get my cream to sour for churning during the wintertime. I always keep some buttermilk when I churn and add a little of it to the sweet fresh cream the day before I want to churn, and set it near the stove to keep it a little warm. In this way the cream gets sour quickly and the butter is not stale as it sometimes is when cream sours slowly. I also stir my cream twice every day. —Mrs. S. H.

Farm Women Form Homemakers' Clubs.

A movement is now on among the farm women of the state to have, where such groups have not already been established, organizations which shall aid them in the business of homemaking.

The method of organizing homemakers' clubs is very simple, and entirely in the hands of any community of energetic, up-to-date farm women who feel the need of working and pleasuring together. The constitution for these clubs and programs for bimonthly meetings have been worked out at the home economics department of the college of agriculture at Madison, and copies will be sent on request to women who are interested in the movement.

The primary subjects for consideration by the clubs during the winter are questions pertaining to clothing, food, child welfare and better household arrangements. The program for the first meeting after a club has been organized is devoted to the subject of bread making, and the recipes discussed at this meeting are used in preparing refreshments for the next one, so that the method may thus be tested and the value of the results discussed by the members of the club.

Recipes.

Potato Soup.—Three potatoes of medium size, four cups skim milk, one small onion, four tablespoons butter, two tablespoons flour, one and one-half teaspoons salt, one-half teaspoon celery salt, or two tablespoons celery, cut in small pieces, one-eighth chopped parsley, little cayenne pepper or paprika. Boil the potatoes and when soft rub them through a sieve. Slice the onion and scald this and the celery with the milk. Take out the onion and add the milk slowly to the potatoes. Melt two tablespoons butter, into which mix the dry ingredients, and stir into the boiling soup. Boil one minute; strain, add the remainder of the butter, and sprinkle with the parsley when ready to serve. The parsley improves the looks and adds a little to the flavor, but m be omitted if this is more convenient

Cinnamon Rolls.—Roll biscuit dou to an oblong shape one-half inch thi spread with melted butter and sprin with sugar and cinnamon. Roll lik jelly roll, cut off inch slices, place greased muffin tins and bake in qu oven fifteen minutes.

Date Cake.—One egg, two cupf sugar, one tablespoonful butter, o half cupful English walnut me chopped fine, one cupful dates, sto and cut fine, one cupful boiling wa to which has been added one scant t spoonful soda, one and one-half cup flour, one teaspoonful vanilla. B one hour in a very slow oven.—Mrs. N

THE YOUNG FOLKS

All letters from boys and girls to this departm should be sent to office of The Wisconsin Far Madison, Wisconsin.

Mother Must Be Proud of H.

Dear Young Folks:—I have enjo your letters and the riddles v much. This is my first letter. I a little boy ten years old and I hav brother eight. Our papa is dead our mamma is improving a homest in Wyoming.

My brother and I work all we to help mamma. I want some of girls to tell how to make baking p der biscuits, then I will cook mamma. She said she was goin to let Dick and me be her girls. Sh going to make me an apron. I h been washing dishes a long time.

I am in the fifth grade and brother and I like to read your lett

I hope the girls won't forget to s in some easy recipes for me.

Crochet Directions For Mart.

Dear Young Folks:—I saw Mart request for a crocheted yoke, so I m sending one that I think is very p ty. I love to crochet and think thi an easy yoke to make, as I have m several. Use No. 30 crochet cot It is a clover pattern.

Chain twenty to start.

First row—Join in third stitch m needle to form picot; four treble, p chain, four treble, two chain, turn

Second row—Chain five, four treb two chain; chain two, four trebl two chain; chain two, one treble, t

Third row—Chain three, three t in two chain; chain two, four trebl two chain; chain two, four treble in picot.

Start clover—Chain fourteen, jo sixth stitch from needle; chain five, in same place; chain five, join in place; turn, five treble in first pic Take off needle and slip through row, treble, fill picot with five tre ten trebles in second picot; ten tr in third picot; fill up stem with double crochet.

Fourth row—Chain five, continue beginning for next three rows.

Seventh row—Chain fourteen, jo sixth stitch from needle. Make t picots like in third row, turn, trebles in first picot; take threa needle and slip through in fifth five trebles in same picot; five trebl next picot; five trebles in next p slip through first leaf, chain four make three more picots, five trebl first picot. Take thread from ne and slip through center of next leaf trebles in same picot, ten trebles in picot, ten trebles in third picot, nine double crochet for stem. Fi next clover with five trebles in se picot, ten trebles in third picot, double crochet for stem. This m second clover.

Continue, increasing as before, you have ten clovers for armhole. three rows without increasing shoulder. Make same as front, three leaves in place of ten in fro

Edging—Chain eight, two trebles twice on needle, chain two, two trebles, skip three chain; continue around Fill up with double trebles; three treble, chain four, join in last stitch to picot; three trebles, chain four, three trebles, join in chain two; continue.

Beading—Chain four, join in eight picot, turn; same on other seven slip stitch on bottom of eight picot, chain seven, join to picot, fill up with seven slip st continue. The beading goes on the tom of the yoke and the edging ar the armholes and neck. —B.

International Sunday School Lesson.

Lesson for November 12, 1916.
(By E. O. SELLERS, Acting Director of Sunday School Course.)

World's Temperance Sunday.

LESSON TEXT—Romans 14:13-15:3.

GOLDEN TEXT—It is not good to eat flesh, nor to drink wine, nor to do anything wherby thy brother stumbleth. —Rom. 14:21.

The early Christian church had two outstanding problems, the question of the Sabbath days (two of them) and the question of eating meat offered to idols. This lesson suggests the solution of the latter. Our modern problem of intoxicating liquors is very much the same as this ancient one of the early Gentile Christians.

I. "Let us not, therefore, judge one another" (vv. 13-15). There are certain acts which are universally conceded to be right and within the Christian law of liberty. There are also other acts which are as plainly prohibited. There are a large number of acts which lie in the region between these two, and men ought to be careful how they condemn one another for these latter things. Where good and true men differ, their acts, on the matter of the Sabbath (See Col. 2:16), or on temperance, must be determined as being unto the Lord, sincerely, conscientiously. It is not for us to judge (v. 13), literally, to pronounce judgment. They have a right to their opinion and to their liberty of thought and action, but (vv. 14, 22, 23) as for Paul or the Christian, he must have a clear conscience. He must have faith, and be assured that he is right: otherwise he is condemned by God and by his own conscience, and is not a sincere Christian disciple. The word "therefore" in verse 13 points back to verse 12, which ought to be carefully pondered. As we have each to render our accounts to God, we should stop judging one another. Food is a very proper thing, and laws are also proper, yet love is the ruling principle of the Christian life.

We ought to have our liberty curtailed rather than have our souls lost. If we magnify our liberty to the sacrifice of our brother's soul we "walk no longer in love." The demands of Christian love are more to the true followers of Christ than the permissions of Christian liberty. The privilege of eating and drinking while it injures others, however harmless to yourself, is not to be tolerated.

The word "stumbleth" here used (v. 21) implies a movable trap or snare, literally any impediment placed in the way so as to cause another to fall. We must never forget that even a weak brother is "a brother for whom Christ died."

II. "Let not your good be evil spoken of" (vv. 16-23). The kingdom of God is not meat and drink, but it is a life of righteousness, peace and joy in the Holy Ghost. Our liberty is to be so used that it shall not be evil spoken of. The real proof that we are in the kingdom of God and the kingdom of God is in us is not found in our scrupulousness or lack of it, in our eating and drinking, but in the manifestations of righteousness in our lives, and of having peace in our hearts (15:13). This peace must be manifested toward our fellow men (v. 19; Ch. 15:18) and being filled with "joy in the Holy Ghost." The object of our pursuit is to be the things which make for peace, the things whereby we may fill one another up, not the exploitation of some pet hobby, for the kingdom of God does not consist of riding hobbies.

In this matter of temperance reform we all recognize that alcohol has many uses besides that for drinking purposes, and that there are various opinions about drinking various forms of it, and various ways of advancing the temperance cause, all of which are honestly held by many good men, but Christian patriotism demands that every true-hearted man or woman, everyone who is loyal to his country, to humanity and to his God, should take Paul's position, (1) That he will not be a stumbling block in the way of the weak and of the young. (2) That he will not do anything to destroy his brother for whom Christ died. (3) That he will deny himself anything for their sake. (4) That his attitude will be that of love and not of selfishness. This places temperance on a high moral plane, but the world is also beginning to recognize that the temperance question is also an economic one.

It is well to have faith, but it is also well to have the love that does not injure others by the exercise of that faith. The question is, "Are you perfectly sure this thing is right?" When in doubt as to wether any action will please God, doubt your doubts, and avoid that act.

III. "We then that are strong" (15:1-3). This section is in reality a continuation of Chapter 14. Paul is continuing his thought that we are not to please ourselves, but rather to live such lives as will edify or build up our neighbor. Our strength is not given to us that we may glory or lord it over our weaker brethren, but rather that we may serve them.

To please my neighbor does not mean that "when in Rome do as the Romans do," but rather to live such a life that my action will be for the good and edification of my brother, thereby pleasing God (Gal. 1:10).

AUTO EXPERTS WANTED

Everywhere. Big wages. Great demand. Learn Auto Mechanics in this the best equipped school. Also Steam and Gas Engineering. Be sure to write for catalog. Address
ENGINEERING COLLEGE
Austin - Minnesota

NURSERY salesmen wanted. Home territory. Highest commissions, payable weekly. No investment. We deliver and collect. Perry Nursery Co., Rochester, N.Y. Est. 21 yrs.

Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

Catalog of Fall and Winter Fashions

Send 10c in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses', and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wis.

9716—Girls' underwaist and drawers. The pattern is cut in 5 sizes; 4, 6, 8, 10 and 12 years. It requires ¾ yard of 36-inch material for the waist and 1 yard for the drawers for a 6-year size.

1896—Ladies' capes in several styles. The styles here shown are cut in 3 sizes: Small, medium and large. It requires, for No. 1, 1 yard of 36-inch material; for No. 2 ¾ yard of 27-inch material; for No. 3, 1 yard of 44-inch material.

1506—For dolly's wardrobe. Set of short clothes. Comprising drawers, underskirt and a dress that may be finished in bishop or French style. The pattern for this attractive combination is cut in 6 sizes: 14, 16, 18, 20, 22 and 24 inches in height. It will require ⅝ yard for the drawers, ⅞ yard for the petticoat, and 1 yard for the dress of 36-inch material for a 24-inch size. Price 10 cents. This pattern also comes in children's sizes: 1, 2, 3 and 4 years. Price 10 cents.

1476—Girls' dress with sleeve in either of two lengths. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 3½ yards of 44-inch material for an eight-year size.

1471—A simple, serviceable apron model. The pattern is cut in 3 sizes: Small, medium and large. It requires 5½ yards of 36-inch material for the medium size.

1659 Skirt-1658 Waist—A charming gown. The waist pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt is cut in 6 sizes: 22, 24, 26, 28, 30, 32 inches waist measure. It requires 7¾ yards of 44-inch material for the entire gown for a 36-inch size. Two separate patterns, 10 cents for each pattern.

1912—Ladies' dress with or without strap trimming. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6½ yards of 44-inch material for a 36-inch size. The skirt measures a little over 3 yards at the foot.

1911—Juniors' dress. Cut in 3 sizes: 12, 14 and 16 years. It requires 4½ yards of 44-inch material for a 14-year size.

1545—Ladies' three-piece skirt, with tab trimming. The pattern is cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 3⅝ yards of 44-inch material for a 24-inch size, which measures 3¼ yards at lower edge.

1882—A popular and comfortable negligee for ladies. The pattern for this smart style is cut in 6 sizes: 34, 38, 42, 44, 46 and 48 inches bust measure. It requires 5⅜ yards of 44-inch material for a 38-inch size.

1887—Ladies' house dress, with sleeve in either of two lengths. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6¼ yards of 44-inch material for a 36-inch size.

1910—Ladies' waist. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 2⅜ yards of 44-inch material for a 36-inch size.

The AMERICAN MESSENGER

IS THE BEST Illustrated Religious Monthly Published In This Country at the Low Subscription Price of Only 50 Cents a Year.

AMONG its editorial contributors may be mentioned such popular religious writers as Rev. David James Burrell, D. D. LL. D., Pastor of the Marble Collegiate Church of New York City; Rev. Charles Carroll Albertson, D. D., Pastor of the Lafayette Avenue Presbyterian Church of Brooklyn, N. Y.; Rev. J. Wilbur Chapman, D. D., the famous evangelist; Rev. Edgar Whitaker Work, D. D., Pastor of the Fourth Presbyterian Church of New York City, and Rev. George Ernest Merriam.

It is especially valuable to Christian Endeavor and other Young People's Societies. Each issue contains stories of fascinating interest, suitable for home reading and other articles relating to the family life. The American Messenger endeavors to present a comprehensive view of the progress of the Kingdom, both at home and abroad; to tell of the forward movements that are being initiated for the uplift of humanity and the betterment of mankind; to call attention to those phases of Christian work and thought that are of unusual interest; to record the manifold activities of the Christian Church; and to spread abroad the cardinal teachings of Jesus Christ, as revealed in the Gospel which He proclaimed as the message of God.

The paper is interdenominational and admirably suited for every home. All those who subscribe now to the American Messenger for 1917 at fifty cents will receive the paper until January 1, 1918. New subscribers will thus receive the issues for October, November, and December, 1916, free of cost, if they subscribe at once. If you do not know the paper, send for a free sample copy.

Address, AMERICAN MESSENGER, Dept. 5, Park Ave. and 40th St., New York City, N.Y.

NEW, SANITARY SALT and PEPPER SHAKELESS SIFTERS

Moisture-Proof
Dirt-Proof
Germ-Proof

MADE of pure aluminum, satin finished with four narrow and two wide polished bands, and highly polished tops. These unusual salt and pepper sifters are very rich and attractive in appearance and look like silver. They are light in weight, yet so durable as to be practically indestructible. The illustration shows the salt sifter full size.

To operate it is necessary to simply press the button in and out. As they are moisture proof the salt will never be affected by damp atmosphere and the necessity for tiresome shaking is entirely eliminated. No more damp salt or pepper without flavor or strength. Owing to their ingenious construction, the contents cannot spill. They are so constructed as to keep out germs, dust and dirt, the contents being always clean. Price 50 cents a pair, postpaid.

We will send you a pair for 25 cents, postpaid, if you will send us 50 cents at the same time for a yearly subscription to The Housewife.

THE HOUSEWIFE.

In it you have a magazine containing the best literary and artistic efforts of the foremost writers and illustrators of the day. Anna Steese Richardson, organizer of the Better Babies Movement, will write for The Housewife a series of articles on the professions and businesses open to the girl starting out in life. Mabel Potter Daggett will write strong articles for The Housewife on matters of world-wide interest. Helen Christine Bennett will write articles and aim to show the young wife how to start housekeeping right. Lilian Dynevor Rice, who is known to hundreds of thousands all over the United States, will continue as Department Editor of The Housewife. The departments which she will supervise will embrace practical, seasonable cookery, embroidery, crocheting and needlework of all kinds, gardening and helpful household hints. Harold Vincent Milligan, organist and well-known writer on musical subjects, will contribute articles to The Housewife on music for the home. Among the prominent writers of fiction we have scheduled for the year is Holworthy Hall, one of America's brightest young authors. His first serial "The Frying Pan" commences in the November issue of The Housewife and is interestingly and attractively illustrated by Walter Tittle. Taken all in all, The Housewife for the year 1917 will be the best magazine published at 50 cents a year.

Or, you may obtain a pair for 25 cents, by sending us an order for any one of the following combinations of magazines, if your order is received before January 1, 1917.

The Housewife	$ .50	All for $1.00

PART III. "Prince Charlie"

CHAPTER VI—Continued.

"Why, it was Mr. Stuart. He talked about you a good deal at the Fort. You know there are several officers who have their wives with them and he was asking them lots of questions about typical western girls, but they didn't seem to know any, for at a military fort girls don't remain girls long—unless they're half boys, like me. Someone always snaps them up and tacks 'Mrs.' to their name, and that settles them."

"Poor girls!"

"Oh, bless you! they would say that same thing of anyone who visited a fort and did not become married, or engaged—well, I should think so!"

"Do you come in for your share of commiseration?" asked Tillie, who was listening with interest to this gossip of military life that seemed strange for a woman to share.

"Me? Not a bit of it. I am not worth their notice in that respect. They haven't begun to treat me as if I was grown up, yet; that's the disadvantage of being little—you never can impress people with a belief in your own importance. Yesterday, Lieutenant Murray had the impudence to tell me that, when all was said and done, I was only a 'camp follower' hanging onto the coattails of the army, and likely to be mustered out to the regiment at the discretion of the superior officers—my lords and masters! What do you think of that?"

"That you must have made things rather warm for the poor lieutenant to provoke a speech so unnatural to his usual courtesy," answered Rachel. "Whatever Mr. Stuart may credit me with, I have not imagination enough to conceive that speech being unprovoked."

"Well, if you're going to champion his High-Mightiness, I'll tell you nothing more. Mr. Stuart said you were so sympathetic, too."

"I should say it was the Stuart who was imaginative," laughed Rachel; "ask Tillie."

"But, he did say that—seriously," insisted Miss Fred, turning to Tillie. "When Mrs. Captain Sneath was curious about you, he said you had a delicate imagination that would find beauty in things that to many natures would be commonplace, and topped off a long list of virtues by saying you were the most loyal of friends."

Tillie sat looking at Rachel in astonishment.

"What have you been doing with the man?" she asked; "giving him some potion brewed by an Indian witch? A sure 'hoodoo' it must be, to warp a man's judgment like that! And you were not so very nice to him, either."

"Wasn't she?" asked Fred in amazement. "Well, I think it would be hard to be anything else to so charming and so clever a man. Do you know he is very rich?"

"No," answered Tillie. "We only knew that he was a physician out here for a change of air. He is splendid company."

"Well, I should think so! We were all in love with him at the Fort. Mrs. Sneath says he has given up medicine, and—I believe it's something of a secret, but it doesn't matter in this far-out corner of the world—he is something of a writer—a writer of fiction. The way I heard it was through the captain, who used to know him at college. He says that the Stuart, as you call him, is most likely out here studying up material for some work—a novel, may be. Wouldn't you love to read it?"

"I can't say unless I have some idea of the class of work. What has he done?"

It was Rachel who was the questioner, and who, in the light of a reasonable cause for his presence in the Kootenai, felt herself all in a moment a bit of a fool for some of her old fancies.

"I don't know—wish I did," said Miss Fred promptly. "He writes under an assumed name. Mrs. Sneath wouldn't tell me, for fear I'd bother him about it, I suppose; but if he comes up here to camp, I'll find out before he leaves—see if I don't."

"He is not likely to pay a visit up here in this season of the year," remarked Rachel. "I thought he was going east from Owens."

"He did talk like that when he first went down there, and that's what made Captain Sneath decide he was studying up the country; for all at once he said he might stay out west all winter, and seemed to take quite an interest in the Indian question—made friends with all the scouts down there, and talked probabilities with even the few 'good' Indians about the place. He told me he might see me again, if I was coming up with the company. So he is studying up something out here—sure."

Nobody answering this speculation, she was silent a bit, looking at Rachel, who had picked up a book off the table; and then she began to laugh.

"Well—" and Rachel glanced over at her, noting that she looked both amused and hesitating—"well, what is it?"

"I was only thinking how—how funny it would be if you happened to be that 'something.'"

But Rachel's answering laugh, as she pushed the book away, signified that it was the least probable of all fancies.

"It is you who should write romances, instead of the Stuart," she replied—"you and Tillie here. She has a good deal of the same material in her—that of a match-maker. She has spied out life partners for me in all sorts of characters out here, from Davy MacDougall down to Jim. They are wonderfully anxious to get rid of me."

Just outside the gate the blue military garb showed the coming of the usual afternoon callers from Camp Kootenai, among them the major, commander of the company, the only occasional rebel being his petite noncommissioned officer in petticoats. A tall young fellow in lieutenant's uniform halted on his way out to exchange greeting; and if the daughter complained of the young soldier's lack of deference, the father had no reason to, for in his eyes, as he saluted, shone something nearer affection than mere duty—a feeling that he shared with every man in the command, for Major Dreyer was a universal favorite.

"No later news of that scout, Genesee?" asked the younger as they separated.

"No; but we can expect him soon now, for that red shadow of his, Kalitan, just loped into camp. And, by the way," added the older officer, "he mentioned that he passed our friend Stuart back at the settlement. He is coming up this way again."

"Tell Miss Fred that, Major. When I saw her, an hour ago, she needed something to put her in a good humor."

"Ah! Good evening, Lieutenant.

"Good evening, Major."

The minute the subordinate's back was turned, Miss Fred, with a running jump that would have done Jim credit, landed almost on the Major's shoulder. He gave her a fericious hug, and dropped her plump on her feet with a stern—

"Attention!"

Quick as light the little hand was raised in salute, and the little figure gathered together its scattered dignity to make a soldierly appearance.

"Private Dreyer, I have been met on the outposts with a message telling me of a disorganized temper that should belong to your command. What have you to say for yourself?"

Instantly the role of the soldier was dropped, and that of the girl with a temper took its place.

"Oh, he told you, did he?" she asked, with a wrathful glance at the figure retreating toward camp. "Well, just wait until I go riding with him again! He's called me a camp follower, and—and everything else that was uncivil."

"Ah! And what did you do?"

"I? Why nothing, of course."

"Nothing?"

This $645.00 Tractor

Will Be Given Away

Send No Money, Just Your Name

You can become the owner of this $645 BULL TRACTOR, without cost, as a result of a few week's spare-time work in your own community, and I will pay the freight.

SOMETHING FOR NOTHING

BUT YOU MUST BE PROMPT

A COMPLETE MANUAL OF CROCHET AND TATTING

By Anna Valeire

This book on crochet and tatting craft is most timely, as these arts in all their forms are very popular at the present time. It contains over sixty designs and combines new and original patterns of rare beauty combined with dainty simplicity and elegant ste. The abbreviations used to signate the different stitches in tting and crocheting are given and eir meaning explained in full. Instructions are given in detail for very design displayed in the book. herefore, the novice in this art will ve no trouble whatever in working the simple, though seemingly mplicated, designs which have en compiled for her special benefit d in very little time will find that e may easily attempt the more mplicated patterns intended for ore advanced and experienced edleworkers. The lovely array of sertions, edgings and medallions ggest numerous ways in which ey may be used to beautify both rsonal and household articles. The inty tattings immediately bring to ind handkerchiefs of cob-web fineess. The simpler crochet insertions d edges suggest pretty bath-room ts and bed linen. There are no d of designs which may be used on esses and lingerie; two yoke patrns which appear in the book make particularly desirable. Designs r luncheon sets, scarfs, curtain ges and panels, and the new round low tops, and many more things hich will suggest themselves to the orker are all contained in the onderfully complete book on this scinating art needlework.

This wonderful book of working size designs d explicit instructions will be sent Free and stpaid if you will send your order for any of e following combinations of magazines bere November 10, 1916.

THE REASON FOR THE INCREASED COST OF MAGAZINES

The price of paper has increased er 100 per cent and the cost of ks and other materials entering to the manufacture of magazines s caused some publishers to inease their subscription price. The agazines offered below will accept ders from The Library Reading ub until November 10th at the ices which have prevailed for the st year. As an extra inducement r promptness, we will give a copy Crochet and Tatting by Anna aleire, to all who send us orders fore November 10, 1916.

LIBRARY READING CLUB
30 Irving Place, New York

"Well, I did threaten to go over and turn them out of the cabin that was built for me, but—"

"But that was a mere trifle in this tropical climate. I've no doubt it would do them good to sleep under the stars instead of a roof; and then it would give you an opportunity to do some wholesale nursing, if they caught colds all around."

"Just as if I would!"

"Just as if you would not! And Lieutenant Murray would come in for the worse medicine and the biggest doses."

"If his constitution is equal to his impudence, it would take stupendous doses to have any effect. I wish he could be sent back to the Fort."

"Won't sending him up among the Indians do just as well?"

"Y-yes. Are you going to, papa?"

"Ah! now you grow inquisitive."

"I do think," said Tillie, "you plague her a great deal."

"They just treat me as if I was a joke instead of a girl," complained Fred. "They began it before I was born by giving me a boy's name, and it's been kept up ever since."

"Never mind, Baby," he said soothingly; "if I had not made a boy of you I could not have had you with me, so the cause was vital."

They both laughed, but it was easy to see that the cause was vital to them and their companionship very much of a necessity. Its interruptions since her babyhood had been few and short, and her education, picked up on the frontier, had taught her that in the world there was just one place for her—in the saddle, and beside her father, just as her mother had ridden beside him before Fred was born.

CHAPTER VII.

"A Woman Who Was Lost—Long Ago!"

THE next morning, bright and early, Kalitan called at the ranch; and Miss Fred, accustomed as she was to the red men, grew rather enthusiastic over this haughty, graceful specimen, who gave her one glance at the door and walked past her into the house—as she afterward described it, "just as if she had been one of the wooden door posts."

"Rashell Hardy?" was all he said; and without more ado Miss Fred betook herself up the stairs to do his implied bidding and hunt Miss Hardy.

"I rather think it's the grand mogul of all the Kootenais," she said, in announcing him. "No, he didn't give any card; but his personality is too striking to be mistaken, if one has ever seen him or heard him speak. He looked right over my head, and made me feel as if I was about two feet high."

"Yes, but he looks like a young faun. That one never came from a scrub race."

"I'll ask him to stay to dinner," laughed Rachel; "if anything will cure one of a tendency to idealize an Indian, it is to see him satisfying the inner man. Come down and talk to him. It is Kalitan."

"Oh, it is Kalitan, is it? And pray what is that—a chief rich in lineage and blooded stock? His assurance speaks of wealth and power, I should say, and his manner shows one a Fenimore Cooper spirit come to life. How am I as a guesser?"

"One of the worst in the world. Kalitan is really a handsome humbug in some ways. That superb manner of his is the only stock in trade he possesses beyond his swift feet; but the idea of importance he manages to convey speaks wonders for his strength of will. Come along!"

"Klahowya, Rashell Hardy?" he said; and stepping solemnly forward, shook her hand in a grave, ceremonious fashion. Rachel told him the other lady was her friend, by way of introduction, and he widened his mouth ever so little in a smile, but that was the only sign of acknowledgement he gave; and when Rachel spoke to him in English he would not answer, but sat stolidly looking into the fire until she saw what was wrong and addressed him in Chinook. "Rashell Hardy need not so soon forget," he reminded her briefly; and then went on with his speech to her of where he had been; the wonders he had done in the way of a runner, and all else of self-glorification that had occurred in the past months. Many times the name of his chief was uttered in a way that impressed on a listener the idea that among the troops along the frontier there were two men who were really worthy of praise—a scout and a runner. "Kalitan tired now—pretty much," he wound up, as a finale; "come up Kootenai country to rest, maybe, while spring comes. Genesee he rest, too, maybe—maybe not."

"Where, Kalitan?"

"S'pose camp—s'pose maybe Tamahnous cabin; not here yet."

"Coming back?"

Kalitan nodded and arose.

"Come see you, maybe, sometime, often," he said, as if conferring a special honor by promised visits; and then he stalked out as he had stalked in, only checking his gait at sight of Aunty Luce coming in from the kitchen with a dish of cold meat. She nearly dropped it in her fright, and closed her eyes in silent prayer and terror; when she opened them the enemy had left the porch.

"Good Lawd, Miss Rache!" she gasped. "He's skeered me before bad enough, but this the fust time he evah stopped stock an' glare at me! I's gwine to complain to the milantary—I is, shuah."

"You are a great old goose!" said Rachel brusquely. "He wasn't looking at you, but at that cold meat."

There seemed a general gathering of the clans along the Kootenai valley that winter. With the coming north of Genesee had come the troops, then Kalitan, then their mercurial friend of the autumn—the Stuart; and down from Scot's Mountain came Davy MacDougall, one fair day, to join the circle that was a sort of reunion. And among the troops were found many good fellows who were so glad of an evening spent at the ranch that never a night went by without a party gathered there.

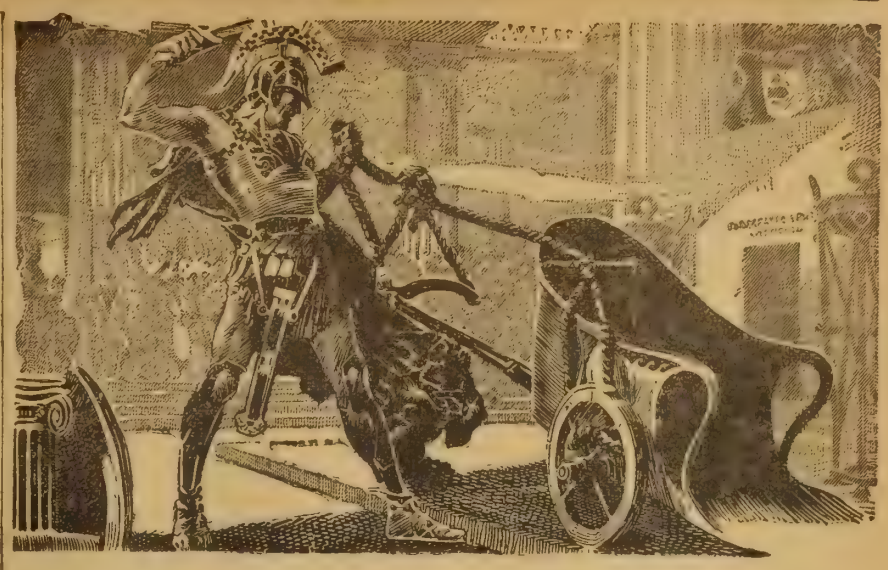
"The heft o' them does everything but sleep here," complained Aunty Luce; "an' all the other ones look jealous 'cause Mr. Stuart does that."

For Hardy and his wife had insisted on his stopping with them, as before, though much of his time was spent at the camp. There was something about him that made him a companion much desired by men; Rachel had more opportunity to observe this now than when their circle was so much smaller. That gay good humor, with its touches of serious feeling, and the delicate sympathy that was always alive to earnest emotion—she found that those traits were keys to the hearts of men as well as women; and a smile here, a kind word there, or a clasp of the hand, were the only arts needed to insure him the unsought friendship of almost every man in the company.

"It's the gift that goes wi' the name," said MacDougall one day when someone spoke of the natural charm of the man's manner. "It's just that—no less. No, o' course, he does na strive for it; it's but a bit o' nature. A blessin', say you, Miss? Well, mayhap; but to the old stock it proved but a curse."

"It seems a rather fair life to connect the idea of a curse with," remarked the Major; "but I rather think he has seen trouble, too. Captain Sneath said something to that effect, I believe—some sudden death of wife and children in an epidemic down in Mexico."

(To be continued.)



Doing "the Impossible"

The Gordian knot is the ages-old symbol of the seemingly impossible. Alexander the Great gave it a place in legendary history when, unable to untie it, he cut it in twain with his sword.

This famous incident of antiquity has its modern counterpart in the real work of the men whose vision and unrestricted initiative brought forth the great Bell System.

In the development of the telephone, one Gordian knot after another has been met with. Yet each new obstacle yielded to the enterprise of the telephone pioneers. Every difficulty was handled with a will and a courage which knew not failure.

Man's words have been given wings and carried wherever his will directs. Electrical handicaps have been overcome one by one.

The feeble current of telephone speech has had a way hewn for its passage through all physical impediments, until the entire country, from the Atlantic to the Pacific, is within hearing of a child's faint cry.

This record of the Bell System for past achievements is an earnest of future accomplishment. New problems are being met with the same indomitable spirit, which guarantees a more comprehensive as well as a more perfect service.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

A Herd Worthy of Consideration.

WE recently had an opportunity to inspect the breeding of the Duroc Jersey herd owned by E. R. Perkins, Manitowish, Wis., and inasmuch as we have seen some of the foundation sows, we feel that Mr. Perkins is offering Durocs that should appeal to our readers in the market for registered swine of this breed. Eleven sows represented the initial purchase on the part of this breeder and a mention of the breeding will show that he did not purchase a "cold-blooded" animal. Four of the sows in the breeding herd were sired by a son of Marion's Wonder and in traveling over the state, inspecting the various Duroc Jersey herds, we have come to the conclusion that Marion's Wonder was the greatest sire ever used in this state. The dams of these four sows represent the Golden Models. Three other sows are sired by Newcombe's Defender, a boar bred by McKee Bros., and sired by the great Defender; $10,000 was refused for the last mentioned boar, the only Duroc Jersey boar twice grand champion at the International. Two of the best breeding matrons in Mr. Perkins' herd are daughters of King the Col. 1st, he a son of King the Col., the boar that has more sons heading pure-bred herds than any sire living or dead. The dam of these two is by the noted Iowa boar, Advance Critic. Two sows that are producing good litters on this farm are sired by Defender's Gold Model by the grand champion, Lee's Defender, out of Golden Queen 38th by the sire that made the Golden Model popular—Golden Model 2d. These sows are out of dams by the one and only Illustrator, also a grand champion. By the way, one of these sows has a spring litter by King Royal by the Royal Champion by the $2,650 boar, Royal King, he in turn by the sire of the Omaha first-prize winners and champion—Orion Cherry King. Now if there is a herd in the state that contains better breeding we have not seen it. Mr. Perkins was unfortunate this year in having a complete failure, consequently he must sell some of his Durocs. In this instance the slogan, "one man's loss is another man's gain' is very true, for the original investment is a great deal more than he expects to get for the produce. He has spring boars and gilts to sell and about fifty fall pigs. These will practically be sold at your own price and he will pay the express to your station and furnish a certificate of registry with each pig sold. We know the price he is asking, and while it is far below the real value of the individual, you get the benefit. It will pay you to investigate. We will appreciate it very much if you will mention The Wisconsin Farmer when writing the owner. See page 23.—Adv.

Orion Cherry King Jr.—National Champion.

THE National Swine Show recently held in Omaha, Neb., was without a doubt the greatest show of the kind ever held in the world, and any breeder that was "in the money" at that show has reason to feel proud indeed. By winning the grand championship, Orion Cherry King Jr., gains the distinction of being the best Duroc Jersey boar on exhibition at this great show. Sons of this boar are scarce in the middle West, though he is a recognized sire in the East. E. H. Parker & Son, Janesville, Wis., are fortunate in having a son of this grand champion at the head of their herd. Orion Cherry King Jr. is by Orion Cherry King, one of the leading sires of the present day, so the Parker boar comes from a line of breeding that is no accident. The Parkers will give the breeders of the Northwest a chance to get some of this blood in their herds, for on February 8th, they will sell fifty head of Duroc Jersey sows, bred to this yearling son of Orion Cherry King Jr., and to a son of The Pal's Col. by Pal's Col. This is the first public sale ever made by this firm and we have been advised that the public will get the best he has, in this his first sale. Keep the date in mind. Spring boars weighing up to 275 pounds are being offered from this herd and they are dandies, as good as any breeder has. The Parker guarantee goes with every boar sold. Write your wants, but don't wait until all the tops are gone. Please say you saw the advertisement in The Wisconsin Farmer. —Adv.

Twenty-eight Boars Sold, Twenty Left.

PECULIAR circumstances surround the breeder of pure-bred swine. We recently received two letters from swine breeders, in the same mail. One said that he had only sold four boars and the other breeder said that he was entirely sold out of boars and gilts. This is the first year that either breeder had ever done any advertising and the prices quoted were practically the same. It is to be expected that the Smileys are enjoying a good trade, for they have one of the good herds of the state and make satisfied customers. We were at their farm last week and saw twenty boars—in two lots—that are ready for shipment. We saw that many more in the feeding lot. Up to that time they had sold twenty-eight spring boars, but don't think that the best ones are all gone, for you know that some buyers are not willing to pay the price. Get in touch with Wm. Smiley & Sons, Albany, Wis., and when writing please mention the fact that you saw the advertisement in The Wisconsin Farmer. See page 26.—Adv.

Hampshires Continue to Gain in Popularity.

WHILE talking "hog" to a farmer recently he showed us a circular that he had received from a prominent Hampshire breeder. This farmer had become interested in Hampshires and had written the breeders that are advertising in this paper. One of them was A. M. Laird, Prairie du Chien, Wis., and when he replied to this farmer's inquiry he enclosed a circular containing testimonials from twenty men to whom he has sold Hampshires since January. This circular "turned the trick" and Mr. Farmer purchased two gilts and a boar from Mr. Laird, and if he writes Mr. Laird what he told us, his testimonial will be on the next circular. This proves again that a satisfied customer is your best advertiser. We are well acquainted with the Laird herd of Hampshires and his method of doing business and we are glad to say that he gives "value received." We were at this farm a short time ago and most of the spring boars were sold then, but if you want a real herd boar, write about Kornfalfa King, his senior herd boar that is for sale, inasmuch as he can't use him to advantage. He has some great gilts of March, April and May farrow, well grown and nicely marked. These must be sold to make room for the fall pigs, and you get the benefit. If you want a pair or trio of fall pigs they will be shipped at weaning time at very reasonable figures. Mr. Laird's farm is devoted to the raising of Hampshires, that is his business and if you buy from him your order will be handled in a businesslike manner. Recent shipments have been made to Massachusetts, Mississippi, Georgia, North and South Dakota, Nebraska, as well as his adjoining states. His advertisement appears on page 26 of this issue. Write for particulars and please mention this paper.—Adv.

Harford's Holsteins.

YOU will be impressed with the pedigrees of the young bulls advertised for sale on page 25 by Fred Harford, Kaukauna. Mr. Harford has been using bulls of exceptional merit from the time he started his breeding operations. Two of his former herd sires have one or more daughters with records over thirty pounds butter in seven days, one was a son of Hengerveld De Kol; one by Sir Sadie Cornucopja and one from Mercedes Julip Pietertje Paul. The cows in his herd are what you would expect to find sired by such bulls. They are large, many weighing 1,600 pounds and better, are broad hipped, straight rumped and with large, square udders. He contemplates doing official testing this winter. Go up and look over his herd or write for pedigrees of his young bulls. When writing kindly mention The Wisconsin Farmer.—Adv.

Lang & Co. Offer Draft Stallions.

W. A. LANG & CO., Greeley, Iowa, well-known for many years as importers and breeders of Belgian and Percheron horses, have an announcement on page 24 offering high-class stallions ranging in age from weanlings to six year olds. A representative of this journal recently visited their barns and found a collection of heavy-boned, good-middled, drafty stallions, part of which are imported and the balance American bred. This firm has always been a stickler for heavy bone and the horses to be found in their barns are evidence that this very important factor has not been lost sight of. They are in position to furnish the prospective purchaser of a high-class Belgian or Percheron stallion, the kind that will meet with his approval. This firm has always given liberal guarantees and satisfactory terms to purchasers. Anyone interested should visit their barns before purchasing. When writing, kindly mention this journal.—Adv.

THE champion Jersey herd at the Northern Wisconsin Fair, Chippewa Falls, 1916. Owned by L. M. Krippner, Rice Lake, Wis. The junior champion bull is offered for sale. See advertisement and write for detailed description.

Henderson's Holsteins.

HAVE you written to J. C. Henderson, Elkhorn, Wis., for a pedigree of the Holstein bull he is advertising for sale on page 25. If you have not and are in the market for a herd sire, we advise you to do so, as he is well worth the money. He is sired by the thirty-three pound bull, Pabst Burke De Kol King, and out of a 17.93-pound grand daughter of Paul Beets De Kol. Mr. Henderson has been doing A. R. O. testing the past year and has made some very creditable records, but as he told the writer, the cows have just started for they responded very readily to heavy feeding. He has been getting them in condition for some time and when they freshen again he will undoubtedly increase their records very materially. The dam of Pabst Burke De Kol King, gave 644 pounds milk and made 33.86 pounds butter in seven days; in a year she gave 20,106 pounds milk and made 845 pounds butter. The dam of the young bull offered for sale made 17.93 pounds butter in seven days and we believe will increase this very materially at her next freshening. Send for an extended pedigree of this bull.—Adv.

Good Durocs and Guernseys.

WE recently visited the farm of Riley Martiny & Son, Baraboo, Wis., and were favorably impressed with the class of stock they are raising on that up-to-date stock farm. Registered Duroc Jerseys and Guernsey cattle are the features of the farm and they have excellent specimens of the two breeds. Just at this time we will call special attention to a dozen spring boars that they have for sale, and right here we want to say that they are good and any breeder that will order one of them will be pleased. They have been well grown, and there is not a cull in the lot. We saw what they called their culls, they were in the feed lot, but many breeders would send them out on mail orders and at that they are far superior to many boars that are in service. The price on the spring boars is $25 and $35 and the boar will be shipped on approval. This is evidence that they are selling good Durocs, for they would not make this offer if the boars were inferior. Dairymen that are in need of a few fresh cows can find them in this herd. The Martinys are getting registered Guernseys as fast as possible, consequently they are offering ten head of grade Guernseys for sale. They have recently freshened or are due to freshen in a short time and their barn accommodations are limited. These cattle are being priced very cheap, one or the ten, for quick sale. This offer is worth investigating. Write relative to the breed you are interested in. This firm is on the square and will treat you right. Please mention this paper when writing. See page 23.—Adv.

Who Wants a Herd Boar?

THERE has been a great demand this fall for desirable herd boars of the different breeds, and the breeders that have had to buy have found difficulty in finding desirable boars. There are plenty of good boars suitable to do service in a grade herd, but when one goes out to buy a boar good enough to place at the head of a registered herd of good sows, he will find out that he has a job on his hands. Some time ago we called attention to the good yearling Duroc Jersey boar that we found in the B. M. Arries herd at Augusta, Wis. He is one of the best yearlings that we have seen. At the time we were on this farm Mr. Arries did not want to sell this boar, and we did not blame him, for he had sired some wonderful pigs. We have recently had a letter from the owner advising that he would offer this boar for sale, that he either had to sell the boar or the gilts and since the gilts have done so well he wishes to retain most of them in the herd, consequently the boar is offered for sale. The price is $100 and here is a boar that is worth the money. Mr. Arries has a few boars sired by this fellow that are very choice—they will please you. Get his prices on them. Please mention The Wisconsin Farmer when writing. See page 23.—Adv.

The Krippner Jersey Herd.

THOSE that attended the Northern Wisconsin Fair at Chippewa Falls this year were impressed with the excellent showing of Jersey cattle. Four good herds were represented and according to the awards, L. M. Krippner, Rice Lake, Wis., had the best herd there. In the first place Mr. Krippner has an excellent bull at the head of his herd, namely Camelia's Golden Lad 88384. He is a bull of great breed character and stamps that in his offspring. He was the grand champion bull of the show and his son was junior champion bull. Mr. Krippner also had both female championships. To make a long story short he won thirteen firsts at this good fair. At the present time the junior champion bull is being offered for sale and anyone wanting to buy a herd bull need not look farther, for this bull will suit the most critical. Besides being a good individual he comes from a high-producing dam. A nine-months old bull is also for sale. Both of these bulls are sired by the grand champion menticned above. Write this breeder for description. A picture of his Jerseys is shown in this issue. See page 24.—Adv.

Chesters by the Hundreds.

HARRY CRANDELL, Cass City, Mich. has one of the largest, if not the largest herd of Chester Whites in the North. Not only has he a large herd but the herd boars and breeding matrons are the best that money could buy. He has a few spring boars that are suitable to head pure-bred herds and at the present time he is offering 10 head of spring gilts. These will be sold open or held until bred to any one of his noted herd boars. Besides the spring stuff, 300 fall pigs can be picked from to supply the demand for Chester Whites of this age. He is offering these fall pigs at very reasonable prices and now would be a good time for Wisconsin breeders to buy from Mr. Crandell, for they can get new blood in their herds and the express rate on pigs is not very high. His address is

Sold Several Young Bulls and Heifers.

GEORGE H. GIBSON, Nashota, Wisconsin, breeder of Holstein cattle recently started an advertisement in The Wisconsin Farmer. Now he writes to tell of his sales and to express his satisfaction with the results obtained from his advertisement. He says:

I have been having excellent results from my advertisement of Holstein cattle, which started in The Wisconsin Farmer in August. Patrick Cudahy, Cudahy, Wis., purchased a young bull and three heifers from me last week. He saw my advertisement in The Wisconsin Farmer. I have also sold several other young bulls.

The Wisconsin Farmer reaches 90,000 possible buyers each week. Farmers look in The Wisconsin Farmer when they wish to purchase new stock, because The Wisconsin Farmer regularly publishes more live stock advertising than any other Wisconsin farm paper. It may put you in touch with prosperous farmers and breeders who wish to buy the kind of stock you have to offer.

Send your advertisement today and see what The Wisconsin Farmer can do for you.

The Wisconsin Farmer Madison, Wis.

Guaranteed Circulation, 90,000.

Cass City, Mich., and it will pay you to get his prices and descriptive booklet. When writing please say you saw the advertisement in The Wisconsin Farmer. See page 23.—Adv.

Inter-County Holstein Sale.

HOLSTEIN men have come to realize that there is as much difference between public sale organizations as there is between cattle. Some sale organizations go on the principle that when a man buys cattle in a sale he takes his own chances. They even go so far as to state that they refuse any responsibility for cattle entered. On the other hand, there are a few sales where the sales organization stand back of every animal sold. You always take the word of the sales company that the animals are high class and are straight and right. We never yet saw a sale advertise that they were offering a lot of mediocre, defective cattle. In the one case the sales company stands back of its promises, while the other organization admits that their advertisements were merely to get buyers. The Inter-County Holstein Breeders' Association is one association that holds itself responsible for cattle sold under its management. It is almost impossible to have every animal straight and right, as some defects may appear later which were not perceptible at the time the animal was sold. In the last sale of this association one cow proved to be a shy breeder; another had a hole in her teat when she came in. When notified of it the association refunded the entire purchase price on the first animal and refunded $50 on the second animal. You do not need to fear that if you buy here that it means an adjustment with every consigner. The associaion makes all adjustments themselves. In order to further protect the buyers, they have all the animals tuberculin tested under the direct supervision of the state live stock sanitary board and then give a sixty-day retest guarantee. The consignment this year is one of unusual quality. There will be a number of excellent bulls offered, including three bulls from dams with records over thirty pounds. One of these is a yearling ready for service. He is nine-tenths white in color and an outstanding individual, being very well grown and good and straight. He is sired by King Segis Champion, a show bull that has won heavily in the East. He is also royally bred, being by King Segis, that Col. Kelly says is the "greatest bull living or dead." His dam is the thirty-six-pound cow, Aaggie Pauline Sarcastic, called the highest record show cow of the breed. The dam of the bull to be sold is Springdale Johanna Rue, that made 30.24 pounds of butter in seven days. She is a daughter of Hillside Vale, that has eighteen A. R. O. daughters, two with records of 31.22; 30.24. J. W. Goldthorpe is consigning a thirty-one-pound grandson of King Segis Pontiac Polkadot, that is 100 per cent the same blood as the $50,000 bull, King Segis Pontiac Alcartra. Fred Almrecht is consigning a thirty-pound son of Moscrips' noted grand champion bull, Sir Beets Cornucopia Netherland. Tompkins Wright, Waupun, Wisconsin, is consigning ten head of excellent females, one a twenty-six-pound daughter of Johanna Korndyke. Ed Schultz, Hartford, is consigning a fine lot of females and other good ones are being consigned by other leading breeders of the two counties. Send for a catalog to Francis Darcey, Watertown, Wisconsin, and plan to attend the sale. When writing kindly mention The Wisconsin Farmer. See page 25.—Adv.

The Maplewood Holstein Herd.

NEAR Kilbourn, Wis., made famous by "The Dells," there is a herd of Holstein cattle that has never been heard about, yet is deserving of considerable publicity, for the owner has been "doing things" with his cows. To show that this man got off on the right foot, we will call attention to the fact that the original cow, purchased was a half sister to the first forty-pound cow, Johanna De Kol Van Beers. The bull heading this herd at the present time is Duke Colantha Johanna Mercedes, a two year old out of a twenty-eight-pound dam and a grandson of the noted Colantha 4th Johanna and Hengerveld De Kol. Preceding this bull in service was King Fobes Oak De Kol 60046, a three-fourths brother to Minnesota's first thirty-six-pound cow. At the present time six sons of the last-mentioned bull are being offered for sale and of this lot there are three that are outstanding in every respect and good enough to deserve a berth in the best herds. They are out of A. R. O. dams and are old enough for service. This herd has only been established a few years, yet the owner has put A. R. O. records of from seventeen to twenty pounds on ten of the young things in the herd. R. C. Walker is the owner of this good herd of cattle and we are pleased to recommend what he has for sale. His address is Kilbourn, Wis., and if you will write him your wants your letter will receive prompt attention. We will appreciate it if you will mention The Wisconsin Farmer when writing. See page 25.—Adv.

Save Your Hides.

HORSE and cattle hides, properly tanned, can be made into warm and handsome fur coats, robes, gloves, mittens, caps and other fur products. You can save money by sending your cattle and horse hides to John Figved, Milwaukee, to be made into fine furs at factory prices. The Figveds have been tanners for several generations, and Figved tanning has always stood for quality and square dealing. Write to the John Figved Robe and Tanning Co., Milwaukee, Wis., for their price list and catalog. Tell them you saw their advertisement in The Wisconsin Farmer.—Adv.

Schultz's Consignment to the Inter-County Holstein Breeders' Sale.

THE Inter-County Holstein Breeders' sale to be held November 15th at Watertown, Wisconsin, will offer the best lot of Holsteins to be sold in public sale this year. The consignment of Ed M. Schultz, Hartford, Wisconsin, contains several that it will pay our readers to investigate. The bull calf he will offer is a very nice individual of large size and nicely marked. His sire, King Korndyke Veeman, is sired by the forty-one-pound bull, King Korndyke Said Vale, and is out of the best daughter of Sir Veeman Hengerveld, with a record of 33.13 pounds of butter in seven days. This bull calf is out of Johanna Star Blanche with a record of twenty-five pounds of butter in seven days as a three year old and 17,219 pounds of milk and 677 pounds of butter in one year at two years of age. She is out of Piebe Estata Dora with a record of 26.2 pounds of butter in seven days and 19,565 pounds of milk and 885.9 pounds of butter in seven days, including his dam as a three year old. He also offers two daughters of Johanna Star Colantha, that has a record of twenty-six pounds of butter in seven days at six years of age and 17,012 pounds of milk and 727.2 pounds of butter in one year at four years of age. One of these has a record of 20.2 pounds of butter in seven days at three years of age and has four dams in pedigree that average 875 pounds of butter and 19,648 pounds of milk in one year. One is a 21.7 pound cow, made at five years, with a record of 590.4 pounds of butter and 13,275 pounds of milk in one year at two years of age. She is a grand daughter of a 32.8 pound cow. One is a daughter of a 23.5 pound three year old

CONSIGNED by Ed D. Gibbs, Fox Lake, Wis., to the Intercounty Holstein sale, Watertown, Wis., on November 15th.

and has six dams in pedigree that average 781.3 pounds of butter and 18,781 pounds of milk in one year, including her dam as a two year old. He will also offer five A. R. O. cows and they are all good individuals of large size. They are all out of large yearly record dams and four of them are sired by bulls that have large yearly record dams. Send for a catalog showing pictures, description and breeding to Francis Darcey, Watertown, Wis. See page 25.—Adv.

Hagemeister's Percheron Sale.

THIS is the last call for the sale to disperse the great stud of Percheron horses owned by the late H. F. Hagemeister, Green Bay, Wisconsin. We have visited this stud twice during the past summer and have looked over each individual. It is our belief that there is no better lot of Percherons in any one stud in the middle West—certainly not in Wisconsin. The mares are big, drafty animals with heavy, smooth limbs, good hips, strong backs and good heads. An evidence that they are uniformly good is shown by the fact that there is not a blemished animal in the forty-three that are offered in the sale. It is largely a Baccarat-Historique sale, the majority of the animals being very close descendants of these two royally bred imported stallions. There will be twenty-two sons and daughters of Historique that was imported by Mr. James Boyd from France, where Mr. Boyd purchased him of Mr. Avaline, president of the Percheron Society of France. Many of these sons and daughters are out of daughters of Baccarat, whose name and record as a breeding stallion is familiar to Wisconsin Percheron breeders. Mr. Kellog purchased him at the highest price ever paid for a Percheron stallion at that time. At a sale in Green Bay a few years ago his daughters sold at the highest average ever made in the state. The present offering is a credit to these two great stallions. There will also be five imported mares sold and their offspring. Among the eleven head of stallions are the two that stand at the head of the stud and to whom the mares offered for sale are bred. These are Brilliant 47573 and McDougal 94905. Send for a catalog to the Hagemeister Brewing Company, Green Bay, Wisconsin. See page 24.—Adv.

Great Demand For Registered Swine in the South.

WE have just received a letter from Col. Orval A. Jones, a brother to Carey M. Jones, written from Jacksonville, Fla., where he had the honor of conducting the first pure-bred live stock sale ever held in that state. He advises that there is an excellent outlet in the southern states for registered stock and especially swine. Besides cattle, he sold eighty-five head of Duroc Jersey hogs—twenty of which were pigs not yet weaned, that were sold singly and including these pigs the eighty-five head averaged $50. This shows conclusively that there is always a market for the good stock. Colonel Jones' services are in demand all over the United States because he makes successful sales. Most of his sales are in the central and southern states, but many of our northern breeders would do well by securing his services. His address is 14 N. Sacremento Blvd., Chicago, Ill. If you contemplate holding a sale of pure-bred stock, see if he has an open date—he'll give satisfaction. See page 24.—Adv.

PROTECTOR E. 195462, the Pride bull at the head of the M. C. Willford Angus herd, Canton, Minn. Many of the females in the Willford-Miller sale at Canton, November 9th, have calves at foot by this bull or are bred to him. He is an outstanding individual.

A TRIP TO CHICAGO

Lowest Rates on All Railroads

Ask For New Stove Catalog No. 432.

THE new catalog of the Kalamazoo Stove Company is ready to be sent to those of our readers who request it. Those who are thinking of getting either a heater or kitchen range will probably want to see this new book of stove styles right away, because the season is here when buying will likely not be long delayed. The manufacturers feel that in this new catalog of heaters, base burners and kitchen ranges they are showing the highest quality and that they are selling them at remarkable money-saving, factory-to-you prices. Almost everyone has heard of the Kalamazoo Company and there is no way of knowing just how many stoves and ranges they have sold to Wisconsin Farmer readers. They sell their goods direct to the consumers by mail and are known from coast to coast for quality goods and for satisfying their customers. In their new catalog they want to call particular attention to their new Kalamazoo Crown Heater. It's in mission design and has all the elegance and beauty, which heretofore has only been found in the big base burners. Another new design to which the manufacturer calls attention to is the Kalamazoo Mission Steel Range, which has been designed for efficiency and beauty. The present prices are not guaranteed after December 1, 1916, therefore Wisconsin Farmer readers, who write now for Catalog No. 432 and buy prior to December 1st may be confident that they have saved some money—a dollar saved is as good as a dollar earned. Those who think they may buy a stove or heater or base burner or a kitchen range, are invited to write to the Kalamazoo Stove Company, Kalamazoo, Mich., and get Catalog No. 432. —Adv.

The Madson & Sons' Poland Chinas.

MADSON & SONS, Madison, Wis., are too well known as breeders of Poland Chinas to need much comment at this time. The Madsons are among Wisconsin's best hog men—they are good caretakers and if you visit their farm you will not find any stunted pigs. Those that are good enough to keep are worth taking care of. The spring boars that they are offering are well grown, many of them weighing right at 250 pounds and they are sired

by Correct I Am and Triumph, both show boars and good sires. The usual Madson guarantee goes with every boar sold and that is worth a great deal in buying a boar. Get their prices at once, for it's time for you to buy that boar. When writing please mention The Wisconsin Farmer. See page 26.—Adv.

Selling of Guernsey Dairy.

A. I. STUBBS, West Salem, Wis., has sold his fine dairy farm adjoining that town, and on November 21st he will sell his entire herd of registered and grade Guernseys, numbering about fifty head. In this sale will be some choice, young bulls of the most desirable breeding. Of the female offering, there will be several attractions. Inasmuch as Mr. Stubbs has been supplying milk and cream to patrons in West Salem and La Crosse for the past few years, it is only natural that the best of the females have been retained in this herd, and ordinarily it is only at dispersion sales that the public have the opportunity to buy the cream of a man's herd. There will be twenty-five registered Guernseys, and as above stated, several of them have substantial A. R. records. There will be a few calves and open heifers, the balance are in milk now and most of them are safe in calf to the noted Holden 4th. He is selling some grades that are excellent producers, and they will increase the earning capacity of many dairy herds. As previously stated, this is a complete dispersion sale, the farm has been sold to Mr. Quackenbush, of North Bend, Wis., and Mr. Stubbs must give possession December 1st, consequently nothing is reserved—you get the benefit. You should have a catalog and if you write, saying you saw the advertisement in The Wisconsin Farmer, you will receive one. Write A. I. Stubbs, West Salem, Wis., and don't forget the date—November 21st. See this page.—Adv.

Buys Good Herd Boar.

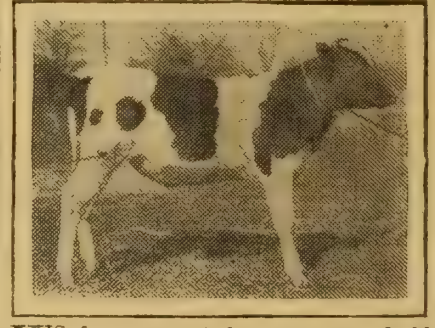
L. E. PEASE, the progressive young breeder of Poland Chinas living near Millville, Grant county, Wis., was fortunate in getting a herd boar from the P. W. Young herd, Prosper, Minn. The boar is a fall yearling that weighs right at 500 pounds and is sired by Master's Giant, in our estimation one of the best breeding boars in the state of Minnesota. His dam is Defender's Choice by Pawnee Defender out of Dorr's Expansion. We need more such boars in Wisconsin. Mr. Pease has a few spring boars for sale that will please you. His shipping point is Bridgeport. If interested in good Polands write for prices and mention The Wisconsin Farmer. See page 26.—Adv.

Here's an Opportunity.

IT IS not customary to sell registered swine, especially sows and gilts, during November or December, yet sometimes conditions necessitate such sales and such is the case with A. L. Hyzer, West Salem, Wis. Mr. Hyzer has rented a farm in Iowa, to take possession December 1st, and at the first he thought he would leave his hogs on the present farm and go ahead with the sow sale that he has advertised for February 1st, but after due consideration he has decided to sell at West Salem, Wis., November 21st, even though he cannot expect to get the real value for his hogs. This will be closing-out sale—everything in the way of registered swine will be sold, and as is the case in all closing-out sales, it is bargain day for the buyers. There will be eight tried sows, several of which cost Mr. Hyzer over $100. There are fifteen fall yearlings that will make money for some of the breeders if they will buy them and put them in their winter sales. Of the spring gilts, the fifteen will be sold that he had reserved for his own breeding herd. These sows are by Lincoln Model, an Ohio Chief bred boar and a first-prize winner at Sioux City, Iowa, Educator, the great Swan boar, King the Col., S. & H.'s Col. and the noted Golden Model 31st. There will be ten boars—two by King the Col., two by Lincoln Model, one by Educator and five by S. & H.'s Col. The best sows have been bred either to Lincoln Model or Logan Col., he by King the Col. This sale offering will be in nice condition and the breeders of the state can well afford to attend this sale, for if the inquiries for brood sows continue to come in as they are now, good sows are going to sell high in the sales the coming winter. The catalogs are now ready and can be had for the asking. If you can't attend this sale, send your buying instructions to T. P. Shreve, in care of A. L. Hyzer, West Salem, Wis. When writing for a catalog, we will appreciate it very much if you will mention The Wisconsin Farmer. See this page.—Adv.

NEXT WEEK'S SALE PROGRAM

Tuesday, November 14	Holstein-Friesians, Francis Darcey, Sec., Watertown, Wis. Holstein-Friesians, Ed M. Schultz, Watertown, Wis.
Wednesday, November 15	Holstein-Friesians, Francis Darcey, Sec., Watertown, Wis. Percherons, Hagemeister Brewing Company, Green Bay, Wis. Holstein-Friesians, Ed M. Schultz, Watertown, Wis.



HIS four nearest dams average 31.26 pounds butter in seven days. Consigned by Ed M. Schultz, Hartford, Wis., to the Intercounty sale, Watertown, Wis., November 15th.

Increasing Dairy Profits.

BEING good to your cows by housing them in clean, sanitary, comfortable stalls means increased dairy profits. Contented cows, well cared for, are best milk producers. Louden steel stalls and stanchions, manufactured by the Louden Machinery Co., 1708 Court St., Fairfield, Iowa, are designed to promote the cows' health and comfort, and thereby increase dairy profits. They are smooth, sanitary, comfortable, and easy to care for, simplifying the work of tending the cows. The Louden Company publishes a catalog which gives complete details about these efficient steel stalls and stanchions. It will be sent free to any dairyman or farmer wishing it. They also publish a book of Louden barn plans, which will help the farmer in building his new barn or remodeling his old one. This book will be sent on receipt of 10 cents to pay the postage. Wisconsin Farmer readers will find both of these books worth having. When writing, please mention that you read about the Louden stalls in this paper.—Adv.

Crouch's Horses at International.

SEVENTY-FIVE head of Percheron and Belgian stallions and mares will be exhibited at the International Live Stock Exposition at Chicago next month by J. Crouch & Son, Lafayette, Ind. Both imported and American-bred animals will be included in the exhibit, and the horses will all be up to the high standard for which the Crouch establishment is noted.—Adv.

Stoehr Having Good Sales.

M. STOEHR, Viroqua, Wis., advises that he has sold out on spring boars of March farrow. He has some April and May pigs that he is pricing cheap for quick sale, will sell you a pair or a trio. He will also sell his junior herd boar, Professor C., a well-bred boar and the sire of some of the best Durocs on his farm. Investigate this offer. See page 23.—Adv.

Those Wanting Berkshires.

THOSE of our readers that are interested in Berkshire swine should take note of the W. W. Powell advertisement that appears in this issue of The Wisconsin Farmer. Mr. Powell is located at Victory, Wis., which is on the C., B. & Q. between Prairie du Chien and La Crosse. At this time he is offering two yearling boars that are proven sires also spring boars and gilts of the most fashionable breeding. Mr. Powell showed his Berkshires at La Crosse Fair this year and no doubt many of our readers saw his hogs at that fair. Write him for prices and description. Don't forget to mention this publication. See page 24.—Adv.

MR. C. J. Schoenfeld & Son, Fox Lake, Wis., whose advertisement appears on this page have one of the largest Short-horn herds in the state which is headed by Village Mystic, weight over 2,400 pounds. He is proving himself a great breeder. His sire is the noted Imp. Villager and his dam is Imp. Glaures Girl 12th, that weighed over 1,900 pounds, and their herd is noted for their milk record for the past twenty-five years. There wasn't a day that this great herd didn't furnish milk to either the creamery or cheese factory, as some of their cows are rich in Bates breeding. Write them for prices on either bulls or heifers.—Adv.

Ailing Animals.

Diseased Pigs.

I would like to know what is the matter with my pigs. They are Chester Whites and are five months old. Ever since I weaned them there has been an ailment with a few of them. There seems to be a weakness in the back or hind legs. I don't know which. Their hind ankles turn forward sometimes when they walk and often they will walk a few steps then drag their hind legs. They eat and drink well and seem healthy every other way. I fed old corn all summer and fed shorts and oil meal in slop with some milk.

It would be hard to say what is the exact cause of the trouble in your pigs. The feed may be to blame in that it is too fattening and does not give the required strength. It might pay you to gradually change the feed either in part or the whole.

Pigs Have Cracked Noses.

We have a bunch of spring pigs, several of which have cracked noses. These pigs seem to be doing well and it does not seem to bother them, except when they sneeze. These pigs are fed ground corn and wheat made into a slop, and also tankage mixed with salt is kept before them. Is this food all right for growing pigs?

Your pigs are probably troubled with necrotic rhinitis. This condition is usually associated with necrosis of the snout and frequently also of the lips and is of rather common occurrence in small pigs. It is one of the conditions that constitutes the disease called sniffles. It is not possible to efficiently treat these cases because of the difficulty of applying medicaments to the lesion and further because of the destructive changes in the bones of the nose and face. The feed you are using seems all right to us.

Give our readers a chance to buy what you have for sale. Advertise it in THE FARMERS' MARKET. Six cents a word each insertion.

DUROC JERSEY SWINE.

SPRAIN DUROCS

BREEDERS have been buying our boars because they are above the average. Still have some good ones left, sired by five noted boars. Order now.

A BOOK ON FEEDING FARM ANIMALS.

Illinois Scientist Prepares Useful Volume.

Under the title "Principles of Feeding Farm Animals," Prof. Sleeter Bull, of the Illinois Agricultural College, has prepared a 400-page book that will appeal strongly to students of feeding problems. The feeding value of all classes of grains and forages is given in detail and feeding methods are outlined for all classes of live stock, young and old. The results of the very latest experiments conducted at the various stations are contained in this volume so that the whole subject of feeding farm animals is brought up to the very minute by Professor Bull. With our high-priced grains it becomes a complex question to know how to feed breeding and fattening animals so that a profit can be realized on the feeding process. Because of this the time is ripe for just such a publication as this. The volume sells for $1.75 and arrangements have been made by The Wisconsin Farmer whereby the book can be furnished to subscribers at this price.

The use of concrete for farm building foundations is becoming more general each year. Rat-proof foundations may be built with concrete and a good concrete mixer will be found profitable to those who have any considerable amount of concrete work to do.

DUROC JERSEY SWINE.

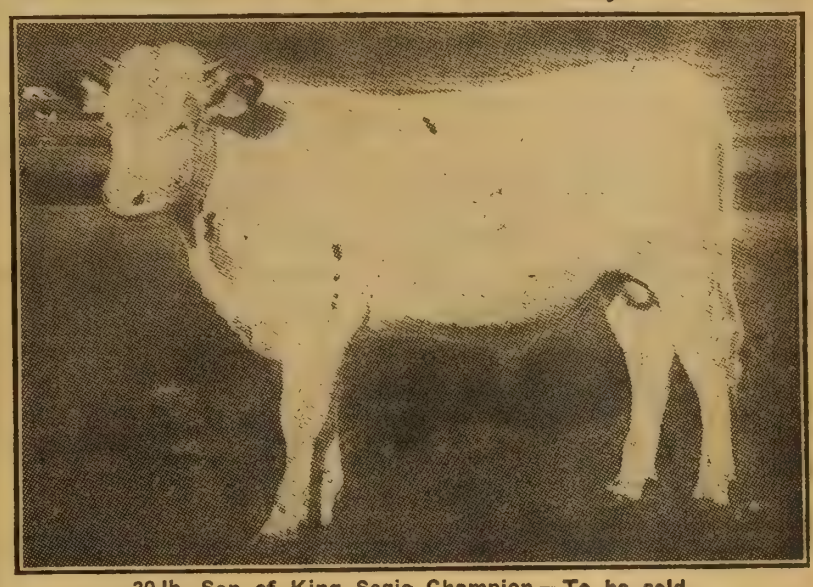
Quality Plus Integrity the Foundation Upon Which We Build.
On November 14-15 at Watertown, Wisconsin



30-lb. Son of King Segis Champion.—To be sold.

WE SHALL dispose of 150 head of choice registered Holsteins, consigned by some of the best known breeders in the state—practically all residing in Dodge and Jefferson counties—all men of integrity. The sale shall be conducted absolutely on the square, just as our spring sale was, which caused Colonel French, vice president of the Holstein-Friesian Association of America, to say: "Would that there were more such sales throughout the country." All cattle are tested for tuberculosis under supervision of the state department of agriculture. We also offer the sixty-day retest guarantee as an evidence of good faith.

The females—cows and heifers—are practically all choice individuals of the Homestead Junior De Kol, Fobes Tretomia Mutual De Kol, King Korndyke Sadie Vale, Colantha Sir Aaggie, Sir Johanna Korndyke strain of breeding. Records such as 26-pound full age, 20-pound 3 year old, 16-pound 2 year old, daughters of 20-pound 2 year olds and high-record, full-age cows, daughters of 30-pound bulls.

Bulls: A 30-pound son of King Segis Champion, a 30-pound son of Sir Beets Cornucopia, 31.83-pound grandson of King Segis Pontiac Polkadot, a 29-pound son of King Korndyke Sadie Vale, a grandson of King Korndyke Sadie Vale from a 25-pound 3 year old. Write for catalogs to

WILLIAMS BROS. BANGOR WISCONSIN

USE A SHORT-HORN BULL

ARE you raising beef? A Short-horn bull will give you more scale and bone and more pounds of flesh for a given amount of feed than any other breed. Are you a dairyman? A Short-horn bull will not reduce your milk supply and he will get you calves that will be quickly salable at a much higher price than you can get from a dairy bred bull. Are you a farmer? The Short-horn is the ideal for your purpose, because it is adapted to all conditions, of quiet temperament, takes on flesh readily, and yields a liberal flow of milk. The Short-horn always works improvement.

AMERICAN SHORT-HORN BREEDERS' ASS'N
13 Dexter Park Ave. **Chicago, Illinois**

GREEN VIEW STOCK FARM OFFERS 7 Pure-Bred SHORT-HORN BULLS

7 to 17 months old, and a few choice

THESE FREE BOOKS NOW READY!

ASK TODAY! These books are now ready to mail. I want you to get your copies. The first edition of my big 1916 catalog was exhausted in four months. The second edition is just off the press. That is why I say, ASK TODAY. Galloway's Fall Book, 96 pages in size **printed in four colors** is also just off the press. I want you to have it. In fact,

I WANT THESE BOOKS IN EVERY FARM AND CITY HOME

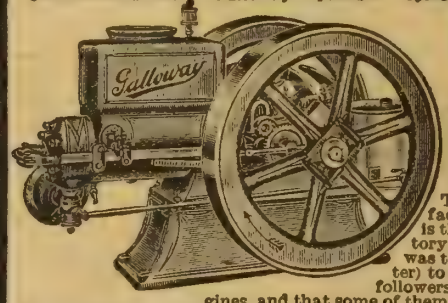
I want you to compare the quality of goods and prices I offer with those you have been used to paying and figure out the saving for yourself. You will easily see that these books will save you from $100 to $500 on your fall buying of Gasoline Engines, Cream Separators, Manure Spreaders, Farm Tractors, Wagons, Buggies, Harness, Farm Implements and Farm Machinery, Dairy Supplies, Metal Grain Bins, Fanning Mills, Disc Drills, Farm Shop Tools, Cement Mixers, Feed Grinders, Roofing Materials, Sewing Machines, Trunks and Bags, Washing Machines, Stoves and Ranges, Kitchen Utensils, Silverware, Dishes, Carpets, Rugs, Furniture, Clothing and Shoes for the entire family, and Farm Hardware and Sporting Goods. Ask now for these two books and commence saving at once.

NEW MODEL 1917 SPREADER! NOW READY

I just wish you could see it! Better built than ever! The beater bolts are ☆ inch larger, with lock nut. Beater-bar bolts increased in size and strength. Beater teeth longer and stronger, which means they now tear the toughest manure **finer than ever and spread it easily.** Heavier bolts hold the beater bars in the beater head. The rear shaft increased in strength—higher carbon steel used. Additional strength in the beater bracket. Larger drive sprockets, which mean **lighter draft than ever.** Fifth wheel castings are larger and increased in strength. The spreader box steadier in turning. The rear conveyor shaft is now made of 40 carbon steel. Pressed steel tongue. All metal parts thoroughly coated with asphaltum weather-proof paint. Spreader box is better finished and painted. These and other qualities make the Galloway Spreader **more invincible than ever in actual field work!** No big four or three-horse team is necessary to handle the Galloway. **Two average farm horses can spread anywhere with the Galloway.** Complete details of this new spreader are in the new books. They tell how and why Galloway made the spreader famous and illustrate the **Galloway invincible roller feed, Galloway patented automatic stop** uniform clean-out push board and the new everlasting steel beater with V-rake. These improvements and inventions make the Galloway worth at least $50.00 more than the average spreader, **but not one cent more is charged you for them.** Write today.

Spreaders $64.75 and up

MASTERPIECE ENGINES $26.75 TO $298.50

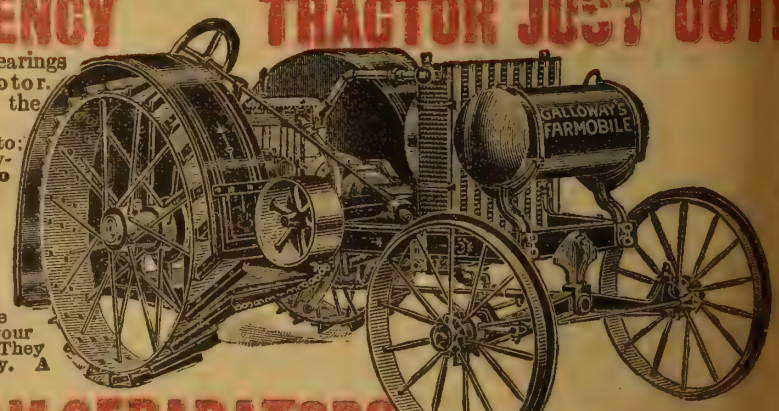


FROM 1¼ TO 16 H. P. STATIONARY AND PORTABLE

My entire line of Masterpiece Engines is unshaken by competition. I build in my own factories here at Waterloo a complete line of my famous Masterpiece engines. For every farm and shop need from 1¼ to 16 horse power. Moguls that are power kings of their kind. My 1¼ and 2¼ pumping engines are BUILT RIGHT AND PRICED LOW. When you buy an engine insist on heavy weight because **it costs more to build** a heavy engine. Insist on **large bore** and **low speed.** The Galloway engines give a lifetime of service at the hard, tough jobs because they are built to stand up under the hardest work! Don't get fooled into buying high speed, light weight engines. They cannot give you year-in and year-out satisfaction at heavy work, and remember that Galloway is the pioneer engine builder selling direct from factory to farm and shop. Remember that Galloway was the first engine builder (or salesman, for that matter) to sell good engines at **one small profit;** that all followers are imitators of the Galloway plan of selling engines, and that some of them are building cheaper engines and pricing them lower to throw dust in your eyes. Cheaper engines are almost invariably lighter engines speeded up to get their rated horse power, and they cannot stand up under the heavy, steady work you will have for an engine to do! I want to point out these things to you. That't why I want you to have these two books.

In my new 100-page FALL BOOK and also the 250-page catalog I will tell you why an engine of the **heavier type is best** and give you **complete details.** Every style and size of Galloway engines illustrated and fully described. You can get the facts about these engines by sending for these two great books. They are filled from cover to cover with interesting, instructive engine facts. Tell you how to select the type of engine best suited to your needs. Postal will get them. Ask for them before the editions are exhausted.

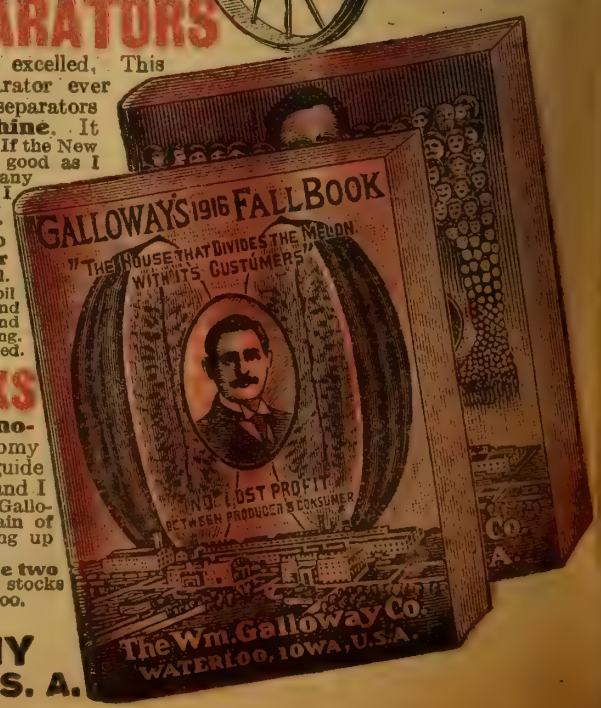
MY 1917 MODEL EFFICIENCY TRACTOR JUST OUT!



Built with anti-friction bearings—21 sets Hyatt roller and ball bearings in this tractor. Four cylinder, Waukesha Tractor motor. Water-cooled, working parts protected; 12 h. p. guaranteed on the draw bar, 20 h. p. on the pulley; turns short; weighs 5,000 lbs. We have exclusive manufacturing right on its new patented transmission. **On no other tractor can you secure it.** It is the secret of **this tractor's wonderful efficiency.** Will do any portable engine job—sawing, silo filling, corn shelling, road grading, will handle 28-inch grain separator, do feed grinding, etc., handle three 14-inch bottoms 8 or 9 inches deep in clover or timothy sod. Double chain drive; gears run in oil-tight case in oil bath; rear wheels 58 in. high; the famous Waukesha motor; Holly carburetor; Kingston magneto; Waukesha governor, engine never races. **Only two levers to control this tractor.** It is as far ahead of one and two cylinder tractors as four and six cylinder cars are ahead of the old style one and two cylinder cars. This modern farm tractor is fully described in our two new books. My 250-page book and my 96-page book are yours for the asking. Get your copies while the supply lasts. They tell the whole story. Ask today. A postal will get them. ➤

SANITARY CREAM SEPARATORS

My Galloway Sanitary bath-in-oil cream separator can not be excelled. This $34.50 size separator skims 375 lbs. per hour. It is the best separator ever built. If you knew all there was to know about building cream separators and built one for yourself, **it would not be a better machine.** It would not run any easier, skim any closer and could not be built of better material, nor more wear and satisfaction be built right into it. **We build the quality into the separator,** and you get the service out. They are built up to a standard, not down to a price. Where other machines are good, the New Galloway Sanitary is as good or better. If you build as good a machine you could not build it at a lower price than my **new 1916 direct from the factory to farm** wholesale figures. If the New Galloway Sanitary Separator is as good as I say it is, **you can't afford** to buy any other kind; if it is not as good as I say it is, I could not afford to offer it to you on a **90-day trial** nor could I afford to guarantee it to you for **ten years against flaws or defects** in workmanship or material. The entire line of Galloway-bath-in-oil separators are completely described and pictured in my 96-page Fall Book and 250-page catalog, both for the asking. Write today before supply is exhausted.



DON'T DELAY - ASK NOW FOR THESE BOOKS

By all means, drop a postal to me asking for these books. Don't put it off. **Economy is wealth.** Saving money is **earning money.** You can practice economy and **save money** if you have these books in your home, and **use them** as a guide in buying. I have worked hard to get these books out for the fall buying season and I want you to see my efforts. **Come to Waterloo** if possible. I want to entertain you at the Galloway Club. I want you to eat one or more meals with me. I want to show you my great chain of factories right here in Waterloo. I want you to see the merchandise departments I am opening up this fall and the great stocks of merchandise we have for the heavy fall and winter trade.

If you can't come and make me a visit, don't fail to drop me a post card and **ask for these two books** that describe and picture the offices, the Agricultural Club building, and the immense stocks of merchandise at low, **one-profit figures.** These books are just as good as a trip to Waterloo.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

Motorcycle Requires Priming.

I have a "Raycycle" motorcycle, five horse power. I would like to know how to feed the gasoline into the cylinder without priming. The engine will run just as long as the engine is primed.

Answer.—The only way to feed gasoline properly into the cylinder is through a mixing valve or a carburetor on the intake, and doubtless your motor is already equipped with such a device. Evidently your motor is not getting enough gasoline. You may not have the needle valve open enough, or there may be some lint or dirt in the mixing valve or in the gasoline line. The writer knows of a similar case in which the motor refused to run, because the gasoline was entirely shut off on account of the stop cock being closed.

Spark Plug Trouble.

What is the matter with a tractor when it coats up one plug, and sometimes both plugs, every time you throw out the clutch? The spark is good after I take the plugs apart and clean them. I have shut off the cylinder drips as much as I can, but some oil still goes to that cylinder.

Answer.—The chances are that your engine is getting a little too much oil, though too much fuel could also cause the trouble. White smoke from the exhaust indicates too much oil; black smoke, too much gasoline. It is an easy matter to cut down on the fuel supply, but not so easy to stop ignition trouble caused by oil working up past the piston rings. A fair amount of oil is necessary to keep the cylinder from scoring. If the piston is too small, or if the rings fit poorly, it is hard to prevent the oil from working up; about the only remedy being a new piston or new rings. Slightly rounding the upper edge of the ring, keeping the lower edge sharp, tends to pump the oil down, and sometimes will stop the trouble.

Transmission Grease Trouble.

I have a Model T Ford that leaks grease around the brakes on the rear wheels. What can I do to stop it? The rear axles have been removed and cleaned, new felt washers put on, and there is not too much grease in the differential. I understand that a hole is sometimes bored in the axle housing to let the grease out before it gets to the wheels. Can you tell me where to bore the hole, and how large to make it?

Answer.—A hole one-fourth of an inch diameter, drilled on the under side of the axle housing near each spring hanger, is said to prevent the grease from working out. This hole tends to balance the air pressure inside the housing. However, it gives a chance for dust to get into the housing. It is very hard to keep the grease from working out if the car has that tendency.

Draw-Bar Horse Power.

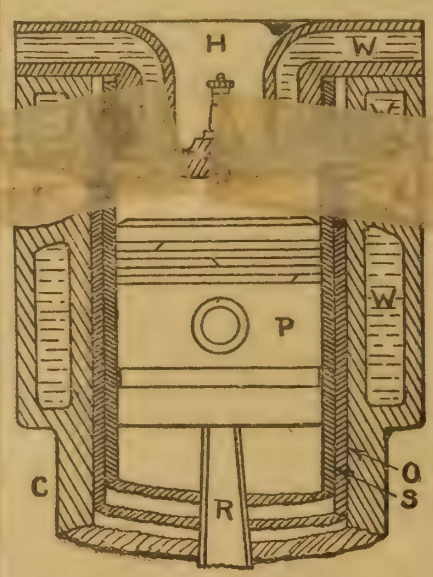
Please tell me how much horse power a thirty-two horse power engine will develop on the drawbar if the tires are thirty-two inches diameter; the speed on low, eight miles per hour; the speed on second, fifteen miles per hour; and the speed on high, twenty-five miles per hour. On low speed, the engine makes one revolution to eight of the wheel. On second speed, the engine makes one revolution to four of the wheel. On high, the engine makes one revolution to two of the wheel.

Answer.—It is usually considered that about one-half of the engine horse power may be used at the drawbar, the other half being lost in driving the tractor. This rule would give you sixteen horse power at the drawbar. Figuring the drawbar pull of sixteen horse power, you would have a pull of 750 pounds at eight miles per hour, 400 pounds at fifteen miles per hour, and 240 pounds at twenty-five miles per hour. As a rule, a tractor will not pull more than 70 per cent of its own weight.

The Sleeve Valve Motor.

Please explain what the sleeve valve on a motor means and does.

Answer.—There are two types of four-cycle motor in common use—the poppet-valve type and the sleeve-valve type, the latter being of comparatively recent design and not so well known as the former. The intake and exhaust of the ordinary motor are regulated by valves pushed up at the proper time by cams on a shaft geared to the crank shaft. These valves are known as "poppet" valves. The sleeve-valve type of motor has no poppet valves and no cam shaft. The inlet and exhaust are controlled by ports in two sleeves sliding up and down inside the cylinder. The figure shows a sectional view of the sleeves, cylinder and cylinder head. O and S are the sleeves, C the cylinder, P the piston, H the cylinder head, and R the connecting rod. W is water jacket space, I is the intake port, and E the exhaust port. The black parts of the sleeves represent holes or ports. As one sleeve slides up, the other slides up or down, as may be necessary to bring the ports in line at the proper time. In the position shown, the inlet port is open and the exhaust closed. The [illegible] are moved up and down by [illegible] eccentrics on an eccentric [illegible] similar to cams on a cam shaft. [illegible] very smooth and free [illegible]



H[illegible] of Motor.

How [illegible] will a Ford engine [illegible] engine speed if attach[illegible] pulley.

Answer.—[illegible] of an engine does not [illegible] of the pulley to which it is [illegible] The Ford engine is rated [illegible] over twenty-two horse [illegible] doubtless would develop [illegible] under test. When used as [illegible] ary engine, it should not be [illegible] to pull much over twelve hor[illegible] continually. "Horse power" is [illegible] urement of the rate at which work is done—33,000 foot pounds per minute. The power that moves one pound 33,000 feet in one minute is a horse power. A horse power will also move 33,000 pounds one foot in a minute. The work done in each case is the same. The first case corresponds to a small pulley running at a high speed, the pull being small and the speed great; the second case corresponds to a large pulley running at a comparatively low speed, but exerting a much greater pull on the shaft.

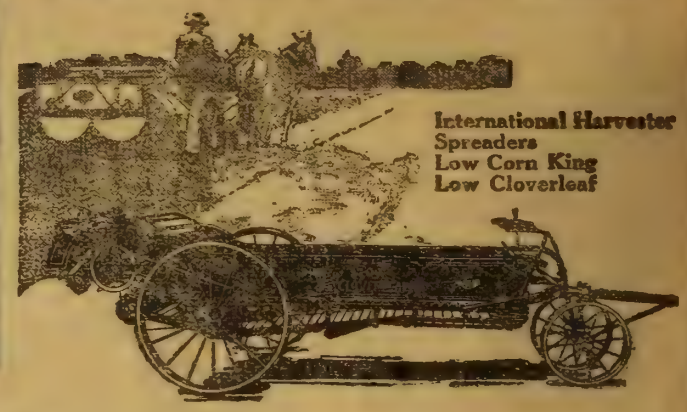
Eight Feet Wide, or Better



International Harvester Spreaders
Low Corn King
Low Cloverleaf

ONCE you have seen both kinds of work you will say: "There is certainly a wide gulf between the ordinary spreader and the modern I H C machine, with its good, wide-spreading device. Give me the up-to-date, time and labor-saving spreader."

International Harvester spreaders—Low Corn King and Low Cloverleaf—are made with wide spreaders that throw the manure out in a wide, even spread, and broken up into fine particles by the disks that give it a second beating. In this condition the soil takes up quickly and evenly the fertilizing elements.

Though they are narrow, conveniently handled spreaders, easy to drive right into stables for loading, they spread to a width of 8 feet, or better. This cuts the spreading time in half, increases the tractive power of the spreader by keeping the wheels off the slippery manure, and gives you the best machine made for top dressing. I H C spreaders are simply built, and very strong. They are low for easy loading. They are built in sizes to suit any buyer, and they do work that is uniformly satisfactory.

Be sure to see the I H C dealer who can sell you a Low Corn King or Low Cloverleaf—or write us for catalogue.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

A TIMELY HEALTH HINT.

I DO not want to pose as an authority on all matters, and sometimes hesitate about writing on subjects which appear vitally important to me, because of the fear that someone will accuse me of being a "know-it-all." I would be derelict to my duty, however, if I did not preach a little health sermon at this time of the year.

I have the greatest respect and admiration in the world for the average doctor. He sees to it that we are brought into the world in the full possession of our bodily vigor and mental attainments, and does his best to prevent our leaving it before our time. He drives many miles, through all kinds of weather, to answer the frantic summons from the farm home and wrestles with the grim angel until one or the other is exhausted and cries quits. He is unselfish, self-sacrificing and deserving of the highest praise. Yet greatly as I respect and admire the average doctor, if there is anything I can do to prevent his coming to my house I shall certainly strive to do it. I like the doctor, but I do not relish the circumstances which bring him to my home. This being the case with us all, anything which you and I can do in the way of preventing sickness should be done most thoroughly and constantly. If "an apple a day keeps the doctor away," should we not all be orchard patrons, year in and year out?

At this time of the year there is great danger from pneumonia, one of the worst diseases which the medical fraternity has to combat. It is likewise a preventabl disease, to a large extent. Can we do better, therefore, than to talk together for a few minutes on how to keep the doctor away—much as we like him personally—at this season when pneumonia germs are all too prevalent?

The health commissioner of one of our states has issued a timely warning against shutting out fresh air from our homes, and particularly from our bedrooms. Those of us who remember the days of our youth can recall waking up in the morning, in our attic bedroom, with a little drift of fine snow on the coverlid. The window may have been shut, but the north wind of winter has a way of finding all the cracks and crannies, rely on that. Nowadays we protect ourselves against the invasions of the wind and snow by sealing up our bedrooms hermetically, until neither snow nor fresh air can enter. It is this overcautious policy which has caused the health commissioner, referred to, to declare that "weather strips make doctor's trips." Let us have the fresh air of our boyhood nights, though we have to pile the blankets and the comforters high on the bed. Better be obliged to jump from the protecting warmth of the covers into an icy-temperatured room and rub ourselves into a warm glow than to get up feeling dull and loggy, with pneumonia germs playing fast and loose in our lungs. "Don't be afraid of cold air and fresh air," continues the timely warning. "Get hardened to the cool air as the chill of autumn comes on, so you will not shiver every time a draft hits you. Sleep with the windows wide open, even in the coldest nights, and always breathe fresh air." Simple, is it not, and yet upon it may depend the health, the very lives, of ourselves and our loved ones.

Many of our agricultural colleges are doing a splendid work in sending out bulletins, giving simple and effective home remedies for common ailments and accidents. This work should be encouraged until it is widespread. Here, for instance, is some splendid advice sent out by the Department of Farmers' Institutes of the University of Wisconsin. It is all very simple and easy to do, and what an amount of pain and suffering and sorrow it may save us:

Earache—Hot cloths or a hot-water bottle at the ear will often relieve the pain. A few drops of sweet oil in the ear, with a plug of cotton to retain the oil, is good for severe cases, but a doctor should also be called in.

Sore throat—Gargle often with equal parts of alcohol and water, or equal parts of listerine and water. Take a laxative.

Fever—Keep patient in bed in a quiet, dark room. Sponge frequently with cool water, and keep him covered with light covering. Give simple food, such as milk or milk toast. If fever runs high, a doctor should be called.

Burns—The seriousness of a burn is determined by the amount of tissue involved. If one-third of the skin of the body is involved in a burn, regardless of the depth, it is serious and may cause death, even with the best of treatment. Especially is this true of scalds. Ice water is good for fresh burns; guard against infection with dirty hands. Cover the wound with cold boric acid compresses. Carron oil (equal parts of limewater and linseed oil) is also good for burns. Blisters should be punctured at their base with a sterile needle, but the skin should be allowed to remain as a protection. Cut and soak clothing away from a burn; do not pull it off.

I wish all our agricultural colleges would make their advice as timely, as effective and as easily understood as this. What is more important than the physical welfare of those we love? I want to ask all of you, who do not have a copy of the original bulletin, to cut out this article and keep it in some handy place, where you can find it readily in an emergency. It is far from the doctor's office in town to some of our farm homes, and the roads will soon be none too good. Let us take what precautions we can against the ravages of disease and accident, to the end that there may not be undue regrets and recriminations, when it is too late.

A DISHEARTENED FARM WOMAN.

I AM going to print only one more letter in response to the plaint of the Illinois farm woman. Next week I shall give my own views on the subject. The letter which I am going to give you this week is from a mother of six children, the oldest ten. I cannot bring myself to believe that her case is a representative one, yet her letter contains so much pathos, so many heartaches, it seems to me I should not fail to print it. Perhaps her husband will read it, identify the writer and do what he can to atone for his thoughtlessness before it is too late. Here is the letter:

Eleven long years since we were married and started on nothing. We got everything on time. Now the husband farms 200 acres of land. I have tried to help, God knows, to do my share of the work. I am tired, disheartened and discouraged. What pleasures are there for me? I go home about twice a year (mother lives nine miles from me) and to see my brother once a year (he lives ten miles). Nowhere do I get to go and always the excuse is that the horses have worked too hard, "I am tired," the children's clothes are not nice enough, or there are too many kids. So, after so long a time, I have given up. I get to town once every four or five years. Hubby carries the pocketbook and, as I buy, he pays. Never a dollar do I get. Men, don't your wives earn a dollar a year? How much pleasure she would get out of a dollar all her own. Now, he is good in some ways, but he thinks it is awful if he has to stay home a whole week. He says home is the place for a woman, but my home is a prison. Oh, how I have longed when he would drive away after groceries or to one of the neighbors, to go along, just to get away from work a few minutes. But he always says he can't bother with me and the children, or why do I want to tag him around.

Well, my work will soon be finished on earth. The doctors, four of them, say an operation has to come. For five years now, I have dragged through and my strength is going every day. I wonder how much longer I can go. But hubby hasn't got the money for the operation.

So, men, I speak to one and all, look at your wife and her work, take her with you, for life is short, and when health is gone, what is left of life? Do you think you can find someone to take her place and be a mother to your children and help you as she has done? She may help, but only to spend what your wife has helped to make. Don't make the mistake not to show her how she stands with you or your love for her. Don't wait until she is cold in death to say those things. Make her life happier and easier now. How long since she got a new dress, suit or coat? I know how I have longed for one. Eleven long years is a long while to wait for one, isn't it? I guess I will always be longing, too.

Just as a chain is no stronger than its weakest link, so our country life, our prosperity and our civilization are no stronger than their weakest links. So long as there are farm women who do not get a new dress in eleven years, who get to town only once in four or five years and who are never entrusted with a dollar, just so long will our agricultural prosperity suffer and our national advancement be retarded. We cannot judge our nation by its millionaire class alone; neither can we judge it by those isolated families wherein the wife is considered a mere beast of burden, entitled to no sympathy and no remuneration for her work. The salvation of our country lies with the great middle class, wherein the wife is considered an equal with the husband and both work together for the family good. But here I am giving my own ideas, when I announced in the beginning I would withhold them until next week. Let me suggest that you read all the letters which I have printed on this subject and then, after I have expressed my views next week, write me what you think of my little preachment on the subject. I have been intensely interested in all the letters written me—and they have come by the hundred. It is impossible to print them all, but I have given a fairly good selection from the best.

PRESIDENT WILSON RE-ELECTED.

THE presidential election has taught us two important things: First, the value of the individual vote, even when fifteen million are cast; second, the importance of the grain belt and the West in determining national issues. If the election had had no other result it would have justified itself many times over.

I want to call your attention, briefly, to a few facts in connection with the re-election of President Wilson. The first is this: A difference of only one vote in each township and precinct in only one state would have defeated President Wilson and have elected Mr. Hughes. If one farmer in each rural township and one town man in each urban precinct had failed to vote or had voted differently, the result in the entire nation would have been changed. Now, do not misunderstand me; I am not lamenting that they voted as they did, nor am I even suggesting that they might have voted otherwise and have suited me better. I am simply trying to impress upon you the value of the individual vote.

When Tuesday morning dawned and we were confronted with the presidential election, it was raining in various parts of the country. Many a farmer looked out across his fields and decided that while it was too wet to continue husking corn it was not too wet to drive to the polls. Had it not rained he might have been tempted to continue his work in the cornfield, arguing that one vote, more or less, would not affect the general result. But one vote to the township and precinct in only one state would have changed the result completely. Hereafter, when election day comes around, let us bear this fact in mind, and no matter how much we are tempted to forego the privilege and duty of voting, let us exercise our prerogative to the utmost, for upon our vote alone may hinge the destiny of the entire nation.

The other matter I want to call your attention to is this: Never was there a time when the grain belt and the West held the balance of political power as they do today. The rural population exceeding the urban here simply means that never before was the farmer's voice and vote so decisive. Last Tuesday night it was positively announced that Mr. Hughes had been elected president; the nation went to bed and to sleep convinced that this had been the result of the battle of ballots. Mr. Hughes had carried all of New England, New York, New Jersey and Pennsylvania—the states with the largest electoral college vote. Yet one by one the overwhelming majority which Mr. Hughes had secured in the East was overcome by the returns, the next day, from the grain belt and the West. With the exception of Iowa and possibly Minnesota (at this writing, the official count may be necessary to determine that state exactly) the trans-Mississippi West swung into line for President Wilson so unanimously that the Eastern lead for Mr. Hughes was wiped out and the president was re-elected. We have proved, once and for all, that New York and New England are not the entire nation, that they cannot dictate and dominate without consulting us, that we of the West have the deciding voice at the last.

I am not going to express my views of the national election at any length here this week, although I may do so next week. I just want to call your attention to still another fact: The rural vote of the grain belt and the West re-elected President Wilson. Perhaps this letter from a grain-belt farmer to the president gives the explanation. It was written from Velva, North Dakota, October 23d:

Dear Mr. Wilson:—At night when I come home and find my family all together, the boys and mother around the table, I kind of feel that we owe something to the man in the White House who is responsible for the peace that we enjoy. I feel that it is my duty to support such a man as you and while I am not a democrat and never voted for a democrat before, I am for four years more of Wilson.

How many farmers—and town men, too—voted as did this man, because they believed the president had kept us out of war and that for this they owed him a debt which a vote but feebly repaid? Throughout all of the international crisis, it has been the grain belt and the middle West which have upheld the president all the time, never wavering in loyalty to him, without regard to party differences. Thousands upon thousands of grain belt farmers must have had this same idea in mind, that was expressed by the North Dakota farmer, when they drove to the polls last Tuesday. Their vote determined the nation.

The Election in Wisconsin.

SENATOR ROBERT M. LAFOLLETTE has been returned by the voters of Wisconsin to the United States Senate by a plurality which will be 75,000 or more. Governor Emanuel Philipp and the balance of the republican state ticket have been elected. The governor's majority is somewhat less than that of Senator LaFollette, which was expected, owing to the fight which was centered upon the state administration. Mr. Hughes carried Wisconsin for president by a plurality reported to be about 20,000.

A great many thousand farmers voted for Governor Philipp. In the absence of the official returns, it appears that Governor Philipp was strong in many of the rural communities of the state. The governor's attitude on taxation doubtless caused his reelection, and his supporters will expect a careful and economical administration of state affairs for the next two years. There has been some effort to discredit Senator LaFollette in this state, but it is plainly evident, from the reports, that a large majority of the voters appreciate the splendid service which he is giving Wisconsin in the congress of the United States.

The next legislature will be republican.

Offical Testing in Wis consin.

MR. ROY T. HARRIS, supervisor for dairy tests in Wisconsin, advises that interest was never stronger in official and semi-official dairy testing and that the demand for testers almost exceeds the supply. Coincident with this information is the news that two more cow-testing associations have been added to the already strong list in Wisconsin. This gives Wisconsin fifty-four cow-testing associations, considerably more than any other state.

The new associations are the Amherst & Nelsonville Cow-Testing Association, the second to be organized in Portage county, and the Sauk-Prairie Cow-Testing Association, the third in Sauk county. Mr. William Swensen is president of the Amherst & Nelsonville Association; Mr. Arthur Peterson is secretary and Mr. Frank Moss, tester. The Sauk-Prairie Association has as its officers: President, Mr. W. J. Welch; secretary, Mr. C. A. Bickford, and tester, Mr. Earl Clingman. Both associations have just started operation.

It is encouraging to see the interest that is being taken in both official and association testing. It means that Wisconsin dairymen are rapidly coming to realize that the test and the scales are the only accurate judges of a cow's productive value. The official and semi-official tests are for the pure-bred breeders and the greater demand for this class of testing naturally follows the big demand for Wisconsin foundation stock. Dairying has reached the place where a breeder of pure breds who wishes to sell his animals at a good price must sell with them an official test of their producing ability. Buyers of bulls are demanding animals from dams with heavy milk production records and buyers of females are looking for cows with good records of heifers from dams that are known to be heavy milkers and high testers. Mr. Harris says that were it not for the high price of feed he believes it would be impossible to supply testers for all the breeders who wish to run official or semi-official tests this winter. The increasing cost of feed has discouraged many, especially the beginners, who fear the feeding expense. This, however, should not discourage any breeder who has an animal that he thinks can make a good record, for the buyers today are looking for dairy stock with good milk and fat records.

The cow-testing associations are doing a splendid work for the farmer-dairyman. They are aiding him to weed out his "boarders" and there should be such an organization in every neighborhood. The dairyman who isn't a member of some association should do his own weighing and testing. Thousands are doing it in Wisconsin. These associations have found for many a farmer high-producing females. They have opened the eyes of many to the good ones in their herds as well as the "boarders" and they are paving the way for much of the official and semi-official testing that is being done.

Wisconsin Boys Interested in Beef.

IN THIS issue of The Wisconsin Farmer will be found a number of letters from boys on Wisconsin farms who have been interested in the raising of baby beef. Aside from the contest feature which has been conducted under the auspices of the Wisconsin Live Stock Breeders' Association, and under the personal supervision of Mr. Ray Baker, assistant secretary, the experiences which these boys have given will be of general interest. It is also profitable to consider the feeding which has been done and the weight put on the calves, and many other points which the young men have come up against in their work. There is room for a great many more beef cattle in Wisconsin, and with the present high prices, and splendid markets, beef ought to be profitable even at the prevailing high cost of feed. The young men in their letters direct attention to the feeding problem and we feel sure our readers will be glad to look over their letters.

Use of Pure-Bred Boar.

OCCASIONALLY one hears of a farmer-dairyman who has been keeping a few hogs to utilize his by-products, and has become discouraged and quit the hogs. Recently we visited one of these farmers who had some spring pigs almost ready for the block, but who didn't think he was getting anywhere with his hogs because he didn't have a pure-bred herd. He was working toward the pure breds and high-producing grades in his dairy herd, but he had failed to apply the rule that blood counts in hogs as well as cattle, and, although using a pure-bred bull, he was using a grade boar.

It should be borne in mind that pure-bred sows are unnecessary for the production of profitable market hogs. But to raise the "prime medium butchers" that are in demand by the packers the pure-bred boar is necessary. Just as much pork can be raised from good grade sows mated with a good pure-bred boar as with pure-bred sows, and we quote from a recent circular of the Wisconsin Live Stock Breeders' Association, which touches the farmer who is breeding primarily for the block:

> Any boar is high priced regardless of his cost, if, given proper care and management, he cannot develop the future usefulness and profit producing ability of his get. Expensive sires must, of course, compensate their owners by producing offspring superior to former generations and carrying popular blood lines. It is considered wise, however, to leave the high-priced sire in the hands of established pure-bred breeders, who, by long years of experience, are enabled to know the value of pedigrees and have learned the "ins and outs" of the breeder's art.
>
> But this should not keep farmers from buying a pure-bred boar. There are plenty of them that are not high priced and that have all the qualifications needed for improving herds of common swine. One or two litters from the pure-bred boar often show increased value sufficient to pay for him. They cost no more to raise—often less—than litters sired by scrubs and they often make one-third more of marketable meat. We have breeds of swine that have been developed for years solely to turn corn, forage crops and by-products into pork in the shortest possible time. From the good individuals representing these breeds we get the type that is crowding the "razor back" out of existence.

Many Wisconsin farmers are making the mistake of using a grade boar. There is an increasing demand by the best dairymen for hogs in combination with their cattle and this will prove a profitable undertaking where discretion is used in selecting the breed best suited and nothing but a good pure-bred boar to head the herd. In breeding this fall for pigs use the best sires—the result will tend to encourage rather than discourage, as has been the experience of the farmer mentioned above who has not seen that the lack of a pure-bred boar is the cause of his discouragement rather than the lack of an entire pure-bred herd.

Wisconsin Community Institute.

A UNIQUE community institute will be held in Fond du Lac Wednesday, Thursday and Friday, December 6th, 7th and 8th, under the joint supervision of the Fond du Lac Chamber of Commerce. The departments which will have charge of this meeting are those affecting rural development, civics, retail merchants and publicity. We quote from the Daily Commonwealth, of Fond du Lac, as follows:

> The meeting is planned with a view of serving the farming community and demonstrating to that community the fact that the city of Fond du Lac appreciates the good will of the people residing in this vicinity and whose stability and high character contribute so much to the prosperity and growth of this city.
>
> The welfare of the city of Fond du Lac and that of the people residing in the surrounding territory is linked together. The relationship between city and country should be cordial and sympathetic. A closer personal acquaintance and a more comprehensive understanding between the people of the city and those of the surrounding country will contribute much toward a good fellowship that will prove of large value to all.
>
> It is proposed that on each of the three days of the institute there shall be a program which shall be of special interest to the progressive farmer and also to the women who have done so much toward bringing the farm home up to the high standard which it occupies today. It is proposed that the speakers at these meetings shall be men and women of state-wide reputation—speakers who will be able to discuss comprehensively the various questions which are engaging the attention of farmers and farm women. These speakers are being furnished by the extension division of the University of Wisconsin and the program is certain to be one of much practical value.

This institute should arouse considerable interest among the farmers of Fond du Lac county, where an enviable spirit prevails. While Fond du Lac is generally considered a well-developed section of the state, at the same time it would be easily possible to largely increase the field of this splendid county by closer co-operation of the farming and other business interests affected.

Making Money Out of Looks, Type and Pedigree.

SOME staggering figures were used in valuing some of the entries at the recent National Dairy Show. One Jersey cow was known to be insured for $50,000, while the grand champion Jersey bull of the show cost his owner $25,000 in gold on the island of Jersey. Doubtless there were many animals in all the dairy breeds that would readily sell for more than $1,000. When one considers these values it would seem to become apparent at once that the handling of high-class pure-bred animals must be left to men of wealth, because a man without capital could not get credit for the purchase of a single individual on the basis of these figures.

This phase of dairying was discussed in a recent issue of the Rural New Yorker by the secretaries of two important dairy record associations. W. H. Caldwell, of the American Guernsey Cattle Club, was asked if there is any way for a farmer with very limited capital to make money in pure-bred stock and here is his reply:

> We have some small breeders who have done well. There is a demand for all good stock as soon as it is put on the market either cows or bulls, and it is hard to get stock for starting a herd just now. Some breeders put out young stock with near-by farmers and pay them good prices for the calves and young stock. A young farmer who could induce the nearest breeder to sell him a choice heifer or two and to furnish him service might build up a herd for himself. He should choose the breed that leads in his neighborhood, because of convenience in securing service and in finding a market. Buyers are always looking for good stock in any locality where there is a group of breeders of any one breed. A farmer who starts with good stock and knows how to feed and care for it to secure good development, might do well. Better to start with one or two good ones from strains that combine high productiveness and also good type for the show room. Such stock comes high at the start, but there is always a market for the increase at paying prices, and the herd will pay in milk production, too.

The same problem was discussed by the treasurer of the Holstein-Friesian Association and here is his view of the matter:

> The small farmer can raise pure breds for the breeder with prestige and an established market. Some of our leading breeders encourage their neighbors to keep the stock and raise calves for them. Sometimes they lend them a young bull which the farmer raises to maturity, and uses for two of three years or until the owner wants it for sale to a customer. The farmer gets its use in return for raising it, and builds up his own herd without cash outlay. Sometimes heifers are put out with farmers with the privilege of keeping the calves at a fixed price or selling them to the breeder. Some breeders furnish breeding service to small farmers who have pure-bred heifers, the farmer to sell back the calf or to keep it and pay for the service. If it is a heifer calf, the farmer usually keeps it. It is better to get a start with pure-bred stock somehow. That is where the money is. Grades are good for regular dairying, but the pure breds pay both ways.

Another prominent dairyman pointed out that he would just as soon make money out of "looks and type and pedigree as from milk." His claim was that he could sell young stock from cows worth $1,000 at prices ranging from $150 to $500 and where that can be done there is more money in it, according to this man, than there is in selling dairy products. As we see it, the whole matter simmers down to one thing, namely, to the natural aptitude of the individual. The breeder of pure-bred live stock, whether it be dairy or beef cattle or animals of any other class, must love his work in the beginning and he must be painstaking in the care that he gives his animals. He must be willing to thumb over records and to take pains with keeping pedigrees in order and his certificates in classified form. Furthermore, he must be a reasonably good salesman and he must be farsighted enough to understand that he is living in an advertising age. Happily most of these characteristics may be acquired by those who have succeeded in having first demonstrated their ability to obtain satisfactory returns from a herd on a straight dairy or beef basis. The day will never come when more than a small proportion of the breeders of any class of stock will handle pure breds, but in this line there is and always will be an opportunity to realize most satisfactory profits by those who are in the business of raising pure-bred foundation stock.

Fighting Weeds and Insects.

WHERE snow has not covered the ground as yet it is well to gather up all the vegetable matter and burn it. In this way many weed seeds will be destroyed. Clean fence corners and clean spaces along the highways will go a long ways towards eradicating weeds. Those who have fall plowed their land, and properly disposed of the vegetable matter, and who have kept this up for several years, will find that they have solved the weed problem and killed most of the insect eggs, thus doing away with two pests which cost the farmers of this country $100,000,000 every year.

In and Around Wisconsin

COMING EVENTS.

Wisconsin Potato Growers' Association and State Potato Show, Eau Claire, Wis., November 21st to 24th.
Winter Course Wisconsin Dairy School, Madison, Wis., November 8th to February 1st.
International Live Stock Exposition, Chicago, Ill., December 2d to 9th.
Wisconsin Dairymen's Convention, Waupaca, Wis., December 5th to 7th.
Wisconsin Buttermakers' Association, Sparta, Wis., December 5th to 7th.
Wisconsin State Horticultural Society, at Madison, December 12th, 13th and 14th.
Farmers' Week (Swine Program), Madison, Wis. Beginning February 6, 1917.

The high school at Viola, Wisconsin, has an agricultural library which is quite liberally used. The instructor in agriculture in this high school has charge of the distribution of the books which are loaned free to farmers. Books and other literature on almost any subject pertaining to farming is furnished upon application.

The Janesville Creamery is advertising in the Rock county papers for more milk on the basis of $2.10 per hundredweight for November and December, $2.05 for January, $2 for February and $1.85 for March. These quotations call for 3.5 per cent milk and 3 cents per point are added for milk which tests better than 3.5 per cent. This creamery announces that 15,000 pounds more milk per day are needed than is now offered.

Supt. and Mrs. T. H. Moore, of the Dunn County Asylum Farm, recently submitted their report which shows that the average cost of maintenance for a year was $3.31 per inmate. The cost for the preceding year was $3.18. The farm netted a profit of $7,707.93 for the fiscal year recently closed, which is over $400 less than the profit last year. The sale of barn, farm and garden products netted the institution $7,660.83 cash in addition to more than $5,500 worth consumed at the institution. Such a conduct of a county farm lessens the expenditure on the taxpayers.

Wisconsin has a frog farm at Cooksville, near the Dane and Rock county lines. A Chicago company leased the place, taking an option upon it, for the purpose of buying should the frog experiment be a success. Frogs are shipped there by the thousands in crates and dumped in the pond prepared for them, which contains clear water, from eight inches to a foot and a half in depth. The frogs are fed twice a year. Only the legs are shipped to the Chicago market. Strangers are not welcomed by the management, as the frogs seem scared and seek to hide.

In an address recently before the Columbus Dairy Improvement Association, George C. Humphreys, of the college of agriculture, said that too much feeding might be as injurious to dairy stock as too little. He suggested an analysis of feed should be made to determine whether some rich and expensive element might be substituted for a cheaper grain. Generally, he said, feed one pound of grain to four pounds of 3.5 per cent milk and about three pounds of silage for every 100 pounds of live weight. He advised the dairyman to consult the tastes of the cow occasionally and treat each animal in proportion to her needs. Above all, don't be afraid to buy good feed if it comes out in the milk pail.

During the present road-building season 1,158 miles of state-aid roads were constructed in this state, at a cost of $3,631,026. In addition there was built 352 state-aid bridges at a cost of $540,068. The total spent on state-aid roads and bridges this year is $4,171,094, just about the same amount as was expended in the same manner in 1915. Wisconsin now has 4,850 miles of state-aid highways built within the past five years. Next year about 1,300 miles will be added at an approximate cost of $4,500,000. The state-aid roads built this year included 215 miles of stone and macadam, fifty-nine miles of concrete, 102 miles of clay and stone, 300 miles of crushed gravel and pit-run gravel roads and the balance simply graded and drained, but not surfaced.

A. K. Schmidt, secretary of the American Society of Equity at Chippewa Falls, does not take such a scared view of the potato market as we get from the market papers and the city dailies. Mr. Schmidt thinks that potatoes may be cheaper next spring than they are now. Farmers have been filling their cellars and caves and warehouse men have been holding back large quantities of potatoes, according to Mr. Schmidt, and in the spring these will all be unloaded. There are a good many people in the cities and towns who are now paying $2 per bushel or better who will hope that Mr. Schmidt is right about the lower prices in the spring.

In September there were eighty barn fires in Wisconsin. The total loss was over $117,000. Fifty-eight of these fires were caused by lightning and in only one instance was a barn damaged by fire where it was equipped with lightning rods. In the same month there were twenty fires due to threshing outfits. Match fires were the cause of many thousands of dollars' loss.

The first Farmers' Week program of the 1916-17 season will be held at Ellison Bay, forty miles north of Sturgeon Bay, Door county, November 21st-23d. L. F. Graber and L. S. Bullock will talk on field crops and live stock.

The efforts of farmers near Janesville, Rock county, Wisconsin, to secure a market for their milk have already resulted in the location of a cheese factory in Janesville. The factory will pay Chicago Milk Producers' Association prices from the start and will use 10,000 pounds of milk daily.

HUDSON SUPER-SIX
Excels All in Endurance

Save $175 Before December 1st

Things the Super-Six does are less important than the way it does them. In breaking world's records it has hardly shown an effort. And after 7000 record-breaking miles, a Super-Six motor showed no evidence of wear in any part or bearing.

The Hudson Super-Six, in most cities, has broken all local records. Most of you have seen them broken.

It has elsewhere broken all worth-while records which have any bearing on stock cars. But all these wondrous things are done without a sign of effort.

Most stock motors go to pieces in attempting speedway tests. Also in hill-climbing feats. They never arrive at all.

But most of our stock-car records were won with a single Super-Six. It made a speed record exceeding 102 miles per hour. It broke all touring car speed records up to 100 miles. It ran 1819 miles in 24 hours, exceeding the record by 52 per cent.

Yet that Super-Six motor, after 3800 miles of that terrific strain, showed no wear whatever. The motor's condition was to experts almost unbelievable.

Another Super-Six broke the ocean-to-ocean record, solely because of endurance. It ran from San Francisco to New York in 5 days, 3 hours and 31 minutes. Then the same 7-passenger Super-Six turned around and went back to San Francisco. The round trip was made in 10 days, 21 hours, 3 minutes. It was the first car to ever finish in a coast to coast and return trip against time.

Last spring the best one-way time made by a famous 8 was 7 days, 11 hours, 52 minutes. In 2½ days more the Super-Six made the round trip. No test of endurance ever equaled that.

That's What You Want

That's why men buy the Super-Six—men wise in motor cars. Not for excessive speed or power. But to render every-day performance without vibration, wear or effort.

The Super-Six at half capacity can match another car's supreme exertion. That means a long-lived motor, low upkeep, small repairs.

The great fact is that the Super-Six has almost ended vibration. It has reduced motor friction to almost nil.

Made Hudson Supreme

The Super-Six has made the Hudson undisputed king. It now outsells any other fine car with a price above $1100. In six months we have quadrupled our output, but 3500 cars per month still fail to meet demands.

Yet this is the first season of the Super-Six. Last spring it entered the market a stranger, with all a stranger's uncertainties. And men have only begun to realize what this new-type motor means.

The end of the season will find 25,000 running. It finds the Super-Six in possession of all the worth-while records. It finds a car so perfect that not one change is necessary for the coming year.

Then every motorist must concede the Super-Six supremacy. And men who have bought cars with a lesser motor will realize their mistake.

The Super-Six is not one of the passing sensations. Ours is not one of those claims to motor supremacy which yields in a year or two to another. Mark what these records mean. There is plenty of evidence now to convince you that it cannot be superseded.

You Can Save $175 Now

By buying now you can save $175. The price will be advanced December 1st. The models will not be changed. You get the same Super-Six motor, the same wonderful chassis, and the same beautiful body. Your car you get now will be identical with those we shall sell after December 1st.

On that date we start a second production of the Super-Six. Material costs have increased enormously. That forces this raise in price.

BABY BEEF IN WISCONSIN.

Boys Who Are Entered in the Wisconsin Live Stock Breeders' Association Baby Beef Contest Write in an Interesting Way of Their Experiences.

FROM LEFT TO RIGHT—TYPES OF SHORT-HORN, ANGUS, SHORT-HORN AND HEREFORD BABY BEEF

[Editor's Note.—A baby beef contest has been conducted under the auspices of the Wisconsin Live Stock Breeders' Association, and the wind-up of this contest and a show of calves raised will take place at Madison, November 22d and 23d. The Wisconsin Farmer presents herewith some interesting notes from some of the boys who have been entered in this contest.]

Feeds According to Appetite.

To the Editor:—The calf which I have entered in the baby beef contest is a grade Short-horn steer, born October 10, 1915. He was not at first intended for baby beef, so his feed was not recorded, nor was any attempt made to hurry his growth. His feed through the winter consisted of skim milk with a little oil meal, a little silage, hay and bran. It was not until March 1st that I learned of the baby beef contest and began to feed him for it. At that time he weighed 300 pounds.

At first I fed him about six pounds of silage daily, a little bran and mixed hay and fifteen pounds of skim milk with three teaspoons of oil meal. This was gradually increased with the exception of milk, which was fed in the same quantity all the time. May 1st our stock of silage gave out and he has had none since. Then I began to feed oats and June 1st I added corn. All corn has been in the form of cob meal. Since July 1st he has been fed steadily, except for slight variations, as his condition warranted. By watching him closely and feeding according to his appetite and his general condition, I have had no trouble by getting him off feed. The total feeding period to date from March 1st to October 30th has been 240 days and his weight now is 800 pounds, making a gain of 500 pounds. He has been kept in a pen in the barn all summer and has not been on pasture, getting all his exercise from frequent runs in the barnyard.

The total amount of feed he has had since March 1st, the average daily ration and its cost at current prices is about as follows:

	Total cost
Bran—240 days, average daily feed, 1½ pounds	$ 4.32
Oil Meal—240 days, average daily feed, .6 pounds	2.85
Corn—150 days, average daily feed, 8 pounds	18.00
Milk—240 days, average daily feed, 15 pounds	7.20
Hay—240 days, average daily feed, 3 pounds	5.10
Silage—Sixty days, average daily feed, 6 pounds	1.15
Oats—180 days, average daily feed, 2.5 pounds	5.60
Total	$44.22

I have estimates from the following prices: Oats, $1.40 per bushel; bran, $24 per ton; oil meal, $38 per ton; corn, $30 per ton; skim milk, 20 cents per hundredweight; hay, $14 per ton.

Walter Murray.

Outagamie Co., Wisconsin.

Pay Attention to Dam of Calf.

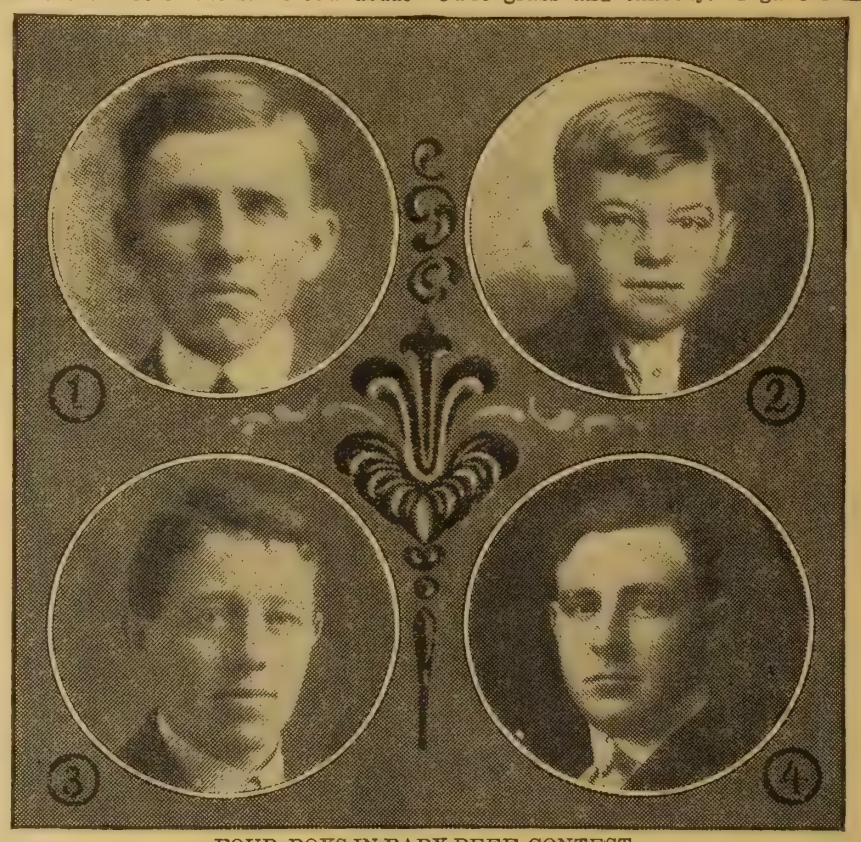
To the Editor:—I wish to tell you of my experience in raising my calf for the baby beef contest and also a few facts that I learned.

The calf was born September 15, 1915. He was a growthy fellow and attracted my attention from the first by his liveliness and good appetite. He nursed the cow for a week and then was placed on new milk which was supplemented by skim milk when the animal was a month old. He had clover before him at all times and was fed a grain ration consisting of ground oats, two parts, wheat bran, one part, and a little oil meal mixed in. The animal had free access to salt and water at all times. He weighed 400 pounds at six months of age, at which time he was entered in the contest, but after a month or two he "went off feed" and did not recover until he had lost his calf fat and consequently I was forced to stop feeding him for the contest and will make a two-year-old steer out of him.

In choosing a calf to feed for baby beef much attention should be paid to the dam of the calf, as a number of calves sired by the same bull will vary greatly in their ability to produce beef and the calves of the same cow usually have the same type and conformation when they are sired by the same bull.

Leslie Foster.

Walworth Co., Wisconsin.



FOUR BOYS IN BABY BEEF CONTEST.

Cost of Feeding a Baby Beef.

To the Editor:—I started feeding a baby beef steer April 16, 1916. He weighed 380 pounds and now, October 22d, weighs 840 pounds. I have been feeding him 184 days to October 22d and his average gain per day is two and one-half pounds. He was born October 15, 1915. He was taken right away from his mother and fed whole milk for a week. Then the milk was gradually mixed with skim milk and in another week he was having a full feed of skim milk, measuring four quarts per day. At the age of four weeks he began to eat oats and hay. The hay was old June grass. He was kept on this ration until April 16, 1916, when I entered him in the baby beef contest. Then I began to increase his skim milk until he got twenty pounds per day—ten pounds of feed. Then I began to feed him corn, oats, oil meal, bran, fifty-six pounds of corn, thirty-two pounds of oats, ten pounds of oil meal and ten pounds of bran. He gained three and seven-tenths pounds per day on the average on this ration and the next time I mixed the feed I had eighty pounds of ground corn, twenty pounds of oil meal and thirty pounds of ground oats and ten pounds of bran. He also made good gains on this mixture. I found the corn and oats did more good being ground than when it was whole. I gave him two pounds of this ration to a hundredweight of beef three times a day. I also found that he ate his meal and hay better if I fed him before I watered him. The hay he received was June grass and timothy. I gave him all the water he wanted to drink and a little salt two or three times a week. After corn began to get big enough to feed I took his skim milk away and gave him green corn, October 20, 1916.

In Wisconsin it does not pay breeders of dairy cattle to let their calves nurse the cow. It increases the cost and the thing we recommend is to reduce the cost in supplementing other fats that cost less than butter fat at 40 cents per pound.

Geo. W. Smith.

Dodge Co., Wisconsin.

Ration Which Put on Weight.

To the Editor:—The calf I am feeding in the baby beef contest was born the first week in February. I started to feed my calf the 22d day of July and I have fed it up until now. I started this calf with one-third cracked corn and two-thirds ground oats. I fed it this way for three weeks. Then I increased the corn and fed less oats and now I am feeding two-thirds corn and one-third oats with a little bran and a little cottonseed meal and timothy hay, while we have no other hay to feed and I have increased the weight on him about eighty pounds a month.

Wm. Radl, Jr.

Columbia Co., Wisconsin.

Picking Flesh Builders.

To the Editor:—When I first heard of the baby beef contest I grew much interested in it and I entered a heifer and a steer. They were both grade Aberdeen Angus. The heifer came the last of September and the steer the last of October, 1915. It was late when I began feeding, as I didn't know whether or not Sauk county was going into the contest.

I find that calves take much care and attention and I don't believe a person can do too much for them. A calf must be properly broken and handled gently and not abused. The main thing is to pick out the right kind, that is, the best shape and those that will put on the best flesh. A calf must not be long legged, wild, but must be short, bulky and have thick, loose hide.

My calves nursed 193 days after I began feeding. When I first started feeding I fed ground oats, oil meal and corn gluten. I kept increasing the quality and quantity of their feed. They also got good clover hay and a sufficient amount of exercise.

Currying and brushing does a lot of good. Washing them makes their hair sleek, soft and smooth. If a calf is handled kindly they become tame and gentle, but if they are abused they become wild and afraid. I broke mine when they were small. I played with them and handled them every day. I would curry and brush them whenever I had the time.

I showed them at the Sauk County Fair at Baraboo and showed them again at two other contests. The heifer won third place and the steer fifth. My contestants had pure-bred Short-horns and mine were grade Aberdeen Angus. I have learned a lot about the care and handling of cattle and hope to do better next year.

In figuring up the cost of the feed I found out they only cost me $27 apiece. I think when a person can feed a calf for eight months for $27 it is cheap enough as well as profitable. I like to handle cattle and take an interest in doing it. I think a contest of this kind is an ideal thing, because a boy takes more interest and better care of his calf, for he always thinks he would like to win the prize.

Howard Roser.

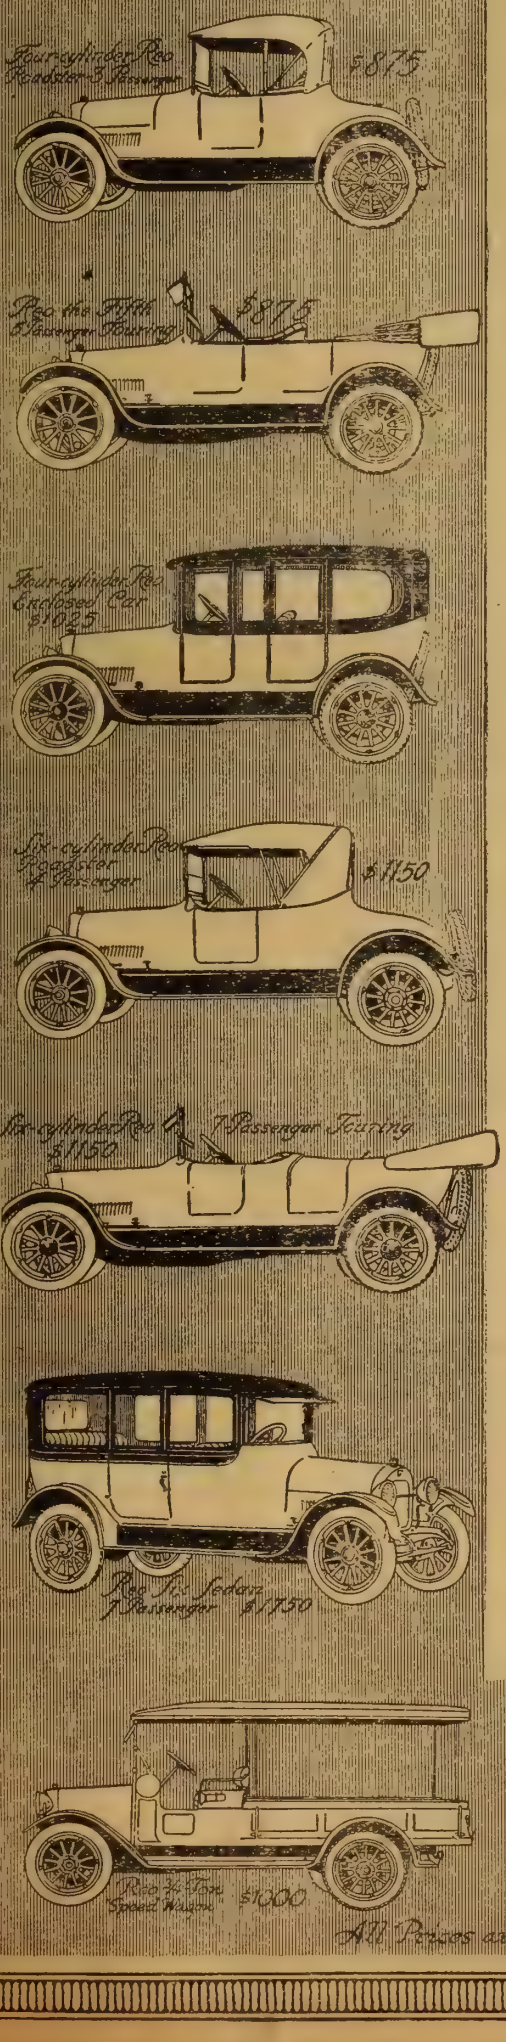
Sauk Co., Wisconsin.

Kindness to Calves Pays.

To the Editor:—In regard to my calves that won second and third prizes at Richland County Fair, will say that they were pure-bred Red Polled heifers which were born March 15th and 18th. They nursed one cow until April 23d and one cow each from that time on. The weight of each calf when put on feed was eighty-seven pounds and ninety-four pounds. From April 23d until September 26th each calf was fed two bushels of oats, two bushels shelled corn and twenty pounds oil meal, besides having free access to hay. During the worst fly time I kept them in a darkened stall. Their weight September 26th was 495

(Concluded on page 22.)

Reo



—but it wouldn't be a Reo!

Are you one of those who, just because you can't get a Reo on the minute, are thinking of accepting as a substitute a car that is your "second choice?"

Or are you one of those who think perhaps you can get as good value in some automobile of lesser reputation?

If you are in doubt on any point, let us just say this:

Take a Reo, and have it made in any other factory—and it wouldn't be a Reo.

It isn't design alone—there are no radical features of design in Reo cars.

Nor is it factory equipment—all automobile factories have about the same machines. Reo, being a leader, is always a few months ahead of most—but machine tools are practically standard.

Nor could one say that Reo mechanics are all more skilled—others can hire good mechanics too.

That's why we say that if you took Reo design and Reo specifications and had the car made up in some other plant, still it would not be a Reo.

It's the Reo spirit—that indefinable but still tangible thing that pervades the whole Reo organization from General Manager down to the Last Man in the Shops, that gives to this product the quality that has come to be known as Reo.

We like to call it good intent—for after all that is the determining factor.

It is the desire of the Reo Folk to make the best automobiles it is possible to make.

Not the most, but the best. Not quantity, but quality, is the Reo goal.

And every Reo man—from the Chief Engineer to the Final Inspector—is imbued with that spirit, is actuated by that desire to make good, dependable automobiles. Better than others.

Visit the Reo plant. You will be welcome—the doors are always open. Reo Folk, proud of their work, are glad to show you through. Note the atmosphere of the place. Watch the workers—listen to the remarks you'll hear.

No one asks—"How many did we make yesterday?" as you hear in so many factories nowadays.

For that isn't the thought uppermost in the minds of Reo workmen.

It's how many parts were discarded, turned back by the inspectors—because of some error so slight it would "pass" in most plants.

There's no secret—no necromancy—about Reo quality or how it gets into the product.

It's the result of that fervent desire of the Reo Folk to make Reo cars excel—and the eternal vigilance that results from that desire—that is responsible for Reo quality, Reo stability, Reo low cost of upkeep, and finally, Reo preference—Reo demand.

Is it any wonder that Reo cars are known as "The Gold Standard of Values?"

Cows Take Kindly to Mechanical Milker.

To the Editor:—We have a milking machine which has been in constant use for four years and has given us splendid satisfaction.

With the same care that anyone would give any kind of milking containers or whatever comes in contact with milk, the machine will produce the cleanest milk. A few times our power has been off and the cows give less milk by hand. On an average it

COLANTHA SIR KORNDYKE DE KOL.

Owned by J. N. Stansfield, Lawrenceville, Ill. Picture taken when this bull was a yearling and weighed 1,460 pounds. Three nearest dams averaged thirty-two pounds of butter in seven days and 123 pounds in thirty days.

is easier to get young cows accustomed to the milking machine than to hand milking for cows with small teats—especially this is true when on a full flow of milk and the machine is sure to be appreciated. We milk cows that give as high as thirty-seven pounds at a milking.

Our milking machine has never injured an udder that we know of. We have had a few off cows, but no more than before we had the machine. Any-

SON OF COLANTHA, TEN DAYS OLD.

one that can and will use ordinary sense should have no trouble with a mechanical milker. However, it depends a little on the man, as we know one man who tells he is having considerable trouble with his machine. His herd are Jerseys and that might make a difference. Another man we know, who resides near here, has used a milking machine for two or three years and likes it. We feel that we would be seriously handicapped to have to do without the milker.

Drives His Car in Winter.

To the Editor:—We take great pleasure in reading the pages of The Wisconsin Farmer and were very much interested in those articles on the farmers' experience with their automobiles.

I have run a car now for six years and would be lost without a car of some kind. The first car cost $950 at Madison. It was some car. We had a great deal of pleasure—especially when the weather was warm and the horses tired, as we could take our car and get to town, a distance of seventeen miles in an hour. If we happened to be in a hurry we could get back home for milking without any trouble in the same length of time. We got a good many nice rides in the long summer evenings, which if we had to take with our horses that were working hard all day, would have been out of the question.

We also use our car to run errands about the farm, such as going about the pasture to give the cattle salt and

HIDES AND FURS.

count them and carry lunch in harvest and haying.

We never took any very long trips. We always had to get back for milking, so never got any further than Madison and Baraboo, but we enjoyed those trips very much.

We figure that we can get about seventeen miles on a gallon of gasoline. I have never discovered any method of increasing the mileage on "gas," only to shut off the engine and coast down hill and we have lots of hills in our country. The largest number of miles we ever made on any one tire was 6,000. To take care of the tire cuts get them repaired at once and keep tire pumped up to the required pressure. Always carry a reliable tire gauge in the car and use it, because you can't tell by looks just what pressure you might have, especially in warm weather. I think this will add to the life of the tires as much as anything you could do.

When it comes to winter driving our car is on the go when one would think it most impossible, but we came to the conclusion that it does the work easier than it could be done with a team, care and time taken into consideration, and for comfort they have a team skinned a mile. On a cold, windy day have your side curtains on and you would not know anything about the weather, and I think that they could be used a lot more and will be, once the road is broken. They can be driven with as much pleasure as in the summertime, because you can make a long drive in a short time. Anyone who has driven a team as much as I have on cold nights in winter can appreciate a little more speed.

From experience and trying what I have read on the subject of increasing mileage from gasoline, I can say that keeping the mixture as low as the motor will permit and still perform properly will increase your mileage per gallon. Also a clean motor, that is, one free from carbon, will help to give a greater number of miles per gallon, and in driving if one does not accelerate, that is, go from a slow speed to a faster one too rapidly, the mileage may be increased, as in opening the throttle wide when the car is moving slowly tends to flood the motor.

Sold Six Grade Cows.

To the Editor:—I have done quite a lot of building this summer. I put up two barns for different parties and I also have a large barn to take care of. I have thirty-eight head of cattle, eighteen head of pure-bred Holsteins. I just finished a weekly A. R. O. test of one of my cows. She gave 541.5 pounds of milk, making 23.90 pounds of butter fat in seven days.

I find it pays to raise good cows and also feed well. I also sold six grade cows averaging $76 apiece.

I have bought 120 acres of land on which I expect to put buildings next spring and then I will give you the cost of building as near as possible. I am sending you herewith a picture of the cow that made the A. R. O. record.

Chas. Pitzke.

Taylor Co., Wisconsin.

In all but semitropical portions of the United States geraniums must be taken indoors for winter. Florists usually make cuttings in the fall to grow new plants in greenhouses for spring use. This practice is, of course, impracticable for the average householder. The latter may take up growing plants and hold them in a dormant condition by storing upright in boxes of dry soil in a cellar having a temperature of from 40 degrees to 50 degrees Fahrenheit. The plants may be placed close together with only a little dry soil among the roots.

Lessons in Recent Calf Contest.

What the Calf Contest Has Meant to Boys and Girls of Rock County Who Took Part in It—By Allen B. West, of Janesville.

AT THE prize-winners' stock parade at the Janesville Fair much interest centered in the calves which were led by the proud winners of the Rock County Calf Club contest.

First came George Arnold, of Rock Prairie, with a Polled Durham calf, and next Leman Rood, of Milton, with a Holstein, for the contestants were not limited to any particular breed. The next three boys, Frank Moore, of Clinton; James Wixom, of Milton Junction, and Wesley Stoney, of Clinton, also led Holsteins. Glen Cary, of Wilton Junction, led a Guernsey and then came two girls, the first, Lucy Kellogg, Janesville, also with a Guernsey, and Erma Hall, of Rock Prairie, with another Holstein.

The calves were a fine-looking lot. "Each one," said Mr. W. E. Markey, of Madison, "is the best of the breed. Never before have I seen or judged such a fine bunch of stock. The exhibit is on a par with those shown at the state fair."

And the young people who led them looked happy, as well they might, for in addition to the prizes won at the Janesville Fair, where the first prize had been awarded a pure-bred Brown Swiss bull calf, the second to a pure-bred Ayrshire calf, the third to a pure-bred Duroc Jersey pig, the fourth to a Holstein calf and the others generous cash prizes, these boys and girls had also won prizes in their respective districts, where contests had been previously held, and where the three winners in each of the four districts had been selected and allowed to exhibit at the Janesville Fair.

A FEW WINNERS IN ROCK COUNTY CALF CONTEST. TAKEN ON J. H. GREEN FARM, NEAR CLINTON, WIS.

The prizes they had received from the districts were: For best calf, a $25 pure-bred pig, and for second and third $15 and $10. The basis on which the awards were made were as follows: On gain made, 25 per cent; economy of production, 25 per cent; record kept, 25 per cent, and best calf, by score card, 25 per cent.

George Arnold's Polled Durham calf had gained 512 pounds; James Wixom's Holstein had gained 513 pounds, which was the greatest gain made. Other weights gained were between 457 and 317 pounds, the last being a Guernsey.

The boys and girls who had won the prizes knew just how these calves had been brought to their present state of perfection, for from February 1st to August 1st they had carefully fed and cared for them with their own hands, following the directions sent out by the United States Department of Agriculture in co-operation with the University of Wisconsin. They had weighed the rations and computed the cost and, as required, kept daily records.

Thirty-one boys and five girls, thirty-six in all, had taken part in the contest, which had been inaugurated by the Rock County Breeders' Association, of which James Van Etta, of Lima, is president, the success of which was due to the work of the special committee which had it in charge and the committees in the four districts, and to L. A. Markham, county secretary of the Y. M. C. A., who, seeing in it the great opportunity it offered to the boys of the county, was active in securing their enrollment and encouraging them in their work.

Though the prize winners were especially happy over the results, the other contestants had gained with them lessons and experience of greater value than any prizes. The contest was a county-wide object lesson on the value of scientific care and feeding. In no other way could boys and girls be taught the lesson so effectively. Nor were they the only learners. The whole community profited by their interest in the contest.

Said one farmer, "I think after this I'll care for my calves in that way;" and another, "I've raised calves for years, but I've learned more about it this summer than ever before."

The boys and girls and their interested friends learned the necessity of keeping accurate accounts with one's stock, and the fact that grain and forage raised upon the farm have definite values whether fed to stock or sold in the market.

They learned also that good stock pays. One girl sold her calf for $100 and used the money to pay her expenses at school. A fourteen-year-old boy who unaided selected his calf, buying it from a neighbor for $50, sold it at the close of the contest for $150.

But best of all the boys and girls learned that the farm has all sorts of interesting problems awaiting solution and that they have no need to leave it to find wider fields for their expanding energies.

National Swine Growers Meet.

Pure-bred swine breeders generally will be interested in the announcement that the National Swine Growers' Association will hold its annual meeting at the Ft. Dearborn Hotel, Chicago, on Monday, December 4th, at 6 o'clock p. m. This is the organization under whose auspices the National Swine Show was held in Omaha in October. From all quarters has come the most favorable kind of commendation of that event and there is much enthusiasm among swine breeders generally over the prospect of holding the second show.

This paper is exceedingly anxious that this meeting be well attended. The swine business of the great central West is in a flourishing condition and every prospect pleases. The National Swine Growers' Association is proving to be the best means yet discovered for inducing the adherents of all breeds to join hands in the common cause of swine improvement. Friendly rivalry will continue as heretofore, but in the end the work of this association will result not only in improving the pure-bred swine of the country but in working a vast improvement in the grades.

"There are 6,361,502 farms in the United States. On 3,643,546 of these farms 15,387,515 hogs are slaughtered annually. If hogs were slaughtered on the remaining 2,717,956 farms at the same rate 11,000,000 fewer hogs would go to market annually," is the calculation made by Earl S. Girton in a new bulletin issued from the agricultural extension department at Iowa State College on "Dressing and Curing Pork on the Farm." This would effect a great saving to the farmers who do not slaughter hogs at the present time, since pork products purchased at local shops must be sold for such prices as to allow a profit to the country shipper, packer and retail butcher as well as to cover freight on the hogs to market and on the product back to the retailer.

How many of our readers will see this and then write and tell us how many different kinds of food products they now buy in packages which they used to buy in bulk, or did not buy at all?

We would like to know. If you will take the time to write, it would please us.

Miscellaneous Milk Troubles.

To the Editor:—"I would starve to death before I would eat a bite of anything made from that milk!" It was in the suburbs of a small town and the members of the family were discussing pro and con where they might be able to procure the milk supply in the place of the former source which was no longer in business. "What's the matter with it?" demanded the worried housewife, who found it hard to supply her family with good, wholesome food even after the wherewithal was earned to buy it.

"That cow is kept in a small, dark, dirty stall all through the winter, with nothing of cleanliness; the manure hangs to her sides in great chunks the whole winter through. It is just possible the situation is better through the summer, but next winter will find conditions unchanged."

Now, the writer happened to know about the cow in question, about the uncleanliness, and an incident was recalled that explains how slovenly, dirty methods, are never safe, even with the best of conditions. There are always ways and means to feed us our peck of dirt on short order. The boy was milking in the grassy, clear yard. The cow, which happened to be a good one, was fat and sleek. She gave a pail "full up" and the boy calmly set it brimming with foam on the grass while he tied the cow to a new, clean spot for the night.

While the cow was being given attention a cat and dog which were standing near helped themselves to their nightly portion of the milk. A youngster who saw the performance considered it his bounden duty to inform the lad of what had occurred. "Well, I reckon we strain our milk," was the indignant reply.

This occurred in a small town where it would pay a man, and pay well, to supply customers with good, wholesome milk. It is being eagerly sought at a maximum price. In fact, milk and butter, good fresh butter, are practically an unknown quantity where the cream is shipped and the skim milk fed to pigs and calves. In common with many other things there is a complete revolution in the matter of dairy products in comparison to that of even a few years ago.

A woman whose cleanliness was above suspicion made butter which was sold at the store. With no really good reason she changed the base of operations and drove seven miles to another town when her own was adjoining the farm where she lived. We needed some extra butter at threshing time and purchased some of her. The awful taste and odor of butter was personally experienced just once before. When a child we just simply had to have farm animals and if the real supply was short stick horses and milk weeds for "cows" filled in the deficiency.

Now, what was the good of having "cows" unless they did one some real benefit? The big, juicy milk weeds were broken off to permit the milk to run out by "milking time." With a small pail that had been presented by an adoring aunt at the Yuletide we very importantly went to "milk."

Somehow the affair did not pan out according to expectations, so all there was for it was to "suck the cow!" Unless you have tasted milkweed or butter made from a cow that eats milkweeds, please do not say you have tasted the worst ever!

A cow was once brought to this place that was purchased from what was seemingly a good neighbor. The odor of the milk was peculiar. It was nauseous. The butter was soft and inferior in quality. Finally the milk was discarded and the cow turned dry. She seemed listless and altogether out of sorts, losing flesh rapidly in spite of the best of feed and care. It afterwards came out through a tenant of her former owner that she was not healthy. He had at one time milked her and refused to use the milk any longer, so she was offered for sale. Without a test to prove definitely that cow had tuberculosis.

One time we traced an unpleasant odor and taste of what should have been good butter to a very simple source. Through a temporary illness a woman, experienced in buttermaking, cared for the dairy part of the household for a couple of weeks. The queer taste of the butter could not be located until we were able to be about the house again. Churning was just begun. The churn and all utensils were carefully scalded and there was the trouble. Instead of rinsing plentifully with cold water immediately after the hot was poured off the cream was poured into the churn "because the weather is so cold I am afraid the butter will be slow."

The cold water would have closed the pores of the wood that the hot water opened, causing the unpleasant odor and taste. Both hot and cold baths were necessary, the former to keep the butter from sticking to the utensils as well as for sanitary reasons.

Another source of malodorous butter is that of the cloth strainer. Without meaning to say that it is impossible to keep one of them sanitary, it is a fact that it is a strenuous business. Unless such strainer is thoroughly sterilized the milk and cream soon acquire an odor and taste that is far from wholesome. If kept sanitary, then the cloth strainer does what a wire concern cannot possibly do. We plead guilty to using them, and after being washed several times with cold water they are boiled—boiled, remember—in a solution of bicarbonate of soda. There is one for each day and they are taken through the wash with the table linen.

There are a lot of other simple causes for unwholesome milk and butter, but a few simple principles applied in a common-sense manner would usually find the trouble, which varies with conditions. Subscriber.

Butter at Its Best.

To the Editor:—Once in a while a churning of butter will come with a flavor that is undoubtedly a little bit "off." The experienced buttermaker quickly detects this slipping down in the standard, but it is not always so easy to determine just where the fault lies. It is a pretty good guess, however, that the ripening has not been done just right, for it is easier to fail here than at most any other point. What, then, is good ripening?

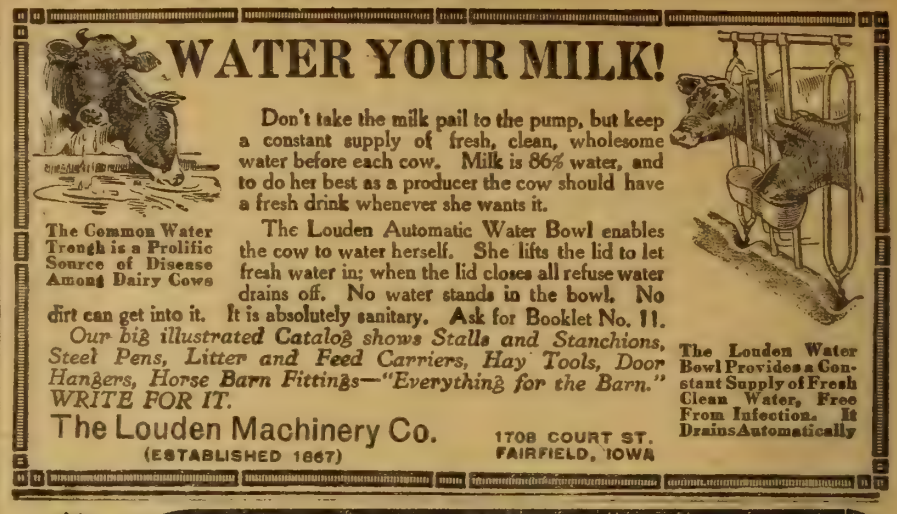
We use a common milk can for this purpose—two of them when we have a flush of cream. As the cream comes from the separator we receive it in a milk pail. This is at once—and by that I mean just what I say, at once—taken to the well platform and set into a tub of water just drawn. While cooling it is stirred to get out any animal heat there may be in it. A long-handled spoon is used for this purpose. Care is taken to reach clear to the bottom and all round on the sides of the pail.

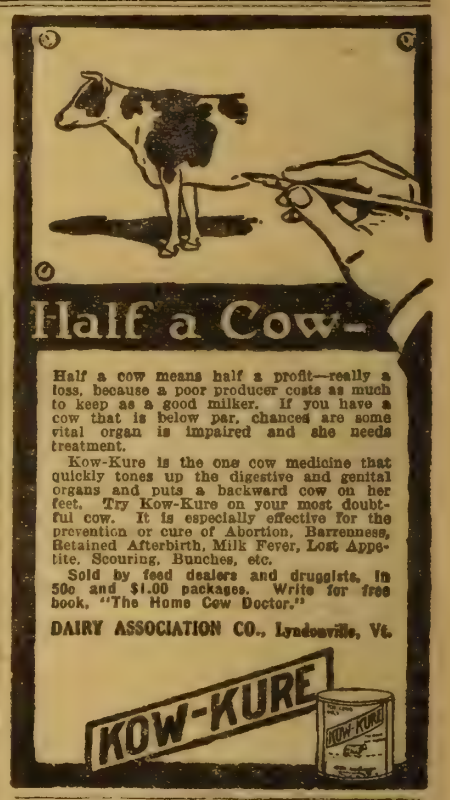
When thoroughly cooled the cream is taken in and poured into the milk can, when it is set away to stand until time to churn. If we have other messes of cream, all are thoroughly mixed in the can. Just here we used to have trouble. Two messes of cream in the same can and not well mixed are sure to come to grief. I remember the time when we left much butter in the cream after churning, just because the different messes were not completely mixed. Now we have a cone-shaped device for the stirring. This is open at the bottom and provided with a long rod for a handle. This will reach to the very bottom of the can, and if pains are taken there is no need of improper agitation and consequent poor mixing. You can get such a stirring arrangement of the manufacturer of dairy implements.

If the churning is not to be done in a day or two, we let the cream can stand where it will be cool and where no bad odors will reach it. By the way, any odors are bad for butter. The purer the air in which milk and cream are kept the better the butter will be. A few hours before the churning is to be done the cream can is brought out and set in a warm place and the cream frequently stirred. The sooner the ripening can be done the better. We never have used a starter in ripening, although that can be done very successfully after a little experience.

When ripe enough we cool the cream down to the proper temperature for churning. This varies a little according to the time of the year and the temperature outside the can. Fifty degrees is about right for summer and 65 for other seasons. By following these rules we have had our best success, and I am not ashamed to say that we have had very good success with our butter. E. L. V.

More than ninety-three high schools in Wisconsin now give courses in agriculture as a part of their work. These courses include practical projects in animal husbandry, poultry raising, cultivation of grains, forage crops and a wide variety of garden vegetables. In many instances the community is benefited by these projects. Some prejudice has been encountered in this work, but in the main the courses are developing splendidly and accomplishing a great deal of good.





UPPER WISCONSIN

The Conrath Bank Plan.

In one of our recent issues we mentioned the fact that Mr. Ben F. Faast, president of the Conrath State Bank, in Rusk county, Wisconsin, had spoken briefly before the Land Clearing Conference at Rhinelander, relative to a land-clearing plan. The Wisconsin Farmer has been furnished with the details of the plan as carried out by the Conrath State Bank. The bank offers to loan money to farmers and new settlers for the following purposes:

1. For the fencing of timber or brush land.
2. For buying stock (dairy or beef).
3. For buying a stump puller, a piler, or dynamite.
4. For stumping land and making it ready for the plow.

More complete details of the plan are explained in the following:

Under plan No. 1 we will loan you the full amount necessary to buy wire and fence posts if you will agree to scatter clover seed and pasture stock on this land during the greater part of the season. The pasturing of stock is of great help in clearing land.

Under plan No. 2 we will loan you the entire cost of the stock you buy, providing this stock is tuberculosis tested and is approved by the county representative. It will pay you to buy good cows and heifers and to pasture this stock on your cut-over lands.

Under plan No. 3 we will loan you the entire cost of a stump puller or a stump piler, providing you buy a good machine at reasonable cost. We will help you try to secure a low price direct from the manufacturer. If we loan you the entire cost of this machine you must agree to stump and pile at least five acres of your land during the first year.

We will also loan you the full cost of dynamite and will try to secure for you this dynamite at reduced prices.

In many cases it would be better for three or four farmers to buy a stump puller and build a Conrath stump piler to be used co-operatively. This will reduce the cost to each farmer. We will loan you the money on a joint note.

Under plan No. 4 we will loan you the entire cost of stumping your land and making it ready for the plow, providing the cost of this stumping does not exceed what we believe to be a fair estimate of what the cost should be. If you will do the work yourself we will pay you by the acre as each acre is completed. As an example—if you want to stump and pile ten acres and the estimated cost will be $150 or $15 an acre, we will loan you the full $150. This money is to be left in the bank and to be paid to you at the rate of $15 per acre as each acre is completed and approved.

The Wisconsin Farmer is in receipt of a circular which has been issued recently by the Conrath State Bank, which loans money to farmers and settlers on one to twenty years' time. The bank will also loan money on special terms for any farmer or settler who desires to erect a barn or silo. One of the statements in the circular advises farmers that it pays to borrow money to improve cut-over land and build farm homes.

Certainly no bank could engage in any more practical business than that outlined in the plan herein given. While the bank is helping the farmer and settler, it is also making new customers whose volume of business will be increased as their land is improved.

Tour By Burnett County Dairymen.

County Agent Klinka, of Polk county, took a company of Burnett county dairymen and farmers through the western part of Polk county recently. They were accompanied by County Agent Briggs, of Burnett county.

The first stop was made at the Seven Pines Farm belonging to C. E. Lewis. Dinner was served at Milltown high school. An interesting feature of the day's exercises was the inspection of the Milltown Co-operative Laundry. The party also visited the A. J. Miller Holstein dairy farm and later called upon the following breeders: Geo. A. Nelson, Ayrshire; Christ Tretsven, Guernsey; Henry Peterson, Short-horn; H. F. Taylor, Jersey; Carl Johnson, Holstein; Fred N. Nelson, Brown Swiss; Frank Nelson, Guernsey.

There were about forty Burnett counties in the party and they expect to purchase considerable stock from their Polk county neighbors.

Fencing a Problem For Settler.

To the Editor:—I am sending you my renewal and wish to say to you I have enjoyed The Wisconsin Farmer very much and would be sorry to miss it from the reading table.

Now a word about the settler and the land speculator of northern Wisconsin. The settler often begins on a new land with little more than his bare hands to make a farm of the wild land. As soon as possible he secures a few milk cows to help feed himself and family. Now begins the difficulty of fencing, surrounded by a land speculator who will not furnish his share of the line fences and whom the settler cannot compel to do so. The burden of helping the speculator fence his land falls on the settler who already has all the burden he can carry. The land speculator is making money off the efforts of the settler without bearing his share of the burden. Can this matter be remedied?

This may seem a small matter, but it is often only a straw that breaks the camel's back. Nellie Covant.

Wood Co., Wisconsin.

Wood Association No. 1.

To the Editor:—The following table gives the names and records of cows in this association which have produced more than forty-five pounds of butter fat during October:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds fat

J. L. Williams, Official Tester.
Wood County, Wis., Association No. 1.

Watch for the date of your nearest institute this winter and plan to be there with all the family. It will be worth while and you will learn something that will help next year's work.

What Does Winter Mean to Your Battery?

Maybe you live where you can drive your car all winter long.

Or maybe in your locality the roads are hub-deep in snow, ice, and mud until spring.

It doesn't matter whether you live in Florida or Alaska—you need Willard Service for your battery's sake.

If you drive, your battery must be in working order—your starter must not fail no matter what the weather may be.

If you store your car, your battery must not be neglected—you want it to be in good condition when spring and good roads come.

If your winters are cold, your battery ought to have regular inspection, for if it is not properly charged it will freeze.

The Willard Service Station is there to help you. There you can have your battery well cared for, filled and charged. Or for a small sum, you can leave it there all winter where it will receive regular, expert attention. Or you can learn how to take care of it yourself, whether you run or store your car.

It doesn't pay to run any risks. Write for list of Willard Service Stations and let us do the worrying. Ask for booklet F-71 "Will She Start" on winter care for your battery.

WILLARD STORAGE BATTERY COMPANY
Cleveland, Ohio

JUDGING A DAIRY COW.

Points Which Must Be Taken Into Consideration—As Given by George C. Humphrey, of Wisconsin Experiment Station.

Good Dairy Head.

WHAT is a good dairy cow? The ability to judge by the dairyman, if ever important is very essential now, with the increasing costs of feed, and the question Prof. G. C. Humphrey has answered in his bulletin, "Judging Dairy Cows," just issued by the Wisconsin Experiment Station.

It is not only necessary to emphasize the need of increasing the size of Wisconsin herds but it is even more necessary to improve the production of the cows. The aim on every farm should be to have better cows and to accomplish this a dairyman must be a good judge of a good cow when he buys or sells, and to know the family history of his cows, whether their ancestry be pure-bred or grades. Prof. Humphrey has endeavored to point out what is a good cow and the need of every dairyman being a good judge. This he sums up in the following:

Makes fewer mistakes in buying cattle.

Gets better prices for his surplus stock.

Selects and builds up a herd of cows of uniform type, size, breed and quality.

Receives a higher and more uniform production of milk and butter fat.

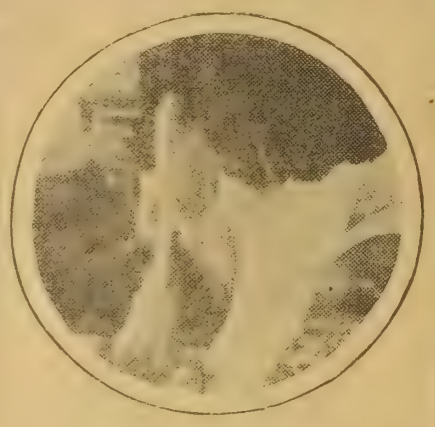
Makes greater returns over and above the cost of feed and care.

Uses better sires and secures better calves.

Has better success in feeding and showing cattle at fairs and expositions.

Has greater satisfaction and pleasure in owning and managing a dairy herd.

Cows which are heavy producers usually have certain well defined characteristics and experiments indicate that cows having certain so-called dairy characteristics are the more economical producers. The dairy cow is best defined by naming her essential features and these are: Good size for her breed, good feed capacity, dairy disposition, a good udder, good constitution and health; dairy breeding, large capacity for milk and butter-fat production, and power to produce offspring of her type and breeding. Where one is able to consider all parts of the body and judge these essential features he is not likely to err seriously in his judgment.



GOOD DAIRY UDDER.
The skin should stretch readily when the udder is milked out.

LOOK FOR THE WEDGES.
The body should be wedge shaped when viewed from the front and top of the withers, wider at the hip bones and at the floor of the chest than at the point of the withers.

GOOD DAIRY UDDER.
The udders should be large, well proportioned and well balanced, extend well forward and high up between the thighs.

These characteristics have led to the term, "triple wedge shape characteristics," as this wedge indicates a big barrel, which means feed capacity; fullness of flanks with well sprung ribs that show digestive capacity while the sharp ends of the wedge show dairy temperament. These characteristics with the need of properly developed udders, milk veins, etc., are taken up in detail together with the methods of scoring at judging exhibitions.

GREAT DIGESTIVE CAPACITY IS ESSENTIAL.
Fullness of flanks and good depth from the hips to the lower line of the rear flank and of the udder, together with well-sprung ribs, far apart indicate a large digestive capacity.

Montana Pays Big Poultry Profits

It costs less than a $1.00 a year to maintain a hen in Montana, and eggs bring highest prices. Poultry and eggs are much in demand—the climate is right—feed cheap—markets exceptionally good.

A New Era of Development

The Electrification by the *"St. Paul Road"* of its main line across Montana at the cost of $12,000,000 has directed the eyes of the world toward this great commonwealth. This stupendous achievement will help the state forward and upward, developing new industries, improving living conditions, increasing land values, and broadening the farmers' markets.

Again Electrification has greatly enhanced the pleasures of travel—eliminating smoke and cinders, and creating clean, smooth travel over the mountains.

The AMERICAN MESSENGER

IS THE BEST Illustrated Religious Monthly Published In This Country at the Low Subscription Price of Only 50 Cents a Year.

AMONG its editorial contributors may be mentioned such popular religious writers as Rev. David James Burrell, D. D. LL. D., Pastor of the Marble Collegiate Church of New York City; Rev. Charles Carroll Albertson, D. D., Pastor of the Lafayette Avenue Presbyterian Church of Brooklyn, N. Y.; Rev. J. Wilbur Chapman, D. D., the famous evangelist; Rev. Edgar Whitaker Work, D. D., Pastor of the Fourth Presbyterian Church of New York City, and Rev. George Ernest Merriam.

It is especially valuable to Christian Endeavor and other Young People's Societies. Each issue contains stories of fascinating interest, suitable for home reading and other articles relating to the family life. The American Messenger endeavors to present a comprehensive view of the progress of the Kingdom, both at home and abroad; to tell of the forward movements that are being initiated for the uplift of humanity and the betterment of mankind; to call attention to those phases of Christian work and thought that are of unusual interest; to record the manifold activities of the Christian Church; and to spread abroad the cardinal teachings of Jesus Christ, as revealed in the Gospel which He proclaimed as the message of God.

The paper is interdenominational and admirably suited for every home. All those who subscribe now to the American Messenger for 1917 at fifty cents will receive the paper until January 1, 1918. New subscribers will thus receive the issues for October, November, and December, 1916, free of cost, if they subscribe at once. If you do not know the paper, send for a free sample copy.

Address, AMERICAN MESSENGER, Dept. 5, Park Ave. and 40th St., New York City, N.Y.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Omro Poultry Institute.

The first of a series of farmers' poultry institutes which will be held at various places in Wisconsin this winter was conducted last Thursday and Friday at Omro, Winnebago county, with splendid success. The attendance was very good and interest ran high and Mr. E. T. Luther, state superintendent of farmers' institutes, expressed himself as much pleased with the innovation in institutes.

Emphasis was laid on the need of more and better eggs for Wisconsin, the type of fowls needed on the farms to produce these eggs and the necessity of good marketing conditions in order to bring about the greatest returns from poultry. It was an institute program primarily for farmers and those interested in egg production rather than the fancier who is breeding for the show pen. The speakers at the two-day session were Mr. J. G. Halpin and Mr. J. B. Hayes, of the state experiment station at Madison; Mrs. A. J. Schloerb, of Omro; Mr. G. W. Harkett, of North Freedom, and Mr. Luther.

As dairymen have discovered that it is profitable to choose herd sires from high-producing dams, poultry raisers are also learning that high-producing flocks are headed by males from good laying hens. The demand for cockerels from eggs of high-producing hens is becoming greater each year, the speakers pointed out, as the farmer has found that the primary value of a hen is the eggs she produces, and to secure such pullets close attention must be paid to the egg records of the mother fowls. The trap-nest is, therefore, to the poultryman what the Babcock test and the scales are to the dairyman, so particular attention was given at Omro to the use of the trap-nest to learn what a hen is doing and at the same time keep a check on the male birds.

Three pens of good and poor laying hens were shown as a demonstration of the fact that the successful egg producer and flock owner must trap-nest. In one pen was Wisconsin Queen, whose record is 258 eggs in twelve months, and at her side a flock mate who in four years has never laid an egg. In another pen were flock mates, one hen with a year's record of 220 eggs, the other with twenty-eight eggs. In the third pen were flock mates, one with a record of 213 eggs, the other with seven eggs for the year. To the eye one looked to be as good as the other. The value of the trap-nest, it was shown, was that males should be chosen from the settings of the high-producing hens, as they could be expected in turn to thus improve the flock production.

Although the trap-nest has no competitor in this line, the expert may judge somewhat by the eye which hens are good layers. This may be summed up as follows:

Good layers are:
First off the roost in the morning.
Last to roost at night.
Usually singing and always happy and busy.
Always heavy eaters.
Healthy and free from parasites.
Late molters.
Have prominent and bright eyes.
Fire red and velvety combs.
Wide, pliable pelvic bones.
Deep abdomen.
Reasonable long and wide back.
Short head.
Loose yellow color in their shanks after heavy laying.
Loose yellow tinge in ear lobes
Loose rich red color of combs.

Marketing from both the farmer's standpoint and that of the egg buyer was discussed with demonstrations of candling, etc. The value of good, fresh eggs was emphasized and especially the need of close attention to the layers. There were also discussions of feeding problems, disease, etc.

Following the lectures Mr. T. L. Bewick organized a Boys' and Girls' Poultry Club, which will work along poultry lines during the coming year under the direction of Mr. Gustav Sell, teacher of agriculture in the Omro high school. In connection with the institute was held a comparison show which brought out a good lot of fowls to be judged by Mr. Geo. A. Wells, of Oshkosh. This was under the direction of the Winnebago County Poultry Association, of which C. H. Larrabee is president and Mrs. A. J. Schloerb secretary and treasurer.

Our Diamond No. 24 Corn and Cob Grinder

is our new all purpose mill that with from 6 to 10 horse power gives an output of from 10 to 30 bushel per hour. Grinds and crushes corn and cob and small grain of all kinds, made after 30 years of experience in building Feed Grinders and fully guaranteed. Let us send you descriptive circular telling about new features on this grinder, also folder "A" which describes the famous

Diamond Saw Frames

With one of our Diamond Line of Saw Frames you can make from $10.00 to $15.00 per day, this winter sawing wood for yourself and others. Printed matter mailed free, so write today.

Our readers frequently write and ask where they can buy some product that they need. If your local dealer or merchant cannot supply you, tell us his name and address—maybe we can be helpful to you and to him. We are here to serve both of you.

THE WISCONSIN FARMER
MADISON WISCONSIN

Wisconsin Poultry Show.

The thirteenth annual show of the Wisconsin Poultry Association will be held at the stock pavilion, college of agriculture, Madison, Wisconsin, January 5, 1917.

One of the big features of this year's exhibition will be a "zone show" of the National Partridge Wyandotte Club, to include specimens of this well-known breed from five states—Iowa, Illinois, Minnesota, Michigan and Wisconsin. Attractive prizes and special cups will be offered in this and other breed competitions. In all more than a thousand birds are expected for the event, representing some of the most successful poultrymen in the middle West. Emphasis as usual will be placed upon utility characteristics rather than upon fanciers' points.

The judges who will officiate at the show are W. H. Stanfield, Hillsdale, Michigan, and George Wells, Oshkosh. Officers of the Wisconsin Poultry Association for this year are: M. C. Gerard, Stoughton, president; W. H. Ashcraft, Janesville, first vice president; John F. Johns, Dodgeville, second vice president; J. J. Flad, Madison, superintendent; J. P. Love, Waukesha, treasurer; J. G. Halpin, Madison, secretary.

The Turkey Situation.

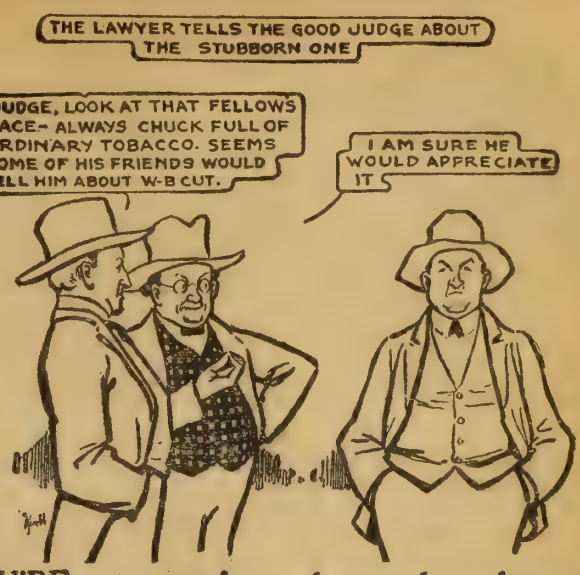
According to James A. Halpin, head of the poultry department of the Wisconsin College of Agriculture, there is no reason to expect any reduction in the number and quality of turkeys raised in Wisconsin this year. For a time there were fears that the Thanksgiving bird would be knocked off the Badger menu. An average of 30 cents per pound for turkeys at retail is expected throughout this state.

Regarding the turkey situation, Mr. Halpin says:

Raising turkeys has never been one of the state's big industries at any time, although some mighty fine specimens are produced here. In some regions of the state turkey raising is on the increase, while elsewhere the reverse is true, and it is declining in popularity. The reasons why farmers quit turkey raising are chiefly because of troublesome diseases which they fail to understand, the unscrupulous hunter who takes pot shots at tame birds, and also because of neighbors who object to the turkey's wandering habits.

Missouri, Oklahoma, Texas and Kentucky are leading turkey raising states at present, as natural conditions in the south and west seem favorable to their best production. Reports from these places tell of extra heavy supplies of high-grade birds, which will be sent north and west to the large markets within a few weeks.

Tell what you have for sale in a little advertisement in THE FARMERS' MARKET. Does not cost much and may be worth a lot to you. Six cents a word each insertion.



YOU'RE not sorry for gophers and monkeys with their faces all swelled out—they are built that way, pockets in their cheeks to hold stuff till it's feeding time. But you can't help feeling sorry for a man with a big wad of old kind of tobacco—he isn't even getting satisfaction. W-B CUT is *rich* tobacco—full of satisfaction—a *little chew*, is *right size*, and it cuts out so much chewing and spitting.

Meetings During the International

Various Record Associations Will Hold Sessions During Week of the Big Exposition, December 2d to 9th.

SUCH information as is available in advance indicates that the International Live Stock Exposition which will be held at the Union Stockyards, Chicago, December 2d to 9th, will have the largest attendance in its history. It has been customary in the past for the various record associations to hold their annual meetings during the period of this show and this year the same plan will be followed. In the following list will be found the meeting place and time of each gathering that will be held during the week:

December 4th to 9th—National Conference on Marketing and Farm Credits, Hotel Sherman.

MONDAY, DECEMBER 4TH.

8:00 p. m.—American Cheviot Society, Stockyard Inn.
8:00 p. m.—National Swine Growers' Association, Fort Dearborn Hotel.
8:00 p. m.—Percheron Society of America, Florentine Room, Congress Hotel.

TUESDAY, DECEMBER 5TH.

5:00 p. m.—American Cotswold Association, Stockyard Inn.
7:00 p. m.—American Berkshire Association, Stockyard Inn.
7:00 p. m.—American Shire Horse Association, Live Stock Record Building (2d floor).
7:30 p. m.—American Shropshire Registry Association, Live Stock Record Building (Assembly Hall).
8:00 p. m.—American Hereford Cattle Breeders, Down Town.
8:00 p. m.—American Rambouillet Sheep Breeders' Association, Live Stock Record Building (2d floor).
8:00 p. m.—Chester White Swine Record Association, La Salle Hotel.
8:00 p. m.—International Live Stock Exposition Association, Live Stock Record Building.

WEDNESDAY, DECEMBER 6TH.

1:00 p. m.—American Poland China Association, Live Stock Record Building (2d floor).
2:00 p. m.—Red Polled Cattle Club of America, Live Stock Record Building (Assembly Hall).
7:30 p. m.—American Aberdeen Angus Breeders' Association, Palmer House.
8:00 p. m.—American Association of Importers and Breeders of Belgian Horses, Live Stock Record Building (Assembly Hall).
8:00 p. m.—American Galloway Breeders' Association, Sherman Hotel.
8:00 p. m.—American Hampshire Sheep Association, Live Stock Record Building (2d floor).
8:00 p. m.—American Polled Hereford Breeders' Association, Live Stock Record Building (2d floor).
8:00 p. m.—American Short-horn Breeders' Association, Congress Hotel.
8:00 p. m.—Lincoln Sheep Breeders' Association, Live Stock Record Building (Sheep Breeders' Office).
8:00 p. m.—White Swine Congress, La Salle Hotel.

THURSDAY, DECEMBER 7TH.

10:00 a. m.—Welsh Pony and Cob Society, Live Stock Record Building (Assembly Hall).
1:30 p. m.—American Southdown Breeders' Association, Live Stock Record Building (Assembly Hall).
2:00 p. m.—American Milk Goat Registry Association, Live Stock Record Building (2d floor).
7:30 p. m.—The Polled Durham Breeders' Association, Grand Pacific Hotel.
7:30 p. m.—American Yorkshire Club, Hotel Sherman.
8:00 p. m.—American Oxford Down Record, Live Stock Record Building (2d floor).

FRIDAY, DECEMBER 8TH.

10:00 a. m.—Illinois State Veterinary Medical Association, Sales Ring, Union Stockyards.
1:00 p. m.—American Romney Breeders, Live Stock Record Building (2d floor).
2:00 p. m.—American Shetland Pony Club, Down Town.

Ailing Animals.

Necrobacillosis.

Can you tell me what is the matter with my pigs' eyes and how to treat them? They are pigs from three to five weeks old, well-bred Duroc Jerseys. If the days were cold they were farrowed in a sanitary pen in a good hog house. If the weather was good the sows nested in the rape patch or around the straw stack and ranged for pasture and rape, run in the lot after fattening cattle, had some corn, slop and good water. The pigs' eyelids become inflamed, slightly swollen and moist looking, then swell shut, and by the time they open again the pig is blind, and, of course, starves to death, as well as getting knocked about by its mates. No discharge appears to come from the eye. These are all the symptoms I could see. I had the same trouble with my spring pigs, together with sores around the head which would make holes until I wondered at the pigs living as long as they did. I lost half of my spring crop, so would like very much to have your advice.

This trouble is known as Necrobacillosis and is often found in small pigs. It is found in different forms, such as you find in your herd. It is hard to treat such troubles effectively because of the concentration of disinfectants which would be required to kill the germ. The strength required would be injurious to the pigs in other ways. About all that can be done is to clean and disinfect quarters and play a watchful, waiting game.

Cough in Pigs.

During the last two weeks my pigs, old and young, have contracted a cough and they seem to be losing steadily. It is a dry, rasping cough and some are running from the nose like a cold. Some say it is caused from lung worms. They eat well and seem to be healthy and thrifty every other way, only are not gaining since they got it. They run in the pasture with the cows and have corn, ground feed and skim milk for rations. They have good quarters with cement floors. Kindly advise me what to do for them.

There are so many things which will cause a cough and subsequent unthriftiness that without close observation one may not be able to diagnose with any degree of accuracy. The trouble may be lung worms, chronic pneumonia, digestive disturbance or some other trouble, but this trouble will have to be determined by close observation by a competent or professional man.

Lack of Milk Supply.

I have several sows that have farrowed and some that are to farrow soon. I am having trouble with them losing the pigs. The pigs are strong and healthy when farrowed, but the sows do not seem to have any milk for them, that is, none that they can get. The sows lie flat on their udder and once in a while they will let the pigs nurse. But they get weak and then die. They have all been fed well, having plenty of skim milk, ground rye and oats, corn and water. I have had the local veterinarians out, but they don't seem to know what the trouble can be. Could you advise me what to do?

It is hard to say just what the trouble is in your herd. However, if the cows do not let the pigs nurse as they should this would cause a lessening of the milk supply. Try a change of feed, say, for instance, get hold of a good quality of alfalfa and boil it in a quantity of water and mix the ground feed into the alfalfa water or tea and feed this to them.

Injury From Slipping.

I have a black nine-year-old Kentucky bred mare that has gone lame on her left hind leg. I drove her to town one evening and she was all right until she slipped on the pavements. As I drove her I saw she was lame. She has not done anything for three days, but is still lame. Can a horse get a spavin slipping in that way? Is there a cure for it? Would shoes help her? She is a valuable animal and I do not want to lose her.

Since you say your horse is a valuable one we would say you did not exercise the best of judgment in neglecting her for so long a time. This animal should have been examined by a veterinarian at once and he could probably have found the seat of the injury. Yes, she could cause a spavin to start from injury in slipping, but this may not be the trouble with your animal. Blistering a spavin three or four times at intervals of two to three weeks with a good blistering agent often brings about a cure.

The Baraboo News suggests that all bridges on the country roads be painted white so that they may be more easily seen at night. The idea is a good one and might save a good many accidents in these days of swiftly running automobiles.

Fruit & Garden

land Selection of Fruit Pays.

hough it is poor business to put ge apples only in the top of the , R. S. Mackintosh, horticultural cialist, University Farm, St. Paul, s that time used in picking, grad- and packing apples by hand is well nt. A uniform grading system, a d box and careful handling are uisites of high prices for Minne- a fruit. All apples should be care- y picked by hand from the tree be- e they become "hard ripe," Mr. ckintosh says. Those which be- ne "water-cored" must be picked ecially early.

rades, particular attention being i to the varieties of apples, should carefully separated. All fruit ed in the boxes of any grade uld be uniform in shape and each de must have a size limit, below ch none in the grade falls. Not re than 10 per cent of the first- de apples should vary from the ndard type or size.

egular apple barrels, or bushel or f-bushel baskets for the local mar- , are most convenient for packing ice apples. The first few layers uld be packed with the stems down after each half-bushel is put in barrel should be shaken to settle fruit. The top should be put on ly to keep the apples in place. A ew or a lever press is best for put- on the top.

fter the barrel is filled and the d nailed securely in place, it should turned over and should have the iety, the grade and the size of the allest apple written on the other l. This end is to be opened as the

When hand packing and grading is ne carefully by all fruit growers of state there will be a considerably reased incentive for consumers to Minnesota apples.

Studying Bean Blight.

Visconsin is one of the first five tes in the Union in the production beans, having about 20,000 acres ually in this crop. At present all the three grades of navy beans, rrowfat, medium and pea are held unusually high quotations, $5.70 per hel being the average. This is the hest harvest-time prices in the mid- West for a number of years.

he Wisconsin crop this year was naged considerably by blight dis- es known as anthracnose. This ease attacks the leaves and pods of plant. A study of this blight is ng made by the Wisconsin Experi- nt Station and is hoped in time to e this state a disease-resistant va- ty which may be as successful as new Wisconsin cabbage.

he Strawberry Outlook.

o the Editor:—The berry patches uld receive good care the coming ter. The prospect for a crop of ries in 1917 is not remarkably ght. This is true because in large tions of country the weather was y unfavorable for plant making. It s too hot and too dry to root the ners. Also, September was so very that it was simply impossible to rt new beds at that time. as is en done in favorable years. But if you have an old plantation ich has borne a crop, or two or ee crops, you need not despair of owing a good home supply of ber- s next summer. To get the best re- ts there are two points to look after hinning and winter protection. It uld have been better if the thinning been done in July or August, but en yet it is not too late. There are ir times too many plants for a good ld of fruit. The problem is how to nove three and leave one, disturb- that one as little as possible. n small patches it may be done with toe, but in large patches it is better take a horse and cultivator, tearing ough hit or miss. For some rea- ns it is better to do this in the fall, en late, than to wait for spring. t if it is done very early in spring is far better than not to do it at all.

Another way is to go in with a two-horse stirring plow, turning down three-fourths of the plants and leaving narrow rows, say eight inches or a foot wide. The need for this thinning depends somewhat upon the variety, for, while some varieties set plants very closely, others are slow plant makers and do not thicken up for some years. Examine your beds and if you find that they are set closely—an inch or two apart—you must thin to get a profitable crop. If however, they are spaced five or six inches apart no thinning is needed in your case.

Winter protection must not be neglected if you would be sure of a crop. It is true that some seasons the winter conditions are all favorable, there may be just the right supply of moisture and snow may come early and continue late and this affords all the mulching which is required. But such winters are the exception, not the rule. It is wise to provide against the probable unfavorable season.

Mulch, by all means, and apply the mulch as soon as the ground is frozen. In case there is severe freezing and thawing while the ground is dry, earlier mulching is more necessary than when the ground is wet. A variety of materials may be used, depending upon which is the more convenient or cheaper. The point to guard is that you get as little weed seed as possible in your mulching. A half rotten hay stack bottom is the best material, or partly rotted wet straw. Marsh hay or clean, dry straw are good. Forest leaves will do if you can make them stay in place, not blowing off the first wind storm. Shredded corn fodder will answer the purpose, or whole cornstalks, but these are less desirable. Strawy litter from the horse stable will do it, but in this you are apt to get troublesome weeds started.

In using mulch bear in mind that the point aimed at is to keep the surface frozen. It is very possible to use more than needed, and that is harmful. And yet the writer has found by experience that it is better to use too much than not enough.

Does It Pay to Feed a Dairy Cow?

To the Editor:—Mr. C. E. Erickson's grade Guernsey cow yielded the largest amount of butter fat of any cow in our association for the thirty-day period ending October 10, 1916. Her total production was 1,111 pounds and 578 pounds of butter fat. Mr. Alfred Brekke's herd of Holsteins and Henry Wogsland's herd of Guernseys averaged 32.3 pounds of butter fat per cow during the month. Mr. Brekke's herd produced the largest amount of milk. The average pounds of butter fat per cow for the entire association for this period was 20.9. What would this mean to the farmers that had the lowest averages if the cow ever obtained the average production that the above-named farmers had? Here is an example of what it would mean:

The cost of feed of the best herd was $20.10; value of product $52.59; profit $32.49. Number of cows, five. Cost of feed for the poorest herd was $18.70; value of product $45.90; profit, $27.20. For every dollar's worth of feed fed to the best five cows they returned $2.60, while the poorest cows only returned $2.40 for every dollar's worth of feed. Does it pay to feed a dairy cow? Think this over, you farmers that aren't in a cow-testing association.

The following is the record of cows in the Alban and New Hope Association which produced forty-five pounds of butter fat for the thirty-day period ending October 10, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
C. E. Ericksen Whiteface, G.G.	8	3-26-16	1111	5.2	57.8
Tom Olson Gr. Hol.	8	7-29-16	1350	3.4	45.9
Gunder Dobie Native	8	8-22-16	1185	3.9	46.2
Otto Halverson Beauty, N.	7	6-28-16	1155	4.6	53.1
Star, N.	12	5-19-16	1005	5.2	52.3

Come to Detroit
The Automobile Center and LEARN THE AUTOMOBILE BUSINESS

Detroit trained men get preference and get jobs quickly. No other city can give what Detroit offers. Think what it means to learn in the Michigan State Auto School. Factories endorse our school, glad to employ our graduates or offer them territory in which to sell cars and start garages. Unlimited opportunities. You're right in the middle of the greatest auto activities. Men are needed everywhere as testers, repair men, chauffeurs, garage men, and salesmen. Hundreds of our graduates start in business for themselves.

Earn $75 to $300 a Month

We teach you to handle any auto proposition. You graduate in from ten to twelve weeks. **Our equipment is complete.** Students actually build cars from start to finish, getting factory training in assembling, block-testing, road-testing, everything. Special complete course in Oxy-Acetylene brazing, welding and cutting separate from regular course. All leading types of starting, lighting and ignition systems in operation. Learn to time motors, adjust carburetors, magnetos, valves and bearings quickly and accurately. Six-cylinder Lozier and 8-cylinder King are used for road instruction. We have a new Chalmers "6-30" chassis with 3,400-r. p. m. motor, the latest thing out, also a 1917 Detroiter-6, and an Overland. Just added Delco System as used in Buick, Hudson and Packard Twin "6." We have also installed a 1917 Willys-Knight complete chassis in the shop for students to work on.

Detroit Is the Place to Learn---Start Any Time

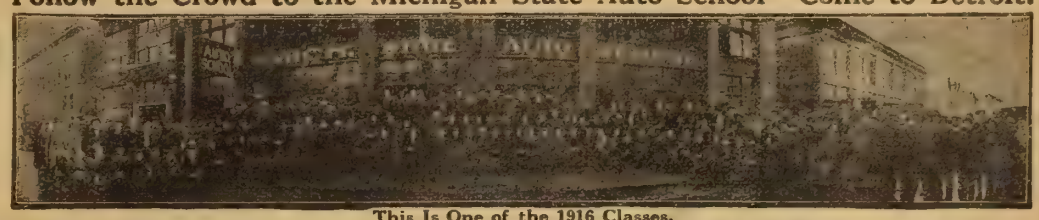
There are 44 auto factories in Detroit, and 140 accessory and parts factories. Our students have the privilege of going through any or all of them. We now **operate Westinghouse Auto-Lite and Bijur Service Stations.** After careful consideration the Westinghouse Electrical & Mfg. Company, the Auto-Lite Company and the Bijur Co. decided that our school was the best place in Detroit to handle their service stations. This has added thousands of dollars' worth of equipment and makes our electrical department unequaled. Students get actual experience and training in handling all kinds of electrical auto equipment and taking care of trouble. We have just installed a Sprague Electric Dynamometer for block-testing purposes for students' use. Auto factories need Dynamometer men constantly. We have a greater demand for our graduates than we can meet. Factories and Garages are paying big salaries to men who **know** how to handle electrical equipment quickly and properly. Detroit is the automobile center. You get practical instruction. Come to our school and learn the auto business right. School open all the year. Enter classes any time, any day. Three classes daily: Morning, afternoon, evening. You can work in the factory in the day time and take course at night.

There is a great demand for Michigan State Auto School students. Garages throughout the country write us for men. Auto factories write and phone for men constantly to fill permanent places. Why not fit yourself for one of these good paying positions?

Money-Back Guarantee

We guarantee to qualify you in a short time for a position as chauffeur, repair man, salesman, tester, demonstrator, garage man, or automobile dealer, paying from $75 to $300 monthly or refund your money. We have constantly more requests for Michigan State Auto School Graduates than we can supply.

Follow the Crowd to the Michigan State Auto School—Come to Detroit.



This Is One of the 1916 Classes.

Factory Co-operation We have completed arrangements with the Auto factories to put them in touch with men who intend going into business for themselves. Think of getting inside information as to the best territory and where the garages will make the most money. The factories are looking for trianed men to represent them. Men who know the auto business from A to Z are in biggest demand. Come here and start right—get the information first-handed and don't wait.

Act Quickly—Now—DON'T WAIT Fill in the coupon and mail it now. Get full particulars and "Auto School News" and New Catalog. They are both absolutely free. Or better still, jump on the train, as hundreds have done, and come to Detroit, the "Heart of the Automobile Industry," and learn right.

Additional Building and Equipment 83,000 sq. ft. of additional floor space in our new building, thousands of dollars' worth of new equipment, plenty of room for students to work. This comes with our new building at 687-89-91 Woodward Ave.

Our school has grown by leaps and bounds, students come from all over the world. Men have left after graduating and started business for themselves; others have accepted good jobs both in Detroit and over the country. Their work has proven that we train them rightly. We are constantly adding new equipment. Our students get the best and latest things to work on. Our electrical department is thorough and complete. It is in charge of one of the most competent electrical instructors.

Remember, you can enter classes any time, any day. The price of course is based on giving full value. Therefore we cannot give another course free. Graduates in the complete auto course are competent to handle farm tractors. Act quickly--now. We have no branches. Write or come direct to this school.

TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

PART III. "Prince Charlie"

CHAPTER VII—Continued.

"Married! That settles the romance," said Fred; "but he is interesting, anyway, and I am going immediately to find out what he has written and save up my money to buy copies."

"I may save you that expense in one instance," and Rachel handed her the book Stuart had sent her. Tillie looked at her in astonishment, and Fred seized it eagerly.

"Oh, but you are sly!" she said, with an accusing pout; "you've heard me puzzling about his work for days and never gave me a hint."

"I only guessed it was his, he never told me; but this morning I charged him with it, and he did not deny. I do not think there is any secret about it, only down at the Fort there were several ladies, I believe, and—and some of them curious—"

"You're right," laughed the Major; "they would have hounded him to death. Camp life is monotonous to most women, and a novelist, especially a young, handsome fellow, would have been a bonanza to them. As it was, they tried to spoil him; and look here!" he said suddenly, "see that you say nothing of his marriage to him, Babe. As he does not mention it himself it may be that the trouble, or—well, just remember not to broach the subject."

"Just as if I would!" said his daughter after he had left. "Papa never realizes that I have at all neared the age of discretion. But doesn't it seem strange to think of Mr. Stuart being married? He doesn't look a bit like it."

"Does that state of existence impress itself so indelibly on one's physical self?" laughed Rachel.

"It does—mostly," affirmed Fred. "They get settled down and prosy, or else—well, dissipated."

"Good gracious! Is that the effect we are supposed to have on the character of our lords and masters?" asked Mrs. Hardy unbelievingly.

"Fred's experience is confined to barrack life and its attendant evils. I don't think she makes allowance for the semi-artistic temper of the Stuart. He strikes me as having just enough of it to keep his heart always young, and his affections, too—on tap, as it were."

"What queer ideas you have about that man!" said Fred suddenly. "Don't you like him?"

"I would not dare say no with so many opposing me."

"Oh, you don't know Rachel. She is always attributing the highest of virtues or the worst of vices to the most unexpected people," said Tillie. "I don't believe she has any feeling in the question at all, except to get on the opposite side of the question from everyone else. If she would own up I'll wager she likes him as well as the rest of us."

"Do you, Rachel?" But her only answer was a laugh. "If you do, I can't see why you disparage him."

"I did not."

"Well, you said his affections were always on tap."

"That was because I envy him the exhaustless youth such a temperament gives one. Such people defy time and circumstances in a way we prosaic folks can never do. It is a gift imparted to an artist, to supply the lack of practical ingredients that are the prime ones to the rest of creation."

"How you talk! Why, Mr. Stuart is not an artist!"

"Isn't he? There are people who are artists though they never draw a line or mix a color; but don't you think we are devoting a great deal of time to this pill-peddler of literary leanings?"

"You are prejudiced," decided Fred. "Leanings, indeed! He has done more than lean in that direction—witness that book."

"I like to hear him tell a story, if he is in the humor," remarked Tillie, with a memory of the cozy autumn evenings. "We used to enjoy that so much before we ever guessed he was a story-teller by profession."

"Well, you must have had a nice sort of a time up here," concluded Fred; "a sort of Tom Moore episode. He would do all right for the poet-prince—or was it a king? But you—well, Rachel, you are not just one's idea of a Lalla."

"You slangy little mortal! Go and read your book."

Which she did obediently and thoroughly, to the author's discomfiture, as he was besieged with questions that taxed his memory and ingenuity pretty thoroughly at times.

He found himself on a much better footing with Rachel than during his first visit. It may have been that her old fancy regarding his mission up there was disappearing; the fancy itself had always been a rather intangible affair—a fabrication wrought by the shuttle of a woman's instinct. Or, having warned Genesee—she had felt it was a warning—there might have fallen from her shoulders some of the responsibility she had so gratuitously assumed. Whatever it was, she was meeting him on freer ground, and found the association one of pleasure.

"I think Miss Fred or your enlarged social circle has had a most excellent influence on your temper," he said to her one day after a ride from camp together, and a long, pleasant chat. "You are now more like the girl I used to think you might be—the girl you debarred me from knowing."

"But think what an amount of time you had for work in those days that are forfeited now to dancing attendance on us women folk!"

"I do not dance."

"Well, you ride, and you walk, and you sing, and tell stories, and manage at least to waste lots of time when you should be working."

"You have a great deal of impatience with anyone who is not a worker, haven't you?"

"Yes," she said, looking up at him. "I grow very impatient myself often from the same cause."

"You always seem to me to be very busy," he answered half vexedly; "too busy. You take on yourself responsibilities in all directions that do not belong to you; and you have such a way of doing as you please that no one about the place seems to realize how much of a general manager you are here, or how likely you are to overburden yourself."

"Nonsense!"

She spoke brusquely, but could not but feel the kindness in the penetration that had given her appreciation where the others, through habit, had grown to take her accomplisments as a matter of course. In the beginning they had taken them as a joke.

"Pardon me," he said finally. "I do not mean to be rude, but do you mind telling me if work is a necessity to you?"

"Certainly not. I have none of that sort of pride to contend with, I hope, and I have a little money—not much, but enough to live on; so, you see, I am provided for in a way."

"Then why do you always seem to be skirmishing around for work?" he asked, in a sort of impatience. "Women should be homemakers, not—"

"Not prospectors or adventurers," she finished up amiably. "But as I have excellent heath, average strength and understanding, I feel they should be put to use in some direction. I have not found the direction yet, and am a prospector meanwhile; but a contented, empty life is a contemptible thing to me. I think there is some work intended for us all in the world; and," she added, with one of those quick changes that kept folks from taking Rachel's most serious meanings seriously—"and I think it's playing it pretty low down on Providence to bluff him on an empty hand."

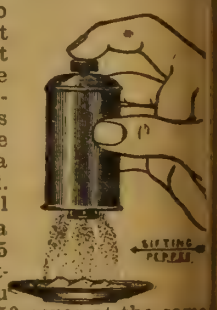
He laughed. "Do you expect, then, to live your life out here helping to manage other people's ranches and accumulating that sort of western

NEW, SANITARY SALT and PEPPER SHAKELESS SIFTERS

Moisture-Proof
Dirt-Proof
Germ-Proof

MADE of pure aluminum, satin finished with four narrow and two wide polished bands, and highly polished tops. These unusual salt and pepper sifters are very rich and attractive in appearance and look like silver. They are light in weight, yet so durable as to be practically indestructible. The illustration shows the salt sifter full size.

To operate it is necessary to simply press the button in and out. As they are moisture proof the salt will never be affected by damp atmosphere and the necessity for tiresome shaking is entirely eliminated. No more damp salt or pepper without flavor or strength. Owing to their ingenious construction, the contents cannot spill. They are so constructed as to keep out germs, dust and dirt, the contents being always clean. Price 50 cents a pair, postpaid.



We will send you a pair for 25 cents, postpaid, if you will send us 50 cents at the same time for a yearly subscription to The Housewife.

THE HOUSEWIFE.

In it you have a magazine containing the best literary and artistic efforts of the foremost writers and illustrators of the day. Anna Steese Richardson, organizer of the Better Babies Movement, will write for The Housewife a series of articles on the professions and businesses open to the girl starting out in life. Mabel Potter Daggett will write strong articles for The Housewife on matters of world-wide interest. Helen Christine Bennett will write articles and aim to show the young wife how to start housekeeping right. Lillian Dynevor Rice, who is known to hundreds of thousands all over the United States, will continue as Department Editor of The Housewife. The departments which she will supervise will embrace practical, seasonable cookery, embroidery, crocheting and needlework of all kinds, gardening and helpful household hints. Harold Vincent Milligan, organist and well-known writer on musical subjects, will contribute articles to The Housewife on music for the home. Among the prominent writers of fiction we have scheduled for the year is Holworthy Hall, one of America's brightest young authors. His first serial "The Frying Pan" commences in the November issue of The Housewife and is interestingly and attractively illustrated by Walter Tittle. Taken all in all, The Housewife for the year 1917 will be the best magazine published at 50 cents a year.

Or, you may obtain a pair for 25 cents, by sending us an order for any one of the following combinations of magazines, if your order is received before January 1, 1917.

logic in extenuation?" She did not answer for a little; then she said:

"I might do worse."

She said it so deliberately that he could not but feel some special thing was meant, and asked quickly:

"What?"

"Well, I might be given talents of benefit to people, and fritter them away for the people's pastime. The people would never know they had lost anything, or come so near a great gain; but I, to cheat, would know it. After the lights were turned out and the curtain down on the farce, I would realize it was too late to begin anew, but that the same lights and the same theater would have served as well for the truths of Christ as the pranks of Pantaloon—the choice lay only in the will of the worker."

Her eyes were turned away from him, as if she was seeking for metaphors in the white stretch of the snowfall. He reached over and laid his hand on hers.

"Rachel!"

It was the only time he had called her that, and the caress of the name gave voice to the touch of his fingers.

"Rachel! What is it you are talking about? Look around here! I want to see you! Do you mean that you think of—of me like that—tell me?"

If Miss Fred could have seen them at that moment it would have done her heart good, for they really looked rather loverlike; each was unconscious of it, though their faces did not lack feeling. She drew her hand slowly away, and said, in that halting, yet persistent, way in which she spoke when very earnest and yet not very sure of herself:

"You think me egotistical, I suppose, to criticise work that is beyond my own capabilities, but—it was you I meant."

"Well?"

His fingers closed over the arm of the chair instead of her hand. All his face was alight with feeling. Perhaps it was as well that her stubbornness kept her eyes from his; to most women they would not have been an aid to cool judgment.

"Well, there isn't anything more to say, is there?" she asked, smiling a little out at the snow. "It was the book that did it—made me feel like that about you; that your work is—well, surface work—skimmed over for pastime. But here and there are touches that show how much deeper and stronger the work you might produce if you were not either lazy or careless."

"You give one heroic treatment, and can be merciless. The story was written some time ago, and written under circumstances that—well, you see I do not sign my name to it, so I can't be very proud of it."

"Ah! that is it? Your judgment, I believe, is too good to be satisfied with it. I shouldn't waste breath speaking, if I was not sure of that. But you have the right to do work you can be proud of; and that is what you must do."

Rachel's way was such a decided way, that people generally accepted her "musts" as a matter of course, Stuart did the same, though evidently unused to the term; and her cool practicalities that were so surely noting his work, not himself, had the effect of checking that first impulse of his to touch her—to make her look at him. He felt more than ever that the girl was strange and changeable—not only in herself but in his influence. He arose and walked across the floor a couple of times, but came back and stood beside her.

"You think I am not ambitious enough; and you are right, I suppose. I have never yet made up my mind whether it was worth my while to write, or whether it might not be more wise to spare the public."

"But you have the desire—you must feel confidence at times."

"How do you know or imagine so much of what I feel?"

"I read it in that book," and she nodded toward the table. "In it you seem so often just on the point of saying or doing, through the people, things that would lift that piece of work into a strong moral lesson; but just when you reach that point you drop it undeveloped."

"You have read and measured it, haven't you?" and he sat down again beside her. "I never thought of—of what you mention in it. A high

A Twelve-Time Christmas Gift

¶ Can you think of a more acceptable Christmas gift than a year's subscription to Pictorial Review? Frankly, we can't. Month after month, as this welcome visitor arrives at the home of a friend, it will be a constant reminder of your thoughtfulness.

¶ Pictorial Review coming to a home every thirty days is like a beautifully-dressed, well-informed, entertaining friend who brings the latest news from the big world of Fashion, Literature and Art, as well as providing up-to-date, authoritative information on every subject dear to the heart of a woman.

¶ Save all the fuss and worry of Christmas shopping. Send us your list of friends with $1.50 for each subscription and we will enclose an appropriate and beautifully printed Christmas card in five colors, with your name on it together with our New Year issue timed to arrive on Christmas morning. In its lovely soft colors, this card is an exquisite piece of art work well worthy to accompany your gift.

¶ Every friend you send Pictorial Review to will thank you for your gift. Why not sit right down now and mail us your list with $1.50 for *each* yearly subscription?

¶ Do it today while you are thinking of it!

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good fait
All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

A Quick Method of Cleaning Silver Without Rubbing.

An easy and effective method of cleaning tarnished silverware by boiling in a soda and salt solution in contact with a clean piece of aluminum or zinc is recommended to housewives by the United States Department of Agriculture as a result of studies made by its specialists in home economics. The necessary procedure is so simple that it may be followed successfully in practically any home.

The cleaning system known as the electrolytic method has been well recognized for several years.

The tarnish which occurs on silver is not due to oxidation, but is dependent entirely upon the action of sulphur. In most cases the source of the sulphur causing tarnish is rubber, wool, foods like eggs and the sulphur in the air due to burning illuminating gas and coal. The electrolytic cleaning method depends on the facts that this tarnish of silver sulphide is slightly soluble in the hot solution employed, and that it is broken down chemically and its silver content redeposited on the ware when the proper electrical conditions prevail. The presence of both the silver and the aluminum or zinc in the hot solution provides the necessary electrical conditions. Under this method, therefore, practically all the silver in the tarnish is returned to the object being cleaned. When silver polishes are used, on the other hand, all the silver in combination in the tarnish is removed.

In the cleaning method recommended by the department the necessary materials are a graniteware cooking utensil deep enough to allow the silverware to be covered by the solution; a clean piece of aluminum or zinc, preferably the former; and baking or washing soda. The solution, consisting of a teaspoonful of baking or washing soda and a like amount of table salt to each quart of water, is brought to a boil in a graniteware or enameled utensil. A sheet of aluminum or clean zinc is dropped in. The tarnished silverware is then immersed in the solution so that it is in contact with the sheet of aluminum or zinc. The tarnish should disappear in a few seconds. The silver object should then be removed from the solution, rinsed and dried with a soft cloth.

Aluminum is much more satisfactory than zinc for use in this cleaning process, since it does not become coated with a layer of carbonates which would interfere with the chemical reaction. Zinc does form carbonates and, if used, must be cleaned frequently in dilute hydrochloric acid. A small sheet of aluminum may be purchased especially for silver cleaning purposes or a piece of an old aluminum utensil well cleaned may be used. Utensils which would later be used in cooking operations should never be employed in cleaning silverware by the electrolytic method. If very large pieces of silver are to be cleaned and a container is required larger than can be placed conveniently on the stove, the hot solution may be poured into such a vessel and the silver object then immersed. The method is most effective, however, when the solution boils during the cleaning process, and efficiency is rapidly lowered as the temperature of the solution falls below the boiling point.

The electrolytic method gives the cleaned silver a satiny finish after several cleanings. If a burnished surface is desired the silver must from time to time be polished lightly with some abrasive polishing material such as powdered whiting. The study made by the department specialists included a comparison of the amount of silver lost when the whole tarnish was removed by polishing and when the electrolytic method was used. It was found that when whiting paste was used as an abrasive spoons lost nearly 0.01 of a gram of silver each, approximately twenty-five times as much as when the "handmade" electrolytic method was employed.

Art in the Home.

Art in the home means refinement in the home. Art in the home means the application of art principles to our everyday life. The modern conception of the application of art to practical life is based on the conception of serviceability plus attractiveness. I take it that the home is the place in which both adults and children find a haven. A true home must meet not only our physical needs but also our social and aesthetic ones. The question then is, what can the application of art principles do for us toward a well-rounded everyday life.

The home should be a restful place. Not forgetting the work end of the house, we must also remember that a house should prove a boon to tired nerves. The restful air which many houses possess is due partly, at least, to the elimination of discordant elements. Just as we plan out the arrangement of the rooms in regard to their size and location, so we must plan out the color scheme of our house, taking account of each room as regards the amount of light it receives, the purpose of the room and the furniture which must go into it.

Color harmony (that is, sameness of color effect) is extremely essential in producing the restfulness in appearance for which we are striving. Especially we should be careful to cover the large areas, such as the walls, the floors and ceilings, with tones that we are certain will give us the effect we desire. If we are uninstructed in the use of color and must depend on our own judgment, the safest thing for us to do is to keep to tones for the large areas which are very much alike in color, although they may vary a good deal in regard to light and dark. For instance, a brown wall with a darker brown rug and a cream or light brown ceiling would probably prove a harmonious and restful combination, especially for the north side of the house (the side receiving the coolest light, in the artist's parlance). The stronger the color that we use the more careful we must be of the combinations into which we place it. This does not mean at all that fairly strong colors cannot be used in our homes, but their use presents greater difficulties and we are more sure of harmonious results if we select colors, especially for the large areas, which have been weakened or neutralized by the addition of gray. Cheerfulness in the room can easily be attained through touches of brighter colors in the smaller things, as cushions, flowers, vases, etc.

We should be careful not to overcrowd the house with too many things. Most of us need a good-sized closet in which to keep the various souvenirs of travels, the various odds and ends which friends may have bestowed upon us, and the many vases and other objects which naturally collect in the course of a number of years of housekeeping. The associative value of an object rightly endears it to us and a part of the individuality of the home depends upon such associations, but it is not necessary that we should keep all or even half of our possessions in constant view.

A few vases, attractive in color and extremely simple in form, but well-proportioned, help the living room, but most of us have too many of them that do not justify their existence. Why give a place in the room to objects that, week after week, have to be dusted when they are neither attractive nor useful? Let us put these things in the closet where they belong, from which storeroom they can be brought out as the occasion demands. When selecting a vase in which to put flowers, an extremely simple one of a color subordinate to and harmonious with the flowers should be chosen.

The same that has been said about vases can well apply to the other objects that are usually found in the living room. I speak particularly of the living room because I am assuming that the space in the workrooms will be occupied by objects necessary for service. I am also assuming that the bedrooms will be extremely simply furnished. Even the dining room is less apt to have unserviceable furnishings than is the living room; so it is all the more necessary that in the living room, where so many interests collect, where we shall find, probably, musical instruments, the books and magazines of the various members of the family, that we should be careful to keep the essential things as simple and effective as possible and of quiet and harmonious colors. The lamp, the easy chairs, all contribute their part toward the effects of the whole. A few plants often add much to the attractiveness of a room. One of the charms of the home is the note of personality pervading it, and the homemaker who will take the time to plan can make that personality all the more effective through the application of the principles of serviceability and attractiveness, expressed in terms of simplicity and appropriateness. Let us not forget that this can be carried out in a home already established, even if the task seems hopeless. Simply by rearranging the furniture already owned, putting the lighter colored furniture into one room and the darker into another, the homemaker has often greatly improved the attractiveness of her house. Then, when the pieces of furniture which suit the convenience, but not the color scheme of their respective rooms, have been treated to a good rubbing down with sandpaper or paint remover, stained the desired tone, and waxed, and discordant curtains or rugs subdued by the dye pot, the transformation is marked and unity begins to emerge from chaos, and "that tired feeling" to be replaced by the joy of living.

In her attempts to create the right atmosphere in the home the homemaker will find a silent, but a very powerful, ally in the pictures she places upon the walls. A home may well have a collection of pictures, just as it has books, for reference and study. Children should be encouraged to collect pictures of the wonders of nature, of brave deeds or of fine achievements in the way of splendid buildings, and be encouraged to look at them just the same as they read good books. The pictures on our walls may rightly appeal to us for a variety of reasons and we have a perfect right to select those meaning most to ourselves, but a picture which is constantly before us should be one that is not only interesting in subject but one that also has been carried out well. There is a wide range of pictures, from the pictures of stately, dignified buildings with their suggestions of power and grandeur or the beautiful renditions of nature, to the intimate pictures of home life, from which to choose. If one feels incompetent to judge of the artistic worth of the picture, the safest plan is to buy the standard things, just as in literature.

The home, the school, the church, could greatly increase their power and influence for good by placing suitable pictures upon their walls. I believe there is another source for good pictures than the ones so far suggested, and that is in enlargements of the amateur photograph. Almost every locality has some beauty places—some spots where hill, stream or trees and sky meet in picturesque union, which, if photographed, even by a kodak, when the effect of light is such as to accentuate the important elemen the scene, could be enlarged into effective pictures. The task o photographer shows itself here i lecting effects composed of larg simple masses of contrast. These tographs of the environment, if ly done, can help carry out one most important functions of namely, to help us visualize h life in terms of the ideal, in ter beauty! And the chances are t one that the home life carried on environment controlled by ideas der, refinement and true beauty itself reflect these qualities and grew stronger in the right kin vigor and serviceableness.—[Jo Ankeney, University of Missouri

To Keep Cider Sweet.

To keep apple cider sweet fill jars with fresh cider and add a spoonful of sugar to each quart. rubber and cap in position and tially tighten. Sterilize in hot bath outfit for ten minutes; i water-seal outfit for eight minute the steam-pressure outfit, under pounds of steam, for four minute the aluminum pressure cooker two minutes. Remove the tighten the covers, invert to coo test for leakage. Apple cider c in this way will keep perfectly.

Lice on House Plants.

To the Editor:—I am a read your paper and find many good in it. Therefore, I am coming w question of my own. Can any readers tell me what to do when plants have lice? I have used remedies, but none seem to Please help me if you can. —R

The Daisy's First Winter.

One little girl who reads the Y Folks' page has sent us a poem o own which she calls "The D First Winter." She says that doesn't suppose we will print Laura—that's her name—is goi be surprised when she opens the this week. We are glad to Laura's little poem and suggest other girls and boys who like to send us original stories and poem our column. We are sure all young folks would enjoy them. is Laura's poem:

Somewhere in a meadow on this earth grew
A dear, bright little daisy, I think all knew.
The bobolinks, blackbirds sang, and whistled,
And near by the ground was very thistled.

Now this little daisy knew not about winter,
For this was her first year of real enter.
Her white petals dropped one after other
But another one grew, so she did bother.
She was always happy and content

"How favored I am," said the white daisy,
"I never stop blooming and I neve lazy."
"But you must remember," said a rough burdock,
"That winter is coming." And it her a shock.
"I never grow again on this old spot?"

Good Record at School.

Dear Young Folks:—I love to the Young Folks' page. I am a eight years old and I go to sc every day. I was never absent tardy. I have a mile to go. We

miles from town and three miles hurch. I love to go to Sunday I have three little pigs two old and I feed them every nd morning. —William.

e Land Journey (vv. 14, 15). oll, Paul and his companions heir march of 140 miles to the Rome. After a march of sixty ey reached the famous Appii i. e., "The market of Appius." aul is met by the first dele- from the church at Rome, who aiting to welcome him and nd escort them to the capital second delegation met them at ree Taverns, or "The Three as we would call stores in the sense. These Christians had no small cost, as they had to ty-six miles to the Appii Forum ty-three to the Three Taverns, n walk the same distance back ity. Thus it was that the sight friends cheered Paul and he God. We can well imagine of those souls, the communion by those pilgrims as they jour- oward the imperial city. n see in the letters which Paul rom Rome plain signs of his for sympathetic friends and can how he must have felt upon us greeted on his journey. We o imagine something of the and inspiration which must me to those Christians who met nous soldier of the cross and privilege of escorting him to

In Rome (vv. 16-29). Having into the city the centurion Ju- o had become a friend of Paul, d the prisoners to the captain uard. This officer we are told iberal-minded man, one of the d people in the corrupt life of Paul was probably first taken orum, which was the center of power and magnificence and ich was the "house of Caesar." :22.) Paul was not sent to for it was against the law to Roman into prison without a ut he was permitted to dwell self in "his own hired house." se, there was a soldier who him. This was the city where d so long desired to preach the (Rom. 1:14-16.) As in other he first turned to the Jews, for his own people no matter how e had suffered at their hands. them together that he might preach unto them Jesus and sought to conciliate them.

In Paul's preaching he always emphasized that a Messiah was risen from the dead as a guaranty of all other resurrections. In his day, as in this present one, there were those who spoke against this, and yet that resurrection was to conquer the world and to save it from moral ruin. Those present had had no word out of Judea. (v. 21). At a later and a public meeting (v. 23) there came unto him, that is, into his lodgings, great numbers to whom Paul sounded the Gospel of the kingdom and gave his personal testimony. He proved out of the law of Moses and out of the prophets, common ground for them all, that the Messiah had truly come, the prophecies of the kingdom of God had been fulfilled, and that Jesus by his life and death and teaching had shown the Jews how perfectly the latter were fulfilled. This Paul did from morning till evening, following the same line as in his speech before Agrippa and in other places where he had been testifying. All of his explanations and testimonials centered in Jesus. It was no abstract mental theory for an improved order of society, but a definite reign of a definite person, Jesus of Nazareth. Paul is a great example for any Bible student to follow.

As on so many other occasions, Paul's preaching caused a division (v. 26).

And again he turns to the Gentiles (v. 28).

Paul told them plainly what lay at the root of their unbelief (v. 27), and though they refused the salvation it was none the less of God.

Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

Catalog of Fall and Winter Fashions

Send 10c in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses', and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wis.

9797—Children's night drawers. The pattern is cut in 5 sizes; 4, 6, 8, 10 and 12 years. It requires 3 yards of 36-inch material for a 6-year size.

1566—Ladies' house dress with reversible fronts and sleeve in either of three lengths. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6¾ yards of 36-inch material for a 36-inch size.

1883—A good, sensible style in ladies' apron. The pattern is cut in 3 sizes:

Small, medium and large. It requires 4⅜ yards of 36-inch material for a medium size.

1347—Children's coat, with yoke and sleeve with shirring or with cuff finish. The pattern is cut in 4 sizes: 1, 2, 4 and 6 years. It requires 2¼ yards of 36-inch material for a 4-year size.

1893-1892—Ladies' costume. Waist 1893, cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 1892, cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 2⅝ yards of 36-inch material for the waist and 3¾ yards for the skirt for a medium size. The skirt measures about 3 yards at the foot. Two separate patterns, 10 cents for each pattern.

1903—Children's dress, with or without pocket and belt. Cut in 4 sizes: 2, 4, 6 and 8 years. It requires 2⅝ yards of 36-inch material for a 4-year size.

1895—A very attractive set of clothes for dolly's wardrobe. This set comprises a simple one-piece dress, a waist-petticoat, drawers and a cape. The pattern is cut in 5 sizes for dolls: 18, 20, 22, 24 and 26 inches in length. Told in the Hills.

(Continued from page 17.)

moral lesson," he repeated; "but to preach those a man should feel himself fit; I am not."

"I don't believe you!"

"What do you know about it?" he demanded so sharply that she smiled; it was so unlike him. But the sharpness was evidently not irritation, for his face had in it more of sadness than any other feeling; she saw it, and did not speak.

After a little he turned to her with that rare impetuosity that was so expressive.

"You are very helpful to me in what you have said: I think you are that to everyone—it seems so. Perhaps you are without work of your own in the world, that you may have thought for others who need help; that is the higest of duties, and it needs strong, good hearts. But do you understand that it is as hard sometimes to be thought too highly of as to be accused wrongfully? It makes one feel such a cheat—such a cursed liar!"

"I rather think we are all cheats, more or less, in that respect," she answered. "I am quite sure the inner workings of my most sacred thought could not be advertised without causing my exile from the bosom of my family; yet I refuse to think myself more wicked than the rest of humanity."

"Don't jest."

"Really, I am not jesting," she answered. "And I believe you are oversensitive as to your own shortcomings, whatever they happen to be. Because I have faith in your ability to do strong work, don't think I am going to skirmish around for a pedestal, or think I've found a piece of perfection in human nature, because they're not to be found, my friend."

"How old are you?" he asked her suddenly.

She laughed, feeling so clearly the tenor of his thought.

"Twenty-two by my birthdays, but old enough to know that the strongest workers in the world have not been always the most immaculate. What matter the sort of person one has been, or the life one has lived if he comes out of it with knowledge and the wish to use it well? You have a certain power that is yours, to use for good or bad, and from a fancy that you should not teach or preach, you let it go to waste. Don't magnify peccadillos!"

"You seem to take for granted the fact that all my acts have been trifling—that only the promises are worthy," he said impatiently.

"I do believe," she answered, smiling brightly, "that you would rather I thought you an altogether wicked person than an average trifler. But I will not—I do not believe it possible for you deliberately to do any wicked thing; you have too tender a heart, and—"

"You don't know anything about it!" he repeated vehemently. "What difference whether an act is deliberate or careless, so long as the effect is evil? I tell you the greater part of the suffering in the world is caused not by wicked intents and hard hearts, but by the careless desire to shirk unpleasant facts, and the soft-heartedness that will assuage momentary pain at the price of making a lifelong cripple, either mentally, morally or physically. Nine times out of ten the man whom we call soft-hearted is only a moral coward. Ah, don't help me to think of that; I think of it enough—enough!"

He brought his clenched hand down on the arm of the chair with an emphasis that was heightened by the knitted brow and compressed lips. He did not look at her. The latter part of the rapid speech seemed more to himself than to her. At least it admitted of no answer; the manner as much as the words kept her silent.

"Come! come!" he added, after a little, as if to arouse himself as well as her. "You began by giving me some good words of advice and suggestion; I must not repay you by dropping into the blues. For a long time I've been a piece of drift-wood, with nothing to anchor ambition to; but a change is coming, I think, and—and if it brings me fair weather, I may have something then to work for; then I may be worth your belief in me—I am not now. My intentions to be so are all right, but they are not always to be trusted. I said, before, that you had the faculty of making people speak the truth to you, if they spoke at all, and I rather think I am proving my words."

He arose and stood looking down at her. Since he had found so many words, she had seemed to lose hers; anyway, she was silent.

"It can't be very pleasant for you," he said at last, "to be bored by the affairs of every renegade to whom you are kind, because of some fancied good you may see in him; but you are turning out just the sort of woman I used to fancy you might be—and—I am grateful to you."

"That's all right," she answered in the old brusque way. To tell the truth, a part of his speech was scarcely heard. Something in the whole affair—the confidence and personal interest, and all—had taken her memory back to the days of that cultus corrie, when another man had shared with her scenes somewhat similar to this. Was there a sort of fate that had set her apart for this sort of thing? She smiled a little grimly at the fancy, and scarcely heard him. He saw the ghost of a smile, and it made him check himself in what he was about to say, and walk toward the door.

She neither spoke nor moved; her face was still toward the window. Turning to look at her, his indecision disappeared, and in three steps he was beside her.

"Rachel, I want to speak to you of something else," he said rapidly, almost eagerly, as if anxious to have it done with; "I—I want to tell you what that anchor is I've been looking for, and without which I never will be able to do the higher class of work, and—and—"

"Yes?"

He had stopped, making a rather awkward pause after his eager beginning. With the one encouraging word, she looked up at him and waited.

"It is a woman."

"Not an unusual anchor for mankind," she remarked with a little laugh.

But there was no answering smile in his eyes; they were very serious.

"I never will be much good to myself, or the rest of the world, until I find her again," he said, "though no one's words are likely to help me more than yours. You would make one ambitious if he dared be and—"

"Never mind about that," she said kindly. "I am glad if it has happened so. And this girl—it is someone you—love?"

"I can't talk to anyone of her—yet," he answered, avoiding her eyes; "only I wanted you to understand—it is at least a little step toward that level where you fancy I may belong. Don't speak of it again; I can hardly say what impelled me to tell you now. Yes, it is a woman I cared for, and who was—lost—whom I lost—long ago."

A moment later she was alone, and could hear his step in the outer room, then on the porch. Fred called after him, but he made no halt—did not even answer, much to the surprise of that young lady and Miss Margaret.

The other girl sat watching him until he disappeared in the stables, and a little later saw him emerge and ride at no slow gait out over the trail toward camp.

"It only needed the finale," she soliloquized, "to complete the picture "Woman! woman! What a disturbing element you are in the universe—man's universe!"

After this bit of trite philosophy, the smile developed into a noiseless laugh that had something of irony in it.

"I rather think Talapa's entrance was more dramatic," was one of the reflections that kept her company; "anyway, she was more picturesque, if less elegant, that Mrs. Stuart is likely to be. Mrs. Stuart! By the way, I wonder if it is Mrs. Stuart? Yes, I suppose so—yet, 'a woman whom I cared for, and who was lost—long ago!'—Lost? Lost?"

CHAPTER VIII.
"I'll Kill Him This Time."

RUMORS were beginning to drift into camp of hostile intents of the Blackfeet; and a general feeling of uneasiness became apparent as no word came from the chief of their scouts, who had not shown up since locating the troops.

The Major's interest was decidedly alive in regard to him, since not a messenger entered camp from any direction who was not questioned on the subject. But from none of them came any word of Genesee.

Other scouts were there—good men, too, and in the southern country of much value; but the Kootenai corner of the state was almost an unknown region to them. They were all right to work under orders, but in those hills, where everything was in favor of the native, a man was needed who knew every gully and every point of vantage, as well as the probable hostile.

While Major Dreyer fretted and fumed over the absentee, there was more than one of the men in camp to remember that their chief scout was said to be a squaw man; and a[mong] of them shared his own expresse[d] of that class, conjectures we[re] afloat as to the probability of [his] coming back at all, or if it came [to] question of fighting with the no[rth] Indians, whether he might [be] found on the other side.

"You can't bet any money [on] squaw man," was the decision [of] of the scouts from over in Idah[o], who did not happen to be a [half] man himself, because the wife [of] nearest neighbor at home ob[jected] "No, gentlemen, they're a risk [to] This one is a good man; I allo[w] —a very good man, I may say, [no] fighter from away back; but th[ere] we have to consider is that [his] w y he's with his own people, [as] may say, having taken a squa[w] and been adopted into the tribe [as] tell you, sirs, it's jest as reas[on] that he will go with them as [against] them—I'm a tellin' you!"

Few of these rumors were he[ard] the ranch. It was an understood[ing] among the men that the young [lady] at Hardy's were to hear noth[ing] camp affairs that was likely to [cause] alarm; but Stuart heard them, [as] the rest of the men; and like [them] he tried to question the only [man] camp who shared suspicion—K[alitan] But Kalitan was unapproacha[ble] English, and even in Chinook [would] condescend no information. He [had] less had none to give, but the [impres]sion of suppressed knowledge [that] managed to convey made him [the] ject of close attention, and [any] tempt to leave camp would hav[e] hailed as proof positive of [many] tangible suspicions. He made [no] attempt. On the contrary, aft[er] arrival there from the Gros V[entre] he seemed blissfully content [to] all winter on government ration[s] do nothing. But he was not bli[nd] any means and understanding E[nglish] though he would not speak [it]; chances were that he knew [more] the thought of the camp th[an] guessed of his; and his stubb[orn] sentment showed itself when [three] Kootenai braves slouched into [camp] one day, and Kalitan was not [allowed] to speak to them save in the pr[esence] of an interpreter, and when [one] fered in the person of a white [scout] Kalitan looked at him with [utter] able disdain, and turning his ba[ck] not a word.

The Major was not at camp. [He] just left to pay his daily [visit] Hardy's; for. despite all persu[asion] he refused to live anywhere b[ut] his men, and if Fred did not [come]

The New Hired Hand!

—the farmer needs good help in the fields. His wife needs good help in the kitchen. Her important duty is to make the best bakings. Her most important helper is Baking Powder.

If she tries Calumet she'll stick to it. Its dependability and uniform quality means good-bye to bake-day failures.

The farmer's wife wants the *most* of the *best* for her money. That's why most of them use Calumet. It's pure in the can and pure in the baking.

Should none of the above combinations suit you, write us just what publications you want and we will be pleased to quote you a special rate. Send all orders and inquiries to

CLUB DEPARTMENT
The Wisconsin Farmer
MADISON, WISCONSIN

ee him in the morning, he was in luty bound to ride over to her quarers in the afternoon.

The officer in command during his bsence was a Captain Holt, a man who had no use for an Indian in any apacity, and whose only idea of setling the vexed question of their rights vas by total extermination and graveoom—an opinion that is expressed by nany a white man who has had to leal with them. But he was divided etween his impulse to send the trio n a double-quick about their business nd the doubt as to what effect it would have on the tribe if they were ent back to it in the sulks. Ordinarly he would not have given their state f mind a moment's consideration; but he situation was not exactly ordiary, and he hesitated.

After stowing away enough provender in their stomachs to last an ordiary individual two days, and stowing he remainder in convenient receptacles about their draperies, intercourse was resumed with their white osts by the suggestive Kalitan.

Just then Stuart and Rachel rode nto camp. They had taken to riding ogether into camp, and out of camp, nd in a good many directions of late; nd in the coffee-colored trio she at once recognized the brave of the bear laws whom she had spoken with durng that "olallie" season in the western hills, and who she had learned since was a great friend of Genesee's. She spoke to him at once—a great deal more intelligibly than her first attempt —and upon questioning, learned that she was well remembered. She heard herself called "the squaw who rides" by him, probably from the fact that she was the only white woman met by their hunters in the hills, though she had not imagined herself so well known by them as his words implied.

He of the bear claws—their spokesman—mentioned Kalitan, giving her for the first time an idea of what had occurred. She turned at once to Captain Holt—not protesting, but interested—and learned all she wanted to.

"Kalitan does not like your southern scouts, for some reason," she said, "and I rather think it was his dignity rather than his loyalty that would suffer from having one of them a listener. Let them speak in my presence; I can understand them, and not arouse Kalitan's pride, either."

The Captain, nothing loath, accepted her guidance out of the dilemma, though it was only by a good deal of flattery on her part that Kalitan could at all forget his anger enough to speak to anyone.

The conversation was, after all, commonplace enough, as it was mostly a recital of his—Kalitan's—glories; for in the eyes of these provincials he posed as a warrior of travel and accumulated knowledge. The impassive faces of his listeners gave no sign as to whether they took him at his own valuation or not. Rachel now and then added a word, to keep from having too entirely the appearance of a listener, and she asked about Genesee.

The answer gave her to understand that weeks ago—five weeks—Genesee had been in their village; asked for a runner to go south to the Fort with talking paper. Had bought pack horse and provisions and started alone to the northeast—may be Blackfoot Agency, they could not say; had seen him no more. Kalitan made some rapid estimate of probabilities that found voice in—

"Blackfoot—one hundred and twenty miles; go slow—Mowitza tired; long wau-wau (talk); come slow—snows high; come soon now, may be."

That was really the only bit of information in the entire "wau-wau" that was of interest to the camp—information that Kalitan would have disdained to satisfy them with willingly; and even to Rachel, whom he knew was Genesee's friend, and his, he did not hint the distrust that had grown among the troops through that suspicious absence.

He would talk long and boastfully of his own affairs, but it was a habit that contrasted strangely with the stubborn silence by which he guarded the affairs of others.

"What is the matter back there?" asked Rachel, as she and Stuart started back to the ranch. "Ill-feeling?"

"Oh, I guess not much," he answered; "only they are growing careful of the Indians of late—afraid of them imposing on good nature, I suppose."

"A little good nature in Captain Holt would do him no harm with the Indians," she rejoined; "and he should know better than to treat Kalitan in that suspicious way. Major Dreyer would not do it, I feel sure, and Genesee won't like it."

"Will that matter much to the company or the command?"

He spoke thus only to arouse that combative spirit of hers; but she did not retort as usual—only said quietly:

"Yes, I think it would—they will find no man like him."

They never again referred to that conversation that had been in a way a confession on his part—the question of the woman at least was never renewed, though he told her much of vague plans that he hoped to develop "when the time comes."

Three days after the visit of Bearclaws and his brethren, Stuart and Rachel were again at the camp; this time accompanying Fred, who thought it was a good enough day to go and see the "boys."

Surely it was a good enough day for any use—clear and fresh overhead, white and sparkling underfoot, and just cold enough to make them think with desire of the cheery wood fires in the camp they were making for. From above, a certain exhilaration was borne to them on the air, sifted through the cedars of the guardian hills; even the horses seemed enthused with the spirit of it, and joyously entered into a sort of a go-as-you please race that brought them all laughing and breathless down the length of "the avenue," a strip of beaten path about twenty feet wide, along which the tents were pitched in two rows facing each other—and not very imposing looking rows, either.

There were greetings and calls right and left, as they went helter-skelter down the line; but there was no check of speed until they stopped, short, at the Major's domicile, that was only a little more distinguished on the outside than the rest, by having the colors whipping themselves into shreds from the flagstaff at the door.

It was too cold for ceremony; and throwing the bridles to an orderly, they made a dash for the door—Miss Fred leading.

"Engaged, is he?" she said goodhumoredly to the man who stepped in her path. "I don't care if he is married. I don't intend to freeze on the place where his door step ought to be. You tell him so."

The man on duty touched his cap and disappeared, and from the sound of the Major's laughter within, must have repeated the message verbatim, and a moment later returned.

(To be continued.)

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. Place your name and address to it, then, to know its cost, count the number of words. The rate is six cents per word, each insertion. For instance, if your advertisement, including the address, has 15 words, one insertion would cost 90 cents, which is one cent for every thousand copies printed. Note the low cost, and read what small advertisements in The Wisconsin Farmer have done for others

One Wisconsin Farmer seed corn advertiser says: "We are getting a nice response to our advertising. We will come back with a larger advertisement." Another says: "**The Wisconsin Farmer** has done good work helping me to sell lots of stock." And another writes: "Please discontinue my advertisement in **The Wisconsin Farmer.** I am getting pretty well sold out for the present."

These small advertisements did not have the advantage of the classified headings now available—under which your advertisement would appear.

Any "Wanted," "For Sale," or "To Exchange" advertisement will receive prompt attention and insertion will be made in first issue possible.

THE WISCONSIN FARMER — **MADISON, WISCONSIN**

FARM LANDS.

LOW-PRICED LANDS on easy terms. None to speculators. Aitkin county. Ideal dairying conditions in soil, climate, water, grasses. Busy creameries on every hand. Get our literature. Read. Investigate. Arnold, Land Agent, Rock Island Ry., 153 Wolvin Bldg., Duluth, Minn.

FINE LAKE SHORE farm of 40 acres, house, barn, poultry house, good well, some fruit trees, overlooking beautiful lake, stocked with all kinds of fish; good clay loam soil and land mostly open; for sale by owner. Price $4,500; easy terms. A. B. Wesner, Centuria, Wisconsin.

FOR Sale—Eighty acres good clay loam land, partially improved, in an excellent location, basswood, maple, birch and oak timber. $25 per acre. $200 cash, long time on balance. Write K. E. Russell, La Crosse, Wis.

WISCONSIN farm consisting of 287 acres, having good buildings, situated seven miles from good market. For information, write to Morris Johnson, Osseo, Wisconsin.

240 ACRES land one mile from Niagara, Marinette county. Hardwood land. Will sell or exchange for Holstein cattle. C. T. Ellis, Madison, Wisconsin.

CALVES—BOTH SEXES.

HOLSTEIN, Short-horn and Guernsey calves, either sex. A few exceptionally fine ones, $12.50 to $35, shipped by express at little cost. For information, write Ed Howey Co., South St. Paul, Minn.

LEGHORNS.

SINGLE COMB White Leghorn cockerels for sale at $1.00 each. Oscar Berg, Edgar, Wis.

HONEY.

HONEY. Pure, extracted, white clover, from my apiaries. Guaranteed first-class. 2 60-lb. cans, $12.60; 1 60-lb. can, $6.60; 6 10-lb. pails, $7.20; 6 5-lb. pails, $3.75. Write M. E. Eggers, Station G, R. 1, Eau Claire, Wisconsin.

POLAND CHINA SWINE.

BIG Polands. Good, growthy spring boars at reasonable prices. Harold Schmeider, Oregon, Wisconsin. Phone 9616.

TELEGRAPHY.

LEARN TELEGRAPHY. Short hours. Positions guaranteed. Write Signal Dept., Northwestern Telegraph School, Eau Claire, Wis.

GUERNSEY CATTLE.

REGISTERED Guernsey bull calves for sale. Also few heifer calves, Fred C. Hansen, Tigerton, Wisconsin.

TWELVE Guernsey grade heifers, cheap for quick sale. G. D. Fellows, Algoma, Wis.

WYANDOTTES.

BUTTERCUP and White Wyandotte cockerels, prices reasonable. Mrs. Marcus Hanson, Cashton, Wisconsin.

DUCKS.

FAWN AND WHITE and Penciled Runners young and old winners. Roland Benedict, Bristol, Wisconsin.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer, who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

Law Questions.

Settlement of Estate.

A South Dakota Subscriber.—My uncle is administrator of my aunt's estate in South Dakota. The estate consists of 296 acres of good land and some personal property. Six months have passed since my uncle was appointed administrator, and he has not yet settled the estate, which is to be divided among fifteen heirs. Can he be forced to settle the estate and what steps are necessary to compel him to do it?

Answer.—An estate in South Dakota cannot be settled by an administrator in less than one year. If an administrator fails to make an accounting of his administration at the end of one year after his appointment the court will compel him to do so. Any heir or other person interested in the estate can apply to the court for an order directing the administrator to present a full account of his proceedings.

Transporting Children to School.

Mr. E. C. Bremer, Forsyth, Mont.—In a certain school district in Montana the school board uses a wagon to transport children to and from school. The school board has changed the route of this wagon and taken it off of one of the main roads in the district, so that children living on said road have to travel a mile to get on the wagon. (1) Had the school board a right to do this? (2) Can the parents of the children recover damages on account of the wagon being taken off the road?

Answer.—(1) The transportation of children to and from school in Montana is under the control of the school boards of the various districts, hence the school board in the case mentioned had a right to change the route of the wagon and take it off one of the main roads in the district. (2) They cannot recover damages.

Husband and Wife—Custody of Child.

A Subscriber, Glencoe, Minn.—A and B are husband and wife and have a son three months old. B left her husband and he forcibly retained the custody and care of the child. The child was born in another state while the mother was visiting her parents. The child is not nursing, but being fed from the bottle. A is of good moral character and is abundantly able and willing to give the child proper care and his mother assists him to do so. Can the child's mother or her parents take the child away from its father by law?

Answer.—A father is by law the natural guardian of his own child and entitled to the care and custody thereof, and in this case the father being of good character and able and willing to care for and support his child, the mother and her parents cannot take the child by law away from its father.

Will of Single Person—Marriage.

A Subscriber, Ostrander, Minn.—If a single man or woman in either Missouri or Colorado, makes a will and afterwards marries, will such will stand good in law when the maker dies?

Answer.—Under such circumstances the will would not stand good in either Missouri or Colorado. When the man would die leaving a widow she would get the portion of his estate allowed her by law, notwithstanding such will.

Miller-Willford Angus Sale.

The joint sale of registered Aberdeen Angus cattle made by R. C. Miller and M. C. Willford at Canton, Minn., November 9th, was a success. The class of cattle sold justified higher average and many of the buyers took advantage of the prevailing prices. Some of the best cows ever included in a Minnesota auction were sold at prices below their value. C. L. Long, T. A. Taylor, L. Gruber and C. J. Bjorklund were good bidders and buyers and secured many bargains. Mr. Willford's herd bull, Protector E., was a favorite of all those present. Several breeders expressed a desire to own this bull and Mr. Willford consented to sell him in the auction. H. E. Hansen, of Mapleton and W. J. Sharp, Amboy, Minn., immediately got busy and bought the bull jointly. In the purchase of this bull we believe these gentlemen purchased the best two-year-old Angus bull in the Northwest. The price paid was $1,025. An average of $176 was made on the entire offering, and while they should have brought more money, the owners expressed themselves as being pleased with the outcome. Col. H. O. Tellier, got every dollar it was possible to get and worked hard for the success of the sale. We follow with a complete sale report:

FEMALES.

SOME of the Angus heifers offered for sale by E. F. Ganz & Son, Alma, Wis. Cows with calves at foot for sale. See the advertisement on page 26.

Will you let us send you this Grand Collection of 22 Winter Blooming Bulbs at our expense? See offer below.

MOST people like to have flowers growing and blooming in the house during the winter months. In this special offering we have had our nurseries make up a collection of extra large bulbs in a great assortment of colors and especially selected of varieties that will grow and blossom freely indoors. Simple directions for potting and culture will be sent with the bulbs so that you can easily make a big show with them. The bright flowers will make your rooms more cheerful and the perfume from them will go all over the house.

The bulbs can be planted in pots as in illustration, or in any other dishes you may have in the house. They will commence to blossom in about 60 days after being brought into the warm rooms.

Just read our offer, fill out the coupon and mail to us at once, and we will have our nurseries send you the 22 fine *Winter Blooming Bulbs* by next parcel post. Right now is the proper time to get them started for indoor blooming.

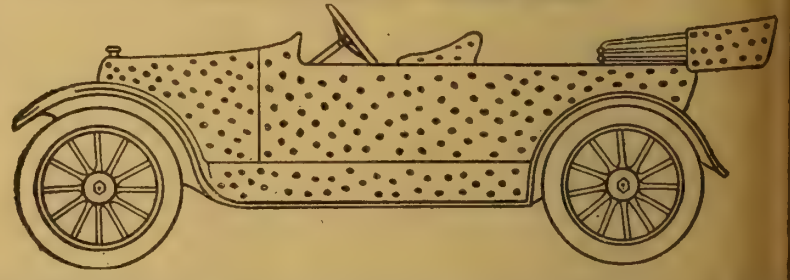
Count the Dots and Win a Prize

Here is the Famous Dot Counting Contest



You see in the picture, an Automobile covered with dots. By being careful and thinking you can count the number of dots on this Auto. If you can do this, we will send you as a prize, *a surprize package of beautiful season and greeting post cards,* lithographed in rich colors and also a certificate of entry in our grand contest for an Saxon Automobile. All you have to do is to enclose a two cent stamp in your letter to pay postage and cost of mailing.

SAXON AUTO GIVEN AWAY

Remember the Saxon will absolutely be given away at the close of the grand contest. In case of a tie a Saxon will be given to each person so tied. Send at once so you can be entered in this great contest. Full particulars by return mail.

TOO LATE TO CLASSIFY.

FOUR REG. HOLSTEIN BULLS FOR SALE

TWO of them old enough for service. Sired by the 29-lb. bull, Fairmont Pietje Ormsby, whose dam is a sister to the 41-lb. cow, Sadie Vale Concordia 4th. Fine individuals and priced reasonable. L. Lindauer, Kaukauna, Wis.

GUERNSEYS

REGISTERED bull calves 4 to 8 months old. Herd tuberculin tested. EDW. H. KILLING, JEFFERSON, WISCONSIN.

Live Stock and Commercial Notes.

Gathered by Representatives of The Wisconsin Farmer.

Some Attractions.

WE made a "hurry-up" trip to West Salem, Wis., to see what A. L. Hyzer was going to sell on November 20th. We knew this was to be a closing-out sale, but didn't know whether everything was to be sold, but all the Durocs go, the best and the poor, and you breeders take the tip and buy one of the yearlings or two year olds that he is selling. One senior yearling by Lincoln Model is some sow, one of those 700-pound kind. A two-year-old Advance Critic sow is a typical brood sow and the dams of some of the best things in the sale. A King the Col. yearling will be an attraction in many sales. A daughter of Golden Model 31st would look good in your herd. If some of you breeders want a sow for a senior yearling next fall, one will be sold in this sale. There are several good fall yearlings in this offering. Some of the spring gilts are good prospects. Some good farmer boars will be sold. The best sows have been bred to Lincoln Model and Logan Col., the latter a son of King the Col. Don't overlook this sale, for there are going to be some bargains. If you can't attend send bids to T. P. Shreve in care of Mr. Hyzer. Write A. L. Hyzer, West Salem, Wis., for a catalog and be sure to attend. See page 24.—Adv.

Fenner's Holsteins.

WE stopped in to see the herd of Wm. Fenner, Sheboygan Falls, last week and had a very pleasant visit with the proprietor. During the past year he has been running an advertisement in The Wisconsin Farmer with the Sheboygan County Holstein Breeders and is pleased with the results obtained. He is now running an advertisement on page 27 in which he is offering heifer and bull calves. These were sired by Pabst Canary Pontiac Champion 142885, one of the best bred bulls in Sheboygan county. This bull was sired by King Pontiac Champion, that has forty-two A. R. O. daughters, twenty-one of which have records from twenty to 26.74 pounds butter in seven days, which is a very creditable showing, as his daughters are all young cows. King Pontiac Champion is a son of King of the Pontiacs, that has 175 A. R. O. daughters, two with records over forty pounds. The dam of Mr. Fenner's bull is a daughter of Sir Hengerveld Model Johanna and is, therefore, a half sister to two thirty-pound cows. It will be seen therefore, that these calves are well bred. Write Mr. Fenner for further particulars.—Adv.

Angus Sale November 21st.

WE have just received the following letter from J. D. Hatch, relative to the Aberdeen Angus cattle that he sells at Lancaster, November 21st. "I have been breeding Angus cattle for thirteen years and have always used excellent sires, they having been International prize winners or closely related to them. My present herd bull is Kenman, a three-year-old son of Prince Felzer, the champion bull owned by Escher. My herd will be sold in just good breeding condition and there will be some snaps, as it is a closing-out sale. I am selling cows that I wouldn't offer before. The hired help proposition is getting too strong for me and I have rented my farm." Write the above for a list of the cattle that sell. See page 24.—Adv.

The Harvey Little Short-horns.

IT isn't necessary to say much about Harvey Little's milking Short-horns, for his greatest trouble is to raise enough cattle to supply the demand. When you buy from this breeder one often has to get in the "waiting list." He now has a few young bulls coming on that will be ready for service in a short time and if you are going to want a herd bull from a record dam get "in the line" at once. His address is Harvey H. Little, Evansville, Wis. Don't forget to mention The Wisconsin Farmer when writing for the records of some of the Short-horns in this herd. See page 26.—Adv.

Sows Bred to King Defender.

IN THIS issue of The Wisconsin Farmer can be seen an illustration of King Defender, the 1,000-pound grand champion boar owned by John L. Fisher, breeder of Duroc Jerseys and Holstein cattle, Janesville, Wis. King Defender is without a doubt the largest boar that ever won grand championship at the Wisconsin State Fair. Some of the best sows in the Fisher herd are being bred to this champion and they will be offered for sale at private treaty in due time. At the present time Mr. Fisher has three yearling boars sired by the great King the Col. and out of a litter sister to the champion, Lee's Defender. These boars can be bought reasonable. He also has some very choice spring boars that you should investigate. Keep this herd in mind, we will have more to say about King Defender at the proper time. Get a line on those boars and when writing please mention The Wisconsin Farmer. See page 25.—Adv.

The Herds at River Falls, Wisconsin.

MR. P. N. COLLINS is one of the biggest breeders of pure-bred stock in the northern part of Wisconsin. He is located at River Falls and has a herd of big-type Poland Chinas, a herd of Short-horn cattle and a flock of Oxford sheep. Mr. Collins recently purchased a son of the 1,000-pound Black Jumbo, and, as this breeder is an excellent caretaker we feel confident that he will be able to show one of the best yearling boars in the state next year. At the present time he has several spring boars for sale, and every one carries a good pedigree and are well grown. He also has a few bulls and heifers that he is pricing very reasonably. Investigate this herd. River Falls is practically on the line between Wisconsin and Minnesota, with the best of shipping facilities. His advertisement appears on page 24 of this issue. Write your wants.—Adv.

KING DEFENDER 176355, first-prize aged boar, senior champion and grand champion Wisconsin State Fair, 1916, weighs 1,010 pounds. The big-type Duroc. Owned by John L. Fisher, of Janesville, Wis., who will offer at private sale forty sows and gilts bred to this boar. See page 25.

Those Grant Co. Angus.

DON'T forget that the Hauk Bros., Cassville, Wis., have one of the best herds of the "doddies" in the state—a good breeding herd and an excellent sire at the head. They have some choice young bulls coming on and if you are going to need a bull of this breed, don't pass up this firm, it's a good outfit to deal with. See page 26.—Adv.

John H. Bear & Son's Short-horns.

MESSRS. JOHN H. BEAR & SON, breeders of Short-horn cattle and Poland China hogs, Spring Green, Wis., write: "The young Short-horn bulls offered by Green View Stock Farm, Spring Green, Wis., are sired by Royal Sultan 390142, one of the best grandsons of Whitehall Sultan. He weighed 2,250 pounds the day he was three years old, he was a smooth, deep-bodied roan. The dams of these bulls are of the following families, Young Mary, Arabella, Favorite, Duchess of Gloster, Rose of Sharon. Most of these cows are good milkers. Anyone in the market for a good bull will do well to see these bulls before buying farm in village limits."—Adv.

Defender's Gold Model.

THE above is the name of one of the best bred Duroc Jersey boars that ever did service in the state of Wisconsin. He is sired by Lee's Defender by A.'s Defender by old Defender, and his dam, Golden Model 38th was by the great Golden Model 2d. This boar is the sire of the spring boars that E. H. Parker & Son have for sale at Janesville, Wis. They have some "real" spring boars, get their prices and mention this publication when writing. See page 25.—Adv.

The Madson Polands.

MADSON & SONS, Madison, Wis., have Poland China spring boars that will suit. They have been well grown and in excellent shape and we feel sure they will give satisfaction. The Madsons are good breeders and strictly on the square. Write them your wants.—Adv.

Wisconsin Farmer Readers Need Good Cattle

THAT The Wisconsin Farmer reaches prosperous, discriminating live stock buyers is proven by the experience of Truttschel Brothers, Sheboygan Falls, Wisconsin. They are convinced of the value of The Wisconsin Farmer as an advertising medium. Read their letter:

We are going to increase our advertising space in The Wisconsin Farmer for the coming year. Every bull which we sold this year has been sold through our advertisement in The Wisconsin Farmer. We are very much pleased with the service you have given us and the results of our advertisement. We find that the readers of The Wisconsin Farmer appreciate the difference between good cattle and poor ones and are willing to pay a reasonable price to get good ones.

Many of these appreciative readers of The Wisconsin Farmer would no doubt be interested in the stock you have to offer. Why not tell them about it? The Wisconsin Farmer reaches more than 90,000 possible buyers each week. Let it carry your message to them. Send the copy for your advertisement today.

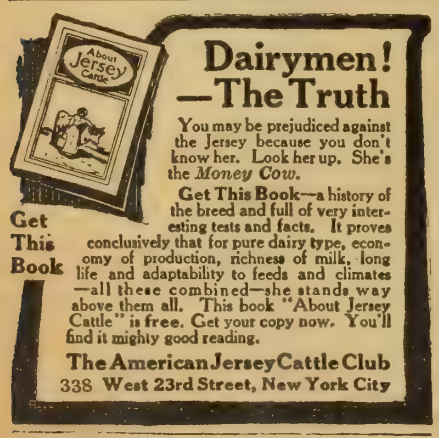
FEWACRES FARM - - - Wauwatosa, Wis.
FREDRICH D. UNDERWOOD, Prop. A. M. SERSTED, Supt. Cattle.



Dairymen! —The Truth

You may be prejudiced against the Jersey because you don't know her. Look her up. She's the *Money Cow.*

Get This Book—a history of the breed and full of very interesting tests and facts. It proves conclusively that for pure dairy type, economy of production, richness of milk, long life and adaptability to feeds and climates—all these combined—she stands way above them all. This book "About Jersey Cattle" is free. Get your copy now. You'll find it mighty good reading.
